CONTENTS

All possible care is taken to check the information given in this volume. But the publishers cannot take responsibility for chance errors or omissions. Authoritative corrections will be gratefully received.

There is in some cases a discrepancy between the figures from the Central and a State Government relating to the same subject. This is generally pointed out in a foot-note.

Just before the Famous Houses Section we have also recorded some last minute changes.

INQUIRIES SOLICITED

THE UGAR SUGAR WORKS LIMITED

SANGLI (S.M.C.)

(Estd. 1939)

★

Factory is situated at Ugar-Khurd, a small village on the left Bank of River Krishna.

Transport facilities are easy as the Factory is only a mile away from the Railway Station Ugar-Khurd, on Southern Railway on Miraj-Belgaum main line.

Factory has got its own estate for sugar-cane, grown by lift irrigation.

Present Factory capacity is 800 tons. Expansion Licence has been granted for 1,200 tons and application has been made for expansion to 1,700 tons.

The Factory has got Licences for the manufacture of Industrial Alcohol from Molasses and of Writing and Printing Paper from sugarcane bagasse. Both these schemes are under consideration.

The Factory produced about 1,74,126 bags of sugar in 1960-61.

Controlled and most efficiently managed by

Messrs. SHIRGAOKAR BROTHERS

the Managing Agents of the Company.

PHYSIOGRAPHY

GEOGRAPHICALLY the mass of land today called India consists of the territories contained in the Union of India and the Portuguese possessions of Goa, Daman and Diu.

The State of Pondicherry, Karikal, Mahe and Yanam (formerly French) is a *de facto* but not *de jure* part of India, though a treaty for a *de jure* transfer has been signed. This treaty awaits ratification by the Governments of India and France.

STATES, TERRITORIES

The country is divided into 16 States and six Territories. The latter are under Central administration.

The 16 States (with the capital towns in brackets) are:

Andhra Pradesh (Hyderabad), Assam (Shillong), Bihar (Patna), Gujarat (Ahmedabad*), Kerala (Trivandrum), Madhya Pradesh (Bhopal), Madras (Madras), Maharashtra (Bombay), Mysore (Bangalore), Nagaland (Kohima), Orissa (Bhubaneshwar), Punjab (Chandigarh), Rajasthan (Jaipur), Uttar Pradesh (Lucknow), West Bengal (Calcutta), Jammu and Kashmir (Srinagar).

The six Territories (with capital towns in brackets) are:

The Andaman and Nicobar Islands (Port Blair), the Laccadive, Minicoy and Amindivi Islands (temporary headquarters: Kozhikode, Kerala), Delhi (Delhi), Himachal Pradesh (Simla), Manipur (Imphal), Tripura (Agartala).

These States and Territories with the exception of Maharashtra, Gujarat and Nagaland came into being on 1st November 1956.

Maharashtra and Gujarat came into being from a break-up of the original Bombay State on 1st May 1960. Nagaland came into being on Feb. 18, 1961.

In addition there is one territorial unit: The North-East Frontier Agency.

GEOGRAPHY

India is about 1,700 miles from east to west, and about 2,000 miles from north to south. Its land frontier is about 8,200 miles long and the sea frontier about 3,500 miles.

The total land area is 1,269,640 sq. miles.

At the time of writing (March 1961) the 1961 census are in progress. For figures see '*Late Particulars*'. According to the 1951 census the total population was 356,879,394†, a little less than one-sixth of the population of the whole world.

This population grows roughly at the rate of about four and half millions a year.

The land frontier with Pakistan is about 4,615 miles long (east and west together). Of this about 2,810 miles are demarcated.

In shape India is like a triangle with its base resting on the Himalaya Mountains in the north and its apex running far into the ocean in the south. At the southern extremity the triangle tapers with a pear-shaped curve to a point called Cape Comorin.

India lies entirely to the north of the equator. From south to north including Kashmir, it stretches from 8° north latitude to 37° north latitude, with the Tropic of Cancer cutting it roughly into two halves. West to east it stretches from about 66° 20′ east longitude to 97° east longitude.

Broadly speaking, India is shut off from the mainland of Asia by the Himalaya Mountains, the highest mountain range in the world. Going from west to east along the country's land frontier are Pakistan, Chinese Turkestan, Tibet, China, Burma and Pakistan.

In the south, the country is surrounded on all sides by water—the Arabian Sea in the west, the Indian Ocean in the south and the Bay of Bengal in the east.

India is so vast and diversified that expressions like 'average rainfall,' 'average temperature' have no meaning. The average annual rainfall in the Thar desert is 4 inches, while that in Cherrapunji is 425.

Similarly places in Kashmir have a minimum temperature of 49° F. while places in Rajasthan have recorded a maximum temperature of 120° F. So one can only speak of local averages rather than of national averages.

Compared with the size of the country, the coast-line is short, as there are few bays or inlets. Hence there are also very few harbours. The fact is the west coast is rocky and the sea is deep near the coast, while in the east the sea is extremely shallow so that big ocean-going ships have to weigh anchor at some distance from the shore.

The only so-called natural harbours are Bombay and Goa, while Madras, Vishakapatnam and Port Okha are examples of purely artificial harbours built by human enterprise.

The principal ports in India are (going from west to east along the coast), Kandla, Bedi Bunder, Port Okha, Porbandar, Surat, Bombay, Marmugao, Mangalore, Kozhikode (Calicut), Cochin, Alleppey, Quilon, Tuticorin, Dhanushkodi, Nagapattinam, Karikal, Cuddalore, Pondicherry, Madras, Masulipatnam, Kakinada, Vishakapatnam and Calcutta.

Of these, Marmugao belongs to Portugal while the rest are in the Republic of India.

MOUNTAIN WALL

India can be divided into three natural regions—1. the mountain wall, 2. the Plain of Hindustan, and 3. the Indian Plateau.

Let us take the mountain wall first. From the Pamir Knot in the far north two mountain ranges radiate one in the south-east and easterly direction called the Himalayas, and the other in a south-western direction reaching almost down to the sea, called the Sulaiman Range in the north and the Kirthar Range in the south.

In the east the mountain wall between India and Burma is called by different names in different places. In the north, for instance, it is known as the Patkoi Hills, further south as the Naga Hills. In Assam it is called Jaintia, Khasi and Garo. Southward are the Lushai Hills, then lastly there are the Arakan Yoma which finally reach the sea at Cape Negrais and continue in the Andaman and Nicobar Islands.

Of the various ranges which constitute the mountain wall of India the Himalayas are the most noteworthy. Extending like a scimitar for a distance of 1,500 miles along the northern frontiers of the country they form the loftiest mountain range in the whole world, and contain many of the highest mountain peaks, Mount Everest 29,141 ft., Mount Godwin Austen 28,250 ft., and Kanchenjunga 28,146 ft.

There are no easy ways in and out through the mountain wall which shuts off India from the rest of Asia, but there are a few difficult passes. In the very north are the Zojila Pass and the Shipki Pass which lead out of Kashmir and Punjab respectively. Then from Shipki right down to Darjeeling there is no route across the mountain wall. Across the Burma frontier again there are a few routes but they are of little use for purposes of communication.

The following is a more detailed description of the mountain region.

In the east on the border of Burma the mountain wall is much lower. Here it can more accurately be described as a range of hills rather than of mountains. This region is wet, forested and very thinly populated. The region round about Cherrapunji in Assam has the highest rainfall in the world.

Then from Darjeeling to Kashmir are the Himalayas proper, over 1,500 miles in length and 150 to 300 miles in breadth. The Himalayas are thus not a mountain chain in the proper sense of the word. They can be described as a series of parallel but converging ranges intersected by valleys and big plateaus.

Hence the Himalayas themselves can be further sub-divided into three parallel zones, the Great Himalayas with an average elevation of 20,000 ft., always covered with snow; the Lesser Himalayas, the middle range, with an average elevation of 15,000 feet; and finally the Outer Himalayas lying between the Lesser Himalayas and the plains with an average elevation of about 3,500 feet.

Two of the longitudinal valleys which separate the mountain ranges are worth a note. They are the Vale of Kashmir and the valley of Katmandu in Nepal. Both the valleys are fertile, extensive and from a tourist's point of view a dream of beauty.

PLAIN OF HINDUSTAN

Geologically, the Ganges plain can be considered as the fore-deep of the mountains to the north of it. This fore-deep extends thousands of feet below the sea-level, though since its formation it has been filled in by deposit. In the east this deposit consists of alluvial material from the mountains, in the west it consists of material blown by the wind. All through the deposit is fine grained made up chiefly of muds and sands.

The Plain of Hindustan extends from the Bay of Bengal in the east to the Pakistan frontier in the west; that is to say, it is about 1,500 miles long and from 150 to 200 miles broad. Throughout this vast tract of land not a hill can be seen. The slope from the mountains to the sea is so gradual that about 100 miles from the mouth of the River Ganges the surface is no more than 500 feet above sea-level.

The Plain of Hindustan is probably the most important part of the country. For one thing, it contains some of the richest soil in the world. Second, it is on the Plain of Hindustan that the whole drama of race conflict and race assimilation was played out, a drama which finally shaped the political and cultural destiny of both India and its neighbour Pakistan.

Going into more detail the Plain of Hindustan is formed by the basins of three distinct river systems. In the far west are the Beas and Sutlej, tributaries of the Indus draining into the Arabian Sea. Further east is the River Ganges with its tributaries the Jamuna, Gogra, Rapti and Gandak which flows south-eastwards into the Bay of Bengal. The capital of the Indian Republic Delhi stands on the water-shed between the Indus and the Ganges river basins. The third of the three river systems, the Brahmaputra rises beyond the Himalayas, turns east and enters India at its eastern extremity and joins the Ganges before reaching the Bay of Bengal. The Brahmaputra has no important tributaries.

The rivers of Hindustan are notable in three respects: 1. They give a constant supply of water, 2. The land through which they flow is broad, flat and fertile and eminently suitable for irrigation, 3. Because water flows perennially they are navigable through the greater part of the year.

As we go from west to east in the plain rainfall increases and so do the fertility of the soil and the density of population.

* Actually a new capital is to be built outside the city. † Excluding Kashmir, the population of which was estimated at 4·41 millions in 1951.

INDIAN PLATEAU

The third of the natural regions into which the country is divided is called the Indian Plateau because it comprises a three-sided table-land covering the whole of the country in the south except for two narrow coastal strips in the east and the west.

The Indian Plateau is marked off from the Plain of Hindustan by a confused mass of hill ranges running with a general direction of east to west. Three of these ranges have been distinguished by the names of Vindhyas, Satpuras and Ajantas respectively. They stand from 1,500 feet to over 4,000 feet high and though pierced by road and railway at the present time were not easy to cross in the old days and thus formed a barrier of hill and jungle between the northern and the southern portions of the country.

The Indian Plateau is higher in the west and the south than in the east and north. Along the western and eastern edge of the plateau run the Western and Eastern Ghats. They start southward, from the extremities of the Vindhya mountain system and run along the western and eastern coasts of the country and unite to form a sort of upheaved angle towards their southern extremity.

The Western Ghats run through the States of Maharashtra and Mysore and ascend to an average height of about 3,000 feet while some of the peaks are anything between 5,000 feet and 9,000 feet high.

The Eastern Ghats stretch down the States of Andhra Pradesh and Madras and have an average elevation of 1,500 feet.

The inner triangular plateau which the Western and Eastern Ghats form far in the south is seamed with little ranges of hills exceeding 4,000 feet in height the best known among which are the Nilgiris. It is on the Nilgiris that Ootacamund the famous summer capital of Madras State stands.

Drainage Systems.—There are three systems of drainage in the Indian Plateau—one towards the north, the second towards the west and the third towards the east. The drainage from the northern or Vindhya edge of the plateau falls into the Ganges. Two rivers Narmada and Tapti carry the rainfall of the southern slopes of the Vindhya and Satpura mountains respectively in almost parallel lines into the Arabian Sea.

Further south, as we have already stated, the plateau is much higher in the west than the east. So the drainage has to make its way across the whole breadth of the plateau eastwards until it falls into the Bay of Bengal.

The most important rivers are the Mahanadi, the Godavari, the Krishna and the Cavery. These rivers differ from the rivers of the Plain of Hindustan in three ways: 1. They are fed only by the monsoon rains and therefore do not yield a constant supply of water, 2. Their valleys are less suitable for irrigation, 3. And finally, they are not navigable for certain seasons in the year when parts of the river dry up.

From a geological point of view the Indian Plateau consists mainly of very old crystalline rocks—much older than the Himalayan fold mountains.

On some of the edges of the plateau in the north-east for instance, are areas of sedimentary rocks from which the country obtains most of its coal. About nine-tenths of the coal resources of India lie in Jharia in Bihar and Ranigunj in West Bengal, though coal-bearing beds are also found in the valley of the Godavari and the northern slopes of the Vindhyas.

The north-west of the plateau is covered by vast stretches of lava called the Deccan lavas. This region is one of the largest areas of lava in the world, covering as it does an area of 250,000 square miles with a total thickness of several thousand feet. In spite of the great extent of the lavas there are few or no signs of volcano.

In the rest of the Plateau valuable minerals occur here and there among old crystalline rocks. Gold is obtained in Mysore, manganese in Andhra, Mysore and Madhya Pradesh, copper and iron in Bihar and Orissa, mica in Andhra and the south-east. The point about diamonds is of some interest. They occur in sand-stones or conglomerate in Panna in Madhya Pradesh or Kurnool in Andhra, though no diamond bearing igneous rocks are found.

Two groups of very small islands in the Bay of Bengal, the Andamans and the Nicobars, and one group in the Arabian Sea the Laccadives are part of the Republic of India.

So is the quasi-island of Kutch off the Kathiawar Peninsula in western India. Kutch is a dry, rocky, treeless country.

The main cultivated plants include rice, wheat, pulses and grains. Among the important seeds grown are castor, sesamum and ground-nut.

The chief fruit trees include mango, coconut, arecanut and certain citrus fruit. Apples, peaches, pears, apricots and walnuts are confined chiefly to the Himalayan valleys.

There are tea plantations over large areas on the mountains in the north-east and south, while coffee, cardamom, pepper and rubber are extensively grown in the south. In some of the damper regions the cinchona is successfully cultivated.

Among the wild animals are the tiger, the elephant, leopard, panther, the cheetah, the marbled and jungle cat, the wolf, jackal, wild dog, the black and the Himalayan bear, the rhinoceros, crocodile, wild hog, wild ass, antelope, gazelle, sambhar, spotted deer, bison, wild buffalo, many kinds of reptile (cobra, Russel's viper).

Among the domestic animals are cattle, buffaloes, sheep, goats, horses and ponies, mules and donkeys, camels, and of course, fowl.

Birds include the parrot, peacock, maina, different kinds of vulture and eagle, kingfisher, pigeons, ducks, partridges, plover, quail and snipe.

Among the more useful insects are the bee, silk worm, coceus laca (the one that gives lac). Mosquitoes abound everywhere. Locust invasions are not frequent.

Edible fish include the carp family, cat fishes, the hilsa and mahseer.

† Data not available.

MONSOON RAINFALL SUMMARY—1960.

Early onset of the monsoon in the south Peninsula, typical "break" monsoon conditions for about ten days during July, very heavy rains and consequent devastating floods in Orissa and the Punjab(I) during August and early in September and prevalence of drought conditions over most of the Peninsula during August followed by abundant rains during September were the chief features of the monsoon this year.

The southwest monsoon established itself over the south Peninsula in May about a fortnight in advance of the normal date and also advanced temporarily in Gangetic West Bengal and Assam towards the end of May. The monsoon current remained feeble during the first six days of June and even withdrew from Gangetic West Bengal on 1st June and from Assam on 3rd. A general revival of the monsoon activity took place on 7th June and the activity was maintained for about a month, during which period, the monsoon established itself over the entire country. There were heavy rains and floods in Saurashtra during the first week of July.

Typical "break monsoon" conditions prevailed for about ten days during the middle of July, when the monsoon activity got confined mostly to the belt extending from Assam to the Punjab(I). There were floods in the rivers of Assam, West Bengal, Bihar State, Uttar Pradesh and the Punjab(I).

From the end of July to the end of August, a series of low pressure systems developed over the north Bay of Bengal, one after the other. These generally moved in a northwesterly direction and gave copious rains over north India and the central parts of the country, particularly over the belt extending from Orissa to the Punjab(I). The rains caused local floods of varying intensity in this belt of the country.

A deep depression which originated in the head Bay of Bengal on 12th August, moved inland and dissipated over the Punjab(I) by 25th August, was responsible for devastating floods in Orissa and the Punjab(I) during this monsoon season. According to press reports, these floods in Orissa were the severest in the recorded history of the State.

Although north India and central parts of the country got excessive rains during August, the rainfall over the Peninsula was scanty. In fact, during August, the deficiency of rainfall in Andhra Pradesh, the Madras State and Interior Mysore was as much as 50 per cent or more. In particular, Rayalaseema had a rainfall deficiency of about 90 per cent during August. However, throughout the month of September, there was abundant rainfall over the Peninsula.

The monsoon withdrew from northwest India by 14th September and from the rest of the country outside the south Peninsula by 17th October.

The total rainfall for the period 1st June to 30th September is shown in the table. One remarkable feature is that although the rainfall departure over most of the country for the season as a whole was mostly within 20 per cent of the normal rainfall, there were large abnormalities in the rainfall during different parts of the season.

MIGRATION TABLES

The following table shows the emigration and immigration figures for 1957 and 1958:

Country	Emigration		Immigration	
	1957	1958	1957	1958
Africa	287	354	36	23
Burma	43	8	4	15
Ceylon	148	54	104	—
Malaya	83	14	1,518	2,189
Others	2,614	2,134	1,234	1,086
Total	3,175	2,564	2,896	3,313

EMIGRATION LAWS

Emigration out of India is governed by the Indian Emigration Act (VII of 1922) and the Rules made thereunder, as amended from time to time.

"Emigration" means departure by sea out of India of persons of Indian parentage under an agreement to work for hire, or if assisted by a person other than a relative with the intention to work for hire or for engaging in agriculture.

Emigration for skilled work is permissible on compliance with prescribed formalities.

The functions under the Act are performed by the Central Government through the Controller-General of Emigration and Joint Secretary to the Government of India in the Ministry of External Affairs, New Delhi, with the assistance of the Protectors of Emigrants at the Emigration Ports and the Regional Passport Officers at the Ports, who supervise the activities of the Protectors of Emigrants under their administrative control.

Following Ports are at present Emigration Ports under the Act. Each Port has a Protector of Emigrants.

1. Bombay (Public Relations Officer (Emi.), Regional Passport and Emigration Office, 148, Mahatma Gandhi Road, Bombay 1).
2. Okha (Port Officer).
3. Porbander (Port Officer).
4. Bedi (Port Officer).
5. Madras (Public Relations Officer (Emi.), Regional Passport and Emigration Office, 41, Mukkur Nallamuthu Chetty Street, George Town, Madras).
6. Nagapattinam (Protector of Emigrants).
7. Tuticorin (Protector of Emigrants).
8. Calcutta (Superintendent (Emi.), Regional Passport and Emigration Office, 4, Brabourne Road, Calcutta).

Below we give notes on overseas Indians in some countries.

Generally speaking fresh Indian immigration is either banned or is not permitted as a matter of policy into South Africa, Northern and Southern Rhodesia, Nyasaland, Australia, New Zealand, Burma, Ceylon, most European and South American countries. There are some countries that admit Indians on a quota basis: Canada, U.S.A., the Philippines, Thailand and Indonesia.

AUSTRALIA

Indians already domiciled in Australia have full citizenship rights, including the right to bring into the country their wives and children if they are not already with them. Provision exists for the temporary admission of Indians who are bona fide merchants, students, or tourists, and of Indians as assistants to such merchants. They are permitted to remain there while they retain their status as such.

The majority of persons of Indian origin settled in Australia are engaged in retail trade or agricultural operations.

Indians domiciled in Australia do not suffer from any disability and have all citizenship rights.

The Commonwealth franchise was granted to Indians domiciled in Australia in 1925.

CONGO REPUBLIC

This includes Ruanda Urundi for purposes of this survey.

Immigration is not on a quota basis. Each application is considered on its merits. There are no political or any other disabilities of any sort. Neither is there any restriction on remittances.

Most Indians are traders and are settled in the eastern districts. They are generally a prosperous community.

BRITISH CENTRAL AFRICA

The three territories of Southern Rhodesia, Northern Rhodesia and Nyasaland were brought into a federation known as the Federation of Rhodesia and Nyasaland. Immigration is a federal subject, and it is the declared policy of the Federal Government not to admit fresh Indian immigrants excepting teachers, ministers of religion and wives and minor children of persons already settled there.

Indians in Southern Rhodesia are mostly traders. Immigration of Indians into Southern Rhodesia has been prohibited since 1924, and only wives and children under 16 of domiciled Indian residents are admitted.

Although there are no discriminatory laws as such against Indians, in practice and in the interpretation of laws discrimination against them exists, particularly in the social sphere. Indians are not eligible for appointments to the Fixed Establishment of the Civil Services, and are not admitted into the Armed Forces. Indians are required to obtain special permits in order to purchase, possess or sell arms and ammunition whereas Europeans can do so on ordinary permits.

There is a common roll for all races with common qualifications. Of about 75,000 voters in the territory, between 700 and 800 are Indians.

A commission had been appointed to advise the five Governments in preparation for the 1960 conference on constitutional matters. The Report of the Commission recommends widening of franchise but not universal adult suffrage and eradication of discriminatory laws.

There is no limit to remittances to sterling area countries.

Indians can now pass freely between Northern and Southern Rhodesia.

BRITISH EAST AFRICA

Though immigration is not disallowed the scope is now greatly limited. It is official policy that the primary source will be Great Britain.

British East Africa consists of the four territories of Kenya, Uganda, Tanganyika and Zanzibar.

The majority of the Indians in these territories are engaged in commercial undertakings. Artisans, technicians, Government servants, doctors, lawyers, make up most of the balance.

Indians in East Africa—numbering over 3 lakhs—are mostly concentrated in urban centres. In Kenya and Tanganyika they constitute about 59 per cent of the total non-native population of each territory; in Uganda they form the single largest community among the non-Africans, being about 82 per cent of the non-African population. Their general economic condition is on the whole very satisfactory. Many of them are quite well-to-do.

In Uganda some Indians have big factories, *e.g.*, sugar, sisal and ginning. About 90 per cent of the total trade of Uganda passes through Indian hands.

Though the Kenya highlands are now open to non-European farmers on a free-seller-buyer basis, in practice no European farmer will be allowed to sell his land to a non-European. Anti-Asiatic regulations prevent the purchase or occupation of certain residential sites in Nairobi and Mombasa (in Kenya) by Indians.

In British East Africa while the Asians are discriminated against on grounds of colour, the severity is diminishing as the Europeans hard-pressed by the African nationalism, are inclined to be more tolerant to Asians.

The well-to-do Indian is on the whole inclined to imitate the European pattern of living and behaviour. The ostentatious style of living of some of the richer Indians excites African jealousy. The Indian skilled workers in Uganda and Kenya, earn much higher wages than their counterparts in India. But most of the earnings are remitted to India and their standard of living has remained stationary. The average African labourer is hostile to the skilled Indian labourer because of the impression that but for the presence of the Indians the lot of the African worker would be much better. But in Government organizations such as railways the African skilled worker is rapidly replacing the Indian. Similarly in petty trade in the smaller towns, the African, with the active co-operation of the British administration, is gradually ousting the Indian shopkeeper.

The position is different in Tanganyika and Zanzibar where African national forces are beginning to co-operate with the Indians there. In Zanzibar this arises from the fact that Africans are in need of outside help in their battle against the feudal Arabs. In Tanganyika the African leadership is interested in Indian friendship, firstly, because of the struggle against the British and secondly, because the leadership realises that if Tanganyika were to become independent they would be in need of financial help and economic know-how which the Asians could provide.

In Kenya elections were to be held in February 1961 on the basis of common poll for 52 seats in the Legislative Council. As a safeguard for minorities 20 of these seats (10 Europeans, five Asian Non-Muslims, three Asian Muslims and two Arabs) are to be reserved after primary communal elections.

Tanganyika has already achieved a sort of self-government with an African majority in the legislature and a Chief Minister.

Elections were also to be held in Zanzibar in the beginning of 1961 to provide the island with more constitutional advancement.

Uganda was also preparing for similar elections.

There has been a move to federate all the four territories into a British East African Federation.

Indians also enjoy municipal franchise in these territories.

BURMA

Burma was a province of India till 1937 April when it was given a separate constitution. In 1931 the Indian population was reported to be over one million. Consequent upon the Japanese occupation of Burma in 1942, about 4 lakhs of Indians left Burma for India. After the liberation of Burma many did not return to that country in view of the changed conditions in Burma and the difficulty of obtaining employment there. The present population of Indians in Burma is estimated to be about 5½ lakhs.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Indians are mainly agricultural, dock and casual labourers and small-scale business men. Some Indians are engaged in wholesale importing business.

With the introduction of the Burmanisation policy, no foreigner is now allowed to buy any property, nor can any property be transferred to any foreigner. Non-nationals in Government service are being replaced by nationals.

A large number of Indian land-owners in Burma have been adversely affected by the 'Land Nationalization' Scheme.

Under the Union of Burma Citizenship Act, 1948, an alien can become a Burma citizen by naturalisation, if he had resided continuously in the Union for not less than five years before the application and also fulfils other prescribed conditions.

As foreigners in the country, Indians as such have no franchise. Those Indians who have become Burmese citizens are entitled to all privileges including franchise that other Burmese are entitled to.

With the Government of Burma's policy of Burmanisation of Agencies in May 1960, those Indians who were carrying on Agency work had to wind up their business. Agency work can now be done only by Burmese citizens.

BRITISH GUIANA, WEST INDIES

Indians form the bulk of sugar plantation labour in British Guiana and Trinidad. A good number of them work also on cocoa plantations. They are the backbone of the countries' agriculture, and grow rice and vegetables. There are also a number of prominent Indian merchants, doctors and teachers.

In British Guiana, Indians constitute the largest single racial group. (49 per cent of the total population.) In Trinidad Indians are about 36 per cent of the total population.

Very few Indians have been employed in Government service. A vast majority of Indians are illiterate. In Jamaica, a large number of dairies are owned by Indians.

There is no discrimination against Indians in British Guiana or Trinidad, and they enjoy the same citizenship rights as other nationals of these territories. Remittance is free.

CANADA

The Government of India and the Government of Canada have entered into a modified Agreement regarding the immigration of Indians into Canada in partial modification of the Agreement of 1951 under which the Government of Canada had agreed to admit annually 150 Indian citizens into Canada. The modified Agreement came into effect on the 1st of January, 1957.

Under the modified Agreement, the Canadian Government have agreed to increase the annual quota of immigrants from India from 150 to 300. Of these 300 immigrants, 150 will be "ordinary quota" immigrants and 150 will be "preference quota" immigrants. Relatives of Indians who have permanently settled in Canada or who have acquired Canadian citizenship will be admissible into Canada as "preference quota" immigrants while other applicants will be admissible under the "ordinary quota". It may be noted that "close relatives" of all those who have become Canadian citizens will be admitted into Canada as non-quota immigrants.

A "relative" means the husband, wife, son, daughter, brother, sister (or the husband, wife or unmarried child under twenty-one years of age of any such son, daughter, brother or sister), father, mother, grandparent, unmarried orphan nephew or niece under twenty-one years of age, fiance or fiancee.

A "close relative" means the husband, wife, unmarried child under twenty-one years of age, father over sixty-five years of age, or mother over sixty years of age.

Applications from prospective immigrants to Canada from India should be addressed to The Canadian Immigration Attache, Office of the High Commissioner for Canada, 13, Golf Links, New Delhi 3.

Indian residents of Canada are largely comprised of labourers employed in lumbering and trucking. There are a few lumber mill owners, and some are working as clerks in various establishments. A good number can also be termed professionals, technicians and highly skilled workers. The majority of Indians are in British Columbia. A good many today go on to industrial centres like Montreal and Toronto. The Indian community is called the "East Indian Community".

Any person admitted to Canada as an immigrant might become a citizen of Canada after five years' continuous residence there. There is no legislation in Canada, federal or provincial which discriminates against any group of citizens on grounds of national origin, race, language or religion.

There are no disabilities on Indians in the matter of owning property, engaging in trade or profession, entering Government service or residence in any locality. In 1952, one Indian was elected to a Municipal Council.

Indians can remit to India any amount earned in Canada.

Figures of Indians arriving in Canada: 1957 : 317 ; 1958 : 451 ; 1959 : 716.

CEYLON

Out of a total of about 9 lakh persons of Indian origin in Ceylon, about 8 lakhs (labourers, subordinate staff, etc.) are in the tea, rubber and coconut estates. The balance is made up of merchants, shop assistants, land proprietors, and professional men such as doctors, accountants, lawyers and their families.

There is no restriction on Indians acquiring property in Ceylon, but non-Ceylonese are not allotted Crown Land. Trade in certain commodities and with certain countries like Japan and Germany is exclusively reserved for Ceylonese enterprise. Certain rights like fishing rights and the ownership of industries like public transport (omnibuses) are restricted to Ceylonese. Government service is restricted to Ceylonese except that foreigners are appointed on a contract basis when no qualified or suitable Ceylonese is available. Consequently Indians who have not acquired Ceylon citizenship have severe handicaps. Indians are also denied certain privileges such as National Insurance and un-employment relief.

The rights of Indians to citizenship are governed by two Acts enacted in 1948 after a discussion between the Indian and Ceylonese Prime Ministers. These Acts are the Ceylon Citizenship Act and the Indian and Pakistani Residents (Citizenship) Act, which provide that the Indian residents in Ceylon would be entitled to obtain the citizenship of Ceylon by registration subject to the following conditions: (*a*) an applicant must be resident in Ceylon when the laws came into force and must have been residing in Ceylon since January 1, 1936 if a bachelor and since January 1, 1939 if a married man, (*b*) he must have adequate means of livelihood, (*c*) he should be in a position to comply with the laws and customs of Ceylon, and (*d*) the application for registration was filed and submitted to the Controller of Registration before August 5, 1951.

An Agreement was entered into in January 1954 between the Government of India and the Government of Ceylon regarding the citizenship rights of persons of Indian origin in Ceylon. Under this Agreement the Government of Ceylon agreed to expedite the registration of citizens under the Indian and Pakistani (Citizenship) Act and to make every endeavour to complete the disposal of pending applications within two years.

The total number of applicants for Ceylon citizenship is estimated to be about 850,000.

Out of these, about 1,22,000 persons have till the end of Sept. 1960, been registered as Ceylon citizens. The applications of the rest have either been rejected or withdrawn.

At the end of 1954 the Government of Ceylon started implementing its policy of Ceylonization in the course of which a large number of persons holding Temporary Residence Permits of all nationalities had their periods of stay curtailed. In the result some Indians were faced with the prospect of leaving the country.

In April, 1955, the Government of Ceylon amended the Immigrants and Emigrants Act of 1948. One of the amendments brought about was that in the case of a person who is alleged to have committed the offence of illegal entry into Ceylon, the onus of establishing the contrary, in any prosecution launched in the case, would devolve on the accused. Yet another amendment rendered the employment of persons resident in Ceylon illegally, a punitive offence on the part of the employers of such persons.

Till the end of Sept. 1960, about 86,000 Indians have left Ceylon for good. Out of these a total of about 48,250 persons have left on receipt of Quit Notices issued by the Government of Ceylon.

The present problem is about 'Stateless' residents.

About the Ceylonization of business firms, all firms (including Indian firms) are permitted to retain personnel, who are considered essential, technically qualified etc., and that in non-essential categories of employment, Ceylonization should take place. This scheme of Ceylonization envisages departmental action to promote the appointment of Ceylonese nationals to executive posts in the private sector. The number of such persons who have or who are likely to secure executive posts in Indian establishments however is very small.

Remittances from Ceylon are governed by the Exchange Control Regulations in force which are altered from time to time in accordance with the financial situation in Ceylon.

ETHIOPIA

Emigration to Ethiopia is neither restricted nor entirely free. Each case is judged on its merits, and there is no quota.

Indians who wish to start new industries or go into farming are given special encouragement.

There are no constitutional, legal or any other disabilities specifically on Indian residents. Some Indians own landed property and have been living in Ethiopia for half a century, and are whole-heartedly accepted by the people.

Under the Civil Code of the Empire of Ethiopia, which came into effect from Sept. 11, 1960, some restrictions have been placed on the ownership of immovable property by foreigners.

No foreigner may own immovable property situate in Ethiopia except in accordance with an Imperial Order. Any foreigner who is found to own immovable property in good faith but does not hold such immovable property in accordance with an Imperial Order shall be required by the competent authority to dispose of such property to an Ethiopian within six months. Failure to dispose of such property will result in the property being seized and sold by the competent authority. The foreigner will get only 80 per cent of the sale proceeds, 20 per cent being deducted as penalty and expenses of sale. Ten per cent only will be deducted if the foreigner acquired the property by succession.

Till recently remittance regulations were liberal but measures have now been taken to tighten the issue of foreign exchange for various imports because of shortage of foreign exchange.

There are nearly 2,000 Indians resident in Ethiopia. Most of them are business men from the Gujarat and Saurashtra regions of India. Almost all of them are well-to-do and are engaged in trade specially in the import of textiles. Besides, there are about 300 Indian teachers who have been recruited by the Ethiopian

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Government to further the cause of education. Recently some Indians have been engaged also as Advisers to various Ministries, for example, Municipality, Commerce, Social Welfare, Community Development, Agriculture.

In 1959 a textile mill, a combined venture of Birla Brothers and the Ethiopian Government started working. This is the biggest mill of its kind in the country. Plans are now under way for expansion of the Indo-Ethiopian Textile Mill to double its present capacity of 12 million yards per annum by a separate mill being constructed adjacent to the existing one.

Indian Army Officers and Civilian Academic Staff are organizing a military academy in Ethiopia at Harar. The first batch of gentlemen cadets of the Academy took their degree on 1st Oct. 1960. The actual running of the Academy is to be handed over to the Ethiopian Army Officer by phased stages and the 1st Stage was to be completed in Dec. 1960.

FIJI

Immigration into Fiji is limited by the provisions of a special ordinance issued in November 1947.

In general, permits to land and reside permanently in Fiji will be granted only to the following :—(*a*) farmers and planters if they have already acquired a property in the Colony of not less than 100 acres, three-quarters of which are productive land ; (*b*) professional men and women with recognised qualifications ; (*c*) ministers of religion ; (*d*) persons who are employed outside Fiji by local firms or undertakings and who are transferred to the Colony ; (*e*) persons who satisfy the Principal Immigration Officer that they have an assured income, that they will not become a charge on public funds.

Absence from Fiji for 12 months forfeits residential status.

The number of people of Indian origin numbered about 191,388 in 1959 out of a total population of 387,646.

The immigration of indentured labourers from India started in 1879. Between this year and 1916, when sponsored immigration virtually ceased, some 40,000 to 50,000 Indians were introduced into the Colony, only a small proportion of whom returned to India at the expiration of their contract period. In 1911, there were 43,000 Indians, in 1936 85,000, in 1956 there were 169,403 ; and by the end of 1958 there were 184,090. In 1945, people of Indian origin outnumbered the native Fijians for the first time and their numerical superiority is maintained and is becoming more marked each year.

About the turn of the century, Indians began to assume the role of independent farmers, which completely altered their position in the Colony, and paved the way for further economic progress. Indians today represent by far the greatest proportion of cane farmers while some cultivate cane on freehold properties, or on lands leased from Fijian landlords. Many are tenant farmers of the Colonial Sugar Refining Company under an arrangement whereby the Company makes its lands available to selected tenants for the cultivation of sugarcane.

Although in competition with a more recent arrival—the Chinese—Indians now practically monopolize the Colony's retail trade while the tailoring and footwear businesses are almost entirely in the hands of Bombay craftsmen. The land transport trade—the ownership of public buses and taxis—is another field which Indians dominate.

As more and more Indian students return from overseas each year after obtaining higher academic or professional qualifications, more and more enter the professional ranks including civil service, law, medicine and dentistry.

The Indian community do not suffer from any political or legal disabilities. However, the only major economic disability which affects them is the existing land laws which make it almost impossible for an Indian to acquire land.

When the chiefs of Fiji ceded the Territory to Britain, a condition of the cession was that the land rights of the Fijians should be protected. But as the Indian population grows its demand for land also increases.

Indians in Fiji have franchise both in respect of legislature and the local bodies but the franchise is on a racial basis. (Women, whether European or Indian, have no franchise.)

The Legislative Council consists of 31 members —16 officials and 15 non-officials. In the non-official group Europeans, Indians and Fijians have equal representation with 5 members for each group. Of the 5 Indian members 3 are elected and 2 are nominated. The Executive Council consists of 4 officials (excluding the Governor) and 3 non-official members. One of the non-official members is an Indian elected from among the Indian members of the Legislative Council.

There are no restrictions on the remittance of money from Fiji to the countries in the sterling area (except Canada). Money may not be sent outside the sterling area without a permit from the Controller of Foreign exchange.

MALAYA

The Federation of Malaya is an independent country in the Commonwealth. It consists of 11 States.

Of the total Indian population of over 7 lakhs in Malaya about 70 per cent are labourers in rubber and tin estates, and the rest are either clerks or employed in business, trade and other professions like law and medicine.

Indians do not suffer from any special disabilities. They are eligible for citizenship of the Federation of Malaya, if they fulfil the prescribed conditions. Many of the Indians in Malaya are qualified or entitled to become Malayan citizens.

The second elections in the Federation to the House of Representatives took place on August 19, 1959. This was in fact Malaya's first election after the attainment of her independence in August 1957. Of the 104 elected members six are Indians.

In the Senate (Upper House) of the Federation Parliament there are 36 members of whom 3 are Indians.

MAURITIUS

Mauritius is an island of approximately 720 square miles in area with a density of population of 853 persons per square mile. Because of its position just within the tropics, it has a maritime climate, tropical during summer and sub-tropical in winter. The lingua franca is a local dialect—Creole, a distortion of French. Other languages spoken are English, French, Chinese, Bhojpuri, Urdu, Telugu, Tamil, Marathi and Gujarati. English is the official language.

Indians in Mauritius form about 67 per cent of the total population of the Colony. The Indian population is mainly composed of descendants of "indentured" labourers from Madras, U.P. and Bihar, but there is a sprinkling of traders from Bombay.* Indians have settled there for generations and are now termed "Indo-Mauritians". A large proportion of them are farm-labourers on sugar plantations. The rest are engaged in commerce and trade or are doctors, lawyers, government servants.

Under the London Agreement of 1956 fresh proposals for constitutional advance were made, some of which were implemented later in the year. Subsequently, General Elections under the new constitution took place on 9th March 1959. Political consciousness of the populace was evident from the fact that votes were cast on party lines and out of 83 independent candidates not one was returned. Out of the 40 single-member constituencies the Labour Party supported by the Comite d'Action Musulman and Labour Trade Unionists returned a solid vote of 31.

The Legislative Council of the Colony as at present constituted consists of 52 members. Besides the 40 elected members, the Governor can nominate upto a maximum of 12 members. The Governor can select 9 Executive Councillors which with the addition of Colonial Secretary, Financial Secretary and Attorney-General, who are ex-officio Councillors, constitute a panel of 'Ministers.' The Executive Council exercises collective responsibility and all the non-official members are assigned portfolios.

Indo-Mauritians are coming into their own and on the whole their economic and social conditions compare favourably with people of Indian origin in other Colonies.

The density of population in this small island is now one of the highest in the world. The rate of growth of population is also a serious problem. Immigration of foreigners for the purpose of settling down is not therefore normally allowed. Only in exceptional circumstances when there is a dearth of skilled hands in a particular trade or a profession is a person allowed to enter the Colony and stay for a specified period. For this, he should have obtained an offer of appointment by a Mauritian employer and an entry permit from the Government of Mauritius. In such cases, wherever necessary, the immigrant should be able to deposit Rs. 1,000 on entry into the Colony. There is, however, no restriction on tourists or other visitors or business men coming to Mauritius for bona fide purpose, for a period of six months or so, if he possesses a return ticket.

There is no colour bar against Indians, nor do they suffer from any political disability.

There are no restrictions on remittances to India.

NEW ZEALAND

Entry into New Zealand is controlled under a permit system, exemption being provided, broadly speaking, only for New Zealand citizens and persons of United Kingdom descent. There is no quota system.

The applications from Indians for permanent entry have been approved at the rate of approximately 100 applications per annum over the past few years. Most of those approved have been submitted on behalf of wives and minor children of Indians already resident in New Zealand.

There are some 2,600 Indians at present resident in New Zealand, mainly Gujaratis and Punjabis. The size of the community is, however, steadily increasing. At the moment 13 per cent are under five years of age and 27 per cent under 16 years of age. The greater part of the Indian community is concentrated in the main urban centres, where for the most part they are engaged in small businesses such as grocery stores, importing houses or restaurants. Others, however, are employed in industry and in clerical work and the professions.

There is no differentiation between Indians and other residents of New Zealand and their economic condition would not therefore vary from the economic condition of other residents engaged in similar trades or occupations.

Indians enjoy the right to vote in Parliamentary and Municipal elections and do not suffer from any political, legal or other disability.

Remittances made by all New Zealand residents (including Indians) from New Zealand are subject to exchange control. The maximum amount permitted varies according to the purpose of the remittance and the currency area concerned. The maximum amount normally approved for remittance to India for maintenance purposes in any one year is £240.

PHILIPPINES

With effect from September 1953, 50 Indian nationals are admitted per annum for permanent residence on preference quota. This quota applies only to husbands, wives, minor children and parents of permanent residents in the Philippines. Immigration is closed to other Indians.

* Bilingual.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Foreign exchange control regulations apply to remittances as to other transactions. Transactions of foreign exchange are now partially decontrolled, the process being in its second stage.

During the year 1961, which in cooperation with other countries located in that area has been declared by President Carlos P. Gracia, as "Visit the Orient in 1961" the issuance of visas to tourists to visit the Philippines will be greatly facilitated.

PORTUGUESE EAST AFRICA

In Portuguese East Africa there is no colour bar as such. At the time when the Goa dispute was at its height, various restrictions were placed on Hindus who are mostly in trade. The situation has, however, now quietened and the Hindus, according to reports are untroubled.

The Indians here also maintain a high standard of living which compares favourably with that of the Portuguese inhabitants.

There is no restriction on remittance of money to India. Indian currency up to Rs. 20,000 can be remitted by bank draft. In the case of remittances exceeding Rs. 20,000 prior permission of the Reserve Bank of India is however necessary.

SAUDI ARABIA

There is no Emigration Act or law in Saudi Arabia to regulate the entry of nationals of other countries. The Saudi Government grants Saudi nationality to non-Saudis without following any fixed principle.

There are no constitutional, legal or any other disabilities on Indian residents. "Iqama", that is residence permit, is required to be obtained by the nationals of all countries except Yemen, Hadramouth and a few other neighbouring countries whose areas are contiguous to Saudi Arabia.

Remittance is restricted but this restriction applies to every one including Saudis. This restriction is due to foreign exchange difficulties but all Government employees including Indians, can send 50 per cent to 75 per cent of their basic pay to their families residing outside Saudi Arabia, depending on the terms of contract made at the time of the appointment.

Indians as a whole are doing well here in service as well as in independent professions. They have a reputation of being intelligent and hard working. Many firms prefer to have Indians on their staff.

Over 3,000 Indians reside in Saudi Arabia, out of which about 500 alone are employed with the Arabian American Oil Company on contract basis in different capacities.

During the years 1957-58 there were over 2,000 Indians employed there. But due to the installation of latest scientific computor machines and stoppage of expansion activities of the Company, a large proportion of manual labour has been dispensed with. Saudis or people from Arab countries are gradually replacing other nationals including Indians to raise the quota of Arab employees to 75 per cent of the total employees. Doctors, nurses, senior executives and technicians are not affected by this.

A number of Indians have acquired Saudi nationality specially during the last 10 years. Most of them have done so because the law of the country differentiates between Saudis and non-Saudis in the sphere of economic and social activities.

SINGAPORE

Entry of fresh immigration from abroad, including Indians, into Singapore, virtually stopped when the Singapore Immigration Ordinance came into force in August 1953. Under its provisions only wives and children under 18 years of the resident population were given the right of entry into Singapore which has also been stopped since 1st May 1959, when the Immigration Regulations had been amended to enforce stricter control of immigration. From December 1, 1959 only citizens of Singapore or persons born in Singapore, their wives and children under six years, have the right of entry into Singapore. The restriction does not however apply to technically qualified persons or others who under an employment pass are assured of a minimum salary of $1,200 per mensem if in service or who by viture of their highly technical qualification would prove in Government's view to be of service to the country.

In addition, some dependents mostly aged parents were also permitted on compassionate grounds during those years.

Indians in Singapore do not suffer from any special disabilities political, legal or otherwise.

There is no restriction on remittance from Singapore at the moment (Nov. 1960).

According to the census taken in June 1957, the total population of Singapore is 1,445,929, of which 75·4 per cent are Chinese. Total number of Indian population including Pakistanis is 124,084. Separate figures are not available. On 31st Dec. 1959 the number of Indians had increased to 137,300 in round figures.

The Singapore Citizenship Ordinance came into operation on 1st November 1957. Under the provisions of the Ordinance, Indians can register as Singapore Citizens after completing eight years of residence in Singapore.

SOUTH AFRICA

Persons of Indian origin in South Africa numbering about 430,000 are mostly labourers, traders, small farmers, factory workers, and in small numbers professionals.

Racial discrimination against Indians exists in South Africa in every walk of life and in the worst possible form. Persons of Indian origin are practically excluded from parliamentary, provincial and municipal franchise as well as from public services except in menial and subordinate posts.

"Apartheid" or racial segregation is the declared policy of the South African Government. In accordance with this policy Indians are subject to a number of restrictions as regards immigration, inter-provincial migration, residence, trade, industry, professional and other occupations. Racial segregation is also enforced in schools, post offices, railways, public transport, hotels, churches, social and religious gatherings and public utility undertakings.

The outstanding piece of anti-Asian legislation is the Group Areas Act, 1950. By this Act, the entire population of the Union has been divided into three main groups, White, Native and Coloured. Persons of Indian origin are included in the Coloured group. The Government will establish by proclamation "group areas" for exclusive occupation or ownership or both, of any of the groups. The various racial communities will have to live and occupy premises for trade and professions only in areas allotted to them. Indians and other non-Europeans will thus not be able to continue to hold properties in an area declared for the European group. The Union Government has already started taking active steps for the proclamation of group areas in a number of important cities in the Union. When the Act is fully implemented, persons of Indian origin will have to move into the areas exclusively reserved for them and this will disrupt their trade and business and involve immense losses running to millions of pounds.

The Group Areas Act was further amended in 1955 (Act No. 6 of 1955) to invest increased powers in the Land Tenure Advisory Board.

The first attempts to put this into effect are taking place in Johannesburg where areas outside the city are being got ready. The area set aside for Indians in this city is at Lenasia. It is reported that Indian traders have made an offer to the Government that if they are allowed to keep their places of trade in the city they would have no objection to residence in the allotted areas. It is also reported that the Government are considering the offer. Meanwhile European voices are being raised against the Group Areas Act on account of its enormous cost. Whole new townships have to be laid around other towns as well—Cape Town and Durban, for example.

It was reported in March 1960 that the whole Indian population of Rustenburg in the Transvaal was told to quit their homes and shops.

Asians have been declared prohibited immigrants since 1913, but the right of entry into the Union of wives and children of Indians domiciled in South Africa was provided for in the Reciprocity Resolution passed at the Imperial Conference of 1918 and later in the Cape Town Agreement of 1927. Under an Act passed in 1953, the Union Government banned the entry into South Africa of the wives and children of persons of Indian origin domiciled in the Union. But certain specified categories of wives and children of persons of Indian origin were allowed to enter South Africa till 10th February 1956.

The aim of the present South African Government in regard to Indians is their ultimate repatriation to India.

There are schemes in existence to tempt Indians to leave the country.

Practically all Indians domiciled in South Africa are South African citizens by law, but they are denied some of the most important rights of citizenship.

No Indian, who is not already a South African citizen, is allowed to acquire South African citizenship.

Indians have no franchise rights in the Provinces of Natal and Transvaal. In the Cape Province they enjoy limited franchise rights as for Cape Coloureds.

Indians are not eligible to a place in the Executive Council or Legislature, whether provincial or central.

There is no special limit to remittances by Indians to India.

The question of the treatment of the people of Indian origin in South Africa was placed before the General Assembly of the United Nations in 1946. In that year the U.N. General Assembly passed a resolution expressing the opinion that "the treatment of Indians should be in conformity with the international obligations under the agreements concluded between the two Governments and the relevant provisions of the Charter." Resolutions have been passed in subsequent sessions of the U.N. General Assembly in this respect, but the Union Government have paid little attention to these resolutions. In the Resolutions adopted in 1950 and afterwards the Union Government was also called upon to suspend the implementation of the Group Areas Act pending the conclusion of negotiations between the Governments of India, Pakistan and South Africa. But the Government of South Africa has proceeded with the implementation of this Act despite these Resolutions.

At the 1959 session again the General Assembly adopted a resolution expressing deep regret and concern that South Africa had ignored all previous appeals. This was passed by 62 to 3 votes with seven abstentions. The three negative votes were those of France, Britain and Portugal. The resolution on apartheid was passed without a discussion, though there had been a full debate in the Assembly Special Political Committee.

The resolution was milder than the resolutions adopted in earlier years. The general feeling was that a milder resolution might produce results where strong condemnation might fail.

SUDAN

Immigration is not allowed.

The Indian community is mostly in trade, more especially import, export. But a few Indians are in the employment of the Sudanese Government on contract. The community is on the whole well-off.

Remittances abroad are governed by exchange control regulations.

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

SURINAM

This was formerly called Dutch Guiana. It is now an autonomous part of the kingdom of the Netherlands.

There are 71,000 Indians in a total population of 222,000. They form the second largest group.

Hindi is widely spoken and understood.

The community has made rapid economic progress, especially during the past 25 years. In medium-size enterprises they already have a stronger economic position than the Creoles, the largest group in the population of Surinam. Indians are mainly engaged in business and industry.

Migration into Surinam is possible only after a permit has been obtained from the local authorities. Such permission is granted if the applicant can prove that he is able to earn his living and has Rs. 1,250 "show money". There is no quota system and applications are considered on an *ad hoc* basis.

There are no constitutional, legal or any other disabilities on Indian residents. Remittances to India are unrestricted.

THAILAND

The annual quota is 200 and the selection is made by the Government's Immigration Division in Bangkok.

There are no legal or constitutional disabilities on the Indian population.

Remittances out of the country are controlled by the Bank of Thailand's rules and regulations.

U.S.A.

The U.S.A. has fixed a quota of 100.

There are certain categories of aliens who are excludable under Section 212 of the Immigration and Nationality Act. These exclusions apply to both immigrants and non-immigrants, though there are exceptions and certain discretionary powers are vested in the Attorney General and the Secretary of State.

The following classes broadly among others are excluded: feeble-minded, insane, mental defective, drug addicts, chronic alcoholics, those with dangerous contagious diseases like leprosy, or convicted for crimes involving moral turpitude, polygamists, anarchists, those who advocate or teach or are broadly associated with communism or with those who attempt to overthrow by violence the government of U.S.A.

There are a variety of requirements which must be met before an immigration visa can be issued. The first is the registration of the intending immigrant on the quota waiting list at a diplomatic or consular office of the United States. These offices are located in New Delhi, Bombay, Calcutta and Madras within India.

Within each quota there are four preference categories which may be stated briefly as follows: First Preference—Immigrants possessing special skills or training and their spouses and children. Second Preference—Parents and unmarried sons and daughters (over 21 years of age) of American citizens. Third Preference—Spouses and children of aliens admitted to the United States for permanent residence. Fourth Preference—Brothers, sisters, and married sons and daughters of American citizens.

Parenthetically, it may be stated that the spouses and children (who are both unmarried and under age 21) of American citizens are admitted on a non-quota basis. For the above preference categories, as well as for non-quota immigrants, petitions must be filed with and be approved by, the Attorney General of the United States.

In the annual allocation of a quota, the law requires that 50 per cent be allocated to the first preference, 30 per cent to second preference and 20 per cent be allocated to third preference. If any quota numbers are unused in the preference categories, they are used to satisfy shortages in first, second or third preference. It is only after all demands for first, second and third preference have been filled that numbers are available for fourth preference and non-preference categories. Of these remaining numbers, 50 per cent are allocated to fourth preference and 50 per cent to non-preference. It must be emphasized that under the Indian quota, the demands for first, second, and third preference have been so high that no numbers have been allocated to fourth preference and non-preference for several years. At present, there are waiting lists also for first and third preference on the Indian quota.

An immigrant, regardless of race, colour or creed, admitted into the United States as a permanent resident alien is eligible for American citizenship, if he fulfils the resident and other requirements laid down in the Immigration and Nationality Act of 1952, as amended.

It may be mentioned that one person of Indian birth who has become a naturalized citizen of the United States is now a member of the House of Representatives for the second time (Nov. 1960), Mr. D. S. Saund. There are no restrictions on the remittance of American funds abroad.

OTHERS

Indonesia has fixed a quota of 1,000 immigrants for a group of four countries, India, Pakistan, Ceylon and Burma. It is, however, entirely at the discretion of the authorities to permit individuals to immigrate.

Indians can go and live in Switzerland subject to the laws in force.

A TOURIST'S GUIDE*

For all information and assistance, visitors are advised to contact the Government of India tourist offices in India. The representatives of the Tourist Department are stationed on duty at the airport and in the case of Bombay a representative of the Tourist Office always meets all important passenger liners.

At the time of writing (March 1961), the 1961 Census are in progress. Population figures given in this article are for 1951. For 1961 figures see 'Late Particulars'.

In the second half of the article we give a list of places which have come into prominence through post-independence development activity —mostly connected with the Five Year Plans.

THE following hints meant for foreign tourists may be useful:

1. Every foreign tourist entering India should be in possession of a valid passport issued by his Government.

He should also obtain before leaving his country a tourist visa from the Indian representative abroad (or the British representative in countries where there are no Indian representatives). Commonwealth citizens (except those of Pakistan and Ceylon) are exempt from the visa requirement, provided their passports are valid for travel to India. Persons of non-Indian origin domiciled in South Africa are, however, required to obtain entry permits.

Transit visas are not required for through air/ship passengers in direct transit by the same flight or by the next regularly scheduled flight irrespective of whether the flight is of the same or a different Airline, provided the period does not exceed 72 hours and they leave from the same place. One can however leave the airport or ship by obtaining a landing permit for 72 hours on depositing his passport.

The normal period of stay cannot be stated. It depends upon the stay period granted by the visa issuing authority.

Normal period of stay on transit visa is 15 days.

No hard and fast rule can be laid down as regards the extension of visas. It will depend on the merits of each case. However, genuine tourists can stay for a maximum period of six months.

For short visits not exceeding 2 weeks to Pakistan, Nepal or Ceylon and Burma tourists may obtain return visas from the Deputy Commissioner of Police, Special Branch II, C.I.D., Bombay or from State Governments. For visits exceeding 2 weeks, they may apply for 'no objection' to return to India endorsements to the Deputy Commissioner of Police, Special Branch II, C.I.D., Bombay or Government. However in such cases they will have to obtain visas from the Indian authorities abroad before entering India.

2. No registration is required for foreigners staying in India for 30 days or less provided they have come on visas for less than 3 months. If they land in India with visas for more than 3 months stay, then they must report for registration within 7 days.

Those coming on visas for less than 3 months stay must get themselves registered with the Police immediately after the expiry of 30 days irrespective of the place where they landed. However, on request being made, registration can be done even before the expiry of 30 days.

3. The Government of India have placed no health restrictions on persons entering India by sea or air, except in regard to yellow fever.

However, all persons are advised, in their own interest, to be protected against small-pox and cholera according to international requirements.

Citizens of the U.K., Australia, Canada, New Zealand, Federation of Rhodesia and Nyasaland, Singapore, Malaya, Ghana and Ireland (Eire), excluding missionaries, and nationals of Nepal, wishing to proceed to India from a place other than Nepal, are required to possess valid passports without visas.

Nepalese, Bhutanese, Portuguese, Indians (Goans) and inhabitants of border districts of Tibet Region of China, when proceeding from their respective countries, require no passport or visa.

Nationals of Commonwealth countries (except Pakistan and Ceylon) and of the Republic of Ireland wishing to proceed to India for missionary work require special endorsements, while nationals of non-Indian origin in South Africa require special permits.

Nationals of all other countries require valid passports with visas. No visa is required for visitors in direct transit by air or sea within 72 hours from the same port.

* NOTE: When the population of a town is not given it may be generally assumed that it is less than 20,000.

Foreign exchange earnings through tourist traffic was about Rs. 18 to 20 crores, in 1958.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Individuals without nationality or of undetermined nationality (Stateless persons, IRO refugees, persons receiving legal and political protection, holders of Nansen passports, etc. should have valid identity documents or sworn affidavits with visas.

Diplomats when travelling as tourists receive the same facilities as their countrymen.

Collective passports and family passports issued by other Government are recognised by the Government of India.

Visas are generally valid for a single journey only, but visitors who wish to proceed on short trips to other countries and return to India within the period of validity of the Indian visa, should apply for double or triple entry visas or entry-cum-transit/transit-cum-entry visas. If a visitor coming on short term visas wishes to extend his stay in India, he can, after arrival in India, apply for further extension of stay.

Foreigners who come on visits not exceeding three months for recreational or sightseeing purposes or for attending meetings convened by the Government of India or international bodies should, in their own interest, apply for tourist visas and not entry visas. Holders of tourist visas are entitled to the grant of Tourist Introduction Cards and facilities for liquor permits, reservation of accommodation in Government-owned Rest Houses and Retiring Rooms at railway stations, etc.

Foreigners who wish to break journey in India for short periods while in transit, should apply for transit visas which are issued for a maximum period of 15 days and entitle the holder to travel from the port of entry to the port of departure by a prescribed route which is not necessarily the shortest one.

Visitors holding tourist visas are advised to obtain from the visa issuing authority a printed Tourist Introduction Card. In case a bona fide tourist has not already obtained a Tourist Introduction Card from the visa issuing authority, he can obtain one from one of the Government of India Tourist Offices in India or overseas.

This card introduces the tourist to various Governmental authorities in India and will enable him to receive all possible assistance from them in matters concerning immigration, customs, clearance, air and rail reservations, liquor permits and reservation of accommodation in rest houses, dak bungalows and retiring rooms in railway stations.

4. All baggage is open to customs examination. The duty payable on most articles varies from 5 per cent to 150 per cent or more according to the article.

Certain personal effects are allowed to enter free. Also alcoholic liquor up to one quart, and one bottle of new, provided the tourist can procure a permit on arrival by producing his Tourist Introduction Card. Liquor permits are issued to tourists at the Santa Cruz Airport, Bombay and at Ballard Pier, on application immediately on landing. Failing this, the permit may be obtained from the Foreign Liquor Permit Office, Old Customs House, Mint Road, Fort or from the excise official at the following hotels: Taj Mahal, Greens, Ambassador, Grand, West End and Ritz.

5. Tourists are allowed to bring into India Rs. 75 in Indian money and foreign currency notes without licence or coins subject to declaration except in the cases specified below:

Indian coins from Pakistan Rs. 5 in value, Indian coins from Afghanistan Re. 1 in value. There is no limit on the amount of Travellers' Cheques.

The official rates of exchange are as follows: £1 equal to Rs. 13·33; U.S. $1 equal to Rs. 4·75. The actual buying and selling rates, however, differ slightly from these rates.

Foreign currency can be exchanged at any authorized dealer or money changer.

A foreign tourist can get a coupon booklet worth Rs. 125 with which to buy photographic films, tobacco and alcoholic drinks at specified places.

6. Tourists are advised to arrange for clearing their baggage by one of the recognized travel agencies.

On production of a certificate from an authorised officer of the Tourist Department of the Government of India, foreign tourists are allowed a concession of 25 per cent in air-conditioned fares and 'Travel As You Like' ticket on the Indian Railways, available for 30 days in an air-conditioned class of accommodation and in first class where air-conditioned accommodation was not available at a lump sum rate of Rs. 495.

Additional concessions for tourists:

Alcohol:—As an alternative to the allowance admissible under the rules, a tourist may be allowed to avail himself of a free allowance of one quart spirits.

Sporting Fire-arms:—Not more than four sporting fire-arms brought in by a tourist are allowed free of duty. These must, however, be covered by a surety of a Scheduled Bank or any Clearing Agent undertaking to re-export them within a period of 6 months.

Cartridges:—100 cartridges are allowed duty-free under the normal rules. Each tourist is allowed to bring in 300 (in all) cartridges, on payment of customs duty, in excess of 100, but without an Import Trade Control Licence.

Film:—Besides the 25 rolls of film for still cameras and 8 reels of substandard movie films which are allowed duty-free under the normal rules, each tourist can import 25 rolls of film for still cameras without I.T.C. and 12 reels of movie film on payment of duty but with an Import Licence.

TRAVEL AGENCIES

Here is a list of recognized agencies:

Indtravels Private Ltd., Neville House, Nicol Road, Ballard Estate, Bombay-1; American Express Co. Inc., Orient Building, Dr. Dadabhoy Naoroji Road, Bombay-1; Asiatic Travel Service, 12, Marzban Road, Bombay-1; Cox & Kings (Agents) Ltd., Lloyds Bank Building, D. Naoroji Road, Bombay-1; Hind Musafir Agency (Jamna Lal Sons), 51, Mahatma Gandhi Road, Bombay-1; Jeena & Co., 10, Veer Nariman Road, Bombay-1; Lee & Muirhead (India) Private Ltd., 12, Rampart Row, Bombay-1; N. Jamnadas & Co., 16, Bank Street, Bombay-1; Thos. Cook & Son (C & O) Ltd., H. O. Cook's Building, D. Naoroji Road, Bombay-1; Trade Wings (Private) Ltd., 30, Rampart Row, Bombay-1; B. O. 15, Old Court House Street, Calcutta-1; Balmer Lawrie & Co. Ltd., 5, Graham Road, Bombay-1; H. O.: 21, Netaji Subhas Road, Calcutta-1; Mercury Travels (India) Private Ltd., 70, Rampart Row, Bombay-1; H. O.: Grand Hotel, P.O. Box 925, Calcutta-1; Orient Express Co. Private Ltd., 359, D. Naoroji Road, Bombay-1; H. O. Janpath, New Delhi; Vensimal Bassarmal Travel Agents, 521, Kalbadevi Road, P.O. Box No. 2112, Bombay-2; G. Raghunathmull Bank Ltd., Hyderabad Deccan; Bharat Travel Service, Ltd., 310/311, Linghi Chetty Street, Madras-1; Ram Mohan & Co. Ltd., National Travel Service, P.O. Box 1723, Madras-1; Iyer & Sons Ltd., United India Building, Connaught Place, New Delhi; Everett Travel Service, Great Eastern Hotel Accade, Old Court House Street, Calcutta-1; National Travel Agency, Mercantile Building, 9 & 10, Lal Bazar, Calcutta-1; Harrison & Crossfields, Cochin; Saha & Rai Travels, New Delhi; Sita World Travel Inc., Hotel Imperial, Janpath, New Delhi.

SHIKAR OUTFITTERS

The following is a list of recognised shikar outfitters: Indian Shikar & Tours (P) Ltd., Jumna Bhawan, 3/14A, Asaf Ali Road, New Delhi; Allwyn Cooper (P) Ltd., Wardha Road, Nagpur; Asaf Ali of Porla, Porla, Distt. Chanda, Maharashtra; Jungleways, Prop.: Lt.-Col. S. A. H. Granville, Pachmarhi, M.P.; Tiger Camps (P) Ltd., Dumri, P.O. Sardarnagar, Distt. Gorakhpur, U.P.; Dr. Franklyn Woods, 49, Danning Road, Jabalpur, M.P.; Big & Small Game Hunting, Prop.: Thakur Dharamchandra, Kesaragarh Castle, Jaipur, Rajasthan; Safaris India, Prop.: P. M. Dinshaw, 102, Simrole Road, Mhow; Shikarees, Prop.: Nawabzada M. F. Khan, Bashirbagh Palace, Hyderabad; P. C. Dhir Birbar, Prop.: Shikar India, Talcher, Dhenkanal, Orissa; Hunters & Hunters, Ark Royal, 50/B, Peddar Road, Cumballa Hill, Bombay-26; Rajput Hunters, Kishangarh, Rajasthan; Lajinder Singh Bedi, 1/23, Asaf Ali Road, New Delhi; Umesh P. Verma, P. O. Dewan-ji-ka-Shikarpur, Champaran, Bihar; A. Imam, "The Grove", P.O. Hazaribagh, Bihar; O. R. Lincoln, 255, Denning Road, Jabalpur, M.P.; Game Trails India, P. Box No. 15, Bhopal (M.P.).

TOURIST OFFICES

The following is a list of Government of India tourist offices in India and abroad:

Director, Govt. of India Tourist Office, 123, Queen's Road, Bombay-1.

Director, Govt. of India Tourist Office, 88, Janpath, New Delhi.

Director, Govt. of India Tourist Office, 13, Old Court House Street, Calcutta.

Director, Govt. of India Tourist Office, 35, Mount Road, Madras.

Manager, Govt. of India Tourist Office, Krishna Vilas, Station Road, Aurangabad.

Manager, Govt. of India Tourist Office, Plot No. 5, Hamidia Road, Bhopal.

Manager, Govt. of India Tourist Office, The Mall, Agra.

Manager, Govt. of India Tourist Office, 15-B, The Mall, Banaras.

Manager, Govt. of India Tourist Office, 16-A, Mahatma Gandhi Road, Bangalore.

Manager, Govt. of India Tourist Office, Willingdon Island, Cochin-3.

Manager, Govt. of India Tourist Office, Tourist Bureau Building, Chaurastha, Darjeeling.

Manager, Govt. of India Tourist Office, Circuit House, Jaipur.

Director, Govt. of India Tourist Office, 28, Cockspur Street, Trafalgar Square, London S.W. 1.

Director, Govt. of India Tourist Office, 19 East, 49th Street, New York, 17, N.Y.

Manager, Govt. of India Tourist Office, 685, Market Street, San Francisco 5, California.

Director, Govt. of India Tourist Office, Indisches Verkehrsburo, Baseler Stress, 461, Baseler Houchhous, Frankfurt/Main, W. Germany.

Manager, Govt. of India Tourist Office, Leonard House, 46, Elizabeth Street, Melbourne (Australia).

Manager, Govt. of India Tourist Office, Ceylon Banks Building, York Street Fort, Colombo.

Director, Govt. of India Tourist Office, 5, Boulevard, Paris-9.

Information Assistant, Govt. of India Tourist Office, Jalgaon, East Khandesh.

Director, Govt. of India Tourist Office, 177-79, King Street (West), at University, Toronto, Canada.

TOURIST CENTRES

Mount Abu (hill station): Pop. 4,316 (1951) in Rajasthan, about 4,000 feet above sea-level. There are two seasons in the year, the first from the middle of March to the beginning of June, and the second from the middle of September to the end of October. *Places worth a visit:* 1. the Dilwara Jain temples (11th-13th century, A.D.) containing the finest marble carvings in India, 2. Achalgarh temples (15th-16th century, A.D.) and Mandakini Kund, 3. Ruins of an ancient

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

town called Chandravati, 4. Nakki Talao (lake), 5. Arbuda Devi, a shrine cut in rock, 6. Guru Shikhar (5,646 ft.), highest point in Abu, 7. Sunset point, 8. Palanpur point, 9. Gaumukh Temple and Agni Kund, 10. the Municipal Park. Mount Abu is electrified and has waterworks with public utility taps. Permission is required to use the dak bungalows and Inspection Houses. Mount Abu is reached by railway and road. The nearest railway station is Abu Road on the metre-gauge section of the Western Railway from Ahmedabad to Delhi. From the station Abu Road is about 17½ miles by road, and there is regular motor service between the town and the station.

Agra : Pop. 375,665 (1951), a city in U.P., stands on the banks of the Jamuna. It was the capital of the Moghul Empire. *Places worth a visit :* 1. the Taj Mahal, regarded by many as the most beautiful building in the world. 2. the Fort, 3. the Juma Masjid, 4. Moti Masjid, 5. the tomb of Itmad-ud-Daula, 6. Akbar's tomb at Sikandra about five miles from Agra, 7. Dayal Bagh, 8. Twenty-three miles from Agra is the deserted city of Fatehpur Sikri founded by Akbar.

Ahmedabad : in Gujarat is the second largest textile centre in India. It contains numerous monuments of the fifteenth and sixteenth centuries. Pop. 788,333 (1951).

It is also a seat of Jaina art and culture. Founded in ancient times as Karnavati on the banks of the Sabarmati, it took a new look and a new name—City of Ahmed in the early 15th century. Many remains of buildings and architecture bear testimony to the synthesis of Indo-Islamic culture. Places worth visiting are: 1. Jumma Musjid (1423); 2. Shah Alum's Mausoleum (1475); 3. Rani Sipri's Mosque (1540); 4. Mosque of Sidi Sayyad (1572) for traceried windows with palm and parasite design; 5. Shaking Minarets; 6. Shahi Baug where Gurudeo Tagore stayed during his youth and which supplied him with material for his *Hungry Stones* (story); 7. Teen Darwaza (three Gates); 8. Mahatma Gandhi's Sabarmati Ashram; 9. Kankaria Tank; 10. Gujarat University & Gujarat Vidyapitha; 11. ATIRA, Textile Research Institute.

Aiholi : near Bagalkot in Mysore State contains about fifty temples important in the development of Hindu architecture and sculpture.

Badami, on which there is a separate note, is near Aiholi.

Ajanta Caves : are 66 miles north of Aurangabad in Maharashtra. The rock-cut caves are 29 in number (5 chaityas or shrines and 24 viharas or monasteries, all Buddhist) and present a record of a unique combination of painting, sculpture and architecture of a period extending over nine centuries from about the 2nd Century B.C. to about 7th Century A.D. The caves can be reached from Aurangabad where there is a good hotel conducted by the Central Railway.

Ajmer : city of considerable antiquity in Rajasthan, Hindu and Muslim religious centre, contains Western Railway workshop. Pop. 196,633 (1951). *Places worth a visit :* 1. the Durgah of Khwaja Sahib (tomb of Muslim saint), 2. the Magazine (Akbar's old palace now museum), 3. Ana Sagar Lake (the marble pavilions round the lake were built by Shah Jehan), 4. Adhai-din-ka-jhopra (Hut of two and a half day), 5. Taragarh (Fortress built by Akbar), 6. Mayo College, 7. Pushkar, a most sacred lake in India, is about seven miles away.

Allahabad: (also called Prayag); city in U.P. situated at the confluence of the Ganga and the Jamuna. It has an old fort and an Asoka pillar. Sixty-five miles from Allahabad is Kosambi, where the ruins of an ancient capital are being excavated. Pop. 332,295 (1951).

The confluence of the Ganga and Jamuna at Prayag is the holiest bathing place for Hindus in India. Every 12 years, Kumbha Mela (religious fair) is held attracting over 40 lakhs of pilgrims during the four weeks; a smaller fair occurs every six years—Adha Kumbhi. For the devout Hindu, Allahabad along with Banaras, and Gaya are the places he must visit, at least once during his lifetime.

The old Mughal Fort contains an underground temple where well carved images are seen and the pilgrims worship at a small tree taking it to be the Eternal Banyan Tree (Akshaya Vata.)

Allahabad has a large University and many educational institutions. It is the home town of the Nehrus, and their gift to the nation, Swaraj Bhavan which was their home is visited by many people throughout the year.

Almora: headquarters of the district of the same name, in U.P. 83 miles from Kathgodam Railway Station, it is the main town in Kumaon Hills (q.v.). Perched at an elevation of 5,600 ft., it is about two miles in length, like a saddle, and is said to have been founded four hundred years ago by Raja Kalyan Chand. Of all the hill stations in the area, Almora is the one which has the most attractive features: moderate rain-fall, temperate climate, the temperature seldom rising above 88°F., even during the summer days, and comparative freedom from fog. Within easy distance of Almora are many Himalayan peaks—Seehee Debi, Bandnee Debi and Binsar being the chief ones. Binsar Hill also known as Jhandi Dhar is only 13 miles from Almora and the bridle path leading to it, passes through enchanting jungle scenery. With its thick vegetation, dense Alpine forests, hundreds of unnamed wild flowers and many varieties of ferns, Jhandi Dhar is of peerless beauty.

Pindari Glacier can be reached from Almora at a distance of 75 miles, in eight stages, attaining an altitude of 13 to 14,000 ft. The most suitable time for this trip is either May-June or September-October.

Two other places in the Kumaon Hills are: Ranikhet and Naini Tal.

Cultural Institutions in Almora: Mayavati Ashram of the Ramakrishna Math; Shri Anand Mayee Ashram and Udaya Shankar's Dancing Institute.

(See also 'Kumaon Hills', 'Naini Tal' and 'Ranikhet'.)

Alwar, Bikaner, Jodhpur, Kotah : famous for Rajput historical monuments.

Amritsar: city in the Punjab, sacred to the Sikhs. Pop. 325,747 (1951). Amritsar is the very centre of the Sikh religion and has a big trade in grain and textiles. *Places worth a visit :* 1. the Golden Temple, 2. Baba Atal Tower, 3. Akal Takht, 4. Ram Bagh Gardens, 5. Fort Govind Garh, and 6. Jalianwalla Bagh Memorial.

Aurangabad : in Maharashtra is noteworthy because of its proximity to Ellora and Ajanta caves and Daulatabad fort. *Places worth a visit are :* 1. Bibi-ka-Muqbara—the tomb of Aurangzeb's wife which is a replica of the famous Taj, 2. Panchakki (old water-mill), 3. The shrine of Shah Musafir lies nearby, 4. Eight Buddhist caves near the town. Pop. 66,636 (1951).

Daulatabad, on which there is a separate note, is near Aurangabad.

Badami: in Mysore State, is famous for sculptured caves of the 6th century and for a group of Hindu temples. Fifteen miles from Badami is Pattadakal with another group of early Hindu temples (7th or 8th century), examples of pure Dravidian architecture.

Aiholi, on which there is a separate note is near Badami.

Bangalore: Largest city in Mysore and a health resort, is about 3,000 feet above sea-level. It is well laid-out and up-to-date with every urban facility. *Places worth a visit :* 1. Cubbon Park, 2. Lal Bagh, 3. Band-stand, 4. Race Course, 5. Maharaja's Palace, 6. Tippu's Palace, 7. Venkataramanaswamy Temple, 8. Vidhan Soudha (new Secretariat). Pop .778,977 (1951).

Lately a large number of industries have been established both by Government and private interests:

Bharat Electronics, Hindustan Aircraft, Hindustan Machine Tools, Indian Telephone Industries.

The Indian Institute of Science is a leading teaching and research body in India.

From Bangalore trips can be made to other places of interest—Belur, Halebid, Bhadravati (for the iron works) and Kolar Gold Fields.

Baroda : Capital of the former Baroda State, now part of Gujarat State, is about 250 miles to the north of Bombay, pop. 211.407 (1951). *Place worth a visit :* 1. Laxmi Vilas Palace (the residence of the Maharaja, one of the most beautiful palaces in India), 2. Old Nazar Bagh Palace, 3. Museum and Public Park, 4. Jubilee Garden, 5. L. F. Battery, 6. Kirti Mandir, 7. Baroda University, and 8. Kala Bhavan (Technical School).

Belur: in Mysore State, noted for its elaborately sculptured temples of the Hoysala period.

Halebid, on which there is a separate note is near Belur.

Banaras* : town in U.P. on the banks of the Ganges, very sacred to the Hindus and Buddhist alike. It is in fact the religious capital of Hindu India and contains about 1,500 comparatively large temples besides countless minor shrines. It is also reputed to be the oldest city in the country. Pop. 355,777 (1951). *Places worth a visit:* 1. Vishwanath Temple, 2. Bharat Mata Temple, 3. Manmandir, with Jaisingh's Observatory, 4. Aurangzeb's Mosque, 5. Gyan Wapi, 6. Nandeswar Kothi, 7. Ramnagar Fort, 8. Banaras Hindu University, and 9. Sarnath, a great Buddhist centre with many architectural remains, is about six miles from Banaras. The Budha preached his first sermon here.

There are also about 30 dharmasalas for Hindu pilgrims. Banaras is on the branch line from Moghul Sarai to Saharanpur.

Bharatpur : town in Rajasthan is famous for its historic fort. Pop. 37,321 (1951).

Bhubaneshwar : the new capital of Orissa, is a city of temples once said to number 7,000. *Places worth a visit :* 1. Lingaraj Temple, 2. Mukteshwar Temple, 3. Parasurameswar Temple, 4. Raj Rani Temple. Nearby are the Jain and Buddhist rock-cut caves of Khandagiri and Udayagiri and Asoka's Rock Edict at Dhauli. Bhubaneshwar is on the main S. E. R. line between Waltair and Howrah, about 20 miles from Cuttack and 38 miles from Puri.

Bijapur : town in Mysore State, capital of the old Adilshahi Sultans of Bijapur is rich with the remains of palaces, mosques and tombs. *Places worth a visit :* 1. Jami Masjid (the greatest mosque in South India), 2. Gol Gumbaz (the tomb of Mahammad Adil Shah and the second largest dome in the world), also called the Whispering Gallery, 3. Mehtar Mahal, 4. Ashar Mahal, 5. Gagan Mahal, 6. Chini Mahal, 7. Mecca Masjid, 8. Tas-Bavry (water-tank), 9. Malik-I-Maidan (Great Gun), 10. Landi-Kasab Gun, 11. Haidar Burj (tower), 12. Ibrahim Roza (the tomb and mosque of Ibrahim II), 13. Jala Mandir (reservoir), 14. Chand Bavri (old tank), 15. Granary, 16. Jod Gombaz (double tombs), 17. Bara Kaman Masjid, and 18. Begum Tank. Bijapur is a railway station on the Gadag-Sholapur section of the Southern Railway. There are a dharmasala and a travellers' bungalow about one and a half miles from the station. Pop. 65,734 (1951).

Bombay : second city and port in India called the Gateway to India. Pop. : over 3 million; Area (Greater Bombay) 174 sq. miles. It is the principal centre of the textile industry, and the second biggest financial centre. The foreign trade of Bombay is about 46 per cent of the total trade of India. The city returns 30 per cent of the country's total income-tax, and 20 per cent of the corporation tax. It is an important communications centre, served by several

* The official name is Varanasi.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

air-lines and two big railways of both of which it is a terminus. May and October are the hottest months, but from November to March it is pleasant. *Places worth a visit:* 1. the Gateway of India, 2. Apollo Bunder, 3. Prince of Wales Museum, 4. the Town Hall, and Central Library 5. Rajabai Tower and University Building, 6. Victoria Terminus of the Central Railway, 7. the General Post Office, 8. Crawford Market, 9. Brabourne Stadium, 10. Chowpatty sands, 11. Malabar Hill, Hanging Gardens and Kamala Nehru Park, 12. Central Station, Terminus of the Western Railway, 13. Race Course, 14. Bhandarwada Reservoir and Gardens, 15. Victoria Gardens and Albert Museum. Places near Bombay worth a visit: 1. Juhu (sea-side resort), 2. Versova (sea-side resort), 3. Vihar Lake (from which the city gets part of its water-supply), 4. Kanheri Caves (rock-cut caves of Buddhist origin), 5. Jogeshwari Caves, 6. Vajreshwari (temple and hot springs of medicinal property), 7. Mandapeshwar (cave temple), 8. Nirmal (temple and lake), 9. Ambarnath (temple), 10. Pawai Lake and the Technical Institute, 11. Pali (hot springs and small game shooting), 12. Elephanta Caves, 13. Vaitarna (water supply scheme), 14. Aarey Milk Colony, 15. The oil refineries at Trombay, 16. The Atomic Energy Establishment at Trombay. The chief means of conveyance in Bombay are trams, buses, electric railway, taxis and gharis.

Brindavan: See under Mathura.

Budh Gaya: near Gaya, in Bihar, a Buddhist centre of pilgrimage. It contains the famous mediæval Buddhist temple near the Bodhi Tree under which Gautam did penance and attained Enlightenment. Pop. 133,700 (1951). See also Gaya.

Bundi: in Rajasthan is well-known for its buildings. Jungles nearby provide plenty of tiger shooting. Pop. 22,697 (1951).

Calcutta: until March, 1912, the headquarters of the Indian Government, and now, as then, the commercial capital of India. It is the terminus of three great railways, and the port of an immense river traffic. Though it lies 84 miles from the Bay of Bengal on the River Hooghly, it has a larger foreign trade than any other Indian port, and its enterprising Port Trust has the largest revenue among Indian port authorities. It is the centre of five great industries—jute, tea, hides and skins, coal and lac. Its exports include besides these, rice and linseed. Population of West Bengal is 26.16 millions and of Greater Calcutta 4,578,071. *Places worth a visit:* 1. Victoria Memorial (contains a picture-gallery and museum), 2. the Indian Museum, 3. the Zoological Gardens, 4. the Jain Temple, 5. the Kalighat Temple, 6. Belvedere House (where the British Viceroys stayed when on visit to Calcutta), now the National Library, 7. Raj Bhavan (residence of the Governor of West Bengal), 8. Marble Palace (containing art treasures property of the Mullik family), 9. Fort William, 10. the Eden Gardens, 11. the Town Hall, 12. Haig Market, 13. Dalhousie Square, 14. the Race Course, 15. Dhakuria Lake, 16. the Hindu bathing ghats, 17. Dakshineshwar Temple. Places near about Calcutta which are worth a visit are: 1. Bally (holy place), 2. Belur (home of the Ramakrishna Mission), 3. the Botanical Gardens (contains the biggest banyan tree in existence), 4. Diamond Harbour (fort and customs house), 5. Dum Dum (airport of Calcutta).

Cape Comorin: also called Kanya Kumari in Madras State, is the southern-most tip of India.

It is the place where the Arabian Sea and the Bay of Bengal meet the Indian Ocean. Tourists go to have a view of sun-rise and sun-set.

It is easily reached from Trivandrum by public transport buses or private conveyance.

The spot is sacred to the Hindus and a place of pilgrimage as the reputed abode of Kanya Kumari the virgin goddess to whom the temple there is dedicated.

Chandigarh: capital of East Punjab is the youngest of Indian Capital cities. It was planned by the French architect Le Corbusier. Some of its public buildings are unique and therefore attract a lot of attention from students of town-planning. Chandigarh is situated near Kalka railway station of the Northern Railway.

Conjeevaram (Kanchipuram): the city of temples, the Banaras of the South, is about 45 miles to the south-west of Madras. It is one of the seven holy cities of India and the only one in the South. The place is divided into three parts, Shiva Conjeevaram, Vishnu Conjeevaram and Pillayar Paliyam, a testimony to the part played by all the main Hindu religious sects in the history of the city. There are over a thousand temples in all. *Places worth a visit:* 1. Kailasnath Temple (over 1,000 years old), 2. Vaikunth Perumal Temple (over 1,000 years old), 3. Ekambareswar Temple (400 years old), 4. Vedaraja Perumal Temple. Pop. 84,810 (1951).

Conjeevaram is on the Renigunta-Chingleput section of the Southern Railway and is easily accessible from Madras *via* Chingleput.

Cooch-Behar: in West Bengal, is known for the facilities and opportunities which it offers to shikaris in search of big game hunting. Pop. 33,242 (1951).

Coonoor: hill station on the Nilgiri Hills in Madras State, is about 6,000 feet above sea-level. The climate is mild and genial neither too hot in the summer nor too cold in the winter. The mean day temperature is 64 degrees. The north-east monsoon breaks in October and lasts about two months. The town has good water-supply and natural drainage facilities and is reputed to be one of the cleanest towns in South India. *Places worth a visit:* 1. Sim's Park (contains collection of plants), 2. Low's Waterfall, 3. Tiger Rock (hill fort). There are innumerable places for excursion and picnic purposes, *e.g.* the Droog, the Dolfin Nose, the Lamb's Rock, Laz Falls, Lady Canning Seat, the Ralliah Dam and Catherine Falls. The chief means of conveyance are cars which can be hired.

Coonoor lies on the narrow-gauge Mettupalayam-Ootacamund line of the Southern Railway. It is also connected by road with Ootacamund, and Kotagiri, another hill station. Pop. 23,902 (1951).

Darjeeling: hill station in West Bengal, lies on the lower slopes of the Himalayas about 370 miles to the north of Calcutta. It is 7,110 feet above sea-level. The maximum temperature in the summer is about 70 degrees and the minimum in the winter is about 35. The town commands picturesque views including that of Mount Kanchenjunga and on a clear day of Mount Everest. Various sports are available during the season such as fishing, shooting and horse-riding. Darjeeling has also a first-class sanatorium known as Eden Sanatorium. *Places worth a visit:* 1. Government House, 2. Town Hall, 3. Museum, 4. Observatory Hill (from where a magnificent view of Kanchenjunga can be obtained), 5. the Mall, 6. Natural History Botanical Gardens, 7. Birch Hill Park, 8. Senchal Lakes, 9. Ghoom Monastery, 10. Tiger Hill (from where the sunrise over Everest is generally viewed on clear October mornings).

Darjeeling is the terminus of the meter-gauge Darjeeling-Himalayan section of the N.E. Railway and is about 27 hours' journey from Calcutta. From Siliguri where the visitor has to change, Darjeeling can also be reached by car. Pop. 33,605 (1951).

Daulatabad: in Maharashtra near Aurangabad, contains the famous rock-hewn 12th century fortress at one time so prosperous that it led Muhammed Tuglak to shift his capital to it from Delhi (1308). Close by is the tomb of the Moghul Emperor Aurangzeb.

Delhi (New): the capital of India and the seat of the Union Government. It was planned in accordance with modern ideas by the architects Sir Edwin Lutyens and Sir Herbert Baker and was formally opened in 1931. New Delhi houses the President's House (now called Rashtrapati Bhavan), the Parliament, and the Secretariat. All the buildings in New Delhi are white except the ones mentioned above. These latter are built of red sandstone. Pop. 276,314 (1951).

Delhi (Old): also called Shahjahanabad, the ancient capital of India stands on the Jamuna and is enclosed by a stone wall with seven gates. It has a history going back to 3,000 years and within an area of 50 square miles eight Delhis rose and fell. The seven predecessors of present-day Delhi are Kutub, Siri, Tuglakabad, Jahanabad, Firozabad, Purana Quila and Shahjahanabad. No city in India contains as many historical remains as Old Delhi. One can trace here the growth and decay of almost every dynasty which held sway over the ancient land of Hindustan. There are a number of factories, jewellery, gold and silver embroidery and ivory carvings works for which Delhi is well-known. Pop. 914,790 (1951). Delhi is a great distributing centre for cotton, wool and silk. Industries include hardware, utensils and stoneware. Delhi is also a large market for grain. Lately tourist traffic has grown into a regular new trade. *Places worth a visit:* Red Fort, Jama Masjid, Rajghat (Mahatma Gandhi's Samadhi), Ashoka Pillars, Feroze Shah Kotla, Purana Quila, Humayun's Tomb, Isa Khan's Tomb, Lodi Park and Lodi Tombs, Safdar Jang's Tomb, Kutab Minar, Tughlaqabad, India Gate or War Memorial Arch, Rashtrapati Bhavan, Parliament House, National Museum, Shri Lakshmi Narayan Temple, Jantar Mantar or the Observatory.

Delhi is directly connected by rail and air with Bombay, Calcutta and Madras. The Central and Western Railways connect it with Bombay, the Northern and Eastern Railways with Calcutta, and the Southern and Central Railways together with Madras.

Delhi also lies on the direct East-West trans-world air routes linking India with all the major cities of the world.

Elephanta Caves: on an island of the same name, about 6 miles from Bombay harbour, are mainly dedicated to Shiva and the sculpture shows that God in His many forms. These belong to the 7-8th century and though there have been mutilations of the figures, the caves are well preserved considering they are very old. The main cave, almost 125 ft × 125 ft, is the only impressive structure, and the rest of the island is used more as a picnic spot by holiday makers. There is a launch service as well as a ferry steamer. An official of the Archaeological Department is available on the spot.

The main figure of three-heads, Mahesh Murti, is considered among the world's most impressive sculpture, for its size, beauty and execution.

Ellora Caves: are situated about 15 miles to the north-west of Aurangabad in Maharashtra. The caves which are excavated in the face of a hill are 34 in number and run north to south for a distance of a mile and a quarter. The hill has the shape of a crescent the southern, the centre, and the northern being occupied respectively by Buddhist, Hindu and Jain temples. There are 12 Buddhist caves, 17 Hindu caves and 5 Jain caves. The Hindu caves are more lavishly decorated than others and Kailash Temple which is the most impressive is also the biggest cave temple in India. It stands in a court averaging 154 feet wide, 276 feet long with a scrap 107 feet high at the back. Among other notable caves are caves X, XII, XIV, XV, XXIX, XXXIII, XXXIV. It is believed that the Ellora Caves are about a thousand years old. They are reached from Aurangabad by bus or car. Thrishneshwar temple near the caves is an important place.

Ernakulam: in Kerala State, is famous for its backwaters. Pop. 62,283 (1951).

Fatehpur Sikri: City founded by Akbar in 1569 but abandoned soon after, is situated 23 miles from Agra. Akbar wished to make it his capital but it had to be abandoned because of lack of water. Here Akbar's son Salim (Emperor Jehangir) was born. The place contains a number of palaces, shrines, mosques built of marble and red sandstone. *The more notable among the monuments are:* 1. Buland Darwaja,

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

the Gateway of Victory, built to commemorate the conquest of Khandesh. It is 176 feet high and is the highest gateway in India. It forms the southern gateway to the most imposing structure in Fatehpur Sikri, 2. the Jami Masjid, said to be a copy of the mosque at Mecca or Medina, 3. Panch Mahal, 4. Diwan-i-Khas (Hall of Private Audience), 5. Mariam's House, 6. Palace of Jodh Bai, 7. House of Birbal, 8. Elephant Tower and 9. Khas Mahal. Fatehpur Sikri has a railway station, and the city can be easily reached by car.

Gaya: big town in Bihar, on the Phalgu river, sacred to Hindus and Buddhists alike. The Vishnupada, a temple, built over the footprint of Vishnu is the centre of the pilgrimage and the Akshaya Vata, the Eternal Banyan tree, is an object of veneration. See also Budha Gaya.

Gersoppa Falls : See Jog Falls.

Golconda : 5 miles from Hyderabad is an ancient spectacular fort (Andhra).

Gopalpur-on-Sea : in Orissa is a sea-side resort for a quiet holiday.

Gulmarg : an ideal hill station in Kashmir, about twenty-nine miles from Srinagar, is a little less than 9,000 feet above sea-level. The place boasts of all modern facilities and is particularly noted as a winter playground affording scope for skating, ski-ing, tobogganing, and golf. Round about are ideal places for walks, rides and excursions.

Gwalior : in Madhya Pradesh, best known for its fort (which is reputed to be the most interesting and remarkable example of a Hindu palace of an early age) lies about 200 miles to the south of Delhi. *Places worth visiting :* 1. Gwalior fort includes Man Singh's Palace and a number of temples and shrines), 2. Tansen's Tomb, 3. Rani (of Jhansi) Laxmi Bai's Chhatri, 4. the Chhatris of other Mahratta rulers, 5. Tomb of Mahomed Ghaus, 6. Jami Masjid, 7. State Museum, 8. King George Park and Zoo, 9. Motimahal Palace. Seventy-two miles from Gwalior is Shivpuri or Sipri famous for its lake and scenery. Survaya which is twelve miles again from Shivpuri contains the remains of a fortress of the early mediæval period. Gwalior is on the main Central Railway line between Bombay and Delhi. Pop. 241,577 (1951).

Halebid : in Mysore State is well known for its elaborately sculptured temples of the Hoysala period.

Belur, on which there is a separate note, is near Halebid.

Hampi : in Mysore State, is the ruined capital of the Vijayanagar Empire. It is 8 miles from the Hospet Railway Station on the Southern Railway. The ruins are about 600 years old and are described as "virtually a vast open air museum of Hindu monuments in the Dravidian style of architecture".

Hardwar : in U.P. on the Inner Himalayas, on the banks of the Ganga is a great Hindu pilgrim centre. It is situated at the foot of the Siwalik hills on the right bank of the Ganga where the river enters the plains. The object of attraction is the bathing ghat called Hari Ki Payri (step of Hari). Every twelfth year a fair is held, called Kumbh Mela which has a special sanctity. Devout pilgrims proceed from here further up to Rishikesh, and to Badrinath.

Hyderabad-Secunderabad : the twin city linked together by the Hussain-Sagar (lake), is the capital of Andhra Pradesh and is centrally situated for all-India communications. It is a railway junction as well as an important air-port, and stands on the banks of the river Musi. Hyderabad was known as Bhaga Nagar when it was founded 400 years ago. It has many attractions. 1. Char Minar (four Minarets) dominates the City with 80 ft. high-minarets, built in 1591 ; 2. Osmania University with its impressive building and Ajanta Pavilion ; 3. Town Hall ; 4. State Museum and Art Gallery ; 5. Salarjung Museum —one of the richest and most varied collections in Asia ; 6. Health Museum and Public gardens. Golconda Fort forms one of the suburbs of Hyderabad. Many new industries are coming up in the city. Pop. 1,085,722 (1951).

Imphal : north-east frontier town and capital of Manipur. It is celebrated for its Manipuri dance and handloom products.

Jabalpur : in Madhya Pradesh; fourteen miles from Jabalpur are Marble Rocks and Dhunva Dhar (water-falls) on the Narmada. Pop. 256,998 (1951).

Jaipur : capital of Rajasthan State, is a well laid-out modern city. It is famous all over India for the beauty of its art and the skill of its artisans. Jaipur pottery, brass ware, sculpture, ivory and sandal-wood work and jewellery have enjoyed a great reputation from ancient times. Pop. 291,130 (1951). *Places worth a visit :* 1. Maharaja's Palace, 2. Jai Singh's Observatory, 3. Amber (ancient capital), 4. Hawa Mahal, 5. Palace Armoury, 6. Cenotaphs of the Queens, 7. Galta (place of pilgrimage) and Ghat. 8. School of Arts. 9 Public Library, 10. Transport Gardens, 11. Museum.

Jaipur is on the metre-gauge line of the Western Railway between Ahmedabad and Delhi.

Jamshedpur : in Bihar, famous as India's 'steel town'. Pop. 218,162 (1951).

It had its beginnings 60 years ago when the Tata Iron & Steel Co. built their plant. Today besides the two-million ton steel plant there are many subsidiary units. Tata Locomotive Engineering Co. Ltd. manufactures metre gauge locomotives and boilers and Mercedes-Benz trucks and buses. The National Metallurgical Laboratory is also situated here. The town is well-laid out with modern amenities and welfare schemes.

Jog Falls : also known as Gersoppa Falls in Mysore State, are one of the highest waterfalls in the world. The river Sharavati takes a big leap down a steep rock from a height of 830 feet. The breadth of the stream here is 230 feet and in four separate cascades known as the Raja, Roarer, Rocket and La Dame Blanche, it takes a magnificent leap. The best time to see them is early December.

Junagadh : in Gujerat, is situated below the celebrated Girnar Hill and is one of the most ancient cities in India. The temples on the hill are noted for their architecture and delicate painting. On the way to Girnar is a rock with an Asoka edict. Pop. 62,730 (1951).

In Junagadh is the famous Gir Forest—the only place in Asia where lions are found.

Kangra Valley : famous for its picturesque landscapes and historic temples, lies in the Punjab. Semi-urban hill stations are Kangra and Dharamsala. *Places worth a visit in Dharamsala are :* 1. Bhagsunath Water Springs, 2. State Quarries, 3. Himalayan Snow View. The chief means of conveyance are cars and buses. There is also a dak bungalow at Dharamsala where visitors can stay. To get to the Kangra Valley a visitor has to change at Pathankot into the narrow-gauge railway which runs to Nagrota. Dharamsala can also be reached from Pathankot by car.

Kanheri : near Bombay, is famous for its Buddhist caves dating back to the 1st century A. D. It is about twenty miles from Bombay.

Kashmir : unsurpassed for the beauty of its mountains, lakes and valleys is a part of the State of Jammu and Kashmir, situated in the far north of India. Its capital Srinagar on the Jhelum is 5,000 ft. above sea-level and famous for its shawls and carpets and the exquisite beauty of its wood-work, rich embroidery and papier-mache articles. Its fruits and vegetables are equally well-known. Well-furnished, luxurious house-boats moored along the winding Jehelum or in the Dal Lake provide all necessary comforts amidst gorgeous natural surroundings. The normal recreations include Shikara rides on the lakes and canals, mountain-climbing, big and small game hunting, golf, fishing and swimming. Gulmarg, Sonamarg and Pahalgam are favourite holiday resorts in the neighbouring mountains and can be reached by motorable road. The way to Srinagar is *via* Pathankot, which is a railway terminus. From Pathankot one goes to Srinagar by road passing Jammu on the way. There is a regular air service from Delhi to Srinagar. *Places worth a visit :* 1. The Moghul Gardens, like *a.* Shalimar, *b.* Chashmashahi, *c.* Acchabal, *d.* Nishat. 2. The lakes like *a.* Dal Lake, *b.* Wulur Lake, *c.* Anchar Lake, *d.* Manasbal Lake and so on. 3. Places of historical and religious interest like *a.* Martand temple, *b.* Pandranthan temple, *c.* Bhaumazu caves, *d.* Avanti Pura, *e.* Pari Mahal and *f.* Sankaracharya Hill.

Khajuraho : in Chhattarpur in Madhya Pradesh, is famous for its group of highly ornate mediaeval Hindu temples. From the nearest railway station Harpalpur on the Jhansi-Manikpur line, it is about 60 miles by motorable road. It has dak bungalows and circuit house rooms.

Kodaikanal : famous hill station on the Palni Hills in Madras State. It is about 7,000 feet above sea-level and has a temperate climate. The average annual rainfall is 65 inches, the major part of the rain falling in October, November and December. The months of April, May and June constitute the 'season'. The town enjoys excellent water-supply and is also well-equipped with all the ordinary amenities of life. The place affords plenty of scope for such recreations as walking, hiking, boating, fishing, hill climbing and golf. Going on an excursion or picnic is yet another way of diverting oneself. For the more adventurous there is big game hunting. Kodaikanal is the delight of the gardener and flowers are in bloom all the year round. *Places worth a visit :* 1. the lake skirted by a three-mile road, 2. the water falls like *a.* Fairy Falls, *b.* Silver Cascades, *c.* Bear Shola Falls, *d.* Glen Falls, *e.* Pamber Falls, 3. There are view points like *a.* Coaker's Walk, *b.* Pillar Rocks, *c.* Prospect Point, *d.* Vembadi Shela Peak, *e.* Dolphin's Nose. 4. the Solar Observatory.

There are a number of boarding houses, and fully furnished flats can also be rented. Kodaikanal is reached from Kodaikanal Road railway junction on the Southern Railway *via* Tiruchirapalli. Kodaikanal town is 50 miles from the railway station and the journey can be done by car, taxi or bus on a very good motoring road.

Kolar Gold Fields : in Mysore State. At present three mines are worked : the Mysore (Oorgum) ; the Champion Reef and the Nundydroog Mines which are near one another. The entire mining and residential area is known as KGF (Kolar Gold Fields) and is a modern and self-contained unit with water supply, electricity and hospital facilities. The city occupies an area of over 30 sq. miles, and houses nearly 160,000 people. It is about 90 miles by road from Bangalore. The mines have reached a depth of about 12,000 ft. Pop. 159,084 (1951).

The gold fields are nationalized and worked by the Mysore Government.

Konarak or Konark : in Orissa, is a huge Temple of the Sun also called the Black Pagoda. It is remarkable both as an example of ancient Indian architecture and sculpture and of engineering skill. A part of the temple is destroyed but on the porch stand the huge figures of warriors and life-sized pieces of horses and elephants and the famous carved wheels at the basement. The image of Aruna, the charioteer of the sun on a monolith in the yard of the Puri Temple was removed from Konarak by the Marathas. Konarak is about 50 miles from Puri, 40 miles from Bhubaneshwar. The road is open from November to May.

Kotagiri : A hill station on the Nilgiris, higher than Coonoor, but lower than Ootacamund, is smaller and quieter than either. It is about 6,500 feet above sea-level and has a mean day temperature of 62°F. The town has electricity, a number of shops and boarding houses, a local board hospital and golf course. Kotagiri is reached from Coonoor or Ootacamund by car or bus. The roads are excellent and there is a regular bus service. Between Kotagiri and

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Ootacamund the road goes over Dodda-betta the highest peak (8,760 ft.) in the Nilgiri Hills (Madras State).

Kulu Valley : well-known for the variety of its scenery, fruit orchards and places of historical interest is situated in the Punjab, north of Simla. It is ideal for hiking and trout fishing. The important part of the valley from the tourist's point of view is the road which runs from Pathankot or Nagrota the rail-heads into the valley. A few miles beyond Pathankot the road passes through the rich cultivation of the Kangra Valley and the extensive tea gardens surrounding Palampur and Baijnath. The traveller has a view of the majestic snow-capped mountains of the Dhaula Dhar range standing out in bold relief against the sky-line. He also comes across the ancient temples of Baijnath. Beyond Aut after Mandi the valley opens out and the final stretch through the lovely Kulu Valley mainly along the left bank of the river Beas offers an entirely different type of scenic effect. The Kulu Valley is also called the 'Valley of the Gods' as in addition to several important deities like Raghunathji at Sultanpur and Jamlu of Malana every village has its own particular God. The best season is from March to May and September to November. The summer is never uncomfortably hot. The main centres of the Kulu Valley are : 1. Kulu or Sultanpur, the principal town, about 4,000 feet above sea-level. It is the main shopping centre and has a dak bungalow, and a number of rest-houses. 2. Raison, 8 miles from Sultanpur and 4,700 feet above sea-level. The available sports are golf, tennis and swimming. Mayflower and the Shacks are two hotels. 3. Katrain, is in the widest part of the Valley, 12 miles from Sultanpur and 4,800 feet above sea-level. 4. Naggar, summer headquarters, is 5,800 feet above sea-level. There is a departmental rest-house and a serai. 5. Manali, the head of the valley and terminus of the motor road, is 23 miles from Sultanpur and is situated amid typical Alpine scenery. Accommodation for visitors is available at Sunshine Orchards, Departmental rest houses and Mission Hospital. Except Manali, the road to which may be occasionally closed owing to snowfall the rest of the valley is open throughout the year. Pathankot is the rail-head for Kulu. From Pathankot Kulu is reached by bus or car, or from Pathankot to Nagrota by metre-gauge railway and from there by bus to Kulu.

Kumaon Hills : in U.P. form part of the Himalayas and are known as the sportsman's paradise. Three important summer resorts are Almora, Nainital and Ranikhet. Most mountaineering parties establish their base at Ranikhet for ascent to the Pindari Glacier.

Tiger shooting is available in the Terai and Bhabhar Forests in the Kumaon region.

(See also 'Almora', 'Nainital', 'Ranikhet').

Lansdowne : in U.P. in Garhwal about half way between Mussoorie and Nainital.

Lonavla-Khandala : in Maharashtra, lies in the heart of the Western Ghats. Hill forts associated with Maratha rule are in the vicinity. The Karla, Bhedsa and Bhaja caves, 10 miles from Lonavla, are an added attraction (see also under Poona District).

Lucknow : the city of gardens is the capital of U.P. It is full of places of historical interest and of architectural beauty and is generally regarded as the cultural capital of North India. It is well-known for its pottery, copper and brass-ware, wood and ivory carvings and gold and silver embroidery on cloth, and rich perfumes. Legend connects the founding of the city with Laxmana, the brother of Rama, the mythical hero of the Ramayana, and is sometimes called Laxmanpur. Pop. 496,861 (1951). *Places worth a visit :* 1. Great Imambara, 2. Small Imambara, 3. Tombs of Wajid Ali Shah and his Begum, 4. Kaiser Bagh Palace, 5. Chattar Manzil, 6. Dilkhusha Palace, 7. Moti Mahal, 8. Machi Bhavan Palace, 9. Jumma Masjid, 10. Charbagh, 11. Alambagh, 12. Sikander Bagh, 13. Musa Bagh, 14. Wingfield Park, 15. Residency, 16. Havelock's Tomb, 17. Clock Tower, 18. Museum, 19. Observatory, 20. Iron Bridge. Lucknow is a big junction on the Northern Railway.

Madras : the third largest city in the sub-continent and the capital of Madras State. It is the place where the English first settled to trade. Pop. 1,416,056 (1951 census). *Places worth a visit :* 1. Fort St. George (contains the oldest Protestant church in the country where Clive was married), 2. High Court, 3. Light House, from the top of which one can get a panoramic view of the city, 4. Marina. The Marina is one of the most beautiful promenades in the world ; sea-bathing is possible at certain points, 5. The Museum, 6. Connemara Library, 7. the Zoo, 8. the Observatory, 9. Moore Market, 10. Parthasarathy Temple, 11. Mylapore Tank and Kapaleshwar Temple, 12. St. George's Cathedral. 13. St. Thomas Mount, 14. Race Course, 15. The Integral Coach Factory at Perambur, where passenger coaches are made, 16. Adyar, where the headquarters of the Theosophical Society are located. There are two places round about Madras which are also worth a visit: 1. the ruins of the Gingee Fort famous in the days of the Vijayanagar Empire are about 95 miles from Madras and can be reached by rail and road, 2. the seven Pagodas of Mahabalipuram are 35 miles by road from Madras and can also be reached by road from Chingleput Railway Junction. Kalakshetra is a well-known institution for music, dance and drama at Adyar.

Madurai : the second biggest city in Madras State, is a great religious centre, containing as it does a number of famous temples. In the old days it was the capital of the Pandya kingdom and has always been a seat of Tamil literature and Hindu temple art. The silk-weaving and textile industries of Madurai are also noteworthy. *Places worth a visit :* 1. The Great Temple, actually made up of two temples one of Meenakshi and the other of Shiva, 2. Tirumal Nayak's Palace, 3. Gandhi Museum and Gandhigram. Pop. 361,781 (1951).

Mahabaleshwar : a hill station in Maharashtra, the season being April, May and October. It is 4,500 feet above sea-level and is noted for its bracing climate. It is also well-known for its fruit and vegetables, orchids and lilies which bloom in April and May. The chief recreations are hiking and driving in a car. Among the sports which are available are tennis, golf and polo. *Places worth a visit :* 1. The two Government Houses old and new, 2. Reay Garden and 3. The two temples of the river Krishna and Mahabaleshwar. Then there are a number of points from which magnificent views can be obtained, like Arthur Seat Point, Baghdad Point, Castle Rock, Carnac Point, Connaught, Point, Falkland Point, Elphinstone Point, Margney and Lardwick Point and Bombay Point. Then there are the waterfalls like Chinaman's Waterfall, Dhobi Waterfall, Lingmala Waterfall and a lake called Yenna Lake. The forts of historical interest, all connected with the name of the Mahratha leader Shivaji are, Kamalgarh, Makrandgarh, Pandavgarh, Pratapgarh and Raigarh. Near Pratapgarh are the Bhavani Temple and the tomb of Afzulkhan. All these places are accessible by road from Mahabaleshwar. Holiday camps have been started by the Maharashtra Government.

Mahabaleshwar can be reached from Poona by road.

Mandu : in Madhya Pradesh is one of the greatest mediaeval city sites in India with extensive remains including fortifications and palaces. Seventy-eight miles west of Mandu by road *via* Dhar are Bagh caves adorned with fine old frescoes.

Matheran : the nearest hill station to Bombay is 2,650 feet above sea-level, and is famous for the magnificent views which it yields. The town looks on to the sea, and the coastal plain rises imperceptibly until it reaches the steep ascent of the Ghats. In a walk round the eighteen-mile circumference of the hill the visitor can reach no fewer than thirty-three points of which the following deserve mention: 1. Garbut Point, 2. Panorama Point, 3. Porcupine Point, 4. Louisa Point, 5. Chowk Point, 6. Alexandra Point, 7. Belvedere Point, 8. Echo Point, 9. Monkey Point. At every one of these points the visitor will find comfortable seats, shady trees and fine views. Among other places which are worth a visit are: 1. Charlotte Lake, 2. Paymaster Park, 3. Band-stand, 4. Castle Hill Tower, 5. Race Course. The chief recreations are walking and riding. Rickshaws, munchils and horses are the chief means of conveyance.

Matheran is reached from Neral Station on the main railway line between Bombay and Poona. From Neral there is a light railway to Matheran which is about one-and-a-half-hour's journey. Alternatively one can do the journey by rickshaw or pony by previous engagement at Matheran.

Mathura-Brindavan : in U.P. is an important place of pilgrimage for Hindus, because of its associations with Shri Krishna. Near the railway station is an archaeological museum which houses unique relics of Kushan art. Six miles from Mathura is Brindavan.

Brindavan is a holy place of Hindus. It is sacred because of its association with the birth and early life of Shri Krishna. *Places worth a visit :* 1. Govind Dev Temple, 2. Gopinath Temple, 3. Ranganath Mandir.

There are travellers' bungalows. Brindavan is accessible by railway or road from Mathura. Pop. 98,552 (1951).

Mussoorie: A hill station in U.P. lies 18 miles to the north of Dehra Dun. It is 6,580 feet above sea-level. The town has excellent water-supply, electric lighting system, hospitals, nursing homes and some of the best schools in India both for boys and girls. There are also plenty of sports and amusements. And like every Himalayan hill station one can obtain magnificent views of mountain tops and green river valleys. Hiking and going on excursion or picnic are among the main recreations. *Places worth a visit:* 1. The falls like *a*. Bhatta Falls, *b*. Kamptee Falls, *c*. Hearsay Falls, *d*. Mossy Falls, 2. Wimper's Tank, 3. Bandstand. Mussoorie is reached from Dehra Dun by car or bus and is about two hours' journey.

Mysore (State) : commemorates the destruction of Mahishasur, the demon by Chamundi who is the tutelary goddess of the royal family of Mysore. Mysore is a picturesque land of forest and mountain presenting the most diversified and beautiful scenery. In the southern forests are found wild elephants for the capture of which khedda operations are undertaken from time to time. Tigers, leopards, bears and bisons are also numerous. *Places worth a visit in Mysore State :* 1. The Chenna Kesava Temple at Belur, 24 miles from Hassan, 2. Sivasamudram Falls on the Cavery River, 3. Hoysaleswara Temple at Halebid, 4. Gersoppa Falls also called the Jog Falls on the Sharavati River, the most famous beauty spot in Mysore. The falls are higher than Niagara, 5. Kolar Gold Fields, the biggest in India worked by electric power, 6. Nandidurg, a hill station near Bangalore, and the summer residence of Tippu Sultan, 7. Srirangapatnam of historical and religious interest as the capital of Tippu and as the city of many temples, 8. Shravanabelgola, the great Jain religious centre with the huge monolith Gomateshwara and of course the city of Bangalore and the town of Mysore.

Mysore (City) : second city in the State, is built in accordance with modern standards, and contains a number of beautiful public buildings. It attracts great crowds twice a year when the city wears a gala appearance. These two occasions are the Maharaja's birthday and the Dasarrah. *Places worth a visit :* 1. The palaces like the Maharaja's Palace, Jaganmohan Palace and so on, 2. Chamundi Hill, with the Bull and the Temple, 3. Zoological Gardens, 4. Silk Factory, 5. Sandalwood Factory, 6. Krishnarajasagar Dam and the Brindavan Gardens, among the most beautiful in the world, about 12 miles from Mysore. Mysore is one of the terminii of the Southern Railway. Pop. 244,323 (1951).

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Naini Tal: hill station is about 6,350 feet above sea-level. Among the principal recreations are hiking, boating and yachting on the lake around which the town stands, and fishing and riding. One can also enjoy the Himalayan mountain scenery. *Places worth a visit:* 1. Cheena Peak, 2. Land's End, 3. Lariya Kanta Peak, 4. Sher-ka-Danda Peak, 5. Tiffin Top or Dorothy Seat, 6. Camel's Peak or Deopatta Peak. Naini Tal is 22 miles from Kathgodam railway station which is connected with Bareilly and Mathura. From Kathgodam one goes by bus or car to Naini Tal which is 22 miles away.

(See also 'Kumaon Hills' and 'Almora' and 'Ranikhet').

Nalanda: in Bihar, approachable from Patna by rail or motor, contains a group of ruined Buddhist temples and monasteries and a small local museum. It was the seat of an ancient Buddhist university.

Nasik: in Maharashtra and 117 miles from Bombay on the N.E. line of the Central Railway, is a place of pilgrimage for Hindus and is famous for Buddhist rock-cut temples of the first century B.C. and later. Pop. 97,042 (1951).

The golf links at near-by Deolali are an added attraction.

Ootacamund: hill station in Madras State stands 7,500 feet above sea-level on the Nilgiris. It is sometimes called 'the queen of the hill stations.' One of the main features which distinguishes it from other hill stations is the number and length of motorable roads which go winding in and out of spacious parks or long stretches of turf studded with ornamental trees. The mean temperature for the year is 57°F; during the winter the thermometer touches freezing point. Ootacamund is called the sportsman's paradise: plenty of fishing and big game shooting being available. There is also golf and tennis and during the season races and tournaments are held. *Places worth a visit:* 1. Botanical Gardens, 2. Race Course, 3. Assembly Room, 4. Dodda Betta, the highest peak in the Nilgiris, 5. Pykara Hydro-Electric Dam which is about 18 miles from Ootacamund. Ootacamund is the terminus of the Nilgiri mountain railway and 6. Kundah Hydro-electric Scheme which includes many lakes, dams and power houses. Pop. 41,370 (1951).

Pachmarhi: hill station, was summer capital of Madhya Pradesh, lies on the Mahadeo hills of the Satpura Range and is about 3,500 feet above sea-level. There are about 20 golf links in the town and plenty of game is also available in the Pipariya forest. *Places worth a visit:* 1. Bee Dam, 2. Mahadeo Caves, 3. Dhupgarh, highest point in the Satpuras, 4. Dorothy Deep Falls, 5. Duchess Falls, 6. Lansdowne Hill, 7. Nilphur springs, 8. Waters Meet, 9. Big Falls, 10. Pansy Pool, 11. Twipram Pool, 12. Saunder's Pool, 13. Pandava Caves. Pachmarhi is reached from Pipariya Station on the main Central Railway line from Bombay to Jabalpur. From Pipariya, Pachmarhi is 32 miles.

There are facilities for swimming, trekking and riding.

Padmanabhapuram: in Kerala, is the ancient capital of the former Travancore State. *Place worth a visit:* Palace.

Pahalgam: in Kashmir in the lap of the Lidder Valley is situated 60 miles from Srinagar and is famous for its camping sites, and as a base for the Amarnath Cave and Kolahoi glacier.

Palitana: in Saurashtra, is famous for its holy hill Shatrunjaya (see separate note) and its Jain temples. Pop. 24,097 (1951).

Pandharpur: town in Sholapur District in Maharashtra. It stands on the Bhima river and is one of the most frequented places of pilgrimage in Maharashtra. The centre of devotion is the temple dedicated to Vithoba, an incarnation of Vishnu. Fairs are held annually in honour of the God.

Patna: capital of Bihar, stands on the site of the ancient city of Pataliputra. Pop. 283,479 (1951).

Poona: in Maharashtra and 120 miles from Bombay, has many historical buildings and one of the best race courses in India. *Places worth a visit are:* Shanwar Wada, the National Chemical Laboratory, the Defence Academy and the Central Water and Power Research Station at Khadakvasla. Pop. 480,982 (1951).

Other show-places near Poona are: Sinhagad and Purandar. The factory which manufactures antibiotics at Pimpri is worth a visit. See also Poona District.

Porbandar: in Gujarat, is the birthplace of Mahatma Gandhi and an attractive summer resort. Pop. 58,824 (1951).

Prabhas Patan: in Gujarat, is the site of the famous Somnath Temple, which was destroyed and rebuilt several times. Its last construction was begun in 1951.

Puri: (*Jagannath Puri*): famous for the Jagannath Temple, is a coastal town in Orissa. The car festival when an image of Jagannath is taken in procession in a huge Chariot drawn by ardent devotees (the proverbial Juggernaut) is an event of India-wide importance. The temple has a monolith pillar brought from Konarak Temple, in front and a 24-feet high stone wall all round. There are four entrances. The presiding deities are Krishna, Balaram and their sister Subhadra. Besides the Jagannath Temple other places worth a visit are the monastic establishments (maths). Fifty miles from Puri is Konarak, the Sun Temple. Pop. 49,057 (1951).

Rameshwaram: This holy town in Madras State is built on an island in the Palk Straits. It contains one of India's most venerated temples, perhaps the finest example of South Indian architecture. It is in the form of a quadrangular enclosure 650 ft. by 1,000 ft. The temple is renowned for its vast pillared corridors nearly 4,000 ft. long.

It is near the tip of the Indian peninsula.

Ranchi: hill station and summer resort of Bihar, noted for its picturesque scenery and fine roads. Pop. 106,849 (1951).

It is the site of heavy machine building plants.

Ranikhet: is a hill station in U.P. on the Kumaon Hills. Most mountaineering parties establish their bases at Ranikhet.

(See also 'Kumaon Hills', 'Almora' and 'Naini Tal').

Sanchi: small village near Bhopal in Madhya Pradesh, famous for the Budhhist stupa which is the largest and the best preserved in India. The stupa is built with sand stone and is about 103 feet in diameter and 42 feet high. The sculpture is remarkable in that there is no anthropomorphic figure of Buddha. The most striking features of the Stupa are the four gates which are profusely carved with scenes from the Jataka stories. Sanchi is on the main Central Rly. near Bhopal. The museum maintained by the Archaeological department is worth a visit. There are a Travellers' Bungalow and Tourist Centre.

Santiniketan: in West Bengal, is the home of the famous Visva Bharati, the international university founded by Tagore. *Places worth a visit are:* Rabindra Bhavan (the poet's residence) where his personal belongings, manuscripts, etc. are on display and the poet's mud hut where he wrote many of his famous books.

The place is 91 miles from Calcutta on the Eastern Railway and 2 miles from Bolpur Station.

Sasaram: in Bihar is known for the magnificent tomb of Sher Shah, Emperor of Delhi. Pop. 29,265 (1951).

Seringapatam: or Srirangapattana in Mysore State, 9 miles by road from Mysore city was the ancient capital of Tippu Sultan. It is situated on an island on the Kaveri. It has the Sultan's fort, mosque and palaces. There are also many old temples.

Sevagram: near Wardha in Maharashtra is the village where Mahatma Gandhi founded his ashram. It has been the home of many Gandhian institutions.

Shatrunjaya Hills.—Shatrunjaya, near Palitana in Saurashtra, is also known to the Jains as Siddhagiri or Siddhachala or the Hill of the Perfected Ones. It is the most sacred place (*tirtha*) of Shvetambara Jains. There are a great number of temples in groups on *touks* or summits. The most important one is the *touk* of Adishvara Bhagavan. The ancient image, consecrated by the prophet's son, Batubal, has been replaced. This is perhaps the most holy site within the most sacred precincts of the Shatrunjaya Hills. At this place a large number of saints are said to have attained *Nirvana*. A number of inscriptions have been found here, which have been utilised towards writing the history of Western India and the history of the different schools of Jainism.

Shillong: is the capital of the Assam Government. Thirty-six miles from here is Cherrapunji, the wettest place in the world. Pop. 53,756 (1951).

Shivpuri: also known as Sipri is in Madhya Pradesh, 72 miles from Gwalior. It is an interesting tourist resort with good hunting and boating possibilities. Pop. 21,887 (1951).

Simla: the former summer capital of the Government of India and the Government of the Punjab, it is situated on a spur of the Himalayas at a height of 7,200 feet. Among the recreations of the place are hiking, riding and shooting. The roads are excellent. *Places worth a visit:* 1. President's House, 2. Race Course, 3. Jakko Hill, 4. Observatory Hill, 5. Prospect Hill, and 6. Mashobra-Mahasu, seven miles away. There is a very good road into the interior and hikers to Narkanda, Kotgarh, Rampur and Bushahr can lodge in rest-houses that line the road. There is also a bus service on this road and holiday-makers who leave in the morning can be back in Simla by evening. The trek route to Kulu commences at Narkanda Simla is also well provided with a number of excellent schools and hotels.

Simla is now the capital of Himachal Pradesh.

Simla is reached from Delhi *via* Kalka on the Delhi-Ambala line. From Kalka there is a narrow gauge railway upto Simla. At Kalka motor cars are available. Buses also run between Kalka and Simla. All through the scenery is superb, with mountain peaks or luxuriant foliage. Pop. 46,150 (1951).

Somnath: see under Prabhas Patan.

Sravanabelgola: in Mysore State, is noted for its Jain temples and the colossal statue of Gomatesvara which is 65 ft. high, the tallest monolithic in the world. It was erected in 983 A.D.

Srirangam: an island on the Kavery, two miles north of Tiruchirapalli (Trichinopoly), contains one of the largest temples in South India. The temple is consecrated to Ranganath (Vishnu) and contains a hall of 1,000 columns. Changes were made from the 9th to the 16th centuries and inscriptions of Chola, Pandya, Hoyasala and Vijayanagar kings are all found on it. The north gopuram is 152 feet high. Pop. 36,702 (1951).

Tanjore: in the delta of the Kavery river in Madras State is noted for its temples and palaces. It was the capital of the Cholas under whom it grew in name and fame as a great centre of art and culture. It remained so under the Maratha rulers who followed. *Places worth a visit:* 1. the temple of Brihadishvara built by Raja-Raja the great, 2. Naik's Court, 3. Maratha Court (the two together are often called the Palace in Tanjore).

Saraswati Mahal has a unique collection of manuscripts, Sanskrit, Marathi, Tamil, Telugu and Kannada. There are also paintings and books printed in English.

There are also good dak bungalows. Tanjore is reached from Madras by the Southern Railway. Pop. 100,680.

Tiruchirapalli (Trichinopoly): the third largest city in Madras State is situated on the Kavery. It is a very ancient city and was the

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

strategic capital of the Chola and Naik kings. It is now a great educational centre. *Places worth a visit :* 1. the Rock temple 2. the two huge masses of granite known as the Golden Rock and Fakir Rock, 3. the Jambukeshwar Temple, two miles north of Trichinopoly dedicated to Appulinga or Siva. Pop. 218,921 (1951). See also Srirangam.

Travancore : (now constituent part of Kerala State) : the most beautiful and fertile region in all southern India has many charms to offer the traveller within its domains. It has scenery ranging from a countryside of lakes, creeks and canals, to low hills, undulating land, rice fields and forests of cocoanut and areca palms, with a heavy undergrowth of pepper vines and tapioca.

It has also a wonderful highland zone with mountains touching heights of from 5,000 feet to over 8,000 feet, and hills covered with the densest of virgin forest, the home of great herds of wild elephants and bison, tiger, bear, black panther and wild boar, and where lies the lovely Periyar Lake over which one may cruise in comfort and see wild life in its natural habitat.

Trivandrum : the capital of Kerala, is accessible by well-kept roads and railway, and is also now connected by air with Bombay, Madras and Colombo.

Places worth a visit : 1. the Palaces, 2. Museum, 3. Picture Gallery, 4. Zoo, 5. Aquarium and 6. Padmanabha Temple.

North of Trivandrum is the ancient town of Quilon and to the north of this again, a pleasant trip by boat along delightful backwaters or by car along a good motor road, is the busy seaport of Alleppey.

About seven miles south of Trivandrum is Kovalam, a pleasant seaside resort with good facilities for bathing.

On the way to Cape Comorin from Trivandrum is Shuchindra Temple which should also be seen.

Udaipur : in Rajasthan, is a city of lakes with island palaces. Seventy miles from Udaipur is Chittorgarh, the abandoned capital of Mewar, famous for its Tower of Victory. Pop. 89,621 (1951).

Ujjain : on the Sipra in Madhya Pradesh, is one of the seven cities sacred to the Hindus. Also known as Avanti. The Oriental Museum has many valuable manuscripts and pieces of sculpture. Is supposed to be the seat of King Vikrama. Mahakaleshwar temple is an attraction of pilgrimage. Pop. 129,817 (1951).

NEW INDIA

The new India has its own show places, where much of the country's industrial life is centred. Most of them are connected with the Five Year Plan programme and are in the main a post-independence development. Some of these we give in the notes on the older towns above. Some other typical centres we give below :

Anand : town half way between Baroda and Ahmedabad, where the headquarters of the cooperative society producing milk, butter, cheese and baby food are located—Amul. The co-operative dairy, which is up-to-date and modern unites as many as 40,000 farmers spread over an area of 1,300 square miles around it.

Batanagar : an industrial town near Calcutta. The Bata Shoe Factory is located here.

Bhadravati : in Mysore State. The Mysore Government's iron and steel plant is located here. (See under 'Government Industrial Undertakings'.)

Bhakra-Nangal : twin-towns, which have grown recently round the huge Rs. 170 crore hydro-electric and irrigation project the biggest in the country, in which the waters of the Sutlej are controlled by dams, and diverted for irrigation and the generation of electric power. (See under 'Irrigation' for a longer note). A modern fertilizer factory is fast coming up at Naya Nangal.

Bhilai : in Drug district of M.P., 176 miles from Nagpur on the Howrah line is the site of an integrated iron and steel plant, set up in the public sector with Russian help. (See 'Government Industrial Undertakings'.)

Burnpur and Kulti : towns in which the Indian Iron and Steel Co. Ltd. has its works. Situated near Asansol on the border of West Bengal and Bihar, on the Grand Trunk Road, these works present an impressive view to the railway passengers by day or by night.

Cambay : a city of antiquity and an old international port in Gujarat. Today it has acquired importance once again as the place —at Lunej—where oil and natural gas have been discovered. Drilling with foreign (Russian) technical help is in progress. (See article on 'Petroleum'.)

Chittaranjan : near Asansol, on the border of Bihar and W. Bengal. The industrial colony came into being with the establishment of the broad gauge locomotive and boiler factory, run by the Railway Board under the Ministry of Railways. From the point of view of the conveniences provided and the welfare of the working classes, this is an ideal colony. (See also under 'Government Industrial Undertakings'.)

Dalmianagar : is situated on the west bank of the river Sone, south Bihar in the district of Shahabad. 350 miles by rail from Calcutta. It is the seat of the Rohtas Industries Limited and Ashoka Cement Limited, manufacturers of cement, paper, sugar, vanaspati, asbestos cement sheets, etc., providing employment direct and indirect and sustenance to 60,000 persons.

Durgapur : in West Bengal, 100 miles from Calcutta, near Asansol is the site of an integrated iron and steel plant in the public sector, set up with British help. The Durgapur Coke Oven plant run by the Government of West Bengal, the Durgapur Barrage, the canal system and thermal power house (of the D.V.C.) are also located in the vicinity. An optical glass unit is to be started nearby.

D.V.C.: short for Damodar Valley Corporation, looks after the big Rs. 132 crore multi-purpose project on the Damodar River in Bihar-Bengal. Tilaiya, Konar, Maithon and Panchet Hill are the sites of the four dams ; with hydel generating stations attached to the last three and thermal stations at Bokaro and Durgapur. There is an extensive canal system for irrigation attached to the storage lakes. (See also under 'Irrigation'.)

The D.V.C. area, roughly from Hazaribagh to Durgapur in east Bihar, contains the highest concentration of high-grade mineral wealth in the country—coal, iron ore, copper and mica. A whole host of industries have sprung up or are under construction : Sindri, Hindustan Cables, Chittaranjan, Durgapur steel plant, coke oven project, the heavy machine building group of industries, the Kargali and Dugda coal washeries. A steel plant may also be set up at Bokaro.

Gandhigram : about 25 miles from Madurai (South India) is a new colony formed to put Gandhian principles into actual practice in day-to-day life. The guiding principles are service and love. The accent is on hand-made products and the uplift of villages. Intensive training is imparted in many institutions here. A pilot health survey project covering over 70 villages in the neighbourhood has been undertaken with American aid.

Hirakud : the site of the Rs. 30-crore multi-purpose project across the River Mahanadi in Orissa to provide irrigation facilities and electric power. Power is being supplied to industries round about and to the Rourkela iron and steel plant. (See also under 'Irrigation'.)

Jwalamukhi : in the Kangra Hills where gas has been discovered. Drilling is in progress with foreign (Rumanian) technical help. (See article on 'Petroleum'.)

Kirloskarvadi : In Satara District, Maharashtra, is an industrial colony established over 45 years ago, where agricultural implements and a variety of engineering goods have been manufactured.

Korba: in Madhya Pradesh is the site of a new coal mine and a thermal station for the M.P. Grid, from which the Bhilai steel project will get most of its power supply. Coal from Korba will also be used in Bhilai.

Kosi : The Rs. 45-crore multi-purpose project in Bihar for flood protection, irrigation and electric power. The barrage on the river is about 30 miles below Chatra in Nepal. (See under 'Irrigation'.)

Koynanagar : in Satara district, Maharashtra, is approachable by road (30 miles) from Karad railway station on the Southern Railway. Here the turbulent waters of the River Koyna are being controlled and diverted through an underground tunnel (project cost, first stage, Rs. 40 crores) on the other side of the hill for generating electricity in an underground power house. The whole area with the staff colony, schools, hospitals and shopping centres, is known as Koynanagar.

Mallapuram (Tungabhadra) : in Bellary District in Mysore State is the site of the Rs. 60-crore Tungabhadra Dam, one of the great multi-purpose projects in the country. (See under 'Irrigation'.)

Modinagar : in Meerut District, near Delhi, is an industrial colony where vanaspati, textiles, sugar and a host of other articles are manufactured by a single firm.

Motipur : one of a large number of villages in the U.P. terai in the districts of Bijnor, Pilibhit, Naini Tal and Rampur. These villages form the largest concentration of mechanized farms in the country, the best known of which is the State Government's Terai State Farm.

Nagarjunasagar : See under VIJAYAPURI.

Nepanagar : in M.P. on the Central Railway is the site of the only newsprint factory in India. (See also 'Government Industrial Undertakings'.)

Neyveli : in South Arcot District, in Madras State, about 150 miles from Madras city, the site of lignite mines and centre of industrial development in this part of the country. The project now under execution will produce electric power, fertilizer, raw lignite briquettes. A thermal power station with Russian cooperation will soon start generating electricity (Nov. 1960). (See under 'Government Industrial Undertakings').

Perambur : a suburb of Madras where an integral railway coach factory is situated. (See under 'Government Industrial Undertakings'.

Pimpri : near Poona, is the place where the Hindustan Antibiotics factory is located. It manufactures penicillin. (See also under 'Government Industrial Undertakings'.)

Pipri : in Mirzapur District in U.P. is the site of the Rs. 46-crore Rihand dam on the river Rihand, whose waters will be used mainly for the production of power. One of the biggest aluminium plants in the country is being built here. (See under 'Irrigation'.)

Rourkela: in Orissa State, about 250 miles from Calcutta on the main line to Nagpur, is the site of an iron and steel plant in the public sector set up with German help. In addition a special fertilizer plant is also being erected here.

(See under 'Government Industrial Undertakings').

Rupnarayanpur : near Chittaranjan, is a small township for telephone cable manufacturing concern—the Hindusthan Cables Ltd. (See under 'Government Industrial Undertakings').

Sindri : the site of the big fertilizer plant in Bihar. (See under 'Government Industrial Undertakings'.)

Vijayapuri (East & West) : on either side of the Nagarjunasagar dam across the River Krishna in Andhra Pradesh (project cost,

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Rs. 93 crores), 90 miles from Hyderabad, are two new towns. Although planned mainly for irrigation, there will be a small hydel generating station. The canal system on the right and left banks is extensive and ingeniously constructed. (See under 'Irrigation'.)

On the site of Vijayapuri once stood the capital of the Ikshvaku Kings. The great Buddhist sage and philosopher Nagarjunacharya lived and taught here. It was a great centre of learning and the University was known as Nagarjunkonda. Extensive excavations have brought to light important pieces of sculpture, housed in a big museum nearby.

Visakhapatnam : near Waltair in the Visakhapatnam district in Andhra, is one of the major ports of India and is the site of a shipbuilding yard. It can build four vessels per annum upto 15,000 tons each. (See under 'Government Industrial Undertakings'). Also, the Caltex Oil Refinery.

Walchandnagar : in Poona district, Maharashtra, can be reached either from Poona or from Baramati railway station. It is an industrial colony, which produces mainly sugar and sugar-making machinery.

HOTELS

Here is a list of first-class Western style hotels.

AGRA CANTT.
IMPERIAL HOTEL : Mahatma Gandhi Road; LAURIE'S HOTEL : Mahatma Gandhi Road.

AHMEDABAD
CAMA HOTEL : Khanpur.
RITZ HOTEL : Lal Darwaza.

ALLAHABAD
BARNETT'S HOTEL : 14, Canning Road; ROYAL HOTEL : 24, South Road, Civil Lines.

ALWAR
CIRCUIT HOUSE ; SILISERH PALACE.

ALWAYE
TOURIST BUNGALOW.

AMBALA CANTT.
CECIL HOTEL : 127, Staff Road ; PARRY'S HOTEL : 126, Staff Road.

AMRITSAR
NO. 10, GUEST HOUSE : 10, Cantonment.

AURANGABAD
AURANGABAD HOTEL : Aurangabad ; PRINTRAVEL HOTEL : Station Road.

BANGALORE
CENTRAL HOTEL : 20/22, Lavelle Road, Bangalore 1 ; HOTEL EMBASSY : 2, Infantry Road, Bangalore 1; LOBO'S HOTEL: Cubbon Road, Bangalore 1 ; MADRAS WOODLANDS HOTEL : 5, Sampangi Tank Road, Bangalore 1 ; SHILTON HOTEL : St. Mark's Road, Bangalore 1 ; WEST END HOTEL : High Grounds.

BARODA
BARODA HOTEL : Race Course Road.

BELGAUM
HOTEL GREEN : 164, Camp.

BIKANER
CIRCUIT HOUSE : Bikaner.

BODHGAYA
TOURIST BUNGALOW : Bodhgaya.

BOMBAY
AIR LINES HOTEL : Churchgate Reclamation ; AMBASSADOR HOTEL ; Churchgate Extension ; GRAND HOTEL : Ballard Estate ; GREEN'S HOTEL : Apollo Pier ; SEA GREEN HOTEL : Marine Drive ; TAJ MAHAL HOTEL : Apollo Pier ; RITZ HOTEL : Churchgate Reclamation, Fort ; WEST END HOTEL : 45, Marine Lines ; HOTEL WALDORF : 16, Arthur Bunder Road ; MIRABELLE HOTEL : 33A, Marine Lines.

BUNDI
CIRCUIT HOUSE.

CALCUTTA
GREAT EASTERN HOTEL : 1-3, Old Court House Street ; HOTEL MINERVA : 11, Ganesh Chandra Avenue, Calcutta 13 ; OBEROI GRAND HOTEL : 15, Chowringhee ; RUSSELL HOTEL : 12-B, Russell Street, Calcutta 16 ; SPENCES HOTEL ; 4, Wellesley Place.

CALICUT
ALAKAPURI GUEST HOUSE : Calicut 2.
TOURIST BUNGALOW.

CANNANORE
TOURIST BUNGALOW.

CAPE COMORIN
CAPE HOTEL ; TOURIST BUNGALOW.

CHANDIGARH
OBEROI MOUNT VIEW : Sector 10.

CHHATARPUR
CIRCUIT HOUSE.

COCHIN
MALABAR HOTEL : Willingdon Island, Cochin 3; TOURIST BUNGALOW : Bolghotty, Ernakulam ; WOODLANDS HOTEL : Willingdon Island, Cochin 3.

COONOOR (Nilgiri Hills).
HAMPTON HOTEL ; RITZ HOTEL.

DARJEELING
BELLEVUE HOTEL ; OBEROI MOUNT EVEREST : Gandhi Road ; WINDAMERE HOTEL : Observatory Hill.

DEHRA DUN
HOTEL WHITE HOUSE : 15-A, Lytton Road.

DELHI
AIRLINES HOTEL : Opp. New Delhi Railway Station : ASHOKA HOTELS : Diplomatic Enclave, New Delhi, CLARIDGE'S HOTEL : 12, Aurangzeb Road; FLORA HOTEL: Dayanand Road, Daryaganj; GRAND HOTEL : 2, Underhill Road, Civil Lines; HOTEL AMBASSADOR : Sujan Singh Park, New Delhi ; HOTEL BROADWAY : Asaf Ali Road, New Delhi ; HOTEL IMPERIAL : Janpath, New Delhi ; HOTEL JANPATH : Janpath, New Delhi ; HOTEL MARINA : Connaught Circus, New Delhi ; NIRULA'S HOTEL : L-Block, Connaught Circus, New Delhi ; OBEROI MAIDENS ; 7, Alipur Road, Delhi 8 ; OBEROI SWISS : 2, Alipur Road, Delhi 8.

* Includes money earned through tourists from other countries also, but not mentioned in the table being not substantial.

CONSTITUTION OF INDIA

THE present constitution of India was drawn up by a Constituent Assembly which first met on 9th December 1946. A draft constitution was published in February 1948. The constitution with amendments in the original draft was finally adopted on 26th November, 1949. It came into effect on 26th January 1950.

There were nine amendments to the Constitution upto the end of March 1961. The Ninth Amendment had passed Parliament at the time of writing (March 1961).

A whole Schedule, the Ninth Schedule, was added by an amendment in 1951.

A major amendment was concerned with the re-formation of the constituent units of the Union. The States as re-formed came into existence on 1st Nov., 1956.

A smaller change came on May 1, 1960 when one of the States Bombay was divided into two States, Maharashtra and Gujarat.

STATES

India, that is, Bharat is a sovereign democratic republic.

It is variously called the Republic of India, the Union of India, The Indian Union.

The Union is made up of 16 States and 6 Union Territories.

The States with their capitals given in brackets are:

Andhra Pradesh (Hyderabad); Assam (Shillong); Bihar (Patna); Maharashtra (Bombay); Gujarat (Ahmedabad)*; Kerala (Trivandrum); Madhya Pradesh (Bhopal); Madras (Madras); Mysore (Bangalore); Nagaland (Kohima); Orissa (Bhubaneshwar); Punjab (Chandigarh); Rajasthan (Jaipur); Uttar Pradesh (Lucknow); West Bengal (Calcutta).

Jammu and Kashmir (Srinagar).

The 6 Union Territories with their capitals in brackets are:

Delhi (Delhi); Himachal Pradesh (Simla); Manipur (Imphal); Tripura (Agartala); Laccadive, Minicoy and Amindivi Islands (Kozhikode, provisional headquarters); Andaman and Nicobar Islands (Port Blair).

The States are administered by State Governments, the Union Territories by the Central Government.

The State of Kashmir is in a unique position. It enjoys rather more power than the other States (see under Jammu and Kashmir). It has a flag of its own.

This special status is conferred by Art. 370 of the Constitution.

In addition to the States and Territories mentioned above there is one administrative unit—the North-East Frontier Agency, called NEFA for short.

The NEFA is administered by the Governor of Assam as agent of the Central Government.

FEDERATION

The constitution of India is quasi-federal in nature.

The distribution of power between the Centre and the local administrations follows the accepted principle that subjects which for convenience

* Temporary capital.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

and efficiency ought to be administered on an all-India basis are vested in the Union Government, while others (of the nation-building sort) which can be conveniently administered on a local basis are vested in the State Governments.

Thus, defence, foreign affairs, transport and communications, currency and coinage, banking, customs and export duties, and the administration of justice at the higher level are all Central subjects, while State powers include those over police, public health, education, agriculture, forests and so on.

There is a third group of subjects that fall betwixt and between such as trade and industry, economic and social planning, social security and insurance, labour welfare, price control, electricity, newspapers and books and vital statistics. On these subjects both the Centre and the State can freely legislate, it being understood that whenever there is conflict between Union and State legislation the Union laws will ordinarily prevail.

Three detailed lists of subjects are drawn up, the Union List, the State List and the Concurrent List, and the residuary power rests with the Union. That is to say, if at any time, a subject which does not figure in any of the three lists, comes up for consideration the power of dealing with it lies with the Union Government.

The three lists are given in the Seventh Schedule.

It may be added that the Union List has 97 entries, the State List 65 and the Concurrent List 47.

All elections are directed and controlled by an Election Commission. Elections to the Lok Sabha and the Legislative Assemblies of the States are on the basis of adult suffrage. Seats are reserved in the Lok Sabha for the Scheduled Castes and the Scheduled Tribes.

There is a Public Service Commission for the Union and also for the States. Two or more States may agree to have only one Commission for the group. Actually, every State has a Public Service Commission at present while the Union Public Service Commission operates for the Union Territories as well. Appointment of members of the Commission are made by the President or the Governor as the case may be. The Commissions conduct examinations for appointments to the services of the Union or the States. The Union Commission submits an annual report to the President.

Provision is made for removing differences between the various States by empowering the President to establish an Inter-State Council.

FUNDAMENTAL RIGHTS

In the Indian Union the rights of Indian citizenship are given to 1. One who is born in India, 2. Either of whose parents was born in India, and 3. Who has been a resident of India for five years. Provision is also made for persons who are affected by the partition of the sub-continent.

Details were filled in by the Citizenship Act of 1955 which also provides for the termination and deprivation of citizenship under certain conditions. The Act also empowers Government to extend the rights of citizenship to any country in the Commonwealth and the Republic of Ireland on a reciprocal basis.

Certain fundamental rights are guaranteed to every citizen for the first time. All citizens are equal before the law and no discrimination is made on grounds of religion, sex, caste, etc. All citizens have equal opportunities.

Freedom of speech and expression is guaranteed, and the right to hold meetings (without arms), to form unions and associations, to move freely in India and to reside in any part, to acquire property and to practise any profession are also assured under the Constitution.

Life and personal liberty are protected under the law, and there will not be punishment for the same offence more than once. Preventive detention is also forbidden except in certain cases.

Children under the age of 14 will not be allowed to be employed in factories and forced labour like *begar* is prohibited.

India is a secular State and as such there is freedom of conscience. Citizens are allowed to profess, practise and propagate any religion; and the State will not ordinarily interfere in religious questions. The minorities are assured of cultural and educational rights.

The State can acquire compulsorily property for public purposes, but compensation may be paid to the owner of the property concerned although questions relating to the quantum of compensation are not justiciable. But property may also be acquired without compensation in certain cases.

All titles, except military or academic, are also abolished, though honours for meritorious service may be conferred.

Untouchability is abolished.

These fundamental rights can be enforced by the Supreme Court and by High Courts which have the authority to issue prerogative writs such as *habeas corpus, certiorari, prohibition*, etc.

In respect of the Defence Forces, however, Parliament has power to legislate on these fundamental rights.

It must also be pointed out that some of these fundamental rights can be suspended in case of emergency, and the remedies available for their enforcement may also be suspended by an order of the President.

There are also certain Directive Principles in accordance with which the State has to direct its policy. These principles are of a recommendatory character and cannot be enforced in a court of law. However the State is expected to look upon them as a kind of touch-stone for its policy and action.

These principles include organization of village panchayats, provision for just and humane conditions of work, equal pay for equal work, unemployment benefit, assistance in old age and sickness, maternity relief, a uniform civil code for the citizens, provision for compulsory and free education of children and separation of judiciary from executive.

Other principles are the organization of agriculture and animal husbandry on modern and scientific lines, prohibition of intoxicating drinks and drugs, protection of national monuments, promotion of international peace and security and settlement of international disputes by arbitration.

There are special provisions to safeguard the interests of two groups—The Anglo-Indians and the Scheduled Castes and Tribes.

The Scheduled Castes and Tribes have special representation in the legislatures of the country upto 1970 (see separate articles on the Scheduled Castes and Tribes). In certain tribal areas there are autonomous administrative bodies.

As for Anglo-Indians the President may nominate not more than two members of the Anglo-Indian community to the Lok Sabha if he thinks that the community is not adequately represented. Similar power is given to the Governor of a State. The Governor can nominate one member to the Legislative Assembly. In West Bengal, however, he can nominate not more than two.

The claims of the Scheduled Castes and the Scheduled Tribes are to be considered in making appointments to services, and for two years after the commencement of the Constitution the Anglo-Indians were to have the same proportion in the services as they had immediately before 15th August 1947. This reservation is to be progressively reduced by 10 per cent every two years in such a way that it is to cease completely ten years after the commencement of the Constitution.

Originally all reservation including reservation of seats for Scheduled and Tribal classes were to cease ten years after the commencement of the Constitution.

In 1960 the constitution was amended—it was the eighth amendment to the constitution—to extend the period of reservation of seats in the legislatures for another ten years from 1960.

A special officer for the Scheduled Castes and the Scheduled Tribes has been appointed.

UNION EXECUTIVE

The executive head of the Indian Union is the President. He is elected by the elected members of the Houses of Parliament and the Legislative Assemblies of all the States. His term of office is five years, and he is eligible for re-election. Only a person who is a citizen of India and has completed the age of thirty-five years is qualified to contest the election.

He is the Supreme Commander of the Armed Forces.

He has the power to grant pardons or remission of punishment.

The President is entitled to the use of an official residence without payment of rent, and a salary of Rs. 10,000 per month and allowances. Provision has also been made by an Act of Parliament for a pension of Rs. 15,000 per annum.

The President has the power of summoning, proroguing and dissolving Parliament. At the commencement of each session he addresses both Houses of Parliament assembled together. He has the right of sending messages to Parliament and sending back a Bill presented to him for his assent. This power however can be used by him only once.

The President has legislative powers under certain circumstances. When neither of the Houses of Parliament is in session and the President is satisfied that circumstances exist which make immediate action necessary he may promulgate an ordinance.

Such ordinance must be put before both the Houses of Parliament and will cease to operate at the expiration of six weeks from the re-assembly of Parliament.

The President can also declare emergency if he is satisfied that the security of India or any part thereof is threatened either by war or internal disturbances when the legislature is in session. Such a proclamation would give additional powers to the Union executive and the Legislature.

The judges of the Supreme Court and the High Courts, the Attorney-General of India and the Comptroller and Auditor-General of India are all appointed by the President. The heads of States, *i.e.*, Governors are also appointed by the President.

The President has the power of appointing ambassadors abroad and receiving diplomatic representatives of foreign States.

The President places a number of annual reports before Parliament: the Annual Financial Statement, the report of the Auditor-General of India relating to the accounts of the Government of India, the annual report of the Union Public Services Commission and the report of the Special Officer for Minorities.

All executive action of the Government of India is taken in the name of the President and it is the duty of the Prime Minister to communicate to the President all decisions of the Council of Ministers.

Provision is made for the impeachment of the President, by Parliament, for violation of the Constitution. If such a resolution is passed by a majority of not less than two-thirds of the total membership, such a resolution has the effect of removing the President from office.

In the exercise of his functions, the President has the aid and advice of a Council of Ministers, with the Prime Minister at the head of it. The President appoints the Prime Minister and other Ministers are appointed on the advice of the Prime Minister.

The Council of Ministers is collectively responsible to the Lok Sabha (the Lower House).

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Every Minister must be a member of either House of Parliament, and he is required to take an oath of office and secrecy.

The salaries and allowances of Ministers are determined by Parliament.

There is a Vice-President of India, who is ex-officio Chairman of the Rajya Sabha (the Upper House). The Vice-President acts as President during a casual vacancy in the office of the President. He is elected by the members of both Houses of Parliament and his term of office is five years.

UNION PARLIAMENT

The Parliament consists of the President and two Houses known as, as already mentioned, the Lok Sabha and the Rajya Sabha. It must meet at least twice a year. The maximum strength of the two Houses is fixed at 250 (12 nominated) for the Rajya Sabha and 520 for the Lok Sabha (not more than 500 from the States and 20 from the Territories).

In March 1961 the Rajya Sabha had a total strength of 231. Of these members 12 were nominated by the President.

In March 1961 the Lok Sabha had a total strength of 499. Of these members 10 were nominated.

The Rajya Sabha is elected by the elected members of the Legislative Assemblies of the States, while the Lok Sabha is elected directly by the voters in the country.

In the case of the Union Territories of Himachal Pradesh, Tripura, and Manipur, the Territorial Councils form the electoral colleges for the election of members to the Rajya Sabha from these Territories. The electoral college for the Territory of Delhi consists of persons who were members of the Delhi Legislative Assembly immediately before 1st November 1956.

The elections to the Lok Sabha are based on adult suffrage and joint electorates. There is no reservation of seats for any group except Scheduled Castes and Scheduled Tribes.

The representatives of Jammu and Kashmir in the Lok Sabha are appointed by the President on the recommendation of the legislature of the State.

The Rajya Sabha is a permanent body with one-third of its members retiring every second year. The Vice-President of the Union is also the Chairman of the Rajya Sabha. The Rajya Sabha has also a Deputy Chairman.

The Lok Sabha has a duration of five years, ordinarily. There is a Speaker and a Deputy Speaker of the House both of whom are elected by its members.

All these posts carry a salary and allowances.

Under certain circumstances, the members can be disqualified and their seats declared vacant.

All legislation requires the consent of both Houses of Parliament, and every question is decided by a simple majority of those present and voting except on amendments to the constitution.

Money Bills can be introduced only in the Lok Sabha. The Rajya Sabha can only return a bill with its recommendations to the Lok Sabha within a period of fourteen days of its receipt. Bills passed by Parliament are submitted to the President for his assent. Only on such assent being given does the Bill become law.

A Bill normally goes through the following stages. It is first published. After introduction there is a general debate. Third, there is a clause-by-clause discussion. Then it is voted upon. A specially important measure may go before a select committee or a joint select committee. A Money Bill has a slightly different passage. After it has passed the Lok Sabha it is sent to the Rajya Sabha which has to return it within fourteen days with its recommendations which may be accepted or rejected.

The quorum is fixed at one-tenth of the membership of the House.

The language used in Parliament is either Hindi or English.

Distribution of Seats

The distribution of seats in the Rajya Sabha is as follows :

Andhra Pradesh 18; Assam 7; Bihar 22; Gujarat 11; Kerala 9; Madhya Pradesh 16; Madras 17; Maharashtra 19; Mysore 12; Orissa 10; Punjab 11; Rajasthan 10; Uttar Pradesh 34; West Bengal 16; Jammu and Kashmir 4; Delhi 3; Himachal Pradesh 2; Manipur 1; Tripura 1; Total—220.

The President has nominated 12 members. Thus the total of elected and nominated members is 232.

The allocation of seats in the Lok Sabha is as follows :

Andhra Pradesh 43; Assam 22; Bihar 55; Gujarat 22; Kerala 18; Madhya Pradesh 36; Madras 41; Maharashtra 44; Mysore 26; Orissa 20; Punjab 22; Rajasthan 22; Uttar Pradesh 86; West Bengal 36; Jammu and Kashmir 6; Delhi 5; Himachal Pradesh 4; Manipur 2; Tripura 2.

The President has nominated one member each for the Andamans and the Laccadives and two to represent the Anglo-Indian Community.

As mentioned above the six members from Jammu and Kashmir are also nominated by the President on the recommendation of the State legislature.

Parliament's control over the administration is also exercised through a series of committees. The Committees can summon witnesses or require documents to be produced. There is a Committee on Privileges which sees to breaches of Parliamentary privilege, a Business Advisory Committee which helps the Ministry of Parliamentary Affairs in drawing up the programme for a session.

Two very important Committees are the Public Accounts Committee and the Estimates Committee. They are elected by the House of the People and Ministers are barred from membership. The Public Accounts Committee ensures that money is spent for the purpose for which Parliament has voted it, and criticizes cases of waste, or extravagance. The Estimates Committee examines possibilities of economy and reform in financial administration and the manner in which estimates may be presented to Parliament.

The programme of work for any session is worked out by the Ministry of Parliamentary Affairs.

SUPREME COURT

The Supreme Court of India consists of a Chief Justice of India and not more than thirteen other Judges. The appointments are made by the President. The salary of the Chief Justice is Rs. 5,000 per month and of the other Judges Rs. 4,000 per month.

The Judges could hold office till the age of 65.

For purposes of constitutional law the Supreme Court has exclusive original jurisdiction in any dispute (*a*) between the Government of India and one or more States, (*b*) between the Government of India and one or more States on one side and one or more other States on the other, (*c*) between two or more States only in so far as the dispute involves any question on which the existence of a legal right depends.

The Supreme Court has also jurisdiction both appellate and original in matters which involve a substantial question of law as to the interpretation of the constitution.

An Attorney-General for legal advice and a Comptroller and Auditor-General of India for audit and accounts are appointed by the President. The Attorney-General has the right to appear in all courts in India.

(See also under 'Administration of Justice'.)

STATE GOVERNMENT

The 15 States have Governors at their heads, five Union Territories have Chief Commissioners at their heads, the head of the sixth, Himachal Pradesh, is designated Lieutenant-Governor, and the State of Kashmir has a Sadar-i-Riyasat (President).

Zonal Councils

The States and Union Territories are grouped into geographical zones, and for each zone there is a Zonal Council, which is an advisory body.

These came into existence as part of the scheme relating to the reorganization of States embodied in the States Reorganization Act of 1956.

There are five zones: Northern zone (Punjab, Rajasthan, Kashmir, Delhi and Himachal Pradesh); Central zone (Uttar Pradesh and Madhya Pradesh); Eastern zone (Bihar, West Bengal, Orissa, Assam, Manipur and Tripura); Western zone (Gujarat, Maharashtra and Mysore); Southern zone (Andhra Pradesh, Madras, and Kerala and also Mysore as a permanent invitee).

Each Zonal Council consists of a Union Minister to be nominated by the President, the Chief Minister of each of the States in the Zone and two other Ministers of each State. The two Ministers are to be nominated by the Governor of the State, in the case of Kashmir by the Sadar-i-Riyasat. If there is no Council of Ministers in a State the three members from that State will be nominated by the President. In the case of a Union Territory there will be only two members and they will be nominated by the President.

The Union Minister is to preside over the meetings.

The first Union Minister nominated by the President was late Govind Vallabh Pant, the Home Minister.

The Council will normally meet by rotation in the States included in the Zone.

The idea in constituting Zonal Councils is to develop the habit of cooperative working and to arrest the growth of particularist trends like regionalism and linguism.

It would also help in encouraging co-operation among the States in the execution of major development projects.

The Councils may discuss matters of common interest—and more especially problems arising out of the reorganization of States such as border disputes, linguistic minorities, inter-State transport and also economic or social planning—and advise the Central or State Governments on the action to be taken in such matters.

All questions at meetings will be decided by a majority of the members present.

The proceedings of every meeting of a Zonal Council have to be forwarded to the Central Government and the States Governments concerned.

Wherever there is a problem in which States of more than one Zone have a common interest it will be discussed at a joint meeting.

The joint meeting will be held at such time and place as the Chairman may decide. The rules of procedure at these meetings will be framed by the Central Government.

The office of each Zonal Council has been located as follows :

North Zone—New Delhi, Central Zone—Allahabad, Eastern Zone—Calcutta, Southern Zone—Madras, Western Zone—Bombay.

The administrative expenses of the office, except the salary and allowances of the Secretary will be borne by the Central Government.

States

The Governor of a State is appointed by the President. Executive power is vested in the Governor who is appointed for a term of five

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

years, ordinarily. Only a citizen of India and one who has completed 35 years of age, is eligible for such an appointment.

The Governor, like the President has power to grant pardon, etc. He will have a Council of Ministers to aid and advise him. The Governor also appoints an Advocate-General for the State.

Legislature

Ten States, Andhra Pradesh, Bihar, Kashmir, Madhya Pradesh, Madras, Maharashtra, Mysore, Punjab, Uttar Pradesh, West Bengal have two Houses of Legislature ; the others, only one. The two Houses are called the Legislative Assembly (sometimes Vidhan Sabha) and the Legislative Council (sometimes Vidhan Parishad). The former has a duration of five years, while the latter is a permanent body with one-third of the members retiring every second year.

The minimum strength of an Assembly is 60 and the maximum 500.

The minimum strength of a Council is 40, and the maximum one-third of the State Assembly.

An Assembly is elected directly on a basis of adult franchise with reservation of seats for the Scheduled Castes and Tribes. The composition of a Council is more complicated. About a third are elected by the Assembly, another third by local authorities (municipalities, district boards), about a twelfth by registered teachers in schools not lower than the secondary school standard, and about a twelfth by registered graduates of not less than three years' standing. And the rest are nominated by the Governor from among persons who have distinguished themselves in art, science, literature, co-operation and social service.

The Legislature must meet at least twice a year. While the Assembly consists of members who are directly elected from territorial constituencies, the Council consists of members nominated by the Governor, elected by the Assembly and of representatives of local bodies and special interests.

The legislature can frame its own rules of procedure but it is more or less the same as in Parliament. The quorum for a meeting is one-tenth of the membership or ten whichever is higher.

In case of disagreement, if the Bill is passed a second time after three months of its reference to the Council it automatically becomes law after one month of its passage in the lower house.

The State legislature too has its Committees like Parliament.

The number of seats (excluding nominated members) in the Legislative Assembly and the Legislative Council is as follows (the first figure shows the number of seats in the Assembly, and the second in the Council):

Andhra Pradesh: 301; 90; Assam: 108;—; Bihar: 330; 96; Gujarat: 132;—; Kashmir: 100; 36; Kerala: 126;—; Madhya Pradesh: 288; 90; Madras: 205; 63; Maharashtra: 264; 78; Mysore: 208; 43; Orissa: 140;—; Punjab: 154; 51; Rajasthan: 176;—; Uttar Pradesh: 430; 108; West Bengal: 238; 75.

The total number of seats in the Territorial Council of Himachal Pradesh is 41, of Manipur 30 and of Tripura 30.

About the Kashmir Assembly it may be mentioned that 25 seats are now vacant waiting to be filled in by members from that part of Kashmir now under occupation by Pakistan troops.

The effective strength of the Assembly is 75.

The right of summoning, proroguing and dissolving the legislature is vested in the Governor, who addresses the legislature at the commencement of each session.

Like the Parliament there is a Speaker, a Deputy Speaker, a Chairman and a Deputy Chairman for the Legislative Assembly and the Legislative Council respectively. These officers of the legislatures are entitled to salary and allowances.

The language in the legislature can be either Hindi or English or any other language allowed by the Speaker.

The State Legislatures cannot discuss the conduct of any judge of the Supreme Court or of a High Court in the discharge of his duties.

As the Governor is a part of the legislature, he has certain legislative powers. He can promulgate ordinances during the recess of the legislature; such ordinances must be placed before the legislature and cease to operate at the expiration of six weeks from the re-assembly of the legislature.

The salary of the Governor is Rs. 5,500 per month and he is also entitled to certain allowances.

If the government of a State cannot be carried on in accordance with the provisions of the Constitution, and the Governor makes a report to that effect to the President, the President may by proclamation assume to himself all or any of the functions of the Government of the State. He may also declare that the powers of the State legislatures shall be exercised by Parliament, and suspend any provision of the constitution relating to the State.

However, he cannot assume to himself, or suspend any of the provisions of the Constitution relating to High Courts.

UNION TERRITORIES

In accordance with the provisions of the Territorial Councils Act of 1956 three Union Territories namely, Himachal Pradesh, Manipur and Tripura have Territorial Councils.

The Councils are elected directly from territorial constituencies on the basis of adult suffrage. They will deal with local affairs such as education, public health, roads and bridges and transport generally, panchayats, local works, animal husbandry.

A Council will meet at least once in two months. The Administrator of the Territory may attend and address a meeting of the Council. When he attends any such meeting he will preside over it.

For every Territorial Council there will be a chief executive officer appointed by the Administrator. There may also be other staff.

The Council can levy taxes on professions, trades, callings and employments and tolls on bridges and fix school fees. The taxes have to be approved by the Central Government before they become effective.

The Council has the power to borrow money with the approval of the Central Government.

The budget estimates of the Territory will be presented by a Finance Committee of the Council. The budget estimates finally adopted by the Council in the light of the suggestions made by the Administrator will be the budget of the Territorial Council.

The Central Government may pay to a Territorial Council the net proceeds of the following taxes attributable to the area under the Council's jurisdiction:

Entertainment tax; a certain percentage of the land revenue not exceeding 10; tax on motor vehicles; taxes on passengers, goods, terminal tax.

The Central Government may also make such grants as it thinks fit.

The Administrator will have the right to give directions to the Council in regard to matters connected with education.

The Administrator can also suspend the execution of a resolution or order of the Council or prohibit any action on grounds that it is likely to lead to a breach of the peace or cause annoyance or injury to the public or to any class or body of persons. But in such cases he has to send a report to the Central Government together with explanations offered by the Council. The Central Government may then confirm, modify or rescind the Administrator's order.

The Central Government may on the report of the Administrator supersede a Territorial Council for incompetence, negligence of duty or abuse of power. In such cases a new Council will have to be elected within a period of one year.

The Central Government has the power to make rules for the purpose of carrying out the provisions of the Act, to regulate the conduct of business of the Council; regulate the employment, payment, suspension of officers and servants of the Council; the keeping of accounts.

Such rules framed by the Central Government have to be laid before Parliament for not less than thirty days, and have to be approved by it.

Any bye-laws made by the Council in regard to matters over which it has jurisdiction have to be confirmed by the Central Government. These laws are liable to alteration by the latter authority.

The strength of the Territorial Council of Himachal Pradesh is 41, of Manipur 30 and of Tripura 30. Of the 41 seats in the Himachal Council 12 are reserved for the Scheduled Castes.

The Central Government has the authority to nominate two persons who are not in the service of Government, to a Territorial Council.

For the Union Territory of Delhi there is established an Advisory Committee which will be associated with the Minister of Home Affairs who is responsible for the administration of Union Territories. This Committee consists of all members of Parliament representing Delhi, the Chief Commissioner of Delhi, the Vice-Chancellor of the University of Delhi, the Mayor of the Delhi Municipal Corporation and the Senior Vice-President of the New Delhi Municipal Committee.

As regards Andaman and Nicobar Islands (Union Territory), the President makes rules and regulations for the peace and good government of the State, and appoints a Chief Commissioner for administration. the President has the power of making regulations which have the effect of amending or repealing an Act of Parliament.

NEFA is administered by the Governor of Assam, who acts as the agent of the Union Government, while for Nagaland the Interim Body will advise the Governor on day-to-day affairs until the State formally comes into being.

It may be mentioned here that the tribal areas of Assam have a special status. The Governor of Assam administers them on behalf of the President and can set up councils for districts and regions. These councils have powers of legislation about disposition of land, inheritance of property, matrimonial and other customs. They can set up and administer courts, schools, dispensaries and markets. They can collect certain specified taxes.

These areas are often referred to as the autonomous districts of Assam.

There is a High Court for each State and a Judicial Commissioners' Court each for the Union Territories of Himachal Pradesh, Manipur and Tripura.

The salary of a Chief Justice of a State is Rs. 4,000, and of a High Court Judge Rs. 3,500.

The highest court for Delhi is the District Court. Appeals from here go to the Punjab High Court, a circuit bench of which sits in Delhi. For Andamans, the highest court is the Chief Commissioner's Court. Appeals go to the Calcutta High Court.

FINANCE

The financial relations between the Union and the States are as follows:—There is a Consolidated Fund of India and a Consolidated Fund of each State, and all money received is credited to the public account of India or the public account of the State as the case may be. Provision is also made for the establishment of a 'Contingency Fund of India' and a 'Contingency Fund of the State.'

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Certain duties and taxes are levied and collected by the Government of India, such as duties in respect of succession to property, terminal taxes, taxes on railway fares and freights, etc. But the net proceeds are assigned to the States, in accordance with such principles of distribution as formulated by Parliament. Certain other taxes, like income-tax are levied and collected by the Government of India, but are distributed between the Union and the States.

These matters are fixed in accordance with the recommendations of a Finance Commission appointed for the purpose.

No moneys can be appropriated out of the Consolidated Fund of India or of a State except in accordance with an Appropriation Act by the appropriate legislature.

The property of the Union is exempt from the taxes imposed by a State, and the property and income of States are exempt from Union taxation.

Provision is made for the appointment of a Finance Commission.

The privy purse sums of the Rulers are a charge on the Consolidated Fund of India, and these sums are to be exempt from taxes on income.

OFFICIAL LANGUAGE

Hindi in the Devanagari script is the official language of the Union and the form of numerals is the international form of the Indian numerals. The English language, however, will continue to be the official language for a period of not more than fifteen years from the commencement of the Constitution.

After this English will be used less and less and Hindi more and more until the latter replaces the former completely. There would be no time set for this final change-over.

The official language of the Union, *i.e.*, English will be used for communication between the Union and a State or between one State and another. However, if two States agree Hindi may be used instead of English between them.

All proceedings in the Supreme Court and High Courts, the texts of Bills and Acts passed by the legislatures and ordinances promulgated by the appropriate authorities are to be in the English language, until Parliament by law provides otherwise.

But Hindi could be used as an additional language after 1965.

By previous consent of the President proceedings in a High Court may be conducted in Hindi or any recognised State language but judgments, decrees or orders passed by the court must be in English.

It is the duty of the Union Government to promote and spread the Hindi language. The vocabulary for the development of the language is to be drawn primarily from Sanskrit.

The States have been given the liberty of adopting any one or more languages used in their territory or Hindi as the official language of the State.

The following languages are recognised by the Constitution: (1) Assamese, (2) Bengali, (3) Gujarati, (4) Hindi, (5) Kannada, (6) Kashmiri, (7) Malayalam, (8) Marathi, (9) Oriya, (10) Punjabi, (11) Sanskrit, (12) Tamil, (13) Telugu, (14) Urdu.

A Commission was appointed in accordance with the provisions of the Constitution to make recommendations to the President as regards the progressive use of the Hindi language for official purposes of the Union, and other allied matters.

After the Commission reported, Parliament decided that while Hindi would become the official language in 1965 as laid down in the Constitution English would continue to be used side by side with Hindi though in a progressively diminishing degree until it is completely replaced. No date is fixed for the change-over. The Supreme Court and the High Courts could use Hindi in addition to English after 1965.

EMERGENCY PROVISIONS

If the President is satisfied that a grave emergency exists, and the security of India or any part thereof is threatened either by war or internal disturbance, he may make a declaration to that effect. Such proclamation must be approved by both the Houses of Parliament, before the expiration of two months, otherwise it ceases to operate at the end of that period. As a result of this proclamation Parliament will be authorised to legislate on items included in the State list and the President, to issue directions to the Governor. Parliament can validate such a proclamation for a period of three years which is the maximum.

A request for a declaration of emergency may also come from a State authority.

This, however, would not be applicable to the functions of the High Courts. Somewhat similar provision is also made for financial emergency.

AMENDMENT OF THE CONSTITUTION

For purposes of amendment the items are divided into three classes with a different procedure for each class.

For amendment of the provision with respect to the Supreme Court and the High Courts, the distribution of legislative powers between the Centre and the States, the representation of the States in Parliament, etc., the amendment must be passed by both the Houses of Parliament by a majority of the total membership of the House and by a majority of two-thirds of the members present and voting, and must further be ratified by the legislatures of not less than one-half of the States.

In other cases no reference to the State legislatures is necessary. Parliament by itself can amend the Constitution in the manner mentioned above. In some cases amendments can be effected even by a bare majority such as is required for the passing of any ordinary law.

There were eight amendments to the Constitution from the coming into force of the Constitution on 26th January 1950 to the end of March 1960.

The Constitution (First Amendment) Act, 1951 aimed among other things at enabling the State to make special provision for the advancement of socially and educationally backward classes. It also gave the State broader powers to restrict freedom of speech and writing in the interests of friendly relations with foreign States, public order, decency, morality and in relation to defamation or incitement to an offence.

Two new articles were added after Art 31 to save the laws relating to the acquisition of estates and the validation of certain land reforms Acts and Regulations passed by certain States. These Acts were specified in an extra Schedule added to the list, the Ninth Schedule.

The Articles affected by the First Amendment were 15, 19, 85, 87, 174, 176, 341, 342, 372 and 375. It added two new Articles 31A and 31B and a new Schedule, the Ninth Schedule.

The object of the Constitution (Second Amendment) Act, 1952 was to make adjustments in the representation in the Lok Sabha consequent on the completion of the 1951 census. The Article affected was Article 81.

The Constitution (Third Amendment) Act, 1954 changed entry No. 33 in the Concurrent List in the Seventh Schedule by adding foodstuffs, cattle fodder, raw cotton and jute whose production and supply could be controlled by the Centre if necessary.

The Constitution (Fourth Amendment) Act, 1955 enables the State to acquire private property compulsorily for a public purpose and bars any reference about the quantum of compensation fixed by the legislature to a court of law. Also, the temporary taking over of private property* in the public interest or to secure better management is excluded from the compensation clause. Laws providing for State monopolies are also saved from invalidation. Seven new entries were made to the Ninth Schedule.

The Articles affected were 31, 31A, 31(2) and 305.

The Constitution (Fifth Amendment) Act, 1955 merely fixed a time for State legislatures to give their opinion on Central laws affecting the area, boundary etc. of the State concerned. The Article affected was 3.

The Constitution (Sixth Amendment) Act, 1956 added a new entry in the Union List in the Seventh Schedule, thus giving the Centre authority to legislate on the taxes, on the sale and purchase of goods in the course of inter-State transactions.

The Constitution (Seventh Amendment) Act, 1956 dealt with a whole host of problems thrown up by the reorganisation of the States, such as the alteration of State boundaries, the creation of new States, the classification of certain areas as Union Territory, the allocation of seats in the Rajya Sabha, the provision of a bicameral legislature for certain States. Other points the Amendment dealt with are the original jurisdiction of the Supreme Court, the High Courts and safeguards for linguistic minorities.

Some articles affected were 1, 80, 81, 82, 131, 168, 216, 217, 220, 222, 224 and the First Schedule, and the Fourth Schedule. Four new Articles 290A, 350A and 350B and 372A were added.

The Constitution (Eighth Amendment) Act, 1959 is concerned with the representation of Scheduled Castes and Tribes and Anglo-Indians in Parliament and State legislatures. Article 334 of the Constitution lays down that the reservation of seats in these bodies should cease ten years after the commencement of the Constitution, that is, in 1960. The Amendment proposes that the reservation of seats for the Scheduled Castes and Tribes and the representation of Anglo-Indians by nomination should continue for a further period of ten years—till 1970.

Article 333 is also amended so that the number of members so nominated to a State legislature may be fixed—not more than two in West Bengal and not more than one elsewhere.

The Constitution (Ninth Amendment) Act, 1960, gives effect to the transfer of territories between India and Pakistan under the Nehru-Noon Agreement of 1958.

* Without affecting ownership.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

ADMINISTRATION OF JUSTICE

THE Indian Union though a dual polity has no dual judiciary at all. The Supreme Court and the High Courts form one single integrated judiciary having jurisdiction and providing remedies in all cases arising under the constitutional law, the civil law or the criminal law. This is done in order to eliminate all diversities in remedial procedure.

The writs which for generations ran over the length and breadth of the country in the name of the British Sovereign, are now issued by the Supreme Court of India and the various High Courts in the territory of India. All the laws which existed before independence continue to operate in India as before subject to adaptation and modification made therein. Article 372 of the Constitution provides *inter alia* that, subject to the other provisions of the constitution, all the laws in force in the territory of India immediately before the commencement of the Constitution shall continue in force therein until altered, repealed or amended by a competent Legislature or other competent authority.

Article 13 of the Constitution provides that all laws in force in the territory of India immediately before the commencement of the Constitution, in so far as they are inconsistent with the provisions of the Constitution relating to Fundamental Rights (Part III) shall to the extent of such inconsistency be void.

The State is also debarred from making any law which takes away or abridges the Fundamental Rights conferred by this Part, and any law made in contravention shall be void to the extent of such contravention (Art. 13 (2)).

Article 14 ensures to all persons equality before the law by providing that the State shall not deny to any person equality before the law or the equal protection of the laws within the territory of India.

The continuity of the existing laws and legal procedure is further ensured by Article 375 under which all courts of civil, criminal and revenue jurisdiction and all authorities and officers continue to exercise their respective functions subject to the provisions of the Constitution.

The indigenous law of India is personal and divisible with reference to the two great classes of the population, Hindu and Muslim. Both systems claim divine origin and are inextricably interwoven with religion, and each exists in combination with a law based on custom. The rules of the Shastras and the Koran have, however, been in some cases altered and relaxed. Instances can be found in the Bengal Sati Regulation Act of 1829, the Indian Slavery Act, 1843, the Caste Disabilities Removal Act of 1850, the Hindu Widows' Remarriage Act, 1856, and some other Acts and Codes like those which remove the civil disabilities of Harijans.

During recent years indeed there has been a determined demand on the part of social reformers, and various women's organisations in India for an amendment of the Hindu Law so as to bring it into line with progressive social opinion, in consonance with the spirit of the times.

The Draft Hindu Code that was before the provisional Parliament aimed at abolishing the archaic principles of the ancient system of law, the removal of sex and caste disabilities, and generally simplifying, secularising, and modernising the law governing all Hindus, including Lingayats, Buddhists, Jains and Sikhs. But the Code lapsed on account of the dissolution of the provisional Parliament.

The Government of India however introduced piecemeal legislation regarding reforms in Hindu Law.

The following Acts have already been passed: The Hindu Marriage Act 1955, The Hindu Succession Act 1956, The Hindu Minority and Guardianship Act 1956, The Hindu Adaptation and Maintenance Act 1956. The new Hindu code is thus part of the statute book.

In the meanwhile, an opposite tendency has been observable among the Muslims, who by recent legislation have sought to revert to the law of the Shariat, discountenancing the application of Hindu Law and custom to the sections of the Muslim community who as converts from Hinduism had retained Hindu Law in matters of inheritance and succession.

Apart from this, the entire legal system which has hitherto prevailed in the country is in course of time bound to undergo a profound transformation by reason of the withdrawal of British rule and the partition of India. A Law Commission has been appointed by the Government of India for this purpose, and it has already submitted to the Government interim reports on certain laws. It has also submitted its report on the administration of justice and legal education.

A summary of this was given in the 1959-60 *Directory*.

A demand has been made for the simplification of the procedure and law for the administration of justice.

Accordingly a bill for amending the code of Criminal Procedure was passed. The amendment gives the accused certain new rights. He can now take an oath and give evidence if he so desires.

The Indian Penal Code has from time to time been amended. The rules of Civil Procedure have been embodied in the Code of Civil Procedure. The Code of Civil Procedure was remodelled in 1908 and the Code of Criminal Procedure in 1898. These Codes as amended from time to time are now in force.

SUPREME COURT

Art. 124 of the Constitution provides for the establishment of a Supreme Court of India consisting of a Chief Justice of India and seven other judges. There is provision in law for the appointment in all of 13 other judges. At present there are 14 judges including the Chief Justice (see Act 17 of 1960). Every judge of the Supreme Court shall be appointed by the President and shall hold office until he attains the age of sixty-five years. In the course of appointment of a Judge the Chief Justice shall always be consulted. Only a citizen of India who has been for at least 5 years a judge of a High Court, or for 10 years an advocate of a High Court, or a person, who in the opinion of the President, is a distinguished jurist, is qualified to be appointed judge of the Supreme Court.

A judge of the Supreme Court is not liable to be removed from his office except by an order of the President passed after an address by each House of Parliament, supported by a majority of the total membership of that House, and by a majority of not less than two-thirds of the members of that House present and voting, has been presented to the President in the same session for such removal, on the ground of proved misbehaviour or incapacity. No person who has held office as a judge of the Supreme Court shall plead or act in any court or before any authority within the territory of India.

The Supreme Court is a court of record with all the powers of such a court including the power to punish for contempt. The seat of the Court is to be in Delhi or such other place as the Chief Justice with the approval of the President may from time to time appoint.

The Supreme Court has exclusive original jurisdiction in any dispute (*a*) between the Government of India and one or more States; (*b*) between Government of India and one or more States on the one side and one or more other States, on the other; (*c*) between two or more States, if and in so far as the dispute involves any question (whether of law or fact) on which the existence or extent of a legal right depends (Article 131).

The appellate jurisdiction of the Supreme Court extends over all appeals from any judgment, decree or final order of a High Court, in civil, criminal or other proceedings, if the High Court certifies that the case involves a substantial question of law as to the interpretation of the Constitution. If the High Court refuses such a certificate the Supreme Court may grant special leave to appeal in a proper case (Art. 136). An appeal shall also lie to the Supreme Court from a High Court in civil matters, when the amount or value of the subject matter in dispute is not less than Rs. 20,000 or the High Court certifies the case to be a fit one for appeal to the Supreme Court (Art. 133).

In criminal matters under Art. 134 an appeal lies to the Supreme Court from any judgment, final order or sentence of a High Court, if the High Court has (*a*) on appeal reversed an order of acquittal of an accused person and sentenced him to death; or (*b*) has withdrawn for trial before itself any case from a subordinate court and has in such trial convicted the accused person and sentenced him to death; or (*c*) the High Court has certified that the case is a fit one for appeal.

For purposes of appeals to the Supreme Court, the Judicial Commissioners' Courts are to be considered as High Courts.

Under Art. 136 discretion is given to the Supreme Court to grant special leave to appeal from any judgment, decree, sentence or order, in any matter passed by any Court or Tribunal in the territory of India.

The Supreme Court has also power to review its own judgement (Art 137).

The jurisdiction and powers of the Federal Court under the existing law are also exercisable by the Supreme Court (Art. 135) including the advisory power to give its opinion on questions of law or fact referred to it by the President (Art. 143).

The law declared by the Supreme Court shall be binding on all courts in the territory of India excepting the Supreme Court itself.

The dual system in the Supreme Court was abolished with effect from January 26, 1955.

Parliament has the power to legislate on the constitution, organisation, jurisdiction and powers of the Supreme Court.

Article 32 of the Constitution guarantees the right to move the Supreme Court by appropriate proceedings for the enforcement of Fundamental Rights; and for the enforcement of such rights the Supreme Court has power to issue directions or orders or writs, including writs in the nature of Habeas Corpus, mandamus, prohibition, *quo warranto* and *Certiorari* whichever may be appropriate.

Power is given to Parliament to enlarge the jurisdiction of the Supreme Court by appropriate legislation (Art. 138).

The royal prerogative to grant pardons, reprieves, respites or remissions of punishments now resides in the President (Art. 72).

Under Art. 348, all proceedings in the Supreme Court and in every High Court in India and the authoritative text of all Bills and Acts of Parliament and the State Legislatures and of all Ordinances promulgated by the President or Governors and of all orders, rules and regulations issued under the Constitution or any law shall be in the English language. If this language is to be replaced by any other language, Parliament must legislate to that effect.

All authorities, civil and criminal in the territory of India, have to act in aid of the Supreme Court (Art. 144). The independence of the judges of the Supreme Court, is secured by charging their salaries on the Consolidated Fund of India, and by prohibiting any discussion in the legislature on the conduct of the judges in their official capacity.

Some important judgements of the Supreme Court of India in 1959 *and* 1960:

(1) In M. S. M. Sharma *v.* Shri Krishna Sinha and others (1959 S.C.J. p. 925) laid down that the State Legislatures have all powers,

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

privileges and immunities of the House of Commons at the commencement of the Constitution and hence they can prohibit the publication of such part of their proceedings as has been ordered to be expunged.

(2) In Kochunni *v.* State of Madras (1959 S.C.J. p. 858) the Supreme Court laid down that under Art. 32, the Court can issue even a declaratory order if that happens to be proper relief to the aggrieved party. It also laid down an application under Art. 32 may be entertained for determination of questions of fact.

(3) In Babulal Parate *v.* the State of Bombay (1960 S.C.J. P. 107) it was laid down that there is no need to make a fresh reference to the State legislature for ascertaining its view on an amendment to the Bill seeking to reorganise States.

(4) In Jagan Nath Sahu *v.* the Union of India (1960 S.C.J. P. 975) it was laid down that in their relations between each other and nations outside the Commonwealth, members of the Commonwealth must be regarded as foreign powers and their affairs as between them are foreign affairs.

(5) In Indo-Pakistan agreement. In re. (1960 S.C.J. P. 933) it was laid down that the agreement to transfer the Berubari Union to Pakistan involved the alteration of the content of Article 1 and the relevant part of the First Schedule. Hence legislation by Parliament for amending Article 3 of the Constitution with a view to covering cases of cession of territory of India in favour of a foreign State would be necessary. After such an amendment in the Constitution, Parliament may pass a law for such a transfer. A law passed under Article 368 may also be adequate to implement the agreement.

HIGH COURTS

Every High Court is a court of record and has all powers of such court including the power to commit for contempt of itself.

Every judge of a High Court is appointed by the President after consultation with the Chief Justice of India, the Governor of the State and the Chief Justice of the particular High Court; and he holds office until he attains the age of sixty years.

A person is not qualified to be appointed a judge of a High Court unless he is a citizen of India and has either held judicial office or practised as an advocate for 10 years in any of the States.

A High Court judge is not liable to be removed from his office except in the manner provided in Art. 124 (4) for the removal of a judge of the Supreme Court of India.

No person who after the commencement of the constitution has held office as a permanent judge of a High Court could plead or act in any court or before any authority in the territory of India except the Supreme Court or other High Courts.

There is provision in the Constitution for the appointment of additional or acting judges.

Power is given to the President in consultation with the Chief Justice of India to transfer a judge from one High Court to any other High Court in India. (Art. 222.)

Article 225 preserves the jurisdiction and powers of the High Courts as they existed immediately before the commencement of the Constitution. Restrictions on the exercise of the original jurisdiction in revenue matters are removed.

Art. 226 gives to every High Court in India power throughout its jurisdiction to issue to any person or authority including Government directions, orders, writs, including writs in the nature of Habeas Corpus, mandamus, prohibition, *quo warranto* and *Certiorari* for the enforcement of Fundamental Rights and for any other purpose. (Art. 226).

The High Courts have powers of superintendence over all subordinate Courts and tribunals within their respective jurisdiction.

Legislation affecting constitution and organisation of the High Courts can be passed by Parliament alone.

The Law Commission appointed by the Government of India has rejected the suggestion that the powers of the High Courts under Art. 226–227 should be curtailed.

The Commission has also recommended to the Government of India that a High Court should not have Benches. It has also expressed the view that the establishment of tribunals will be necessary in view of the ideal of a Welfare State.

Some of the other recommendations of the Commission are:

(1) Article 217 of the Constitution should be amended to provide that a Judge of a High Court should be appointed only on the recommendation of the Chief Justice of that State and with the concurrence of the Chief Justice of India.

(2) The Senior Puisne Judge should not be automatically appointed as the Chief Justice unless he possesses the qualification they have referred to.

(3) The retiring age of High Court Judges should be raised to sixty-five, in the case of appointments to be made hereafter.

(4) The pension of the Chief Justice of a State High Court should be fixed at Rs. 2,000 per month and that of a Puisne Judge at Rs. 1,750 per month for 12 years of service.

(5) High Court Judges should not be permitted to practise in any court after retirement.

(6) The Constitution should be amended to bar a Judge of a High Court from accepting any employment other than as a Judge of the Supreme Court after retirement either under the Union or under the State.

(7) The jurisdiction of the city civil courts in Madras and Bombay should be reduced to Rs. 10,000.

On an average more than 14,000 cases are filed in the High Courts of India every month.

Figures collected for the first seven months of 1959 show that the cases filed in the 14 High Courts totalled 1,02,593. The highest number filed was in the Allahabad High Court while the lowest was in Jammu and Kashmir.

The break-up was: Allahabad—16,673; Andhra Pradesh—12,463; Assam—763; Bombay—13,623; Calcutta—7,959; Kerala—7,908; Madhya Pradesh—4,545; Madras—12,642; Mysore—3,517; Orissa—1,236; Patna—4,355; Punjab—11,841; Rajasthan—4,523; and Jammu and Kashmir—545.

LOWER COURTS

The Code of Criminal Procedure provides for the constitution of inferior criminal courts styled courts of session and courts of magistrates.

Every State, outside the towns of Madras, Bombay and Calcutta, is divided into sessions divisions consisting of one or more districts, and every sessions division has a court of session and a sessions judge, with assistants if need be. These stationary sessions courts are like the English Assizes, and are competent to try all accused persons duly committed, and to inflict any punishment authorised by law, but sentences of death are subject to confirmation by the highest court of criminal appeal in the State.

The Govts. of Bihar and Maharashtra have decided to abolish the system of trial by jury shortly (March 1961). The question of abolishing the system in Mysore and West Bengal is under the consideration of the State Govts. The system does not exist in Andhra Pradesh, Assam, Gujarat, Kerala, M.P., Madras, Orissa, Punjab, Rajasthan and U.P.

Magistrates' courts are of three classes with descending powers. Provision is made and largely utilised in the towns, for the appointment of honorary magistrates. In the towns of Madras, Bombay and Calcutta, Presidency Magistrates deal with magisterial cases and benches of Justices of the Peace or Honorary Magistrates dispose of the less important cases.

Article 50 of the Constitution lays down that the States shall take steps to separate the judiciary from the executive in the public service of the States.

The State of Bombay* was the first State to introduce the separation of the judiciary from the executive in public services, by a statute. The Act came into force on July 1, 1953.

There is complete separation in Kerala, Andhra and Mysore, and partial separation in Madras, Punjab, Bihar and U.P. It is not effected by any statute but by rules made by the Government in that behalf.

In Bihar the separation is introduced in all districts except five. The districts in which the separation is introduced are Patna, Gaya, Shahabad, Muzaffarpur, Darbhanga, Saran, Champaran, Bhagalpur, Monghyr, Saharsa, Hazaribagh and Purnea.

The Government of West Bengal has announced that it has decided to make the judiciary independent of the executive at all levels.

There is no complete separation of judiciary from the executive in the State of Madhya Pradesh and the question is under the consideration of the Government. There is, however, complete separation in the following districts of M.P.: Rewa, Sidhi, Shahdol, Satna, Chhattarpur, Panna, Datia, Tikamgarh, Raisen, Sehore, Gwalior, Shivpuri, Bhind, Morena, Guna, Shajapur, Rajgarh, Vidisha, Ujjain, Dhar, Dewas, Indore, Nimar, Mandleshwar (Ratlam), Jhabua and Mandsaur.

In the districts of Cuttack, Puri and Balasore in Orissa, separation of excutive from the judiciary was to be introduced from May 1, 1960.

Districts in Madras State where separation of executive and Judiciary has been introduced: North Arcot, South Arcot, Chingleput, Coimbatore, Madurai, The Nilgiris (except for a portion), Ramanathapuram, Thanjavur, Tirunelveli, Tiruchirapalli, Salem and Madras City.

The constitution and jurisdiction of the inferior civil courts vary. Broadly speaking one district and sessions judge is appointed for each district. As District Judge he presides in its principal civil court. His functions as Sessions Judge have already been described.

For these posts members of the Indian Civil Service were mainly selected in the past though some appointments were made from the Provincial Service. Now members of the Bar are recruited. In the majority of cases members of the subordinate judiciary are promoted to the posts of District judges.

Next come the Subordinate Judges and Munsiffs, the extent of whose original jurisdiction varies in different parts of the country.

There are in addition a number of Courts of Small Causes, with jurisdiction to try money suits up to Rs. 500. In the towns of Madras, Bombay and Calcutta where the Chartered High Courts have original jurisdiction, Small Causes Courts dispose of money suits up to Rs. 3,000.

In Bombay and Madras there are also City Civil Courts. The City Civil Court in Bombay has a pecuniary jurisdiction of upto Rs. 25,000.

As Insolvency Courts the Chartered High Courts of Calcutta, Bombay and Madras have jurisdiction in the Presidency towns. In the mofussil similar powers are conferred on the District Courts by the Provincial Insolvency Act of 1920.

There are Coroners only for the Presidency Towns of Calcutta and Bombay. Elsewhere their duties are discharged by the ordinary staff of magistrates and police officers unaided by jurors.

SPECIAL COURTS

Labour Courts and Industrial Courts now exist in most States.

A Labour Court consists of a single judge.

These Courts decide upon disputes regarding (*a*) propriety or legality of an order passed by an employer, (*b*) the application and interpretation of standing orders, (*c*) they also decide disputes referred to them by Government for arbitration. Legality or otherwise of strikes or lock-outs or closure, etc. is also decided by them.

An appeal against the judgment of the Labour Courts lies to the Industrial Court. This court has also original jurisdiction regarding matters referred to it by the Government or by representative Unions. It decides upon questions of law referred to it by Wage Boards and references regarding interpretation of the Act and the Rules. It has power of superintendence over Labour Courts.

The Industrial Disputes Act was passed by the Central Legislature in 1947 for the investigation and settlement of industrial disputes.

Industrial Tribunals were established under this Act. If the conciliation bodies set up under this Act fail to bring about a settlement, the matter is referred to the Industrial Tribunals.

Neither party to a dispute is entitled to be represented by a legal practitioner except with the consent of the other party and by leave of the Tribunal.

Industrial Tribunals are not permanent Courts. Whenever a matter is referred to the Government regarding an industrial dispute the Government appoints one or more persons as Industrial Tribunal to adjudicate upon the dispute.

The Industrial Disputes (Amendment and Miscellaneous Provisions) Act No. 36 of 1956 makes provision for the constitution of the following courts and tribunals:

1. Labour Courts to be constituted by the appropriate Government. A court is to consist of one judge only.

2. Industrial Tribunals. A Tribunal is to consist of one judge only. A person is not qualified to be a member of a Tribunal unless he has been judge of a High Court. The Tribunals will be constituted by the appropriate Government.

3. National Tribunals. These Tribunals will be constituted by the Central Government. Here also a tribunal is to consist of one judge only.

This Act came into force on 1st Sept., 1956.

The Industrial Disputes (Amendment) Act 41 of 1956 and the Dock Workers (Regulation of Employment) Act, 1948, are two other Acts with respect to labour cases.

Administration of labour laws is a divided responsibility. The Central Government has the following organisations for the administration of labour laws. (1) The Office of the Chief Labour Commissioner, New Delhi. (2) The Office of the Coal Mines Welfare Commissioner, Dhanbad. (3) The Office of the Coal Mines Provident Fund Commissioner, Dhanbad. (4) The Office of the Welfare Commissioner, Mica Mines Labour Welfare Fund, Dhanbad and Nellore. (5) The Office of the Chief Inspector of Mines, Dhanbad. (6) The Office of the Chief Adviser of Factories, New Delhi. (7) The Office of the Director-General, Employees' State Insurance Corporation, New Delhi. (8) The Office of the Controller of Emigrant Labour, Shillong. (9) The Office of the Director, Labour Bureau, Simla. (10) The Office of the Central Provident Fund Commissioner, New Delhi.

The State Governments also have their own organisations for the administration and enforcement of labour laws.

Juvenile offenders are tried by the Juvenile Courts. In places where there are no juvenile courts the offenders are tried either by the High Court, or the Court of Session or a salaried Presidency Magistrate or a salaried Magistrate of the First Class.

Legal practitioners are not entitled to appear in any case or proceeding before a Juvenile Court. However the Court may grant permission in exceptional cases.

Probation officers are appointed by the State Government for helping the Court in the discharge of its functions. The powers and duties of such officers are laid down in the rules. Their main duty is to investigate the history of the juvenile offender and offer help to the Court. An appeal against the judgment of a Juvenile Court lies to the Chief Presidency Magistrate in Greater Bombay, and in other places to the Court of Session. If a case is decided by a Presidency Magistrate or a Court of Session the appeal lies to the High Court.

Panchayat Courts (called Nyaya Panchayat) are in existence in many States. The members of the Panchayat Court are elected by the Village Panchayat. Sections 30-44 of the Act lay down rules about the suits that may be tried and the suits that may not be tried by the Court. A Nyaya Panchayat cannot alter or revise its decision. An appeal against a decision of the Nyaya Panchayat lies to the District Judge.

LEGAL OFFICIALS

The Government of India have their own law colleague in the Law Minister of the Union Cabinet. All Government measures are drafted in his Ministry after their substance is decided upon by the administrative departments concerned.

Outside the Cabinet the principal law officers of the Government of India are the Attorney-General and Solicitor-General appointed by the President. At Bombay and Calcutta the Government of India have their own law officers.

Each of the State Governments has its own Advocate-General.

Article 76 of the Constitution of India says that for the post of Attorney-General the President shall appoint a person qualified to be appointed a Judge of the Supreme Court. It shall be the duty of the Attorney-General to advise the Government of India on such legal matters and to perform such other duties of a legal character as may be referred or assigned to him by the President, and to discharge the functions conferred upon him by the Constitution. In the performance of his duties the Attorney-General shall have right of audience in all Courts in the territory of India. The Attorney-General has a right to take part in the proceedings of Parliament and address it.

Under Article 165 the Governor of each State is authorised to appoint a person qualified to be appointed a Judge of a High Court to be Advocate-General for the State.

The Advocate-General is appointed by the Governor. He has to give advice to the Government of the State upon such legal matters and to perform such other duties of a legal character as may be referred to or assigned to him. He holds office during the pleasure of the Governor. He appears in the Court on behalf of the Government. He is the leader of the Bar and the President of the Bar Council. He is also authorised to take part in the proceedings of the State legislature, if his advice is sought.

In addition to the Advocate-General there is also a Government Pleader in many States. He usually belongs to the Appellate Side of the High Court while the Advocate-General belongs to the Original Side where the High Court has both Original and Appellate Sides. The Government Pleader is assisted by an Assistant Government Pleader and they look after criminal work.

The State Governments have their own law officers, in addition to the Advocate-General and the Government Pleader. The law officer is designated Remembrancer of Legal Affairs. He also works as Secretary to the Legal Department. He is never a practising lawyer, but a Government servant. Usually one of the District Judges is appointed Remembrancer of Legal Affairs.

The Legal Remembrancer drafts Government Bills and gives advice to Government Departments on all legal matters.

Sheriffs are attached to the High Courts of Bombay, Calcutta and Madras.

They are entrusted with the work of preparing jury lists, serving summons and other legal processes. The Sheriff in Bombay is the ex-officio Chairman of the Maharashtra State Permanent Famine Relief Committee. He can also convene public meetings on behalf of the citizens.

The detailed work of the office is entrusted to the Deputy Sheriff who is an officer of the High Court.

There are Official Assignees in three States—Bombay*, W. Bengal and Madras. The appointment is made by the Chief Justice of the High Court concerned.

The duties of the Official Assignee are two-fold, *viz.* realisation and distribution of the insolvent's estate, and the control of the property of the insolvent and his conduct generally.

A party aggrieved by the decision of the Official Assignee may appeal to the Insolvency Judge of the High Court.

In addition to the Official Assignee, a Deputy Official Assignee may also be appointed. Another officer of the court is the Insolvency Registrar who may be vested with the powers mentioned in section 6 of the Presidency Towns Insolvency Act.

There are two classes of legal practitioners, practising in the Supreme Court. They are Senior Advocates, and other Advocates (popularly known as Junior Advocates).

All Advocates of the Supreme Court are entitled to practise in High Courts. An Advocate of the Supreme Court can appear on the original side of the High Court even without an Attorney. In Bombay and Calcutta an Advocate can appear on the original side only when instructed by an Attorney. An Advocate of a High Court is entitled to practise in the High Court concerned and in all the courts subordinate to it. An Attorney-at-Law if enrolled as an Advocate can also practise in the High Court, except on the original side. He, however, can plead in insolvency and chamber matters.

Pleaders are entitled to practise in the District for which they hold sanads.

In addition to these classes, there are Mukhtars in the States of Assam, Bihar, Orissa, Uttar Pradesh, West Bengal and Rajasthan. In Assam there is one more class of legal practitioners known as Revenue Agents.

The dual system was abolished in the Supreme Court on 26th Jan. 1955.

A Bill is introduced in Parliament (Bill No. 80 of 1959) in order to amend and consolidate the law relating to legal practitioners and to provide for the constitution of Bar Councils and an All-India Bar.

Formerly official Law Reports were published only in six series—Bombay, Allahabad, Calcutta, Madras and Nagpur. Three more series, Cuttack, Mysore and Rajasthan, have now been added.

These reports contain cases decided by the High Courts and the Supreme Court of India.

In addition to these series a "Supreme Court Reporter" is also published. It contains important decisions of the Supreme Court of India.

Besides these official reports there are a number of private agencies that also bring out reports of the decisions of the Supreme Court and the High Courts. The Law Commission has recommended that it is neither feasible nor desirable to restrict the publications of reports or to confer the monopoly of citation on one set of reports. Reports are also published of important cases determined by Labour Courts, Industrial Courts and Labour Appellate Tribunals.

HINDU LAW REFORM

A short note on Hindu Law reform is in order as it concerns the welfare of the women of this country.

As a result of increasing consciousness on the part of Indian women of their social and political status, there has in recent years been a move to revise and codify the somewhat vague and contradictory law governing the Hindu home, especially as it affects marriage, divorce, succession to property, etc.

In 1937 the Indian Legislature enacted the Hindu Women's Rights to Property Act. This Act, for the first time, gave to Hindu widows a right to claim a share in the husband's property and demand partition.

Four years later the Government of India set up a Committee to overhaul and codify the Hindu Law. This Committee, which was known as the Rau Committee, drafted two bills dealing with Hindu intestate succession and Hindu marriage.

When the measures came up for consideration by the two Houses of the Central Legislature, a joint committee of the Houses recommended the revival of the Rau Committee with a view to the codification of the entire Hindu Law. Consequently the Rau Committee was revived early in 1944. During 1944–45, the Committee made a tour of the country and elicited public opinion on the proposals embodied in the two measures and on the codification of the Hindu Law as a whole. They gathered evidence from leading lawyers and representative organisations of various shades of Hindu opinion on a draft Hindu Code prepared by them.

During the last five years, the Central and the Provincial Legislatures passed various Acts, which aimed at improving the condition of Hindu women.

The Hindu Marriage Disabilities Removal Act of 1946, legalised marriages between Hindus belonging to the same Gotra or Pravara.

The Hindu Married Women's Right to Separate Residence and Maintenance Act of 1946 enabled a married Hindu woman to claim from her husband separate residence and maintenance on certain grounds.

The Hindu Marriage Validating Act, 1949 removed the caste-barriers from the sphere of marriages and validated even the Pratiloma marriages.

The Child Marriage Restraint (Amendment) Act of 1949 raises the marriage age of girls from 14 to 15 years.

In the State of Bombay*, monogamy was made a rule by the Prevention of Hindu Bigamous Marriage Act of 1946, and dissolution of marriages by divorce was allowed under certain conditions by the Bombay Hindu Divorce Act of 1947.

In the state of Madras, there was an Act preventing bigamous marriages and providing for divorce. The Act was called the Madras Hindu (Bigamy Prevention and Divorce) Act.

The Madras Legislature passed the Madras Devadasis (Prevention of Dedication) Act in 1947. This Act puts an end to the unhealthy practice of dedicating Hindu women as 'devadasis' to Hindu deities.

Bombay Hindu Women's Right to Property Act (Extension to Agricultural Land) extended the application of the Hindu Women's Right to Property Act, 1938 to agricultural land also. A similar law was passed in Madras.

Though the Hindu Code Bill was dropped, the Government of India have passed several Acts as already mentioned affecting Hindu Law.

The Special Marriage Act of 1954 repeals the Special Marriage Act of 1872. Though the Act of 1954 is not a part of Hindu Code, it affects Hindus in so far as it provides for civil marriages both for Hindus and non-Hindus.

The Hindu Marriage Act of 1955 came into force on 18th May, 1955. The Act has repealed the following laws :—

1. The Hindu Marriage Disabilities Removal Act of 1946 ; 2. The Hindu Marriage Validity Act of 1949 ; 3. The Hindu Divorce Act of 1947 (Bombay Act) ; 4. The Prevention of Hindu Bigamous Marriage Act of 1946 ; 5. The Madras Hindu (Bigamy Prevention and Divorce) Act ; 6. The Saurashtra Prevention of Hindu Bigamous Marriage Act ; 7. The Saurashtra Hindu Divorce Act.

Under the Hindu Marriage Act 25 of 1956, monogamy has become a rule in Hindu Society. Divorce is allowed on certain grounds. Inter-caste marriages are valid.

The Hindu Minority and Guardianship Act (32 of 1956) seeks to regularise the law regarding guardianship.

The Hindu Succession Act 29 of 1956 aims at simplifying the Hindu Law of succession. It does away with the distinction between the Mitakshara and Dayabhaga law of succession. However, special provision is made for regulating succession to the property of intestates governed by Marumakkattayam, Aliyasantana or Nambudri laws of inheritance. The Act creates two classes of heirs, preferential heirs are included in Class I. The Act confers a right to a share on a daughter, a provision unknown to the previous Hindu Law.

The Hindu Succession Act has also made the following changes, which are revolutionary, in the old Hindu Law :

All property held by a Hindu woman is now her absolute property and there are no restrictions on her rights.

The heirs of a deceased Hindu are entitled to get a share even in the undivided interest in the coparcenary property. A Hindu can make a will even of his undivided interest in the coparcenary property.

The Hindu Adoption and Maintenance Act 79 of 1956 was passed in December 1956. Under the Act the adoption of a son or a daughter is permitted. The consent of the wife is necessary for adoption, which is now purely secular in character.

Besides these laws, Parliament has passed two important Acts relating to social reform. The Suppression of Immoral Traffic in Women and Girls' Act (No. 104 of 1956) was passed in December 1956. This Act provides in pursuance of the International Convention signed at New York on 9th May 1950 for the suppression of immoral traffic in women and girls. The Women's and Children's Institutions (Licensing Act (No. 105 of 1956) was passed in December 1956. This Act provides for the licensing of such institutions and of matters relating to them.

Yet another Act, in social reform is the Probation of Offenders Act. Act 20 of 1958.

The Bombay* Legislature has passed an Act for the registration of marriages.

Legislation prohibiting dowry system is also on the anvil. Another Bill called 'The Orphanages and other Charitable Homes (Supervision and Control) Bill, is also introduced in Parliament.

A Bill to provide for the care, protection, maintenance, welfare, training, education and rehabilitation of neglected or delinquent children and for the trial of delinquent children in the Union Territories has recently been introduced in Parliament.

LAW COMMISSION REPORT

A Law Commission to revise the Statute Law of the country and suggest ways and means of improving the system of judicial administration was appointed on Aug. 5, 1955.

The members were :

Mr. M. C. Setalvad (*Chairman*) ; Mr. M. C. Chagla, Mr. K. N. Wanchoo, Mr. G. N. Das, Mr. P. Satyanarayana Rao, Dr. N. C. Sen Gupta, Mr. V. K. T. Chari, Mr. Narasu Raju, Mr. S. N. Sikri, Mr. G. S. Pathak and Mr. G. N. Joshi.

The Commission was to function in two sections. The first section consisting of the Chairman and the first three members was to deal mainly with the question of the reform of judicial administration. The second was to consist of the other seven members and was to deal with the revision of statute law. The two sections would however work in close co-operation under the direction of the Chairman.

While the section dealing with the revision of statute law submitted periodical reports, the one dealing with judicial administration submitted its full report sometime in the second half of 1958. It was laid on the table in Parliament on 25th Feb. 1959.

In Dec. 1958 the Law Commission was reconstituted for a period of three years to enable it to continue the work of statute revision.

The chairman is Mr. T. L. Venkatarama Iyer, retired judge of the Supreme Court. There are two whole-time members, Mr. P. Satyanarayan Rao and Mr. L. S. Misra and two part-time members Mr. N. A. Palkhiwala and Mr. Sachin Chaudhary. Mr. G. Rajagopal, Secretary to the Government of India in the Legislative Department, is the Secretary to the Commission.

A summary of the report of the Law Commission on judicial administration is given in the 1959-60 edition of the Directory.

DEFENCE SERVICES

Chief of the Army Staff, General P. N. Thapar.
Chief of the Naval Staff, Vice-Admiral R. D. Katari.
Chief of the Air Staff, Air Marshal A. M. Engineer, D.F.C.

THE supreme command of all the Armed Forces of the Indian Republic is vested in the President. Since the attainment of Independence, the Ministry of Defence has become the central agency for formulating and obtaining policy decisions of the Government of India on defence matters and for transmitting them to, and seeing to their implementation by, the three Defence Services Headquarters.

The partition of India in 1947 was an important landmark in the history of the Armed Forces of India. They were divided between the two countries on a communal-cum-optional basis, which worked out to an approximate proportion of one-third to Pakistan and two-thirds to the Union of India. British forces, including the Royal Air Force, were completely withdrawn from India early in 1948.

The total defence outlay on revenue and capital account for 1960–61 was estimated at Rs. 310 crores against Rs. 266 crores during 1959–60.

The following is the break-up of the net Defence Services expenditure (in crores of rupees) since 1955–56.

Year	Effective			Non-Effective	Defence Capital Outlay	Total
	Army	Navy	Air Force			
1955–56 (Actuals) ..	118	12	28	14	18	190
1956–57 (Actuals) ..	129	12	37	14	20	212
1957–58 (Actuals) ..	159	14	70	14	23	280
1958–59 (Actuals) ..	146	16	75	14	28	279
1959–60 (Actuals) ..	142	14	59	15	36	266
1960–61 (Estimates) ..	176	19	61	16	38	310

(See also under Finance).

DEFENCE ORGANISATION

Since August 15, 1947, each Service has been placed under a separate and independent head, their present designations being Chief of the Army Staff, Chief of the Naval Staff and Chief of the Air Staff.

With the appointment of three Service Chiefs independent of each other, the task of co-ordination of the activities of the three Services has devolved on the Defence Ministry. In order to ensure expeditious handling of work, a network of committees has been established at different levels.

At the top is the Defence Committee of the Cabinet which is, for all practical purposes, the Government so far as the Services are concerned. All important policy questions relating to defence are decided by this Committee, which is presided over by the Prime Minister. Next in importance is the Defence Minister's Committee which, besides the Defence Minister, includes the Deputy Defence Ministers, the Defence Secretary, the Financial Adviser (Defence) and the three Service Chiefs.

The Defence Minister is responsible to Parliament for all matters relating to the Defence Services, including appropriation and allotment of funds, correlation of all civil and ministerial activities for purposes of defence and control and direction of research policy.

There are a number of inter-Services organisations, directly administered by the Defence Ministry, dealing with matters of common concern to the three Services. Some of them are the Defence Minister's Committees on Research and Development and Production, the National Cadet Corps, the National Defence College, the Defence Services Staff College, the National Defence Academy, the School of Foreign Languages, the Directorate-General of Armed Forces Medical Services, the Resettlement Directorate, the Indian Soldiers', Sailors' and Airmen's Board, the Combined Inter-Services Historical Section, the Directorate of Military Lands and Cantonments and the Joint Cipher Bureau.

RESEARCH & PRODUCTION

The Defence Minister's (Research and Development) Committee has been constituted to step up the tempo of defence research work. It has under it the Research and Development Organisation headed by the Scientific Adviser, Dr. D. S. Kothari.

The Defence Minister's (Production) Committee forms part of the higher defence control evolving a co-ordinated policy in regard to the manufacture of military stores and equipment. It has under it the Defence Production Organisation for the overall defence production effort for meeting the requirements of the Services by the maximum utilisation of the existing capacity and creating additional capacity in the Ordnance Factories, including the Machine-Tool Proto-type Factory. It is also responsible for the inspection of all stores for which orders are placed with the Ordinance Factories, other defence and public undertakings and private trade. This organisation is headed by the Controller-General of Defence Production, Rear-Admiral D. Shankar.

The Research and Development Organisation was brought into being in January 1958 by the amalgamation of the Technical Development Establishments of the three Services and the Defence Science Organisation to ensure that scientific research played an effective role in production. The head of this set-up, is the Scientific Adviser to the Minister for Defence, is assisted by a Chief Controller and a Chief Scientist. This re-organisation is intended to bring to the three Services the backing of the country's scientific activity and to secure the maximum utilisation of the available researches.

The R. and D. Organisation, which is closely associated with the Productive Organisation, includes technical establishments dealing with weapons, ammunition, military explosives, metallurgy, electronics and optical instruments. It has under it research installations like the Defence Science Laboratory, New Delhi, the Stores Laboratory, Kanpur, the Naval Laboratories at Bombay and Cochin and research-cum-training installations, like the Institute of Armament Studies, Kirkee. Whereas research is carried on in the laboratories, development work is concentrated at the various technical establishments scattered all over the country.

It was in order to meet the urgent need of training technical staff officers for the Armed Forces that the Government established the Institute of Armament Studies some years ago, as a constituent of the Defence Science Organisation. Apart from training Service officers, the Institute provides facilities for a comprehensive scientific study and research in the performance of weapons and equipment. Similarly, the two naval laboratories, one chemical and metallurgical and the other physical, were established to deal with science problems relating to the Navy.

With a view to the early realisation of the aim of self-sufficiency in defence material, the tempo of research and development is being progressively stepped up. A chain of laboratories is being established to cover new fields of activity and to evaluate the stringent conditions in different terrains of the country's frontiers. As simulation of these conditions cannot be carried out fully in the existing laboratories, certain field laboratories are being set up. A research laboratory was recently started at Jodhpur to study the performance of weapons and equipment in dry, sandy heat. Another laboratory, opened in the Landour Cantonment in Mussoorie caters for high-altitude research work. An Aeronautical Development Centre and a Gas Turbine Research Centre have been started at the Air Force Maintenance Command, Kanpur, where an aeronautical testing laboratory is also to be opened soon.

A Psychological Research Wing of the Science Organisation was formed in 1949 under a Chief Psychologist, the main function of which is to conduct research in the assessment of human personality so that the right type of officers may be selected for the Armed Forces.

A Defence Science Service has been instituted which includes all civilian scientists engaged in research, development, inspection or teaching in any of the three Services or in the Ministry of Defence.

ORDNANCE FACTORIES

The Production Organisation, which has under it about 20 Ordnance Factories, is so designed at to achieve self-sufficiency in respect of stores required by the three Services and has made continuous efforts to establish production of items hitherto imported. The organisation employs more than two and a half lakh civilian employees and represents one of the greatest State-owned integrated enterprises.

The Ordnance Factories have, since independence, been considerably enlarged and modernised to raise indigenous manufacture in an effort to make the country self-sufficient in vital supplies.

Though primarily geared for the manufacture of highly-specialised armaments and military equipment, the Ordnance Factories, as part of their peace-time functions, are now using all their utilizable spare capacity to cater to the needs of various sections of the community. Wide and varied, their civil trade activities cover the five broad categories of ferrous, non-ferrous, leather and textile, chemical and general engineering. The last category includes scientific, optical and mathematical instruments, sporting arms and ammunition, metal castings and forgings and other miscellaneous articles.

The Ordnance Factories manufacture a variety of steel, cast-iron and non-ferrous materials required by industry in various forms. Pioneer work has been done in the manufacture of practically all the steels, ferrous alloys and metal alloys for special purposes. Long experience in the manufacture of these metals for the Services guarantees the quality of the material and rigid adherence to specifications.

With the peace-time relaxation in the requirements of scientific and optical stores for the Services, the Ordnance Factories have been manufacturing precision instruments of the highest standard of quality and finish for civilian use, including 35-mm sound projectors, film-strip projectors, still-film projectors, photo-enlargers, microfilm readers, pathological,

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

dissecting and student-type microscopes, auto-collimators, prismatic binoculars, splinter-proof goggles and drawing instrument sets.

Initially manufacturing only harness and saddlery items for horsed cavalry, artillery and other mounted units of the Army, one of the Ordnance Factories is now engaged in producing various miscellaneous items embracing four distinctly separate trades, *e.g.* leather, textile, wood and engineering.

The Ordnance Factories' highly-precisioned machinery, skilled craftsmen and production capacity offer substantial assistance to the Railways by keeping the wheels of traffic constantly moving. The railway stores manufactured by them cover several components of locomotives and wagons, including piston rods, connecting rods, crank-shafts, axles, coupling hooks, resistance grids, light-riding trolley wheels and fog signals. They also produce, among others, jeep-engine blocks and heads, steam and diesel road-rollers and their spare parts, oil-expellers, mechanical ploughs, air-conditioning compressors, fuel-gas plant, pressure cookers and small tools, bolts and nuts.

Among the various types of fire-arms for civil use which the Ordnance Factories produce are rifles and double and single-barrel shot-guns. They also supply to civil industry acetone, nitric and sulphuric acid, benzol, zeylol, nitro-cellulose, nitro-benzene, mono-nitro-toluene and oleum.

The Ordnance Factories have also recently undertaken the manufacture of tractors for the Dandakaranya Development Administration, the Rajasthan Canal Board and the Army and military trucks for the Army. By the end of September 1960 they had completed and delivered 196 heavy, medium and light tractors and 937 three-ton and 100 one-ton trucks.

Besides the Ordnance Factories meeting the country's defence requirements, the other important defence industries are the Hindustan Aircraft Ltd., and the Bharat Electronics Ltd. at Bangalore.

For detailed notes on Hindustan Aircraft and Bharat Electronics see article 'Government Industrial Undertakings'.

Value of defence production : 1956-57 : Rs. 14 crores ; 1957-58 : Rs. 18 crores ; 1958-59 : Rs. 20 crores ; 1959-60 : Rs. 25·14 crores ; 1960-61 : about Rs. 28 crores.

The Defence Production Organisation has also under it the Mazagon Docks, Bombay, and the Garden Reach Workshops, Calcutta, recently acquired by the Government from Peninsular and Oriental Company. While these shipyards will continue to carry out refits and repairs of commercial ships, they will also do so for naval ships. Their acquisition will greatly facilitate naval ship building.

NATIONAL CADET CORPS

The National Cadet Corps came into being in 1948. The aim of the Corps is (1) to develop character, comradeship, ideal of service and capacity for leadership in young men and women, (2) to stimulate interest in the defence of the country, and (3) to build up a reserve of potential officers to enable the Armed Forces to expand rapidly in a national emergency. The organisation is, thus, mainly of an educational and nation-building character. Officers and cadets have no liability whatsoever for active military service.

A certain percentage of the total intake of candidates for commissioned ranks in the Army, Navy and Air Force, on the basis of direct entry to the Armed Forces training institutions, has been reserved for N.C.C. cadets of the three Services.

The N.C.C. consists of three divisions : (1) Junior, (2) Senior and (3) Girls'.

The strength of the Corps as on March 31, 1960, was as follows :—

Senior Division						Junior Division						Girls' Division			
Army Wing		Naval Wing		Air Wing		Army Wing		Naval Wing		Air Wing		Senior Wing		Junior Wing	
Officers	Cadets	Officers	Cadets	Officers	Cadets	Officers	Cadets	Officers	Cadets	Officers	Cadets	Officers	Cadets	Officers	Cadets
1,812	87,913	42	2,160	54	3,655	2,326	97,538	169	6,950	231	9,652	212	9,540	400	18,000

Grand Total—Senior Division—95,636, Junior Division—1,16,866, Girls' Division—28,152.
The strength of the Corps a year earlier was : Senior Division 74,471, Junior Division 92,326 and Girls' Division 26,588.

The Senior Division provides Service training to young graduates and recruitment to it is from amongst students of universities and colleges. It is composed of three wings, *viz.* Army, Navy and Air.

Recruitment to the Junior Division is from amongst students of secondary schools. It is also composed of Army, Navy and Air Wings.

The object of the Girls' Division is to develop all-round personality among girls. This Division has two wings, Senior and Junior, units of the Senior Wing being raised in colleges and those of the Junior Wing in schools.

In order to better fit cadets of the N.C.C. for the officer ranks of the Armed Forces and to increase the cadet intake into the Services, the Government have recently decided to raise Officer Training Units (O.T.U.) in the Corps all over the country. The total strength of these training units will be 750 to be made up in the course of three years by the recruitment of 250 each year. Thereafter, 15 per cent of the vacancies at the Indian Military Academy, Dehra Dun, will be offered to these training units, as against the present 10 per cent reserved for direct N.C.C. entry and henceforth this will be the only N.C.C. intake into this institution for pre-commission training of Army officers. Technical graduates of these training units will also be given direct commissions in the Navy and Air Force.

In response to an increasing demand in the country for more and more military training being given to as many students as possible, Government propose to expand the Cadet Corps by the addition of new units called N.C.C. Rifles to be organised, equipped and trained on the pattern of the rifle regiments in the Army.

Entry into the ranks of the N.C.C. Rifles will be open to boys and girls above the age of 15/16 years on a voluntary basis, but their training will not involve any military liability. Training for boys will consist of drill with and without arms, weapon training, field-craft, map-reading, patrolling section and platoon reading, first aid, fire-fighting and rescue work, while that for girls will comprise P.T., squad drill, signalling, hygiene and sanitation, first aid and home nursing.

To cope with the demand for military training for boys and girls in schools who cannot get admission into the N.C.C., an Auxiliary Cadet Corps has been started. This corps has made rapid progress, and its present strength is estimated at 10 lakhs.

The A.C.C. trains the youth of the country in team spirit, discipline and patriotism. It functions under the overall supervision of the Director, National Cadet Corps, Ministry of Defence. Instructors for this organisation are selected from schools and are trained by regular Army staff of the various N.C.C. units.

TRAINING INSTITUTIONS

The important training institutions common to the three Services are given below:

National Defence College : The National Defence College has been set up this year (1960) in New Delhi, for the training of senior officers of the three Services, on the pattern of the Imperial Defence College in the U.K. Its main purpose is to enable students to study the military, scientific, industrial, social, economic and political factors involved in war as also the higher direction and strategy of warfare. Concurrently with this study, it offers a unique opportunity to senior Service officers and highly-placed civil servants of getting together and exchanging ideas so as to give them both a clearer and better understanding of each other's problems in peace and in war. The training lasts about a year and officers selected for attending the course are ordinarily of the rank of Brigadier in the Army and equivalent ranks and status in the Navy, the Air Force and the civil services, including scientists. Only those in the age-group of 38–45 years who are considered to be potential leaders in their professions are selected for the course.

Commandant, Lt.-Gen. K. Bahadur Singh.

Defence Services Staff College : The Defence Services Staff College is located in Wellington in the Nilgiri Hills in south India. One hundred officers drawn from all the three Services, including six officers from the U.S.A. and Commonwealth countries, are, trained every year. The aim of the course is to prepare officers to hold second-grade or equivalent staff appointments or higher staff or command appointments.

Commandant, Maj.-Gen. S. H. F. J. Manekshaw.

National Defence Academy : The National Defence Academy at Khadakvasla, near Poona, started functioning in its present location in January 1955. Previously, it had been set up at Dehra Dun in January 1949 as an experimental measure, with a Joint Services Wing and a Military Wing. On its move to Khadakvasla, the J.S.W. came to be known as N.D.A. At this Academy, Army, Navy and Air Force cadets receive three years' combined basic training. The first two years are devoted to common preliminary training and the third to specialised training in the respective Services. Thereafter, Army cadets join the Indian Military Academy at Dehra Dun for a further one-year course, while Naval and Air Force cadets proceed to their respective Service establishments for advanced training.

Commandant, Rear-Admiral B. A. Samson.

Rashtriya Indian Military College : Run on the lines of public schools, the Rashtriya Indian Military College, located in Dehra Dun, brings up future officers of the three Services by imparting preliminary pre-cadet training to such pupils as desire subsequently to choose a military career. It thus serves as a feeder to the National Defence Academy, which provides combined basic training to cadets of all the three Services. Called until recently as Sainik School and previously as Prince of Wales Royal Indian Military College, it was started in 1922 with the primary object of catching would-be officers of the Armed Forces at an impressionable age to be able easily to mould their character. By a

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

carefully-framed compulsory system of P.T., drill, parades and games, students are groomed to attain certain physical standards to fit them for a Service career. Though special attention is paid to fostering in them discipline, self-reliance and an aptitude for soldiering, social training forms an important extra-curricular activity.

Principal, Din Dayal.

School of Foreign Languages : Located in New Delhi, the School of Foreign Languages was started in 1949 to meet the growing demand for qualified linguists.

Director, P. N. Banerjee.

Armed Forces Medical College : The Armed Forces Medical College is an inter-services post-graduate institution designed to meet the requirements of the integrated medical services of the Army, Navy and Air Force, and is located in Poona. The College has departments of medicine, surgery, pathology, hygiene, radiology, blood transfusion and dentistry.

Commandant, Maj.-Gen. C. C. Kapila.

ARMED FORCES MEDICAL SERVICES

The Directorate-General of Armed Forces Medical Services was created in 1948 with a view to integrating the medical services of the Armed Forces.

An officer of the rank of Lieut.-General is the head of this inter-Services organization, who maintains close contact with the three Directors of Medical Services (Army, Navy and Air Force). He is responsible to the Ministry for the over-all medical policy relating to the Armed Forces. The entire organisation relating to medical equipment and stores is directly under him. The Directorate has under it the Armed Forces Medical College and the Artificial Limb Centre.

A modern Artificial Limb Centre was set up by the Central Government at Poona soon after World War II. In 1948, with the arrival of new equipment and machinery from the U.K., it was firmly established and now claims to be the fourth largest institution of its kind in the world.

The Centre, which functions under the control of the Director-General of Armed Forces Medical Services, also produces various types of orthopaedic boots and shoes, belts, trusses and spinal braces.

RESETTLEMENT DIRECTORATE

The Directorate of Resettlement in the Defence Ministry deals with matters relating to the rehabilitation of ex-Servicemen in civil life.

In collaboration with other Ministries of the Central Government, the State Governments, the Post-War Reconstruction Fund Trust Committees and other organisations, the Defence Ministry has formulated schemes for resettling ex-Servicemen in the Government and private service, land colonies, vocational and technical trades and motor transport services. More than 1,39,590 ex-Servicemen have already been thus rehabilitated in civil life.

In the matter of employment, the Government have accorded preference to ex-Servicemen in filling up appointments in police, excise, watch and ward and other departments for which military training is a qualification. As a result, nearly 1,03,295 ex-Servicemen have been placed in Government. Ex-Servicemen who have a bias for agriculture are settled on land.

Through the efforts of the Defence Services Liaison Organization, set-up in May 1956, 423 retired Armed Forces officers were selected for appointment in civil posts under the Central or State Governments and 56 in the private sector up to the end of September 1960.

SOLDIERS', SAILORS' AND AIRMEN'S BOARD

The Indian Soldiers', Sailors' and Airmen's Board is the most important official institution connected with the welfare of the serving personnel of the Armed Forces and ex-Servicemen and their families.

The Board has its seat at New Delhi and co-ordinates the activities of State boards which exist in each State. Under the control of these State boards, there exists throughout the country a network of district boards reinforced in some cases by tehsil or taluka committees and other kindred bodies. These boards are established in all districts from which recruits have been obtained in sufficient numbers. The President of the District Board is the Collector or the Deputy Commissioner.

The Indian Soldiers', Sailors' and Airmen's Board Fund is now used primarily for payment of special pensions to blinded ex-Servicemen and to meet the expenditure on miscellaneous items, such as bank charges and audit fees in connection with the administration of the fund.

The other Central funds which are not under the control of the Indian Soldiers', Sailors' and Airmen's Board are :

Armed Forces Benevolent Fund, Flag Day Fund, Armed Forces Reconstruction Fund, Army Central Welfare Fund, Navy Benevolent Association Fund, Navy Amenities Fund, Air Force Benevolent Association Fund, Air Force Central Welfare Fund, Indian Gorkha Ex-Servicemen's Welfare Fund and St. Dunstan's India Fund.

A sum of Rs. 11,01,177 was collected on the 1958 Flag Day.

HISTORICAL SECTION

The Combined Inter-Services Historical Section (India and Pakistan) has been engaged in an ambitious scheme of writing a comprehensive history of World War II, with particular reference to the operations in which the Armed Forces of undivided India took part. The scheme envisages a series of 24 volumes ; 13 volumes have already been published, while the remaining 11 are under preparation.

The Historical Section has under it a small research organisation now set up on a permanent footing to act as custodian of the records of the Defence Ministry and the three Services. Its functions include the writing of historical accounts of recent operations and the giving of information and advice on military history to the Services.

GALLANTRY AWARDS

Three new gallantry awards were instituted by the President after Independence for gallantry in combat with the enemy. They are designated the Param Vir Chakra, the Maha Vir Chakra and the Vir Chakra. They came into force with effect from August 15, 1947.

The Param Vir Chakra is awarded for most conspicuous bravery, or some daring or pre-eminent act of valour or self-sacrifice, in the presence of the enemy, whether on land, at sea or in the air. It ranks first among all awards.

The Maha Vir Chakra is awarded for conspicuous acts of gallantry in the presence of the enemy whether on land, at sea or in the air.

The Vir Chakra is awarded for acts of gallantry in the presence of the enemy, whether on land, at sea or in the air.

A fourth gallantry decoration, named the Ashoka Chakra, in three grades, *viz.* Class I, Class II and Class III, was instituted for acts of gallantry other than in the face of the enemy. This also came into force with effect from August 15, 1947.

Class I of the Chakra is awarded for most conspicuous bravery, or some daring or pre-eminent act of valour or self-sacrifice. Class II of the Chakra is awarded for conspicuous gallantry and class III for gallantry.

If a recipient of any of these Chakras again performs such an act of bravery as would have made him or her eligible to receive the same decoration, such further act of bravery is recognised by the award of a Bar attached to the riband by which the Chakra is suspended, and for every such additional act of bravery, an additional Bar is added, and any such Bar or Bars is/are also awarded posthumously. For every Bar awarded a replica in miniature of the Chakra concerned and in the case of the Param Vir Chakra of the "Indra's Vajra" is added to the riband when worn alone.

Every recipient of any of these decorations who is junior in rank to a 2nd Lieutenant in the Army, a Sub-Lieutenant in the Navy, or a Pilot Officer in the Air Force, is entitled, from the date of the act by which the decoration has been gained, to a special pension, and each additional Bar conferred carries with it additional pension for life.

A system of Mention-in-Despatches was also instituted. A 'lotus leaf' emblem is worn by the awardees on the ribbon of the campaign/war medal concerned.

The rates of monetary allowance admissible are as follows :—

(*a*) (*i*) Param Vir Chakra.—Rs. 50 p.m. (Rs. 70 p.m. in the case of J.C.Os. who have previously been given an award of the second order of gallantry, such as the I.O.M.).
(*ii*) Each Bar to PVC.—Rs. 20 p.m.
(*b*) (*i*) Maha Vir Chakra.—Rs. 30 p.m. (Rs. 50 p.m. in the case of J.C.Os. who have been previously given a gallantry award of the third order, such as the M.C.).
(*ii*) Each Bar to M.V.C.—Rs. 10 p.m.
(*c*) (*i*) Vir Chakra.—Rs. 20 p.m.
(*ii*) Each Bar to Vr.C.—Rs. 8 p.m.

The following are the details of Republican India's awards won by members of the Armed Forces up to March 30, 1961 :—

INDIAN ARMY
Param Vir Chakra—5 (3 posthumous).
Ashoka Chakra Cl-I—7 (5 posthumous).
Maha Vir Chakra—51 (20 posthumous).
Ashoka Chakra Cl-II—50 (11 posthumous).
Vir Chakra—292 (58 posthumous), the number including 4 bars.
Ashoka Chakra Cl-III—85 (13 posthumous).
Mention-in-Despatches—1,153 (35 posthumous).
INDIAN NAVY
Ashoka Chakra Class III—3.
INDIAN AIR FORCE
Ashoka Chakra Cl-I—1.
Maha Vir Chakra—4.
Ashoka Chakra Cl-II—9.
Vir Chakra—29 (2 posthumous).
Ashoka Chakra Cl-III—5.

The recipients of the Param Vir Chakra are Maj. Som Nath Sharma, Capt. R. R. Rane, Company Hav.-Maj. Piru Singh, Naik Jadunath Singh and L/Nk. Karam Singh, while those of the Ashoka Chakra, Class I, are Lt.-Col. J. R. Chitnis, Flight-Lieut. Subhas Biswas, Capt. D. K. Jatar, Lieut. P. M. Raman, Hav. Bachitar Singh, Hav. Sunder Singh, Hav. Joginder Singh and Naik Nar Bahadur Thapa.

NEW SERVICE MEDALS

Six new awards for the Armed Forces—Vishisht Seva (Distinguished Service) Medal, Sainya Seva (Services) Medal, Videsh Seva (Overseas) Medal, Sena (Army) Medal, Nao Sena (Navy) Medal and Vayu Sena (Air Force) Medal—were instituted by Government on the occasion of 1960 Republic Day.

The Vishisht Seva Medal is to be awarded to personnel of all the three Services in Classes I, II and III in recognition of distinguished service of the "most exceptional", "exceptional" and a "high" order respectively, Sainya Seva Medal to all Service personnel in recognition of non-operational duties under conditions of hardship and severe climate, and the Videsh Seva Medal to all ranks of the Armed Forces for duties outside India. The Army, Navy and Air Force medals are to be awarded in recognition of such individual acts of exceptional devotion to duty or courage as have special significance for the Service concerned.

INDIAN ARMY

The Army HQ located in Delhi, functions directly under the Chief of the Army Staff. It is divided into the following main branches : (*a*) General Staff Branch, (*b*) Adjutant-General's Branch, (*c*) Quartermaster-General's Branch, (*d*) Master-General of the Ordnance Branch, (*e*) Engineer-in-Chief's Branch and (*f*) Military Secretary's Branch. These branches are further sub-divided into directorates.

The Chief of the General Staff, who is one of the four Principal Staff Officers (holding the rank of Lt.-General) at Army Headquarters,

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

deals with military operations and intelligence, staff duties, training, artillery, signals, weapons and equipment, survey and the Territorial Army.

The Adjutant-General, who is another P.S.O., deals with all matters concerning man-power, such as pay and pensions, discipline, and terms and conditions of service. The A. G. is also assisted by the Judge Advocate-General in matters affecting military law and international law in its military aspect.

The third P.S.O. is the Quartermaster-General, who controls all rail and sea movement, both of personnel and stores, within and outside the country. He also deals with the quartering problems of the Army as well as labour, canteen, fire and postal services.

The Master-General of the Ordnance, who is the fourth P.S.O., is responsible for the storage, care and preservation and issue of all kinds of equipment for troops. The Directorate of Electrical and Mechanical Engineering is also under the M.G.O.

The Engineer-in-Chief is the head of the Corps of Engineers and of the Military Engineering Service. The E.-in-C.'s Branch gives technical advice on all engineering matters to the three Service Headquarters.

The Military Secretary handles confidential reports of officers and maintains their personal records. The M. S. Branch is also responsible for postings and transfers, promotion and retirement of officers and the grant of honorary ranks and all types of commissions.

Under the Army H.Q., the Indian Army is organised into three Commands—Eastern, Western and Southern, each being under a General Officer Commanding-in-Chief of the rank of Lieutenant-General. The Commands are divided into Areas, each under the command of a G.O.C. of the rank of Major-General, and the Areas, in their turn, are sub-divided into Sub-Areas each under the command of a Brigadier.

The Army consists of a number of arms and services. They are Infantry, Armoured Corps, Regiment of Artillery, Corps of Engineers, Corps of Signals, Army Service Corps, Army Ordnance Corps, Army Medical Corps, Army Dental Corps, Corps of Electrical and Mechanical Engineers, Army Education Corps, Remounts, Veterinary and Farms Corps, Corps of Military Police and Defence Security Corps.

TERRITORIAL ARMY

As no country can afford to maintain a large standing fighting force in peace-time without straining its resources in men and material, a Territorial Army was formed in India, in 1949 to serve as a second line of defence.

The Territorial Army Act, 1948, was passed by Parliament in September 1948 and the Army was inaugurated in October 1949 when recruitment was thrown open.

The Territorial Army consists of various arms and services, *i.e.*, the Regiment of Artillery, including anti-aircraft and coastal defence units, the Corps of Engineers, including port and railway units, the Corps of Signals, including P. and T. units, Infantry, the Medical Corps and the Corps of Electrical and Mechanical Engineers. The units raised are of two types, *i.e.*, provincial units recruited from rural areas which undergo annual training of two to three months' duration at a stretch, and urban units recruited from large towns where Territorial Army units have been raised. They undergo training on the weekly drill system, *i.e.* in the evenings, Sundays and holidays with a short camp of not less than four consecutive days.

All able-bodied persons, from unskilled labourers to highly qualified technicians, provided they are citizens of India, are eligible for recruitment. The age limits are 18 and 35 years, relaxable in the case of ex-Service (Army, Navy and Air Force) personnel and civilians possessing technical qualifications. Government servants and employees of private concerns are also eligible to join the Territorial Army.

The role of the Territorial Army is to

(*i*) relieve the Regular Army of static duties and support the civil power if required.
(*ii*) provide coastal defence and anti-aircraft units.
(*iii*) provide units for the Regular Army if and when required.

When embodied, called out or under training, Territorial Army personnel receive the same pay and allowances as are admissible to the corresponding ranks of the Regular Army. It is obligatory for every civilian employer to reinstate a member of the Territorial Army in his civilian post on termination of his military training.

In order to provide an incentive to Territorial Army personnel for hard and meritorious work, 2½ per cent of the actual vacancies available at the Indian Military Academy are reserved for such personnel. On successful completion of the course at the Academy, they are granted regular commissions in the Army.

No officer or enrolled person is required to perform military service beyond the limits of India, save under a general or special order of the Central Government.

LOK SAHAYAK SENA

Ever since Independence, there has been a persistent demand in the country for imparting military training to the people. To meet these aspirations, a scheme known as the Auxiliary Territorial Force was introduced in 1950, with the aim of giving elementary military training to as large a number of people as possible. Later, when it was decided to enlarge the scope of the scheme, the A.T.F. was wound up and its place taken by the National Volunteer Force, since re-designated Lok Sahayak Sena.

The L.S.S. was inaugurated on May 1, 1955, to train five lakh men in five years or less. All able-bodied male citizens between 18 and 40 years, except ex-Servicemen and N.C.C. cadets, are eligible to join this force. The object is not to raise a force for the defence of the country but to get people interested in national service and to inculcate in them a sense of discipline, self-reliance and responsibility.

Training in this force is imparted at camps organised throughout the country. The duration of a training camp is 30 days at which a maximum of 525 trainees are recruited. Training in this force includes drill, rifle training, elementary field engineering, first aid, hygiene and education.

From May 1, 1955, up to March 31, 1960, 1,065 L.S.S. camps had been held and nearly 4,69,000 persons trained as better citizens, healthier both in mind and body.

ARMY SCHOOLS

Recruitment for the permanent cadre of commissioned ranks in the Army is done through the National Defence Academy, Khadakvasla, and the Indian Military Academy, Dehra Dun. After completion of their three-year course at the N.D.A. Army cadets have to spend another one year at the Military Academy before being commissioned. Direct admission to the Academy at higher age-levels also continues, though the number of cadets so taken is limited.

The Military Academy at present conducts courses for ex-N.D.A., direct-entry and N.C.C. cadets, serving personnel, and technical graduates. Regular and direct-entry cadets commissioned in the technical branches are sent on specialised post-commission courses. The technical graduates' course was specially introduced in January 1948 as a temporary measure to give military training to qualified technicians and engineers for the Corps of Engineers, the Corps of Signals and the Corps of Electrical and Mechanical Engineers to cope with the increased requirements of technicians for the Army.

The Armoured Corps Centre and School at Ahmednagar trains recruits as well as regimental instructors. The School of Artillery at Deolali provides training in the field, anti-tank, anti-aircraft and coastal artillery branches. The Army Ordnance School at Jabalpur imparts specialised training to all officers and ORs in identification, handling and storage of various types of items, including ammunition and explosives.

The Infantry School at Mhow is the home of infantry doctrines and a centre for developing infantry weapons. The School also conducts courses for senior officers and junior commanders of all corps in the Army. The Army Service Corps has two schools, one at Meerut and the other at Bangalore, giving training in organisation and administration, animal transport, mechanical transport and supplies. The Army Medical Corps has its training centres at Lucknow and Poona.

The College of Military Engineering at Kirkee, near Poona, trains officers of the Corps of Engineers, the Corps of Signals and the Corps of Electrical and Mechanical Engineers to the degree standard in civil, tele-communication and electrical and mechanical engineering respectively.

The Madras, Bombay and Bengal Engineer Groups at Bangalore, Poona and Roorkee provide basic technical and specialised Corps training to officers and ORs of the Corps of Engineers as also civilian officers of the Military Engineering Service.

The Corps of Electrical and Mechanical Engineers has its training centre at Secunderabad, while the School of Signals, which gives technical training in tele-communication engineering to personnel of the Corps of Signals, is situated at Mhow. The Army Signals School, which trains officers and ORs of all arms as instructors in regimental signals, is located at Jabalpur.

The other training institutions in the Army are the Remounts, Veterinary and Farms Centre and School at Meerut, the Education Corps School and the Military School of Music at Pachmarhi, and the Intelligence Corps School and the Physical Training School at Poona.

The various commissioned ranks in the Army from the top downwards are: General, Lieutenant-General, Major-General, Brigadier, Colonel, Lieutenant Colonel, Major, Captain, Lieutenant and Second Lieutenant. The ranks of the Junior Commissioned Officers and other ranks respectively are Subedar-Major/Risaldar-Major, Subedar/Risaldar, and Jemadar/Dafadar, and Havildar, Naik, Lance-Naik and Sepoy/Sowar.

INDIAN NAVY

The Naval HQ, under the Chief of the Naval Staff, exercises control over the Indian Navy through the following four operational and administrative commands:

1. Flag Officer Commanding, Indian Fleet.
2. Flag Officer, Bombay.
3. Commodore-in-Charge, Cochin.
4. Commodore, East Coast, Vishakapatnam.

Today, the Indian Fleet consists of I.N.S. MYSORE, a cruiser (Flagship of the Navy), the cruiser I.N.S. DELHI, two Destroyer Squadrons (I.N.S. RAJPUT, RANJIT, RANA, GODAVARI, GOMATI and GANGA), one Frigate Squadron (I.N.S. CAUVERY, KISTNA and TIR), and three Minesweeping Squadrons (I.N.S. BOMBAY, KONKAN, MADRAS, RAJPUTANA, BENGAL, ROHILKHAND, BASSEIN, BIMLIPATAM, KARWAR, KAKINADA, CANNANORE and CUDDALORE).

In addition, the Fleet has some survey ships, a tanker and some auxiliary craft.

The survey unit of the Navy, which now comprises I.N.S. INVESTIGATOR, JUMNA, SUTLEJ and DARSHAK, carries out the necessary survey of India's coast and approaches to harbours. I.N.S. DARSHAK of 2,750 tons displacement is the first naval ship built in India.

In the programme of modernisation of the Fleet, a number of new ships have been acquired. These are mostly anti-submarine and anti-aircraft

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

frigates of the latest type, some of which are still under construction in the U.K. Of these, I.N.S. BRAHMAPUTRA, KHUKRI, KIRPAN, KUTHAR, TALWAR, TRISHUL and BEAS have already joined the Fleet, and are being grouped into separate frigate squadrons. The one still under construction or in the various stages of completion is I.N.S. BETWA.

A beginning has already been made to build certain simpler types of naval vessels in India. A mooring vessel, I.N.S. DHRUVAK, and a survey ship, I.N.S. DARSHAK, built at the Hindustan Shipyard Ltd., Visakhapatnam, have already been launched. I.N.S. AJAY is the latest of the new constructions. Two more similar sea defence boats are now getting ready at Calcutta.

The first engineering college for the Indian Navy was inaugurated in the precincts of I.N.S. SHIVAJI on January 2, 1960.

The Naval Dockyard, which came into being in 1750, has constructed some of the finest ships for the Royal Navy. A 1,000-ton frigate built at the Dockyard in 1870, which was originally named 'Trincomalee', is still being used by the Nautical Committee of the U.K.

The Dockyard is now equipped with a foundry, boiler, engine and ship-fitting shops, electronic and radar workshops, blacksmith, plater, joiner and carpentry shops, soil-making lofts, machine-shops, and gun-mounting and torpedo workshops. Its main function is to carry out all types of major refits of ships of the Navy and the associated harbour craft services. To meet the demands of the growing Service this Dockyard is being rapidly expanded.

NAVAL AVIATION

The Naval Air Arm, which is one of the youngest branches of the Navy, came into being in 1948 for training aircrew, followed soon after by the setting up of a Naval Air Station at Cochin. Later, the formation of a Fleet Requirements Unit was approved, aircraft, equipment and spares acquired and officers and ratings deputed for training courses abroad. The civil airfield at Cochin was acquired for the Navy in 1953 to be converted into the first Naval Air Station. Soon after, the first batch of Sealand aircraft were purchased from the U.K. and later the station was named I.N.S. GARUDA. Early in 1955, a number of Firefly target-towing aircraft were obtained from the U.K. for providing gunnery-training facilities for the Fleet. The strength of the Fleet Requirements Unit was further augmented when three HT-2 aircraft were acquired from HAL to give instructional training to aircrew and other personnel. A jet flight has been added to the Fleet Air Arm with a number of Vampire jet aircraft.

The first aircraft carrier acquired by the Indian Navy was commissioned at Belfast on March 4, 1961 in the United Kingdom. Formerly known as H.M.S. HERCULES the carrier was renamed as I.N.S. VIKRANT.

This light fleet aircraft-carrier, which has a displacement of 19,550 tons (full load), was acquired for the Navy in 1957. The carrier was expected to be commanded by Capt. P. S. Mahindroo, I.N. and she would have a complement including her flying personnel, of over 1,000 officers and sailors. The carrier was expected to arrive in India in September 1961. A Naval Air Training School has been set up at Cochin to train ratings in the maintenance and repair of aircraft. At the same time, the Government are considering setting up a School for Naval Airmen for training non-technical personnel.

A number of Sea Hawks and Brognet Alize aircraft have been acquired for the carrier.

To meet the meteorological needs of the Fleet Requirements Unit, a Naval Weather Service Organisation, manned by trained instructor officers, was established at the GARUDA towards the end of 1952. Since then, more and more instructor officers have been trained to take over meteorological duties, both ashore and aboard ships. This organisation now also conducts courses of instruction in meteorology for naval ratings.

TRAINING ESTABLISHMENTS

The training of other naval personnel is carried out in the shore establishments of I.N.S. VENDURUTHI, Cochin, I.N.S. CIRCARS, Visakhapatnam, I.N.S. ANGRE, Bombay, I.N.S. KUNJALI, Bombay, I.N.S. SHIVAJI, Lonavla, I.N.S. VALSURA, Jamnagar, and I.N.S. HAMLA, Bombay. I.N.H.S. ASVINI at Bombay and I.N.H.S. SANJIVANI at Cochin are the two naval hospitals.

The various ranks in the Navy from the top downwards are: Admiral, Vice-Admiral, Rear-Admiral, Commodore, Captain, Commander, Lieut.-Commander, Lieutenant, Sub-Lieutenant, Branch List Officer, Midshipman, Chief Petty Officer, Petty Officer, Leading Rate, Able Rate and Ordinary Rate.

INDIAN AIR FORCE

The Air HQ is divided into three main branches—Air Branch, which deals with operations, training, policy and plans, signals, reserves and intelligence, Administration Branch and Maintenance Branch. Each is under a Branch P.S.O. who, in turn, has several Directorates under him.

The Indian Air Force is, in the main, divided into four major formations, namely Operational, Training, Maintenance and Eastern Air Commands under the control of the Air HQ.

The Operational Command controls all flying units—fighter, bomber, reconnaissance and air-transport squadrons. The Training Command has under its control training schools and colleges for both officers and airmen for technical and non-technical ground training and for aircrew flying training. The Maintenance Command controls all technical and equipment units in the I.A.F. The Eastern Air Command, recently established, unlike the other three Commands organised on a functional basis, has been set up on a geographical basis as in the case of the Army. All the four Commands are headed by Air Officers Commanding-in-Chief in the rank of Air Vice-Marshal.

The three Commands exercise control through their Wings and Stations located in various parts of the country. Under each Wing and Station come various flying, training, technical or other static units.

The different types of aircraft used by the IAF:

Training: Tiger-Moth, Percival Prentice, HT-2, Harvard, Spitfire and Vampire.

Fighter: Vampire, Toofani (Ouragon), Mystere, Hunter and Gnat.

Transport: Dakota, Devon, C-119 (Boxcar), Otter, Viscount, Ilyushin and Helicopter.

Bomber: Liberator and Canberra.

Reconnaissance: Liberator and Canberra.

TRAINING ESTABLISHMENTS

During the past few years, this youngest Defence Service, which celebrated its silver jubilee on April 1, 1958, has attained a large measure of self-sufficiency in the field of training in flying and technical and non-technical duties. Only a very small number of officers are now sent abroad for specialised courses not available in this country.

The Air Force Flying College at Jodhpur is the nursery of pilots, navigators and air-signallers. Advance flying training to aircrew is provided at Hyderabad, a Jet Training Wing and a Transport Training Wing having been set up at Hakimpet and Begumpet respectively as part of the Air Force Station. On successful completion of their one-year training at Jodhpur, pupil aircrew have to undergo a year's training at Hakimpet or Begumpet before being awarded their wings and commissioned.

The Air Force Administrative College at Coimbatore trains officers of the ground duty branches. The Air Force Technical College at Jalahalli, near Bangalore, imparts training to engineering officers and technical airmen of certain advanced signals trades. The No. 1 Ground Training School at Jalahalli trains non-technical airmen. The No. 2 Ground Training School at Tambaram (Madras) trains technical tradesmen (airmen). The No. 3 Ground Training School at Jalahalli is intended for airmen trainees of higher signals trades.

A School of Land/Air Warfare has been set up at Secunderabad to train Army and Air Force officers in the doctrine and planning of joint operations by air and ground forces, namely close air support, air transport support and air defence. The School has been organised into three wings corresponding to these distinct categories. Likewise, instructional staff of the institution is drawn from the two Services.

The School of Aviation Medicine, set up in Bangalore in 1957, runs courses for the training of medical officers and airmen in the science of aviation medicine. It contemplates subsequently undertaking research in this somewhat new, though extremely fascinating, field and has already established itself as an essential link in the training and research organisation of the Air Force. Aviation medicine seeks to help in the selection of aircrew and in investigating and solving problems associated with military aviation in general and high-speed, high altitude jet and space flight in particular.

The I.A.F. Paratroopers' Training School at Agra, instituted in 1949, continues to train paratroopers for the Army, personnel for the I.A.F. Para-Medical Flights and instructors for the School itself.

PRODUCTION ACTIVITY

Now armed with the latest jet trans-sonic aircraft, the Air Force has made rapid headway in the sphere of technical development. It can today boast of an organisation not merely performing maintenance tasks but also participating in research and production activity. It comprises a network of repair and manufacturing units backed by a chain of equipment and storage depots.

Earliest and foremost of these units is the Base Repair Depot. Since its establishment, soon after Independence, as a nucleus of the Air Force repair organisation, it has grown in scope and size. It has since assembled new aircraft, sent back into service aircraft after reconditioning, and reclaimed with the assistance of the H.A.L., virtually "dead" Liberators and restored them to operational fitness. Today, the various functions of the B.R.D. are erection of new aircraft, periodical overhaul of planes in use, repair of damaged aircraft, overhaul of aero-engines and rectification of defects in engines.

The Defence Ministry recently entered into an agreement with Messrs. Hawker Siddeley Aviation, Ltd., of the U.K. for the manufacture in India under licence of the Avro-748 transport aircraft in replacement of the Dakotas, which are now getting obsolete. The manufacture of this aircraft, with the help of British technicians, will be undertaken at the Air Force base at Kanpur. The Avro-748 is a pressurised low-wing monoplane offering comparatively low operating costs, with the additional advantage of propeller-turbine power plant. It will have Rolls-Royce Dart engines.

AUXILIARY AIR FORCE

In pursuance of the Reserve and Auxiliary Air Forces Act of 1952, seven Auxiliary Air Force Squadrons have so far been raised at Delhi, Bombay, Calcutta, Allahabad, Madras, Bhubaneshwar and Chandigarh. Similar auxiliary squadrons will be formed in other principal cities of India. Three of these squadrons are now equipped with jet aircraft.

The A.A.F. is intended to assist the Regular Air Force in aerial defence and to provide air support to the Regular Army and the T.A. in an emergency. It provides part-time Air Force training to citizens and does not interfere with their normal vocational pursuits in civil life.

The various commissioned ranks in the Air Force from the top downwards are: Air Chief Marshal, Air Marshal, Air Vice-Marshal, Air Commodore, Group Captain, Wing Commander, Squadron Leader, Flight Lieutenant, Flying Officer and Pilot Officer.

The men are ranked as Master Warrant Officer, Warrant Officer, Flight Sergeant, Sergeant, Corporal, Leading Aircraftsman, and Aircraftsman Class I and Aircraftsman Class II.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

SOCIAL WELFARE IN INDIA

THE period under British rule (1800-1947) witnessed a destruction of the old social structure in India. In the new structure that emerged a number of reforms and institutions were introduced by bodies like the Bramho Samaj (associated with the name of Raja Ram Mohan Roy), the Prarthana Samaj, the Deccan Education Society and the All-India Social Reform Association (Justice M. G. Ranade), the Ramkrishna Mission (Swami Vivekananda), the Servants of India Society (G. K. Gokhale) and the Arya Samaj (Dayanand Saraswati). The Arya Samaj and the Ramkrishna Mission sponsored social reforms, established orphanages, widows' homes, free dispensaries and relief centres in periods of emergency. The Servants of India Society is especially notable for its ramifications in the fields of labour, tribal welfare, youth welfare and emergency and relief work. An impetus to women's welfare was given by D. K. Karve's Women's University and G. K. Devadhar's Seva Sadan in Poona.

During this period pioneering work in many neglected fields of service, *e.g.* foundling homes, leper asylums and institutions for the maimed and the handicapped, was undertaken by Christian missionaries in the country.

By 1920 Mahatma Gandhi's contribution began to gain recognition throughout the country. He provided for a number of constructive social welfare programmes through organisations like the Harijan Sewak Sangh, All-India Village Industries Association, Charkha Sangh, the Hindustani Nai Talimi Sangh, Goseva Sangh, and the Kasturba Gandhi National Memorial Trust, etc. His constructive programme also included dignity of manual labour and labour welfare, prohibition of alcohol, drugs and gambling, Tribal welfare and leprosy relief.

The late '30s saw the formation of the first popular Ministries in eleven provinces in India.

During the same period professional social work began to be recognised with the establishment of the Tata Institute of Social Sciences in 1936.

The new profession generally covers the following fields of social work: Community Welfare Services; Family, Child and Youth Welfare Service; Public Welfare Administration; Social Security Services; Services for the maladjusted and handicapped groups; Social Defence and Correctional Administration; Services for Emergency Relief and Rehabilitation; Social Legislation and Social Action; Social Research; Training in Social Work; Tribal Welfare and Rural Welfare.

The establishment of the Indian Conference of Social Work at a meeting of over 450 social workers assembled in Bombay in November 1947 marks a significant development in the field of social work in India. The Conference undertakes and promotes the study of social problems and endeavours to foster co-operation, collaboration and co-ordination amongst social service agencies in India and abroad. It has held sessions in Bombay (1947), Madras (1948), Delhi (1949), Jamshedpur (1950), Calcutta (1951), Hyderabad (1953), Lucknow (1954), Bangalore (1955), Jaipur (1956) and its Decennial Anniversary Session in Madras (1957).

The I.C.S.W. held its third national seminar, the subject being urban community development, in December 1959 at Hyderabad.

In 1952, it enabled the International Conference of Social Work to hold its Sixth Session at Madras— the first International Conference on Asian soil.

Part IV of the Constitution lays down the "Directive Principles of State Policy", as follows:—

"The State shall strive to promote the welfare of the people by securing and protecting as effectively as it may, a social order in which justice, social, economic, and political, shall inform all the institutions of the national life."

SOCIAL LEGISLATION

Social legislation on an all-India scale dates back to 1843 when the first law abolishing slavery was passed. The earlier laws sought to reform the evil social practices existing at the time, practices such as *Sati* and infanticide. Later, social legislation began to assume a more positive and constructive role. Laws for better working conditions in factories, laws providing maternity benefits, for the abolition of traffic in women and children, and laws for the protection and care of destitute and delinquent children have all received attention in the first half of this century.

According to the present Constitution, social legislation can be formulated and implemented both by the Central and State Governments. Most social subjects are on the concurrent list, *i.e.* they can be legislated upon by the Central or State Governments. These subjects include: marriage and divorce, social security and social insurance, economic and social planning, welfare of labour, charities and charitable institutions, vagrancy and mental deficiency.

Prison Reform Bills and Borstal Institutions are subjects in the State list. An informative volume entitled "Social Legislation", which contains detailed information regarding the laws pertaining to women, children, handicapped groups and social defence was published in 1956 by the Planning Commission of the Government of India.

The Government of India have decided that programmes relating to child welfare will be the administrative responsibility of the Union Ministry of Education. The States of Assam, Andhra Pradesh, Bombay,* Madhya Pradesh, Punjab, Rajasthan, Uttar Pradesh and West Bengal have Departments of Social Welfare, whereas Madras possesses a Women's Welfare Department.

The expenditure allocated to Social Services in the 1st Five-Year Plan period was 532 crores of rupees out of a total outlay of 2,356 crores, which works out to 23 per cent, whereas in the Second Five-Year Plan, out of a total outlay of 4,800 crores of rupees 808 crores were earmarked for Social Services, including Housing, Rehabilitation, etc. in the revised allocations.

To the above amount we could also add the provision of 90 crores in the First Plan period, and 200 crores in the Second Plan period for community development, both of which work out to four per cent of the total provision respectively.

PLAN PROVISION BY MAJOR HEADS OF DEVELOPMENT

	Second Plan	Third Plan (as per draft outline)
	Total Provision (Rs. crores)	Total Provision (Rs. crores)
(a) Education ..	275	500
(b) Health (including water supply and sanitation programme)	245	300
(c) Labour & Labour Welfare, Welfare of Backward Classes, Scheduled Tribes, Social Welfare	114	125
(d) Housing	84	120
(e) Rehabilitation ..	90	—
Total	808	1,045

SOME ALL-INDIA ACTS

The Special Marriage Act, 1954; The Hindu Marriage Act, 1955; The Hindu Succession Act, 1956; The Hindu Adoption and Maintenance Act, 1956; The Hindu Minority and Guardianship Act, 1956; The Mines Maternity Benefit Act, 1941; The Apprentices Act, 1850; The Children Pledging of Labour Act, 1933; The Employment of Children Act, 1938; The Reformatory Schools Act, 1897; The Lepers Act, 1898; The Indian Lunacy Act, 1912; The Untouchability Offences Act, 1955; Suppression of Immoral Traffic in Women and Girls Act, 1956; The Women's and Children's Institutions Licensing Act, 1956; The Orphanages and Other Charitable Institutions Supervision and Control Act, 1960; The Probation of Offenders Act, 1958.

Traffic in Women

The Suppression of Immoral Traffic in Women and Girls Act 1956 was implemented in most States in May 1958. It applies to the whole of India, and from the date of the coming into force of this Act, all other State Acts relating to the suppression of immoral traffic in women and girls or to the prevention of prostitution stand repealed.

Some institutions concerned with this aspect of the problem are:

Andhra Pradesh: Association for Moral and Social Hygiene; Nari Sudhar Samiti (Hyderabad).

Maharashtra: Bombay State Women's Council Rescue Home; Bombay Vigilance Association Shelter, League of Mercy Shelter; Salvation Army Industrial Institute for Women; Shraddhanand Anath Mahilashram; and St. Catherine's Home (all in Bombay City), Association for Moral and Social Hygiene.

Other districts of Maharashtra: Wasudeo Babaji Nowrangay Orphanage (Pandharpur); Anath Mahilashram (Kolhapur); St. Crispin's Home; Mahila Sevagram; Hindu Anath Mahilashram; Ramabai Mukti Mission (Poona Dist.).

Madras: The Stree Sadan Rescue and Training Home; Government Vigilance Home; Good Shephard Home; Meenakshi Sadanam (Madurai); Association for Moral and Social Hygiene.

Bengal: The Fendal Home and All Bengal Women's Union Home.

Delhi: Nari Niketan; Association for Moral and Social Hygiene.

Bihar: Bharatiya Bidhwashram, Anathalaya; Association for Moral and Social Hygiene.

Mysore: Abhaya Ashram, Good Shephard Home; Association for Moral and Social Hygiene.

U.P.: Ashoka Ashram (Dehra Dun); Association for Moral and Social Hygiene.

Gujarat: Shri Seth Mansukhlal Chaganlal Hindu Widhwa Ashram; Vikas Griha (Ahmedabad); Vikas Griha (Junagadh); Association for Moral and Social Hygiene.

Kerala: One rescue home and four shelters; Association for Moral and Social Hygiene.

Madhya Pradesh: Association for Moral and Social Hygiene.

Orissa: Association for Moral and Social Hygiene (Cuttack).

Punjab: Two homes; Association for Moral and Social Hygiene (Chandigarh).

Rajasthan: Association for Moral and Social Hygiene (Jaipur).

A substantial sum has been allotted by Central and State Governments to root out traffic in women and girls.

State Homes for Women and Reception Centres for temporary stay have been organised in various parts of the country by the Central Social Welfare Board.

* Bilingual.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

From the time the Act was enforced on May 1, 1958 to Sept. 15, 1959 the Central Social Welfare Board set up 68 protective homes in the country to accommodate about 1,000 women and children rescued from brothels. The number of homes opened at the various places are: Andhra Pradesh 3; Bihar 1; Bombay† 17; Kerala 7; Madras 9; Mysore 6; Orissa 1; Rajasthan 5; Uttar Pradesh 13; West Bengal 2; Delhi 1; Himachal Pradesh 3.

State-wise, the accommodation available as on Sept. 1, 1958 was: 100 in Nari Sudhar Samiti, Hyderabad, Andhra Pradesh; 200 in a rescue home and four shelters in Kerala; 100 in Stri Sadana Rescue Home, Madras City and 50 in Meenakshi Sadnam, Madurai, Madras; 45 in two homes in West Bengal; 100 in Nari Niketan in Delhi; 100 women in two homes in Mysore, and 25 women in two homes in Punjab.

There were no brothels in Himachal Pradesh and Manipur. The Laccadive, Minicoy and Amindivi Islands were also free from traffic in women and children.

Most State Governments have already framed rules and appointed special police officers for enforcing the provisions of the Act.

The Central Social Welfare Board appointed an Advisory Committee under the chairmanship of Mrs. Dhanvanti Rama Rau to study the problem of social and moral hygiene in the country.

The Report observes that prostitution is mainly an urban problem and as many as 65·5% of women come from the rural areas in the age group 10 to 29. The causes that lead to prostitution:—55·4% economic stress, 27·7 disharmony or family mal-adjustment, and 6·9 social and religious practices. Figures for kidnapping and seducing were not available.

It is the view of the Committee that vigilance or preventive work is very scanty and the standard of rescue work by voluntary institutions needs to be improved.

As a result of the recommendation of the Advisory Committees, appointed by the Board, a programme of social and moral hygiene and after-care services has been drawn up for the Second Plan.*

A total provision of Rs. 9·5 crores has been made in the plans of the appropriate Ministries in the Government of India and also in the State plans.

The Association for Moral & Social Hygiene in India which was founded in 1865 by Keshab Chandra Sen has its headquarters in New Delhi and several State branches which in turn have District Branches. It works through various committees, the most important of which are Legal, Rescue and Rehabilitation, Preventive, Research and Education. It also holds conferences on all India and State basis. Its strength consists in the fact that most of the voluntary agencies doing similar work are affiliated to it and it also receives the active co-operation of the police and other Governmental bodies.

Since 1959, the Association has been getting financial aid from the Public Co-operation Division of the Planning Committee for the training of social workers etc. It also gets financial assistance from the Ministry of Health and the Association undertakes the opening of venerial diseases clinics in various States.

The National Council for Women in India has its standing Committee on Moral and Social Hygiene, in Poona.

Children

Children's Acts in relation to delinquency are in force in the States of Andhra Pradesh, Bombay,† Madhya Pradesh, Madras, Mysore, Punjab, Kerala, U.P., West Bengal and the Union Territory of Delhi.

The Borstal Schools Acts, which are slightly different in scope, are in operation in the States of Andhra, Bombay,† Madras, Mysore, Punjab, U.P., West Bengal and Kerala.

The Reformatory Schools Act of 1897 has also been enforced in all the major States and some Union Territories. But where Children's Acts are in force, the Reformatory Schools Acts are not enforced. In States where Children's Acts exist but are not enforced, the Reformatory Schools Act applies.

The Central Government have sponsored a Care Programme under which the States are given assistance. Under this programme 7 remand homes, one borstal school and 2 probation hostels in Bihar, 5 remand homes and 5 certified schools in Maharashtra and Gujarat, 9 remand homes and one borstal school in Kerala, 2 certified schools, 2 remand homes and 3 probation hostels in Madhya Pradesh, one certified school, one remand home and 3 boys' clubs in Madras, 6 certified schools, 10 remand homes and one probation hostel in Mysore, one certified school and 4 boys' clubs in Rajasthan, one remand home, one certified school, one probation hostel and one juvenile guidance bureau in Delhi, one certified school in Himachal Pradesh, and one certified school in Tripura have been approved.

Besides formal education, vocational trading in a number of trades is imparted to the inmates of the three types of institutions referred to above. Others provide follow-up services.

A new experiment in preventive correction was started in Bombay City by the Children's Aid Society under its Juvenile Service Bureau.

Beggars

The Criminal Procedure Code treats vagrants and vagabonds alike and provides penalties under Sections 55 (*i*) (*b*) and 109 (*b*).

Beggars may be proceeded against under Section 133 as those committing public nuisance.

Beggary within railway premises was prohibited by law as from February 15, 1941.

Special Acts have been passed by most of the States to prohibit begging in public places. In others, the municipal and police Acts provide measures against begging.

There are institutions in the States for the custody, care and assistance of beggars in their rehabilitation.

There are 18 certified institutions with a total capacity for 2,000 beggars in Bombay.† West Bengal has 8 Beggar Homes with an accommodation for 2,050. There are 7 similar institutions in Madras, 8 including 3 relief settlements in Kerala and two in Delhi. There is a Beggar Home each in the States of U.P., Madhya Pradesh and Mysore. The inmates of these Homes are provided with food, clothing, education facilities for physical culture and vocational training. The Indian Penal Code (Amendment) Act which provides for punishment for kidnapping or maiming of children for begging was enacted.

SOCIAL SERVICE AGENCIES

The groups of voluntary social work in India largely fall under the following heads: Administrators; Professional social workers; Missionaries; The Gandhian social workers; and Voluntary social workers belonging to the various private agencies.

Of these the religious believe in the traditional form of charity, the Missionaries in institutionalised social work, the Gandhian in the 14-point constructive programme.

The group of professionally trained social workers is small though most compact. This group consists of alumni and teachers of the following post-graduate schools of social work in India:

The Tata Institute of Social Sciences, Devnar, Chembur, Bombay 71; Delhi School of Social Work, 3, University Road, Delhi 8; the Faculty of Social Work of the M. S. University of Baroda, Camp Road, Baroda; Shri Kashi Vidyapeeth, Banaras, Chavni, Banaras 2; Madras School of Social Work, 1, Jarretts Gardens (upper flat), 23-24, Casa Major Road, Egmore, Madras 8; The All India Institute of Social Welfare and Business Management, College Square West, Calcutta 7. The J. K. Institute of Sociology and Human Relations, Lucknow University, Lucknow also imparts training in social work, while the Patna University has a department to train social workers for industrial welfare work. The other institutions are: Institute of Social Service, Nirmala Niketan, New Marine Lines, Bombay 1; P. S. G. School of Social Work, Peelamedu, Coimbatore; Labour Welfare Institute, Govt. of Bombay, Govindji Keni Road, Naigaum, Dadar, Bombay 14; National Institute of Social Sciences, Bangalore; Udaipur School of Social Work, Udaipur; Xavier Labour Relations Institute, Jamshedpur; Department of Economics and Sociology, Andhra University, Waltair; Institute of Social Sciences, Agra University, Agra; University School of Social Sciences, Gujarat University, Ahmedabad; Department of Sociology, Labour and Social Welfare, Bihar University, Bhagalpur; Vikram University Dept. of Social Work, Indore, M.P.

Voluntary Social Service Agencies operating on an All-India basis are mentioned below:—

Child Welfare

Balkan-ji-Bari (6-A, Cooperage, Bombay 1); Society for the Protection of Children in India (2-B, Camac Street, Calcutta); Indian Council for Child Welfare, Room 14-15, Block 'A', 'B' Barracks, Queensway, New Delhi; Indian Council for Child Education (Sumanas, 39, Edward Elliots Road, Madras 4).

Youth Welfare

Y.M.C.A. (5, Russel Street, Calcutta 16); Y.W.C.A. (Parliament Road, New Delhi); Bharat Scouts and Guides Association (Regal Building, Parliament Street, New Delhi); Bharat Sevak Samaj (27-A, Theatre Communication Buildings, Connaught Place, New Delhi); Y.M.C.A., New Delhi; Youth Welfare Association (193-E, Devnagar, New Delhi); Poor Welfare Association (29/24, Shakti Nagar, Delhi 6); 'Gyan Prakash Yuvak Sangh' (653, Chuna Kankar, Mathura, U.P.); Youth Hostels Association (2, East Park Road, New Delhi 5); Social Service League (Indraprastha College, Alipur Road, Delhi).

Women's and Family Welfare

All India Women's Conference (6, Bhagwandas Road, New Delhi); Family Planning Association of India (Metropolitan House, Dadabhoy Naoroji Road, Bombay 1); National Council of Women in India (C Block, Western House, Curzon Road, New Delhi); Kasturba Gandhi National Memorial Trust (Kasturba Gram, P.O. Indore, Madhya Pradesh).

Health

Tuberculosis Association of India (20, Red Cross Road, New Delhi 2); Indian Red Cross Society (20, Red Cross Road, New Delhi 2); All India Cancer Prevention Society (Tata Memorial Hospital, Parel, Bombay 12); Hind Kusht Niwaran Sangh (Red Cross Road, New Delhi); Akhil Bharat Sharirik Sikshan Maha-Mandal (Tilak Road, Nagpur, Maharashtra).

Indian Medical Association, Hanging Bridge, Daryaganj, Delhi 7.

Rehabilitation of the Handicapped

Convention of the Teachers of the Deaf in India (50, Bondel Road, Ballygunj, Calcutta); All India Lighthouse for the Blind (89, Elliot Road, Calcutta); National Association for the Blind (Victoria Memorial Blind School, Tardeo, Bombay 7); All India Blind Relief Society (11-F, Lajpatnagar, New Delhi); The Fellowship of the Physically Handicapped, (No. 7, Queen's Barracks, Foreshore Road, Backbay Reclamation, Bombay 1); Society for the Education of the Crippled (Child and Adult) (20, Nepean Sea Road, Bombay 6).

† Bilingual.

* See also under Social Welfare Board p. 35.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Rural Welfare

Sarva Sewa Sangh (K33-4 Golghar, Varanasi, U.P.); India Village Service (I.V.S. House, Marhera, Dist. Etah, U.P.).

General Social Welfare

Servants of India Society (Poona 4); Ramkrishna Mission (Belur, Dist. Howrah); Gandhi Memorial Fund (5, Mansingh Road, New Delhi); Salvation Army (Moreland Road, Bombay 8); Friends' Service Unit (1, Upperwood Street, Calcutta 16); All India Seva Samiti (Seva Samiti Building, Allahabad); Indian Co-operative Union Ltd. (American Barracks, Queensway, New Delhi).

Rural Women's Welfare

Kasturba Gandhi National Memorial Trust (Kasturbagram, Indore, Madhya Pradesh).

Relief and Rehabilitation

United Council of Relief and Welfare (Rashtrapati Bhavan, New Delhi).

Social Education

Indian Adult Education Association (17-B, Indraprastha Marg, New Delhi); Jamia Milia (Okhla, Delhi); Literacy House (Lucknow); All India Mass Education Society (Gonda).

Welfare of Under-Privileged Groups

Harijan Sewak Sangh (Kingsway, Delhi); Bhartiya Adimjati Sevak Sangh (Kingsway, Delhi 9).

Social Defence

All India Crime Prevention Society (Behari Niwas, Kanpur, U.P.): Association for Moral and Social Hygiene in India (Room No. 211, 'P' Block, Raisina Road, New Delhi).

All social welfare agencies will now work under the supervision of the Panchayat institutions in States where democratic decentralisation is in operation.

This principle has been accepted by Mrs. Durgabai Deshmukh, Chairman of the Central Social Welfare Board.

Co-ordination

The national organization for the co-ordination of all welfare services is the Indian Conference of Social Work located at 6/A, Cooperage, Bombay 1.

There is also a South-East Asia Regional Office of the International Conference of Social Work which has been established in conjunction with the Indian Conference of Social Work in Bombay.

International Welfare Agencies in India

The following are some of the International agencies and organisations working in the country: International Conference of Social Work (South-East Asia Regional Office (6/A, Cooperage, Bombay-1); Ford Foundation (32, Ferozshah Road, New Delhi); World Health Organisation (S.E.A. Office, Patiala House, Hardinge Avenue, New Delhi); Rockefeller Foundation (20/39, Diplomatic Enclave, Kautilya Marg, New Delhi); International Labour Organisation, Indian Branch (Mandi House, New Delhi); International Union for Child Welfare (Consultant for Far East Asia, Rooms Nos. 14 & 15, Block A, Barracks B, Queensway, New Delhi): United Nations International Children's Emergency Fund (UNICEF House, 11, Jor Bagh, Delhi); United Nations Educational, Scientific and Cultural Organisation (Old Mill Road, New Delhi); Food and Agricultural Organisation, UNO. (21, Curzon Road, New Delhi).

Bhoodan Movement

Special mention must be made of the Bhoodan Movement initiated by Acharya Vinoba Bhave, one of the ablest disciples of Gandhiji. He is effecting a silent but nevertheless remarkable social revolution within the country by the voluntary gift of land (Bhoodan), wealth (Sampattidan), labour (Shramdan) and life (Jeevandan).

Urban Welfare

Mention may also be made of schemes for Urban Community Development being recently initiated in the cities of Delhi, Bombay, Ahmedabad, Hyderabad and Madras generally in co-operation with voluntary agencies, municipalities and State Governments.

CENTRAL SOCIAL WELFARE BOARD

The Central Social Welfare Board was set up by a resolution of the Government of India in August 1953 under the general administrative charge of the Union Ministry of Education, to promote programmes of social welfare, especially for women, children and the handicapped sections. Its three main functions are: (1) to offer financial assistance to the existing welfare organizations, (2) to sponsor and aid new welfare services in uncovered areas where they are needed and (3) to co-ordinate the social welfare programmes of various Central Ministries, State Governments and voluntary agencies.

By the middle of 1954, social welfare advisory boards were set up in different States for assisting the Central Social Welfare Board to bring about a decentralisation of activities and to enable it to keep in touch with the aided institutions for the proper direction of their efforts. There are now 22 State Social Welfare Boards in the country.

Grants-in-Aid: Since its inception upto the end of October 1960, the Board had sanctioned 12,068 grants amounting to Rs. 332·48 lakhs to 5,912 voluntary welfare institutions. These figures include grants given for a year at a time (5,710 institutions, Rs. 204·19 lakhs) and those on a long-term basis (725 institutions, Rs. 128·29 lakhs).

Welfare extension projects: Among schemes directly sponsored by the Board are the rural Welfare Extension Projects launched in Aug. 1954 and the training programmes. Each of these projects covers an area of about 25 to 30 villages and a population of about 20,000. The programmes and activities of these projects comprise Balwadis (community creches and pre-basic schools), maternity and infant health services (including those for the handicapped and the delinquent), literacy and social education for women, arts and crafts centres and recreational activities.

A project Implementing Committee comprising mainly of women social workers of the area is responsible for the formulation and execution of programmes in each project area. In each project area there are five centres, one for about five villages, each centre being in the charge of a trained gramsevika who works with a dai and a craft instructor, who together constitute one team of workers. At the project level are a mukhya sevika and a midwife. Half of the expenditure on each project is contributed by the Central Board and the other half is met from other sources, such as the State Governments, local bodies and local contribution.

Upto the end of October, 1960, 418 such projects with 2,027 centres covering a population of 79·48 lakhs in 10,499 villages had been established. The number of projects had reached 440, but some of them have since been merged in projects in the Community Development Blocks.

From 1961-62 onwards, it has been decided that these activities should be conducted by local voluntary welfare organisations, each of which will be given a suitable grant under the Board's grants-in-aid programme.

From April, 1957, the Board has undertaken all work relating to the welfare of women and children in the Community Development Blocks. Each of these projects covers about 100 villages and a population of 60,000 to 70,000. There are by the end of October, 1960, 324 projects of this pattern, with 3,240 centres, covering 32,400 villages and a population of 213·84 lakhs.

Building grants for project centres of the Welfare Extension Projects are sanctioned by the Board under its grants-in-aid programme. Upto the end of October, 1960, 1,024 centres of 334 projects had been sanctioned an amount of Rs. 36·54 lakhs. The local community had donated 354·70 acres of land and Rs. 18·70 lakhs in money as local contribution.

Training Programmes: For the execution of the rural welfare programme, 317 mukhya sevikas, 3,767 gramsevikas, 221 midwives and 335 dais had been trained at various training centres run by Kasturba Gandhi National Memorial Trust and other voluntary agencies.

Condensed Courses of Training: There is now an increasing scope for a large number of women being trained and employed as gramsevikas, midwives, teachers etc. in rural areas under various plan schemes. The minimum educational qualifications for each of these is to pass in the vernacular final or 7th or 8th class. They should first be given a course of general education before they can be recruited for specialised training. The Board under its programme of grants-in-aid gives grants to the institutions giving condensed courses of training to adult women between the ages of 20 to 35 years. Upto the end of October, 1960, 222 voluntary institutions had been sanctioned grants amounting to Rs. 60 lakhs.

Welfare Extension Projects (Urban): These projects are meant to provide a Community Welfare centre for the residents of slum areas of large cities and towns, where such services are needed. The activities undertaken in these projects may include starting of creches, balwadis, ante-natal and post-natal advisory services, infant health centres, hobby clubs, vocational guidance, training in arts and crafts for women, referal and placement services for the handicapped and the like. These services are centred round the family as a unit. The Board gives grants to the institutions running these projects. Upto the end of October, 1960, 72 voluntary institutions had been sanctioned grants amounting to Rs. 18 lakhs, for running these projects in urban areas.

Holiday Homes for Children: Under this scheme the Central Social Welfare Board gives assistance for organising holiday camps for children between 12 and 16 years of age coming from the lower income groups to the hill stations and summer resorts. The scheme is being co-ordinated by the Indian Council for Child Welfare. Upto the end of October, 1960, 78 batches of 50 children each had been sanctioned grants of Rs. 2·10 lakhs for arranging Holiday Homes at various places.

Night Shelters: The Board has started a scheme of Night Shelters for the shelterless in the big cities. This scheme is being implemented, coordination being undertaken by Bharat Sevak Samaj; upto the end of October, 1960, schemes for the opening of 42 Night Shelters in different States had been approved.

Programmes for after-care and Social and Moral Hygiene: Apart from formulating new welfare schemes and assisting in the expansion of existing ones, the Board has achieved notable success in coordinating the welfare activities carried on in a number of central ministries. This is particularly in respect of programmes sponsored by it for the after-care and rehabilitation of women rescued from moral danger and others discharged from correctional and care institutions and in the economic welfare programmes. Upto the end of October, 1960, 47 After-care Homes which provide appropriate training and meet other needs of persons discharged from correctional institutions, 135 district shelters, which receive the discharged and rescued persons and send them to Homes had been sanctioned. The Ministry of Commerce and Industry had accorded technical approval for starting 21 production units in After-care Homes each of which will provide employment to 300 to 500 persons, some of whom would not be in need of After-care.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Socio-Economic Programmes: With the co-operation and technical as well as financial assistance of the Ministry of Commerce and Industry and its industrial Boards and the Khadi Commission, a number of production units are being organised which would provide remunerative work to the needy women and the physically handicapped. Under this programme so far 102 Ambar Parishramalayas have been set up providing training to women in the rural areas, with the assistance of the All India Handloom Board, where, in all, about 500 women and handicapped persons such as the blind and the orthopaedically handicapped would be given training and subsequent employment; about 140 instructors have been trained in handicrafts at the Regional Handicrafts Training Institutes conducted with the assistance of All India Handicrafts Board and about 40 handicrafts training centres, production centres and procurement units are being set up; production units as ancillary to larger industries have already been set up at Poona and Bangalore and two more would be shortly organised at Calcutta and Coimbatore; three coir spinning and weaving units in the States of Kerala, Mysore and Maharashtra are being set up to provide employment to about 300 needy women; setting up silk reeling and spinning units in the States of Assam, Bihar, Maharashtra, Madhya Pradesh and Orissa. In addition to these, the Central Social Welfare Board also gives grants to voluntary institutions upto an extent of Rs. 15,000 for setting up small production units providing employment to about 30 to 35 needy women per unit. Under the Urban Family Welfare Scheme initiated earlier by the Central Social Welfare Board, Industrial Co-operative Societies set up at Vijayawada and Hyderabad provide work to 500 women workers in production of safety matches.

Publicity: Publicity of the activities of the Board and the propagation of welfare programmes is conducted through the media of films, publications and exhibitions. Six documentary films on various welfare subjects have so far been prepared by the Films Division, on behalf of the Central Social Welfare Board, in various regional languages and two are under preparation. "Social Welfare" (English) and "Samaj Kalyan" (Hindi) are the Board's monthly magazines which are widely read in India and abroad.

THE CO-OPERATIVE MOVEMENT

DURING 1958-9 the number of co-operative societies of all types rose from 2,57,822 to 2,83,971 the percentage increase being 10·1 compared to 5·3 in the previous year. Except for the three States *viz.*, Jammu and Kashmir, Madras and Himachal Pradesh all the States shared the general increase, the highest being in Uttar Pradesh where the number rose by 6,784 societies. The owned funds and working capital of these societies increased simultaneously from Rs. 187·03 crores in 1957-58 to Rs. 220·16 crores and from Rs. 696·17 crores to Rs. 879·59 crores respectively.

Agricultural credit societies numbering 1·83 lakhs formed about 65 per cent of the total number of societies and constituted numerically the most important single class of co-operative institutions in the country. Among non-credit societies, weavers' and other industrial societies constitute the most important groups numbering 10,472 and 14,806 respectively. Next in order are cane supply societies which are concentrated mostly in Bihar and Uttar Pradesh, consumers' stores, and housing societies and farming societies. The membership of all primary societies increased during the year under review by 15 per cent from 2,14 lakhs to 2,48 lakhs, agricultural credit societies alone accounting for a rise of 17 lakhs. Assuming that an average family comprises five members, it may be estimated that by the end of 1958-59 roughly 12,40 lakhs or a little more than 30 per cent of the population wasserved by co-operatives compared to 10,70 lakhs or 27 per cent of the population at the commencement of the year. Allowance will, however, have to be made for individuals being members of more than one society.

Loans advanced by primary societies rose by Rs. 58·94 crores to Rs. 260·19 crores. Bombay* accounted for Rs. 97·40 crores or 37·4 per cent of the aggregate advances.

STATE CO-OPERATIVE BANKS

With the organization of a State Co-operative Bank in Pondicherry the number of state co-operative banks stood at 22 as against 21 a year ago. Of these, three state co-operative banks were functioning in Bombay and two in Andhra Pradesh. The society membership of the state co-operative banks recorded an increase while the number of individual members continued to decline. The paid-up capital and statutory reserves of the banks rose from Rs. 9·97 crores at the beginning of the year to Rs. 12·21 crores at the close of 1958-59. During the year under review the working capital of the state co-operative banks rose by about 35 per cent to Rs. 147·77 crores compared to an increase of 37·2 per cent during the year 1957-58.

Position as on 30th June 1959:

Crores of rupees

Item	Amount
1. Working Capital	147·77
2. Owned funds..	14·93
3. Deposits	58·44
4. Borrowings from:	
(*i*) Government	6·02
(*ii*) Reserve Bank	63·96
(*iii*) Other sources	4·42

CENTRAL CO-OPERATIVE BANKS AND BANKING UNIONS

The declining trend in the number of central co-operative banks and banking unions, continued during the year under review and the number of banks fell from 418 to 402, the smaller banks merging with adjacent larger banks. It may be mentioned that although the total number of banks amalgamated during the year was 20 in various States, the organization of 4 more banks in Kerala resulted in a net decrease of 16 only. The membership of the banks stood at 3·41 lakhs at the close of the year comprising 1,441 central societies, 1,89,245 primary societies and 1,50,458 individuals and others. The working capital of the banks rose from Rs. 147·00 crores at the end of 1957-58 to Rs. 189·62 crores at the end of 1958-59. The central banks in Andhra Pradesh, Bombay* and Madras accounted for over 52 per cent of the total working capital. The following table gives details in regard to the composition of the working capital.

Position as on 30th June 1959:

Crores of rupees

Item	Amount
1. Working Capital	189·62
2. Owned funds	31·68
3. Deposits	77·97
4. Other borrowings	79·97

It may be seen that the owned funds of the central banks increased by 26·8 per cent during 1958-59. Of the total deposits of Rs. 77·97 lakhs 38 per cent was from co-operative societies and the rest from individuals and other sources. The increase in the deposits during the year was 16·5 per cent, compared to 14·4 per cent during the previous year. At the end of 1958-59 the deposits, however, constituted 41·1 per cent of the working capital as against 45·5 per cent at the commencement of the period under review. Loans advanced by the banks during 1958-59 amounted to Rs. 210·16 crores representing an increase of 31·5 per cent over the previous year. Of the total loans, those advanced by banks in Bombay State* amounted to over Rs. 67 crores. As on 30 June 1959 outstandings on account of loans issued by the banks stood at Rs. 130·83 crores as against Rs. 101·00 crores at the end of 1957-58. The outstandings on account of loans advanced to individuals at the end of 1958-59 stood, however, at Rs. 3·37 crores compared to Rs. 3·60 crores at the end of 1957-58. At the end of 1958-59 the overdues amounted to Rs. 14·93 crores compared to Rs. 12·08 crores at the beginning of the year and constituted a little more than 11 per cent of the outstanding loans compared to 12 per cent in the previous year. The position of the overdues was not happy in the case of banks in Bihar where they Constituted about 50 per cent of the outstandings on 30 June 1959. The position did not also appear to be satisfactory in the case of banks in Assam and West Bengal where they constituted over 40 per cent of the outstandings. Of the total loans advanced by the banks during 1958-59, short-term loans amounted to Rs. 194·63 crores. The investments of the banks aggregated Rs. 35·95 crores of which Rs. 17·83 crores were in government and other trustee securities.

AGRICULTURAL CREDIT SOCIETIES

Agricultural credit societies being at the base of the co-operative credit structure constitute the most important sector of the co-operative movement in the country.

At the end of 1958-59 there were 1,82,905 such societies with a membership of 119·01 lakhs compared to 1,66,544 societies with a membership of 102·21 lakhs at the beginning of the year. About 53 per cent of these societies were based on unlimited liability.

During the year the working capital of agricultural credit societies rose by Rs. 37·19 crores to Rs. 170·94 crores, borrowings from state or central banks accounting for Rs. 103·46 crores of the total. Deposits stood at Rs. 9·88 crores and of these Rs. 4·86 crores or a little less than half was accounted for by Punjab and Bombay.* Loans advanced by agricultural credit societies during 1958-59 were higher at Rs. 125·50 crores compared to Rs. 96·08 crores during 1957-58 while the outstandings of loans stood at Rs. 135·00 crores at the end of June

* Bilingual.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

1959 compared to Rs. 107·10 crores at the beginning of the year. Overdues constituted 20 per cent of the outstandings on 30 June 1959, against 21·3 per cent at the end of 1957-58. Of the total loans advanced by societies, short term loans amounted to Rs. 110·70 crores.

The All-India averages in respect of membership, share capital, deposit, working capital and loans of agricultural credit societies are given in the following table. The figures are for 1958-59 :

Amount in rupees

Item	1958-59
1. Membership per society ..	65
2. Working Capital per Society	9,346
3. Share capital:	
(*i*) per society	2,033
(*ii*) per member	31
4. Deposits:	
(*i*) per society	540
(*ii*) per member	8
5. Loans advanced per member	105

LARGE-SIZED SOCIETIES

There were 8,213 large-sized societies at the end of 1958-59 of which 5,011 had received state contribution towards their share capital. Their membership was 27·68 lakhs and their working capital amounted to Rs. 61·92 crores as on 30 June 1959.

The loans advanced by them during the year amounted to Rs. 49·88 crores and outstandings on this account at the end of the year stood at Rs. 48·19 crores. Overdues which amounted to Rs. 6·71 crores as on 30 June 1959 formed about 14 per cent compared to 23·3 per cent in small-sized societies. The societies had 1,362 owned godowns and 1,030 hired godowns.

Working of large-sized and small-sized societies during 1958-59 :

Amount in rupees

Item	Large-sized societies	Small-sized societies
1. Membership per society ..	337	52
2. Working Capital per Society ..	75,396	6,240
3. Share Capital: ..		
(*i*) per society ..	18,652	1,251
(*ii*) per member ..	55	24
4. Deposits:		
(*i*) per society ..	4,790	340
(*ii*) per member ..	14	7
5. Loans advanced per member ..	180	83

GRAIN BANKS

At the close of the year 1958-59 there were 9,740 grain banks with a membership of 11·51 lakhs and a working capital of Rs. 3·89 crores. compared to 9,549 grain banks with a membership of 10·86 lakhs and a working capital of Rs. 3·66 crores at the end of the previous year. Four States *viz.*, Andhra Pradesh, Bombay* Mysore and Orissa had 97·2 per cent of the banks. The grain-loans advanced by the banks during the year amounted to Rs. 1,03 lakhs compared to Rs. 97 lakhs during the previous year. Overdues constituted 57·7 per cent of the outstanding loans as on 30 June 1959.

NON-AGRICULTURAL CREDIT SOCIETIES

The non-agricultural credit societies comprise urban banks, employees' credit societies and other special types of credit societies which cater to the banking and credit requirements of artisans, traders, government servants, salaried employees and others living in urban and semi-urban areas. There were 11,084 such societies at the end of June 1959 compared to 10,430 at the commencement of the year. Nearly 40 per cent of the societies were functioning in Bombay* and Punjab.

Their membership rose by 3·48 lakhs to 40·22 lakhs during 1958-59. The paid-up capital and reserves of these societies amounted to Rs. 26·49 crores and Rs. 10·98 crores respectively on 30 June 1959 compared to Rs. 24·02 crores and Rs. 10·56 crores respectively as on 30 June 1958. Their working capital recorded a fairly large increase from Rs. 102·53 crores at the beginning of the year to Rs. 121·47 crores at the end of June 1959. Loans advanced by them during 1958-59 amounted to Rs. 110·18 crores compared to Rs. 86·77 crores during the preceding year. At the end of the year the loans outstanding amounted to Rs. 90·48 crores and overdues formed 7·2 per cent of this amount. The deposits held by these societies increased from Rs. 60·73 crores at the end of 1957-58 to Rs. 75·81 crores at the end of 1958-59, the societies in Bombay* and West Bengal accounting for about 64 per cent of the total deposits. The borrowings of the societies amounted to Rs. 8·18 crores at the end of June 1959 compared to Rs. 721 crores at the end of June 1958.

CENTRAL LAND MORTGAGE BANKS

The number of central land mortgage banks remained the same *i.e.* 15. Their membership comprised 1,84,772 individuals, 519 primary land mortgage banks and societies compared to 1,50,944 individuals and 539 primary banks and societies at the end of the previous year. The share capital and reserves of the banks amounted to Rs. 2,91 lakhs and Rs. 82 lakhs respectively at the end of June 1959 compared to Rs. 2,26 lakhs and Rs. 72 lakhs respectively at the end of the previous year. The working capital of the banks which amounted to Rs. 31·35 crores on 30 June 1959 composed mainly of debentures floated by them on the guarantee of the respective State governments. The debentures outstanding on that date stood at Rs. 24·46 crores as against Rs. 20·48 crores at the end of the previous year. The value of debentures sold during 1958-59 aggregated Rs. 3·78 crores compared to Rs. 3·71 crores during the previous year. The loans advanced by the banks during 1958-59 amounted to Rs. 6·01 crores while the outstandings on 30 June 1959 stood at Rs. 22·64 crores as against Rs. 4·68 crores advanced during 1957-58 and Rs. 18·92 crores outstanding at the end of the previous year. Investments on account of sinking funds amounted to Rs. 7·00 crores at the end of 1958-59.

PRIMARY LAND MORTGAGE BANKS

During the year under review the number of primary land mortgage banks rose by 16 to 363 and their membership by 64,237 to 4·40 lakhs. During the same period the paid-up capital and reserves rose from Rs. 1,07 lakhs and Rs. 38·60 lakhs to Rs. 1,25 lakhs and Rs. 42·83 lakhs. Their borrowings from central land mortgage banks rose from Rs. 12·42 crores to Rs. 14·58 crores and the loans due by members stood at Rs. 15·14 crores against Rs. 13·08 crores at the end of the previous year.

MARKETING SOCIETIES

At the end of 1958-59 there were 19 marketing societies at the State level with a membership of 3,665 societies and 289 individuals and their working capital amounted to Rs. 6·49 crores. The loans advanced by these societies amounted to Rs. 19·39 lakhs and the sales effected as owners and as agents aggregated Rs. 10·90 crores At the central level the number of marketing societies was 454 on 30 June 1959. The membership of central marketing societies comprised 17,664 societies and 1,45,400 individuals and their working capital amounted to Rs. 9·18 crores at the end of 1958-59. Their purchases during the year amounted to Rs. 17·69 crores and sales as owners and as agents aggregated Rs. 27·53 crores. The following table gives statistics for 1958-59 in regard to primary marketing societies.

Amount in crores of rupees

Item	1958-59
1. Number	2,380
2. Membership	9,68,239
3. Share capital..	3·69
4. Reserves	2·25
5. Borrowings	8·53
6. Working capital	14·47
7. Loans advanced	12·20
8. Purchases	15·60
9. Sales: as owners	9·83
as agents	16·88

Of the 2,380 primary marketing societies at the end of 1958-59, 766 had received share contribution from the state governments, the amount of Government capital being Rs. 1·44 crores. The average membership and the average owned funds of the primary marketing societies were 407 and Rs. 24,959 respectively as on 30 June, 1959 as compared to 285 and Rs. 20,145 respectively as at the end of the previous year. They sold produce valued at Rs. 9·83 crores and Rs. 16·88 crores as owners and as agents respectively during 1958-59 as against Rs. 4·76 crores and Rs. 11·33 crores respectively during 1957-58. These societies owned 938 godowns and used 1,457 hired godowns.

Besides, there were 8,382 sugarcane supply societies (at the central and primary level) and and 2,334 milk supply unions and societies as on 30 June 1959. The working capital of these societies amounted to Rs. 7·18 crores and Rs. 2·83 crores respectively at the end of 1958-59 compared to Rs. 7·12 crores and Rs. 2·39 crores respectively at the end of the previous year. Sugarcane supply societies are mostly concentrated in Bihar and Uttar Pradesh. They marketed cane of the value of Rs. 44·51 crores during 1958-59 as against Rs. 43·43 crores during the previous year. The business handled by milk unions and societies is steadily increasing. Their sales of milk and milk products during 1958-59 were valued at Rs. 8·30 crores compared to Rs.6·66 crores during 1957-58.

PROCESSING SOCIETIES

There were 88 cotton ginning and pressing societies (excluding marketing societies engaged in processing) and 50 sugar factories with a membership of 39,903 and 1,30,819 respectively at the end of 1958-59. Their working capital amounted to Rs. 3·03 crores and Rs. 35·08 crores respectively on 30 June 1959 compared to Rs. 1·86 crores and Rs. 26·77 crores respectively on 30 June 1958. The cotton ginning and pressing societies ginned cotton weighing 13·17 lakh cwts. and pressed 2·02 lakhs bales and the sales effected by them amounted to Rs. 6·21 crores during 1958-59. The sugar factories crushed cane weighing 17·02 lakh tons and produced 1·75 lakh tons of sugar and their sales of sugar were valued at Rs. 22·47 crores during 1958-59. There were 740 other societies engaged in processing activities such as groundnut decorticating, coffee curing, paddy-hulling, etc., and their membership stood at 35,806 at the end of 1958-59. Their working capital amounted to Rs. 94·36 lakhs as on 30 June 1959 as against Rs. 65·51 lakhs on 30 June 1958. The fixed assets in the form of land, building, plant and machinery owned by these societies were of the value of Rs. 26·42 lakhs. The sales effected by these societies during the year under review aggregated Rs. 1,16 lakhs compared to Rs. 88 lakhs during the previous year.

OTHER NON-CREDIT SOCIETIES

Table 9 below shows the working of other non-credit societies during 1958-59.

It may be seen that the weavers' societies stand out as the most important among non-credit societies. Their membership was 11·93 lakhs and their sales aggregated Rs. 47·52 crores. Though the consumers' societies had a

* Bilingual.

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

larger membership at 13·99 lakhs, their sales were relatively less than weavers' societies and amounted to Rs. 34·08 crores during the year under review.

Other industrial societies had a membership of 8·03 lakhs and their sales amounted to Rs. 12·52 crores. The membership of housing societies was 2·81 lakhs and they constructed houses valued at Rs. 33·17 crores. There were 4,193 farming societies and they brought under cultivation 4·55 lakh acres of land.

A table below (Table 7) shows the assistance given by the state governments to different types of co-operative institutions in the form of contribution to their share capital.

It may be seen that at the end of June 1959 the total contribution of state governments towards the share capital of co-operative societies of all types aggregated Rs. 24·86 crores. Of this amount Rs. 10·46 crores or 42·1 per cent were for primary agricultural societies (credit and non-credit), Rs. 5·62 crores for central co-operative banks and Rs. 4·61 crores for state co-operative banks.

SUPERVISORY UNIONS

There were 8 state unions, 2 in Bombay,* one in Punjab and 5 in Delhi, and all of them were federations of special types of societies such as co-operative sugar factories, labour and construction societies etc. The number of primary supervising unions rose from 725 to 931 during the year under review and the number of societies affiliated to them stood at 37,612 compared to 31,278 at the beginning of the year. Of the States which reported primary supervising unions, Andhra Pradesh, Bombay,* Kerala Madras and Mysore had unions which arranged for supervision of credit societies while in other States they were organised for supervising special types of societies *viz.* housing societies, farming societies, purchase and sale unions, labour and construction societies etc. The number of supervising staff maintained by the central banks and primary supervising unions was 1,938 and 399 respectively at the end of 1958-59.

STATE UNIONS AND INSTITUTES

There were 29 State Unions and Institutes at the end of 1958-59. The number of societies affiliated to them was 43,971 at the end of 1958-59. During the year they imparted trainning to 1,00,130 members, 16,908 honorary office bearers and 11,171 paid staff of co-operative societies. Their total income during the year rose from Rs. 64·48 lakhs to Rs. 90·72 lakhs and included government grants amounting to Rs. 70·83 lakhs.

INSURANCE SOCIETIES

The six insurance societies which were working at the beginning of the year continued to work during the year. Their membership rose from 5,528 to 7,306. Premia less reinsurance received by them during the year ended 31 December 1958 amounted to Rs. 19·73 lakhs.

SOCIETIES UNDER LIQUIDATION

There were 14,493 societies under liquidation at the end of June 1958. During 1958-59, 2,607 societies were brought under liquidation and 1,672 societies were finally wound up. The value of assets realised and liabilities paid off during 1958-59 amounted to Rs. 64·61 lakhs and Rs. 46·48 lakhs respectively against Rs. 38·91 lakhs and Rs. 39·25 lakhs respectively during the preceding year. At the end of 1958-59, 15,028 societies were under liquidation. The liabilities and assets of the societies under liquidation amounted to Rs. 7·57 crores and Rs. 6·25 crores respectively against Rs. 7·21 crores and Rs. 5·86 crores respectively at the beginning of the year.

The net results of the operations of different types of societies during the year under review are given in Table 2.

While the position regarding the state and central co-operative banks and agricultural credit societies shows a distinct improvement, other societies do not appear to have fared well. The position regarding the working of large-sized and small-sized agricultual credit societies indicates that in the case of the former the percentage of societies which worked on profit during 1958-59 was 83 as compared with 64 in the case of the latter.

TABLE 1. FIGURES AT A GLANCE (1958-59)

About 67,000 service cooperatives ware expected to function in the country by the end of the Second Plan. By the end of Nov. 1959 there were 15,000 service cooperatives.

The nearly 1·67 lakh village societies which existed in June 1958 mainly providing credit will be reorganised to enable them to take over all functions of service cooperatives. New societies are to be set up, where necessary, according to a phased programme. The plans for 1960-61 provide for the establishment of 9,545 new service cooperatives and the reorganisation of 19,065 existing societies. Of the Second Plan outlay of Rs. 52 crores for schemes of co-operative development, about Rs. 28 crores were to be spent by the end of 1959-60. The proposed outlay for 1960-61 was Rs. 14 crores, including direct Central expenditure.

The membership of village societies would have increased from 10·2 mln. in June 1958 to about 12 mln. in June 1959 and was expected to be about 18 mln. by June 1961—that is, the end of the Second Plan. About the credit supplied, the Second Plan target is Rs. 200 crores. The credit actually provided by then will be, it is estimated, Rs. 190 crores. Land Mortgage Banks advanced about Rs. 8 crores in 1959-60 (Rs. 6·35 crores in 1958-59).

About godowns the Plan target was 5,500. By 1958-59 there were 3,150 and by the end of the Plan it was expected to be 5,780. There were 98 processing societies by 1958-59. It was expected to be another 280 by the end of Plan.

PUBLIC HEALTH

MATTERS connected with health fall largely in the State field.

The Centre is, however, directly responsible even for State subjects in the Centrally administered areas of Manipur, Delhi, Tripura and Himachal Pradesh.

A Central Health Service has been constituted with effect from 1st June 1959. The strength of the Service at its initial constitution is 441 (240 class I and 201 class II) posts.

A 18-member Health Survey and Planning Committee was appointed in June 1959 to review developments in public health under the chairmanship of Dr. A. Lakshmanaswamy Mudaliar and to make recommendations for the Third and subsequent Five Year Plans. Information on different subjects has been gathered from several States. The report was expected to be submitted to the Govt. early in 1961.

CENSUS

Second Plan : Rs. 274 crores.

The statistical position about health personnel, Medical institutions, training institutions, etc. in 1960 was provisionally estimated at: registered medical Practitioners 100,598; (1959) vaids 150,000; compounders 20,801*; vaccinators 5,872*; nurses 30,400 (1959); midwives 35,798 (1959); dentists 3,681 (1958); trained visitors 1,979 (1958); trained dais 7,499 (1958).

Number of medical institutions (Hospitals and Dispensaries) 11,270 (1958); number of beds 1,66,759 (1958); number of maternity and child Welfare centres 4,500; number of primary health centres 2,000.

Number of medical colleges 59, number of medical schools 1, number of dental colleges 10, number of nursing colleges 2, number of medical post graduate institutions 42, number of medical research institutions 20, number of colleges for indigenous systems 94.

VITAL STATISTICS

The registered All-India birth rates, death rates and infant mortality rates are given below :

—	Birth rate.	Death rate.	Infant Mortality rate.
1940 ..	33·0	22·0	160
1947 ..	26·6	19·7	146
1948 ..	25·4	17·1	130
1949 ..	26·7	15·8	123
1950 ..	24·8	16·6	127
1951 ..	24·9	14·4	123
1952 ..	25·4	13·8	116
1953 ..	24·8	13·0	118
1954 ..	24·4	12·5	109

Venereal Diseases: Syphilis occurs in sporadic venereal and endemic non-venereal forms. Gonorrhoea is widely prevalent. Other venereal diseases like Chancroid, Lymphogranuloma Venereum and Granuloma Inguinal are localised in their distribution.

In large cities and industrial areas, prevalence of venereal diseases is estimated to be 5 to 7 per cent of the population for syphilis alone.

The problem in rural areas is not defined. From limited surveys conducted in recent years it appears that sub-Himalayan tracts extending from Kashmir in the West to Assam in the East have a high incidence of syphilis.

A review of the annual clinic admissions in hospitals in Madras, Bombay and Calcutta reveals that of the total admissions for syphilis 66 to 75 per cent are for early infectious syphilis. The age-group at greatest risk is that between 15 and 35 and this group is responsible for 80 per cent of the reported total infectious load.

The sex ratio of early infectious syphilis has been found to be 6 males to one female from which it follows that there must be a considerable reservoir of infection among women which is undiscovered.

Studies among pregnant women in the communities of the larger cities show a seropositivity rate ranging from 5 to 12 per cent.

In a survey of 1,000 pregnancies sustained by 260 women with untreated syphilis, the end result of the pregnancy as related to the infant was as follows:—

Healthy non-syphilitic children	30 per cent
Syphilitic Babies	40 ,,
Still-births and neo-natal deaths	30 ,,

Andhra Pradesh, Himachal Pradesh, Jammu & Kashmir and West Bengal have full-time V.D. Control Officers.

In 1949, Government of India set up in collaboration with the World Health Organisation a Venereal Disease Demonstration Centre in Himachal Pradesh. Besides survey and mass treatment among the people, the Centre was engaged in the training of personnel. Seventeen teams from different States participated in the training programme at the end of which each team was supplied with laboratory equipment and penicillin by the UNICEF to establish control activities in the States.

Venereal disease control was included in the First Five Year Plan. Some States had already developed limited control facilities. The Himachal Pradesh administration established a full scale Venereal Disease organisation at Simla. A Venereal Disease Training and Demonstration Centre was established at Safdarjung Hospital in New Delhi in March 1954. The Venereal Disease Department of the Madras General Hospital was upgraded in 1952. These Training Centres provide improved training facilities and the latter caters for post-graduate training.

A Cardiolipin production unit and a Penicillin production unit were established in co-operation with WHO and UNICEF.

A central V. D. Organization with an adviser in venereal diseases was set up in the Directorate General of Health Services to co-ordinate the V. D. Control activities of the different States. A scheme was also included in the Second Five Year Plan at a cost of Rs. 58·67 lakhs to the Central Government and Rs. 84·28 lakhs to the State Governments for the establishment of 75 District V. D. Clinics and 8 Headquarter V. D. Clinics with laboratories on an approved pattern; free supply of penicillin (PAM) to these V. D. Clinics, and training of personnel.

The Government of India will meet 75 per cent of the non-recurring expenditure and 50 per cent of the recurring expenditure.

So far (upto Nov. 1959) a total of 3 headquarters clinics and 46 District clinics have been established in the different States.† Upto November 1960, 71 V.D. Clinics have been established in the different States. On an average 675 patients report in each of these clinics every month for treatment. Intensive control schemes which include field survey and mass treatment have been initiated in the Mahasu district of Himachal Pradesh and Ankola and Gulburga of Mysore.

A short term intensive anti-V. D. programme based on treatment of the total population in the Kulu sub-division of Punjab with a population of 130,000 in an area of 1,934 square miles was launched on 1st September 1959 and the work was expected to be completed by the end of 1959. This area is reported to have a seropositivity of 30 per cent. Penicillin (PAM) required for this project (approx. 78,600 vials of 10 cc each) is supplied by UNICEF.

Pilot survey work was to be undertaken in Jaunsar Bawar area of Uttar Pradesh in order to assess the extent of the problem in that area, attached to the Institute of Venereology, Madras.

A scheme to standardize procedures of serological tests for syphilis (STS) is under active consideration.

Yaws: Yaws is a treponemal disease. Compared to venereal diseases, yaws is a small problem in the country. It is prevalent in some of the districts of Andhra Pradesh, Bombay*, Madhya Pradesh and Orissa. Anti-Yaws Campaigns are in progress in the States of Andhra Pradesh, Madhya Pradesh and Orissa. The entire work is to be completed by 1962.

Cancer: The number of persons who die of cancer annually is believed to be in the neighbourhood of 2 lakhs.

Limited surveys conducted by the Indian Cancer Research Centre, Bombay, during the past few years showed that in India all types of cancer occurring in the different parts of the body were prevalent; that the total incidence of cancer was probably the same in India as in the other countries of the world; that there was a greater frequency of oral cancer in Western India than in Europe and North America; that smoking and chewing of tobacco had some causal relationship to the incidence of oral cancer; and that lung cancer was not prevalent in India on the same scale as in Western countries.

There are only two institutions exclusively for the treatment of cancer in India: Tata Memorial Hospital at Bombay and the Chittaranjan Hospital at Calcutta. Both are now under the Central Government.

There are 40 general hospitals in the country where facilities for cancer treatment are available.

There are three in the Punjab (Amritsar, Gurdaspur, Patiala), four in U.P. (Agra, Lucknow, Allahabad), four in Madras (Madras and Madurai), three in Maharashtra (Bombay, Nagpur), three in Gujarat (Ahmedabad, Bhavnagar, Jamnagar), four in Mysore (Bangalore, Mysore, Mangalore), three in Kerala (Trivandrum and Ernakulam), two in Assam (Dibrugarh and Shillong), four in Rajasthan (Jaipur, Bikaner, Jodhpur, Ajmer), one in Orissa (Cuttack), one in Bihar (Patna), four in West Bengal (all in Calcutta), two in Delhi and two in Andhra Pradesh (Visakhapatnam, Hyderabad).

The Government of India have arranged for three Cobalt Bomb Therapy Units under the Colombo Plan for supply to the Tata Memorial Hospital, Bombay, the Chittaranjan National Cancer Research Centre, Calcutta, and the Christian Medical College, Ludhiana. It is understood that three more units will be made available from Canada under the Colombo Plan.

Research is conducted at the Cancer Research Centre at the Tata Memorial Hospital in Bombay, the Chittaranjan National Cancer Research Centre, Calcutta; and the Cancer Institute, Madras. The Indian Cancer Society has its headquarters in Bombay and its divisional headquarters in Calcutta and Madras as shown above.

Under the Second Five-Year Plan Rs. 35 lakhs had been provided to establish cancer wards and units in certain hospitals.

PUBLIC HEALTH AGENCIES

A Central Council of Health exists with the Union Health Minister as chairman and State Health Ministers as members.

Dr. T. R. Tewari, Director, Contributory Health Service Scheme, is the Secretary of the Council. The Council is an advisory body and in that capacity performs the following duties:— (*a*) to consider and recommend broad lines of policy in regard to matters concerning health in all its aspects, (*b*) to make proposals for legislation; (*c*) to examine the whole field of possible co-operation on a wide basis in regard to inter-State quarantine during times of festivals, outbreaks of epidemic diseases and serious calamities such as earthquakes and famines and to draw up a common programme of action; (*d*) to make recommendation to the central Govt. regarding distribution of available grants-in-aid for health purposes to the States and to review periodically the work accomplished in different areas through the utilization of these

* Bilingual. † No. of cases treated upto Oct. 2,26,972.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

grants-in-aid and (*e*) to establish any organization or organizations invested with appropriate functions for promoting and maintaining cooperation between the Central and State Health administrations.

The body in charge of research is the Indian Council of Medical Research.

(For a list of research institutions see under "Research".)

A sum of Rs. 4 crores is provided for research programmes.

The annual grant to the Council amounts to about Rs. 50 lakhs.

The following medical bodies are in existence: The Indian Medical Council, the Indian Nursing Council, the Dental Council of India and the Pharmacy Council of India.

The object is to control and regulate the respective professions and standards of qualification.

There are State Pharmacy Councils in Punjab, W. Bengal, Maharashtra, Madras, Bihar, U.P. Delhi, M.P., Orissa, Assam and Andhra Pradesh.

Among important Acts in force are Vaccination Act, Drugs Act of 1940, Drugs Rules of 1945. Then there are the Indian Medical Council Act, the Nursing Act of 1947, the Dental Act, the Pharmacy Act.

There are four main medical depots—one each at Bombay, Calcutta, Karnal and Madras. The depots at Bombay and Madras have factories attached to them. It has been decided to open another medical depot in Hyderabad.

CONTROL OF DISEASES

Steps are being taken to control a number of diseases that are rampant.

Malaria

About 23 crores of people live in areas where malaria is endemic and another 16 crores where malaria though not endemic is still a problem.

The National Malaria Control Programme was launched from April, 1953.

From April 1, 1958 it was decided to convert this control programme to one of eradication of malaria.

According to the approved plan of operations the following is the schedule of targets during the Second Five Year Plan period :—

At the end of 1958-59, 230 eradication units, designed to afford protection to 230 million people, had been allotted out of which 225·5 were functioning. They afforded protection to about 214·15 million people. Against 390 units (230 endemic and 160 hypo-endemic) allotted during 1959-60, 386·25 units (230 endemic and 186·25 hypo-endemic) are functioning at present (Jan. 1960) covering the whole population exposed to malaria.

1960-61: Spraying of insecticides in 390 units areas as in 1959-60 and institution of surveillance procedures in 365 out of 390 units. No surveillance team would be set up in the 25 units out of which 20 are in areas bordering neighbouring countries and 5 in certain problem areas.

The total estimated cost of the eradication programme during the years 1958-59 to 1960-61 is Rs. 43·57 crores out of which the Government of India and the State Governments are expected to spend Rs. 10·09 crores and Rs. 15·19 crores respectively. The balance of Rs. 18·29 crores (equivalent to $ 38·4 million) in foreign exchange is expected to be made available by foreign agencies, *e.g.* U.S.T.C.M./W.H.O. The U.S.T.C.M. has made a further grant of $ 2·5 million to India's malaria eradication programme (Aug. 1960).

The two DDT factories at Delhi and Alwaye supplied 200 tons of DDT Technical, 14 tons of DDT 75 per cent and 2,630 tons of DDT 50 per cent during 1959-60 (upto October 1959). It was expected that these factories will be able to supply 1,550 tons more of DDT 50 per cent during 1959-60. (For more details about the D.D.T. factories see under "Govt. Industrial Undertakings".)

Six Regional Co-ordinating Organisations with headquarters at Hyderabad, Coonoor, Baroda, Cuttack, Shillong and Delhi are functioning for co-ordinating the activities of N.M.E.P. A high level administrative Committee constituted for guidance in administrative matters and a special working committee constituted for advice in technical matters have been established at the Centre. High level working committees have been formed in 17 States.

While the Medical Officers are to be trained at the Malaria Institute of India, Delhi the inspectors and technicians required are being trained in the States and at the Regional Co-ordinating Organisations. From Jan. 1958 to Nov. 1959, 262 officers, 1,296 malaria inspectors and 541 technicians were trained.

The plan of operations of the N.M.E.P. during the Third Five Year Plan period has been drawn up. The cost during the Third Five Year Plan period, it is estimated, would be Rs. 58·4 crores.

Filaria

Among mosquito-borne diseases filaria is second only to malaria. No satisfactory cure has been found for this disease. What is aimed at is the control of the carrier species combined with mass drug administration to control the reservoir of the infection. Anti-mosquito measures have to continue for five years before results become apparent.

It is estimated that over 64 million persons are in the filarious areas of the country exposed to the risk of the infection/disease.

The National Filaria Control programme had 13 control units and 22 survey units allotted during the first Plan. Thirty-four more were allotted, 13 during the year 1956-57, 20 during 1957-58 and one in 1959-60.

In view of the tight foreign exchange position in the country and the absence of aid from the USTCM, it was decided, on the advice of the Planning Commission, that the programme should be continued at the existing level and no new Filaria Control units should be allotted during the remaining period of Second Five Year Plan beginning from 1958-59. However as a special case one unit was allotted to Pondicherry Administration in 1959-60.

The National Filaria Control Programme cost 6·7 crores of rupees during the Second Five-Year Plan (Central Rs. 3·7 crores, States Rs. 3 crores).

Filaria survey units have been disbanded in all the participating States except Andhra, Kerala and M.P.

The number of control units have been cut down from the original 78 to 47.

Upto 31st Oct. 1960 sample surveys have been carried out covering a population of nearly 24·28 million persons residing in places known to be or suspected to be filarious.

Mass drug administration with Diethylcarbamazine (Hetrazan) is in progress as part of the control programme.

About 54·53 lakh persons have been treated till October 1960.

Anti-mosquito measures are in progress in all States except Assam and Pondicherry. About 1·84 lakh houses have been protected by residual spraying during 1960-61 (upto Oct. 1960).

A course of training in filariology is being arranged at the Ernakulam branch of the Malaria Institute of India in January 1961.

So far 77 medical officers, 7 entomologists and 195 filaria inspectors have been trained.

Leprosy

It is estimated that there are over two million leprosy patients in India (April 1961), the incidence in some places being as high as 40 per thousand. About half a million of these are of the infections type.

The areas of highest incidence are Andhra, Assam, Bihar, M.P., Madras, Kerala, some parts of U.P., Maharashtra and Gujarat.

The futility of attempting isolation of leprosy cases in special leprosy homes is now recognised. With the discovery of sulphone therapy in leprosy, a new approach has become available for the control of the disease. Treatment with sulphone is now regarded as the most potent and generally applicable weapon in the control of leprosy. Apart from clinical improvement, sulphone therapy brings about a gradual reduction in the number of leprosy bacilli in the skin, and, by promoting healing of ulcers in nose and elsewhere. It also reduces infective discharge from patients.

The question of legislation for control of leprosy was considered by the Central Council of Health at its 8th meeting held in October 1960 at Jaipur and the Council recommended the setting up of a Committee to examine the various aspects connected with the legislation for the control of leprosy. The Government of India have accepted the recommendation of the Central Council of Health and appointed a Committee for the purpose in November 1960.

The Directorate General of Health Services have published an All India Leprosy Directory giving first hand information of the activities of both the Government and the voluntary organizations working in the field of leprosy.

According to the Directory there are 146 in-patient institutions, 1,248 clinics and 66 leprosy control centres with 19,264 beds in the country.

Under the Leprosy Control Scheme of the Government of India a budget provision of Rs. 35 lakhs was made in the First Five Year Plan by the Central Government. Four Treatment and Study Centres and 29 Subsidiary Centres were established during the 1st Plan in various States. The object of this Scheme is to put into action the new approach to the problem, *i.e.*, to try to control the spread of leprosy in an area by extensive and intensive mass scale treatment with modern chemotherapeutic drugs, specially sulphone.

The Subsidiary Centres provide for a survey of the population (50,000 to 60,000 each centre) for detection of early cases and to carry out mass treatment with sulphone. The Treatment and Study Centres in addition to the above measures, carry out epidemiological surveys and scientific assessment of the results of sulphone therapy. The Scheme has been placed in the charge of the Director, Leprosy Control Work, who is responsible for the proper implementation of the Scheme.

An amount of Rs. 409·48 lakhs had been allocated in the States' Plans for leprosy control programmes during the 2nd Plan.

For the 3rd Plan period an allocation of Rs. 7 crores has been made for anti-leprosy work.

The Leprosy Control Scheme of the Government of India has been continued in a more expanded form in the Second Five Year Plan. The Central Assistance under the Scheme is given to the State Governments on the following terms :—Government of India to meet full non-recurring expenditure. Government of India to meet recurring expenditure to the extent of 80 per cent for the first year, 70 per cent for the second year, 50 per cent for the third year, 30 per cent for the fourth year and 20 per cent for the fifth year. The grant to be given when the State Governments submit their proposals. During 1954-58 the Govt. of India incurred an expenditure of Rs. 67 lakhs as their share of expenditure on the Leprosy Control Programme.

It was proposed to establish 100 additional Subsidiary Centres during the Second Five Year Plan.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Upto the end of June 1960, 33 Leprosy Control Centres were established during First Plan period and eighty Leprosy Control Centres during the Second Plan period. Upto the end of June 1960, the population surveyed by the above centres in the project area was 82,28,665. During the same period the number of persons examined was 58,49,500, the number of cases detected was 81,365, cases registered for treatment 99,269 and persons attended for treatment were 59,390. During the same period the number of healthy contacts under observation was 2,60,888.

With the collaboration of the State Government of Maharashtra, a training centre at the Medical College and Hospital, Nagpur has been started for giving short-term re-orientation course for a period of six weeks to doctors who would be required to man leprosy control units. So far, 49 medical officers from the various State Governments have been trained as against a target of 60 medical officers. Besides this, this training centre provides for short-term refresher courses for medical officers in charge of health centres and other public health personnel. 197 para-medical personnel and 33 medical officers underwent refresher courses at this Centre.

In collaboration with the Gandhi Memorial Leprosy Foundation, Wardha, a training programme was to be started with effect from 15th December 1960, at Chilakalapalli in Andhra Pradesh for training one senior medical officer from the public health department of each State which has established leprosy control units.

A Central Leprosy Teaching and Research Institute has been established at Tirumani in Madras State in collaboration with the Madras Govt. by taking over the Lady Willingdon Leprosy Sanatorium, Tirumani and the Silver Jubilee Children Clinic for Child Leprosy at Saidapet.

A number of private bodies are also fighting to control leprosy. The important amongst them are Mission to Lepers, Hind Kusht Nivaran Sangh (formerly Indian Council of British Empire Leprosy Relief Association), Gandhi Memorial Leprosy Foundation, Kasturba Gandhi Trust, Maharogi Seva Mandal and the Ramakrishna Mission.

Under the Leprosy Control Scheme, up to the end of December 1958 the population surveyed in the project area was 53,00,470. During the same period the number of persons examined was 34,98,445 while the number of cases detected was 53,637. Cases registered for treatment were 64,586 and 45,935 persons were attended for treatment.

The Mission to Lepers runs 50 leper homes with about 10,000 inmates and gets grants from State Governments.

The Hind Kusht Nivaran Sangh has as its president the President of the Indian Republic.

The Sangh has its headquarters in New Delhi and branches in 11 States.

The Sangh's activities include financial assistance to leprosy homes and clinics, propaganda through publication of posters and other material, assistance in the training of medical workers and physiotherapists, and publication of the quarterly journal "Leprosy in India".

Tuberculosis

Mortality figures for cities show a tuberculosis death-rate ranging from 200 to 450 per 100,000 as far as can be ascertained. Little information is available from rural areas. The overall mortality rate from tuberculosis is high and can safely be estimated at 500,000 annual deaths. About 25 lakh people are estimated to be affected by the disease.

A national tuberculosis survey on a sample basis made by the Indian Council of Medical Research, completed in 1958, has shown that there are about 1·5 million infectious cases of pulmonary tuberculosis (T.B. of the lungs).

The findings of the survey in brief are : 1. The morbidity of T.B. varies from 7 to 30 per thousand persons in different areas ; 2. The prevalence of T.B. in villages, small towns and cities is not so markedly different as orginally expected ; 3. The morbidity rates are lower for females than for males ; 4. The prevalence of T.B. among the persons of the age group of 45 years and above was considerably higher than for the age group of 5 to 34 years ; and 5. Bacteriologically positive cases varied from 1 to 11 per thousand persons in different areas.

The Government of India has an Adviser on Tuberculosis, who advises the Central Government and the various State Governments on tuberculosis policy and helps in co-ordinating various tuberculosis control activities. He is also Technical Adviser to the Tuberculosis Association of India.

Prophylactic (BCG) Vaccination against tuberculosis was introduced in India on a restricted scale in August, 1948 with the assistance of WHO/UNICEF. The mass campaign was started in April, 1951 and is now (Dec. 1960) in progress in all the States. Upto the end of Oct. 1960, about 15·52 crore persons had been tuberculin tested of whom about 5·45 crores were vaccinated with BCG and thus given protection against tuberculosis. Another 100 million would be similarly afforded protection during the 3rd Plan.

Now (Dec. 1960) the number of BCG teams each containing one team leader and six BCG technicians has risen to 170.

The contribution of UNICEF and WHO in terms of services of international personnel, provision of equipment and supplies consisting of vaccination kits, vehicles, film projectors, public address equipment, etc. would amount to approximately 2·55 million dollars upto end of 1960.

In furtherance of the object of promoting B.C.G. Vaccination in India, a laboratory for the manufacture of this vaccine was established by the Government of India at the King Institute, Guindy, in 1949. It supplies vaccine not only to centres in India but also to centres in South-East Asia.

It is the largest laboratory of its kind in the world.

A freeze-dried vaccine plant for manufacturing dry BCG vaccine has been installed at the laboratory. The production of freeze dry vaccine has been started in 1961 on pilot basis. If results are good, liquid vaccine will replace dry vaccine.

There are at present six anti-tuberculosis demonstration and teaching centres, one each at New Delhi, Patna, Trivandrum, Madras, Hyderabad and Nagpur. The seventh centre is under establishment in Patiala. The Madras centre which was established in 1956 began its career with an important research project namely the study of the role of modern tubercular drugs in the prevention of the spread of tuberculosis by treatment of patients in their homes. The findings have shown that home treatment with antibiotics is not only feasible but that there is little difference between T. B. patients treated in homes and those treated in sanatoria. Centres are also being established at Bangalore, Agra and Calcutta.

A National Tuberculosis Institute has been started at Bangalore by the Government of India with the help of WHO and UNICEF, to train key tuberculosis workers in the community and public health approach to TB control. This Institute will train doctors, home visitors, laboratory technicians and X-ray technicians in batches of 60 each when fully developed. The special training, to be given at the Institute, will supplement university and institutional courses and provide intensive practical training in the field. The institute was inaugurated by the Prime Minister on Sept. 16, 1960. The training of the first batch of 80 doctors, technicians and public health nurses etc. was expected to start in March 1961.

It was proposed to establish or upgrade about 300 TB Clinics in the country during the Second Plan so as to have at least one TB Clinic in each District. Sixty TB clinics had been established or upgraded by Jan. 1960 and another 20 were expected to be established by 1960-61. 20 more clinics are expected to be established by 1961-62. There are about six University Training Centres in the country which train doctors for Diploma in Tuberculosis (T.D.D.).

Attached to the Delhi University is the 'Patel Chest Institute' for teaching and research in TB and other diseases of the chest.

Two hospitals for tubercular children have been established, one in Delhi and the other at Arogyavaram in Andhra State with 52 and 76 beds respectively.

According to the latest available figures there are for the treatment of TB patients, 71 sanatoria, 70 hospitals, 225 clinics, 151 wards with a strength of a little over 26,000 beds.

This includes beds established for isolating advanced cases of TB for which such treatment is not possible, and for which the Government of India is helping the State Governments with a subsidy.

There are about ten After Care and Rehabilitation Colonies in the country for giving vocational training to ex-tuberculosis patients. The Government of India has formulated a scheme of establishing work centres attached to TB clinics/hospitals where TB patients could be given vocational training while under home treatment.

One centre at Madras has started functioning. The building of a Rehabilitation Centre at Dhubulia (West Bengal) has been completed and equipment is being procured. The centres at Amargarh, Hyderabad and Delhi are under construction.

The Government of India have also approved a scheme for the establishment of open air centres for isolation and treatment of advance TB cases. Under the scheme, centres will be established by District TB Associations where patients will be treated in conjunction with the nearest TB clinics. The Government of India will give non-recurring grant to the Association for the purpose. The Government of India have also provided for research in various aspects of tuberculosis by providing funds to the Indian Council of Medical Research for the purpose.

The Union Ministry of Health proposes to establish 200 tuberculosis clinics, 5 T.B. Demonstration and Training Centres, 5,000 isolation beds, 7 Rehabilitation Work Centres and about 25 mobile T.B. clinics for rural areas during the Third Plan.

Goitre

The scheme for goitre control envisages estimation of the problem in areas where it is yet to be defined, the supply of iodised salts and the assessment of the results of iodine prophylaxis.

The estimated cost is about Rs. 18 lakhs.

Two survey teams are to undertake survey of the areas to delimit the areas of goitre endemicity and define areas of distribution of iodised salt. Only iodised salt will be made available in the selected areas for human consumption at the same price as ordinary salt. The cost of iodisation will be met by the Central Government.

One survey team had already completed survey in the Districts of Bilaspur, Mandi, Mahasu and Sirmur of Himachal Pradesh and is now undertaking survey in the District of Bijnor in Uttar Pradesh after completing survey in the Dehra Dun Tehsil of District Dehra Dun. The other team after completing survey in the Naga Hills is undertaking survey in the District of Champaran in Bihar.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

The average incidence of Goitre in the four Districts of Himachal Pradesh is 28·8 per cent, in Bijnor and Dehra Dun Tehsil of District Dehra Dun 29·2 per cent and 36·9 per cent respectively while in Naga Hills the average incidence is 32·7 per cent and in District Champaran in Bihar it is 41·3 per cent.

UNICEF Assistance : An iodisation plant that UNICEF Executive Board has agreed to supply, has arrived at Bombay and this plant will process 16,000 metric tons of salt per year and will meet the need of a population of 2·75 million. This plant will be shortly installed at Sambhar Lake. The Board has also supplied two vehicles on loan for the two survey teams.

WHO Assistance: WHO will make available such technical advice and guidance as may be useful to the Project.

Goitre Pilot Survey Project : The Government of India in collaboration with the Government of Punjab and the Indian Council of Medical Research, started the Goitre Pilot Survey Project in the Kangra District of Punjab in the First Five-Year Plan in October 1954, for the control of Goitre with iodised/iodated salt. The project has conducted survey in the Districts of Kangra, Hoshiarpur and Gurdaspur of Punjab to demarcate the areas of Goitre endemicity. Iodised salt is being supplied to 33 villages of Kangra Tehsil with a population of 29,539 and Iodated salt to 16 villages of Palampur Tehsil with a population of 30,728 since December 1956 and a control zone consisting of 30 villages in the Kangra and Palampur Tehsils with a population of 30,513 has been supplied with normal salt.

In May 1959 re-survey has been undertaken to evaluate the results of the consumption of iodised/iodated salt. In zone with iodised salt the incidence of Goitre has been reduced among adults from 43 per cent to 24 per cent, among boys from 34 per cent to 23 per cent and among girls from 30·9 per cent to 18 per cent. Similarly in the zone with iodated salt the incidence of disease which was 41 per cent among adults, 34 per cent among boys and 49·5 per cent among girls, has gone down to 24 per cent, 29 per cent and 37 per cent respectively. It was found that there has been no appreciable decrease in the incidence of the disease in the zone which has been supplied with common salt—48 per cent among adults, 33·7 per cent among boys and 49·1 per cent among girls during initial survey and in re-survey it has been found to be 41 per cent, 32 per cent and 41 per cent respectively.

Smallpox : The launching with the least possible delay of a national smallpox eradication programme has been recommended by the Central Expert Committee on Smallpox and Cholera appointed in 1958 by the Union Ministry of Health.*

Suggestions made by the Committee are mentioned in the 1960-61 Directory.

Studies carried out by the committee reveal that smallpox showed a definite seasonal prevalence and that the incidence reached epidemic proportions during the first six months of the year. Another interesting feature noticed by the committee was that smallpox generally showed periodicity, the incidence being significantly high every five or six years. This has been attributed by public health authorities to the accumulation of susceptibles as a result of faulty registration of births leading to non-vaccination of unregistered infants, indifferent techniques of vaccination, waning immunity after primary vaccination and absence of a definite programme of revaccination.

The Government of India has financed the execution of 16 smallpox pilot projects in the country one in each of the States and one in Delhi. These were to be completed by 1960-61 and the total expenditure on these projects estimated at Rs. 34 lakhs during 1960-61 was to be borne by the Union Government. Action has been initiated to step up the country's lymph production to meet the requirements of the eradication programme, likely to be launched from Sept. 1961.

Cholera : The incidence of cholera is of a considerable magnitude in the States of West Bengal, Bihar, Uttar Pradesh, Orissa, Andhra Pradesh, Madhya Pradesh, Bombay,† Madras and Mysore. At present the incidence is low in the Punjab, Assam and Kerala and is not a major public health problem in Rajasthan and Jammu and Kashmir. The incidence is more marked in most States in the second half of the year in contrast to smallpox which is prevalent in the first half of the year.

In accordance with the recommendations of the Central Expert Committee on Smallpox and Cholera, the Indian Council of Medical Research has decided to establish a Cholera Research Centre in Calcutta to carry out continuous research on various aspects of the problem of cholera with a view to developing ultimately practical measures for the control and prevention of the disease.

The Government of West Bengal who are collaborating in the project have agreed to place two wards of 40 beds each in the Infectious Diseases Hospital, Calcutta, at the disposal of the Indian Council of Medical Research for this purpose. The question of allotment of and for setting up a laboratory is being negotiated by the Indian Council of Medical Research with the Government of West Bengal.

Maternity

It is now recognised that Maternity and Child Welfare is an important service. Sixteen States have established posts of Assistant Directors of Health Services to direct Maternity & Child Welfare Services in the States of Orissa, Assam, Delhi, U.P., Punjab, Madhya Pradesh, Bihar, Andhra, Himachal Pradesh, Kerala, Bombay,† Rajasthan, Mysore, Madras, W. Bengal and Kashmir. The Union Govt. has an officer in the Directorate General of Health Services who assists States in Maternity & Child Welfare activities.

Non-official bodies engaged in welfare work are the Indian Council for Child Welfare, New Delhi; The Kasturba Gandhi Memorial Trust; and the Indian Red Cross.

The Central Social and Welfare Board assists the State Boards in promoting Maternity and Child Welfare services. As a result, a large number of agencies undertake services for mothers and children and training programmes for staffing the services with trained personnel.

The total number of maternity and child health centres is about 4,500. Besides, 2,000 primary health centres also provide these services. The medical institutions have 22,000 maternity beds and 4,000 beds for treatment of children.

A sum of Rs. 50 lakhs was earmarked by the Government of India in the First Five-Year Plan for establishing Maternal and Child Health Centres in rural areas of the States.

This sum was utilised by the States, and 201 Maternity and Child Welfare Units, each serving a population of 60,000 to 70,000, were established. These Units are now included in Primary Health Centres. Training schemes for training health workers have received considerable attention both during the 1st and the 2nd Plan.

The large bulk of midwifery services in the villages continue to be rendered by *dais* already practising in the villages. Under the Second Five-Year Plan a short six months course had been designed to orient them in modern techniques of asepsis, and make better and fuller use of their services. Provision had been made in the Plan for training 36,000 *dais*. A sum of Rs. 90 lakhs had been provided in the Plan for the purpose.

A sum of Rs. 45 lakhs had been provided in the Second Five-Year Plan to assist medical colleges to improve paediatric training so that medical personnel can, during the training receive adequate instruction in paediatrics and are better equipped to play their role in Child Health Services.

The centres which receive assistance are Hyderabad, Trivandrum, Bombay, Darbhanga and Agra.

The nine schools for training of health visitors have been expanded and new schools established to train 1,600 health visitors during the Second Plan. Nearly 1,300 have been trained at the 21 health schools and nearly 1,500 candidates are under training.

During the last 10 years there is a steady decline in infant and maternal mortality.

Defectives

The last census of handicapped persons (blind, deaf, crippled, mentally retarded, etc.), took place in 1931. These put the number of blind at about 600,000 and the number of deaf and hard-of-hearing at 230,000.

It is estimated that today the total number of blind is about 2,000,000 and the deaf about 700,000.

There is a Training Centre for the Adult Blind at Dehra Dun to impart vocational training. It imparts training in cottage-industry-type handicrafts to about 185 adult blind. There is also a common Braille code for Indian languages known as Bharati Braille. The Central Braille Printing Press at Dehra Dun has already published several Braille books in English, Hindi and other regional languages.

At Dehra Dun Government of India have also established a Model School for Blind Children. At present (Jan. 1960) only the primary, and kindergarten sections are open. Eventually this school will become a Secondary School for blind children.

There are in all 90 institutions for the blind and 50 for the deaf and 10 for the mentally handicapped. Ten institutions cater for the orthopaedically handicapped children. About 3,000 blind children and adults and about 2,000 deaf children and adults receive training at these institutions.

The Government of India give scholarships to blind and deaf persons over the age of 16 in order to help them to undertake higher academic education, or, professional, vocational or technical training in normal institutions of learning. Scholarships are also awarded to orthopaedically handicapped children and adults.

The number of scholarships awarded at present is 659.

In September, 1955 the Government of India appointed a National Advisory Council for the Education of the Handicapped to advise Government, to formulate new schemes, and to serve as liaison between Government and voluntary bodies.

One of the most difficult problems in the welfare of the handicapped is to secure employment for suitably trained handicapped persons. In order to deal with this problem the Government of India had a proposal to establish a special organisation during the Second Plan period to assist handicapped persons in finding employment in the public services, industry and commerce.

The first Pilot Employment office for the physically handicapped under this scheme was established at Bombay in March 1959. In 1960-61 two more were to be opened.

Mental Disease

The number of insane persons in India who need institutional treatment is estimated at 1·5 million, and of psycho-neurotics about 3 million. The number of hospital beds is a little less than 15,000. Qualified psychiatrists number about 100, and those practising but formally unqualified about 1,000.

* Chingleput in Madras, Bijapur in Mysore and Kozhikode in Kerala have been selected for the first experiments. † Bilingual.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

There are at present four institutions for mentally retarded children.

These are :

The Heaven School, Modi Minar, Char Bangla near Versova), Bombay.

Hermini Villa, St. Andrew's Road, Bandra, Bombay 50.

School for the Training and Care of Children in Need of Special Care, Sewree Hill, Sewree, Bombay.

B.M. School of Psychology and Child Development, Ahmedabad.

At present there are 32 mental hospitals with accommodation for about 20,000 patients.

The Mysore Government Mental Hospital at Bangalore and the Hospital for Mental Diseases at Ranchi* are the ones which are best equipped.

The following is a list of mental hospitals in India :

Mental Hospital, Tezpur ; Inter-Provincial Mental Hospital, Kanke, Ranchi ; Indian Mental Hospital, Kanke, Ranchi ; N. M. Mental Hospital, Thana (Bombay) ; Mental Hospital, Ratnagiri (Maharashtra); Central Mental Hospital, Yeravda; Mental Hospital, Ahmedabad ; Mental Hospital, Dharwar ; Mental Hospital, Baroda ; Mental Hospital, Nagpur ; Government Mental Hospital, Madras ; Government Mental Hospital, Waltair ; Government Mental Hospital, Kozhikode ; Punjab Mental Hospital, Amritsar ; Mental Hospital, Agra ; Mental Hospital, Bareilly ; Mental Hospital, Banaras ; Mental Hospital, Mankunda, Calcutta ; Lambini Park Mental Hospital, P.O. Tiljala, 24 Parganas ; Bangiyaunmad Ashram, 29-A, Vivekananda Road, Dum Dum ; Mental Observation Ward, Bhawanipur, Calcutta ; Mental Hospital, Jalna ; Mental Hospital, Srinagar ; Mental Hospital, Lashkar ; Mental Hospital, Bonganga, Indore ; Mental Hospital, Bangalore ; Mental Hospital, Jaipur ; Mental Hospital, Jodhpur ; Mental Hospital, Udaipur ; Mental Hospital, Bhavnagar ; Mental Hospital, Trivandrum ; Mental Hospital, Trichur.

In view of the Health Survey & Development Committee's findings that the provision for mental health facilities were wholly inadequate and based on the short term proposals made by Prof Mayer-Gross, W.H.O. Consultant in Psychiatry and Dr. M. V. Goindaswamy, the Government of India in collaboration with the Government of Mysore established the All-India Institute of Mental Health at Bangalore to work in close association with the Mental Hospital, Bangalore.

The Mental Hospital, Bangalore had built up certain traditions in the matter of undergraduate and post-graduate teaching and research and hence upgraded it for the purpose.

The Institute came into being on 15th September 1954.

The courses for the post-graduate Diploma in Psychological Medicine (D.P.M.) and Medical (Clinical) Psychology were started on 3rd January 1955. Diploma in Medical Psychology (D.M.P.) was redesignated as Diploma in Medical and Social Psychology (D.M.P. & S.P.). A post-certificate course in Psychiatric Nursing was also started in 1956 January.

The development of mental health services in India was envisaged at this Institute under the Second Five Year Plan, and a sum of Rs.26 lakhs had been made available for this purpose. The chief measures contemplated as part of the plan are : To start and render assistance in the starting of Guidance and Counselling centres in selected rural and urban areas; to open psychiatric wards in general hospitals and staff them adequately with properly trained personnel ; to establish Child Guidance Centres in different parts of the city ; to train teachers and educate the public in the principles and methods of mental hygiene, all of which are intended to bring the problem of mental ill-health in the country under control.

PUBLIC HEALTH MEASURES

About 2,000 primary health centres had been opened by the State Governments/Administration by the end of February 1960 and about 750 additional primary health centres proposed to be established before the end of the Second Five-Year Plan *i.e.*, before the end of March 1961.

State Governments also propose to convert some of the existing dispensaries into primary Health units and to set up a number of secondary health units.

The Second Plan provided about Rs. 19 crores for this programme and a provision of Rs. 20·00 crores has been made for this programme in the Third Five-Year Plan.

There is medical coverage for industrial labour through the Employees' State Insurance Scheme (See under 'Labour' for details).

149 dental clinics in various States had been sanctioned by the Government of India from 1956 to the end of November 1960, against the plan target of 350 clinics as per details below :— 1956-57 : 27 ; 1957-58 : 26 ; 1958-59 : 25 ; 1959-60 : 29 ; 1960 : 42.

Contributory Health Service Scheme

The Contributory Health Service Scheme which was introduced in 1954 to provide improved medical facilities to Central Government servants and members of their families in Delhi and New Delhi on a contributory basis; has been functioning satisfactorily and has gained much popularity. The scheme provides comprehensive medical coverage to about 4,56,000 beneficiaries through 38 dispensaries set up in various parts of the city.

In order to provide medical facilities to the Government servants living in far away localities, four mobile dispensaries are also functioning under the Scheme. Under a reorganization and expansion programme, it has been possible to bring down the work load per doctor per day from 143 cases in 1956 to 120 cases in 1959.

The C.H.S. Scheme has been extended to a number of semi-Govt. bodies and statutory organizations. The industrial and non-industrial civilian employees of the Defence Ministry living within the jurisdiction of the scheme have also been brought within the purview of the scheme.

The total attendance in the C.H.S. Dispensaries during 1959 was 40,75,479 as against 37,14,981 during the previous year. During the first ten months of 1960, a total no. of 39,32,921 patients attended the dispensaries. The expenditure incurred on the Scheme during 1959-60 amounted to Rs. 63,04,391 against which an amount of Rs. 29,36,438 was realized as contribution. The Budget Estimates of the Scheme for 1960-61 amount to Rs. 69,81,000. The cost per family and per beneficiary under the Scheme works out at Rs. 54·37 and Rs. 12·08 for the year 1959 as against Rs. 50·16 and Rs. 11·15 for the preceding year respectively.

A Health Clinic has been set up under the Scheme to provide facilities to the Government servants for their periodical physical check-up. During the period from 1st September 1959 to 31st October 1960, 4,111 Government servants registered themselves for the medical check up, out of which 3,040 cases were examined during the period.

To detect any early cases of tuberculosis amongst the Government servants, a mass X-ray campaign has been initiated. A morbidity survey among all grades of Government employees and their family members covered under the C.H.S. Scheme is also being carried out to determine the nature, extent and the effects of various types of diseases prevailing among them.

It has also been decided to extend the C.H.S. Scheme to the Central Government servants in Bombay, Calcutta and Madras during the Third Five-Year Plan.

In addition to the medical aid facilities, arrangements have also been made for giving advice in Family Planning to the beneficiaries covered under the Scheme. Ten Family Planning Centres in different localities now function under the Scheme and it is proposed to open four more centres shortly. Arrangements have also been made at these centres to sell contraceptives at cheap rates. Some of the contraceptives are supplied free of cost to those with an income below Rs. 100/- p.m. Members of the general public are also allowed to seek advice at these centres.

The CHS Scheme has also been extended to Members of Parliament.

The States have provided Rs.237·24 lakhs in the Revised Plan for the development of the Public Health Laboratory Services. Out of this amount Rs.180·54 lakhs are provided for opening new laboratories and Rs.56·40 lakhs for expanding the existing laboratories.

The Government of India contributes 75 per cent of the non-recurring expenditure (including building expenditure) and 50 per cent of recurring expenditure. During the year 1959-60 a provision of Rs. 6·95 lakhs was made in the budget as the Central Government's share of the expenditure.

The number of laboratories established is as follows. The first number refers to Principal Laboratories and the second to Regional: Orissa (1, —), Andhra (3, 4), Rajasthan (—, 10), U.P. (—, 7), Bihar (1, 15), Madras (—, 7), M.P. (—, 5), Kashmir (—, 7), Mysore (1, 7), H.P. (1,12), Gujarat (—, 1), Kerala (—, 1), West Bengal (—, 7), Tripura (1, —), Assam (1, —).

The Second Plan target was 15 principal and 122 regional laboratories.

Water Supply and Sanitation

Protected water supply is one of the most important factors in sanitation.

Prior to the First Five-Year Plan, according to the report of the Environmental Hygiene Committee (1949), only 6·15 per cent of the total population had protected water supply while three per cent enjoyed the amenity of a sewerage system. During the First Five-Year Plan, all the States included provisions for water supply and sanitation schemes under their Development works. But a fillip to the programme was given when in August 1954, the National Water Supply and Sanitation Programme was inaugurated by the Union Ministry of Health. Urban water supply and sanitation projects approved under this programme are eligible for a hundred per cent loan on their estimated cost whereas the rural water supply and sanitation schemes are eligible for a fifty per cent grant-in-aid on the estimated cost of the scheme.

In the Second Five-Year Plan, greater emphasis was given to this problem and larger provisions were made. 340 water supply and 75 underground drainage projects in urban areas estimated to cost Rs. 69·5 crores have so far been approved under the programme. On the rural side the programme covers some 15 thousand villages at an estimated cost of Rs. 18·6 crores. In addition to the above, 9 water supply and 6 sewerage projects estimated to cost Rs. 8·8 crores are also in progress in the Corporation towns. A sum of Rs. 78 crores has been provided for urban water supply and sanitation during the 3rd Plan.

Training : As a part of the scheme, the Union Ministry of Health have also sanctioned a comprehensive programme for the training of public health engineers and auxiliary engineering personnel at different institutions with suitable programmes drawn up for the purpose. The training programme is implemented at the All India Institute of Hygiene and Public Health, Calcutta, the Engineering College, Guindy, Madras, the Engineering College, Roorkee and at regional field centres selected specifically for the purpose. The entire cost of the training is

* No. of beds 453.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

borne by the Union Ministry of Health, the candidates sponsored by the State Governments being paid monthly stipends for the duration of the course. The programme also includes financial assistance to the institutions where the training facilities are provided. Over 550 trainees drawn from all over the country have so far benefited by this programme.

The United States Technical Co-operation Mission is also participating in the implementation of the programme by providing materials and equipment worth $ 6 million, most of which have been procured already and distributed to the States for use in their water supply and sanitation schemes.

Organisation : The Central Public Health Engineering Organisation has been created as a wing of the Directorate General of Health Services in the Union Ministry of Health to assist the States in the implementation of the National Water Supply and Sanitation Programme and for providing technical advice and guidance wherever necessary. There are at present nine public health engineers and a sanitary chemist in the Central Public Health Engineering Organisation. Public Health Engineering Organisations have also been set up in most of the States since the inception of the National Water Supply and Sanitation Programme.

INDIGENOUS SYSTEMS

The general policy of the Government is that there should be only one system—the allopathic—and that steps should be taken to eradicate quackery from the indigenous systems and put them on a more scientific basis. It is held that in any reorganised training anatomy, physiology and surgery should be part of the curriculum.

The reports and recommendations of the Chopra Committee, the Pandit Committee, the Homœopathic Committee, etc., are givn in the 1960-61 Directory.

A committee consisting of Dr. K. N. Udupa, Surgical Specialist, Himachal Pradesh (Chairman); Mr. Kaladi K. Parameswaran Pillai, Research Professor in Ayurveda, Government Ayurvedic College, Trivandrum (Member); and Mr. R. Narasimhan, Under-Secretary to the Government of India, Ministry of Health (Member-Secretary) was appointed to assess the present status of the Ayurvedic System. It presented its report on Jan. 27, 1959.

Among the recommendations are the setting up of a Central Council of Indian Medicine and a Central Council of Ayurvedic Research for planning and co-ordination.

A Central Council of Ayurvedic Research was set up in Oct. 1959 with the Minister for Health, Mr. D. P. Karmarkar as Chairman and Mr. V. K B. Pillai, Secretary, Ministry of Health as vice-chairman and Dr. C. Dwarkanath, Adviser, Indigenous Systems of Medicine, Ministry of Health as member-secretary.

With the setting up of this council the then existing Advisory Committee on Ayurveda attached to the Ministry of Health ceased to function.

The committee has made suggestions regarding the improvement of Ayurvedic training, research, pharmaceutical concerns and the status of Ayurvedic practitioners. The committee went into the question of the position of Ayurveda in great detail and collected valuable statistics.

The committee has observed that for the time being training in both the integrated and *shudh* Ayurvedic systems may have to continue.

The committee observes that the establishment of a Chair of Indian Medicine in modern medical colleges will definitely tend to create an interest in the Ayurvedic System of Medicine in students of modern medicine and will incidentally clear the prejudice at present existing among modern medical men against Ayurveda.

The committee has made suggestions regarding a new method of approach in the field of research. The present research may briefly be described as diagnosis and treatment both on Ayurvedic lines. It has been suggested that research can be four-fold *viz.*, diagnosis and treatment on Ayurvedic lines, diagnosis on Ayurvedic lines and treatment on modern lines, diagnosis on modern lines and treatment on Ayurvedic lines and lastly diagnosis and treatment on modern lines as a control measure. More model post-graduate-cum-research centres have been suggested by the committee under the control of the Central as well as State Governments.

The report, it is understood, states that more than Rs. 6 crores worth of Ayurvedic medicines are being manufactured and consumed in the country today, although no standards in the matter of raw materials or in the process of preparation have been laid down so far. Remedies for these drawbacks have been suggested by the committee.

Since independence there has been an increase in the number of ayurvedic colleges and pharmaceutical concerns and greater control over the registration of Ayurvedic practitioners. The committee feels that it is time to consolidate the position of Ayurveda on a stronger foundation. It has suggested that Government should make a clear declaration of policy in regard to the place of Ayurveda in the country for providing medical relief.

There are about 50 colleges which afford a training in the indigenous systems of medicine and about 8 in homoeopathy.

Research is conducted at the School of Tropical Medicine, Calcutta; Central Drug Research Institute, Lucknow; the Drugs Research Laboratory in Jammu, and the Central Research Institute in Indigenous Systems of Medicine, the Ayurvedic Research Institute under the Thakurdatta Sharma Dharmarth Trust. There is also a Board in Bombay to promote research.

The Union Ministry of Health has published what is the first complete national pharmacopœia of India. It gives information about the standards to be prescribed and tests to be used to establish the identity and purity of a number of indigenous medicinal preparations.

The Government of India in the Ministry of Food and Agriculture have established a Central Indian Medicinal Plants Organisation.

In the Second Five-Year Plan of the Central Government a provision of Rs. 100 lakhs had been made for the development of Indigenous Systems of Medicine—Ayurveda, Unani, Homœopathy and Nature Cure. A provision of Rs. 521·83 lakhs had also been made in State Plans for the development of indigenous systems of medicine out of which a sum of Rs. 221·49 lakhs had been earmarked for the improvement of existing colleges and establishment of new ones.

The Central Government have been giving grants to the various institutions for research, upgrading and establishment of teaching institutions. A total amount of Rs. 71·82 lakhs was sanctioned upto the end of 1959-60 under this scheme. In 1960-61 a sum of Rs. 6·78 lakhs had been granted to various private institutions by way of direct grants.

The Govt. of India have set up an advisory committee for homœopathic and unani systems of medicine.

A provision of Rs. 8 crores is proposed to be made in the 3rd Five-Year Plan for the development of indigenous systems of medicine.

The amount spent by the Central Government on the indigenous systems were Rs. 6,79,827 in 1956-57; Rs. 13,72,550 in 1957-58; Rs. 6,06,300 in 1958-59.

DRUGS

The Drugs Act, 1940, is now in force in the whole country except Kashmir.

The Act regulates the import into, and the manufacture, sale and distribution of drugs.

The control over import is exercised by the Central Government through its offices at the ports of Bombay, Calcutta, Cochin and Madras.

The control over manufacture, sale and distribution is exercised by State Governments.

The Drugs Act has been recently amended empowering the Central Government to assist State Governments in exercising control over the quality of manufactured drugs.

There is a Central Drugs Laboratory in Calcutta set up in 1947 under the Drugs Control Act.

A Drugs Technical Advisory Board advises the Central and States Government on technical matters concerning the Drugs Act.

A Drugs Consultative Committee advises on how to bring uniformity in the administration of the Act.

The Hindusthan Antibiotics have achieved a capacity of 40 M.M.U./ annum of penicillin. Their scheme for the manufacture of streptomycin was to be completed by the middle of 1961. They also undertake the production of tetracycline on a pilot plant scale.

The third team of Soviet experts arrived in India in December 1959 and had discussions with the Indian Counterpart team. The location for the four public sector projects to be set up under Russian collaboration was finalised as follows:—Antibiotics Plant at Rishikesh (U.P.); Phytochemical Plant at Neriamangalam, Kerala State; Synthetic Drugs Project at Sanatnagar, Hyderabad (A.P.); Surgical Instruments Plant at Nandam Vakham, Madras.

The detailed project reports are expected to be completed soon.

The setting up of a glandular products project envisaged under the Indo-Soviet agreement is still under consideration.

On the basis of the recommendation of the Drug Projects Location Committee, Govt. had provisionally decided to establish drug farms in the following regions for growing specific medicinal plants in each region : Jammu and Kashmir, Darjeeling area in West Bengal, Kerala, Nilgiris in Madras and Chakrata hills in U.P.

Hormones

Four firms are at present engaged in the manufacture of cortical and sex hormones with a total installed capacity of 398 kgs./annum.

A scheme for the manufacture of various corticosteroid hormones and intermediates based on indigenous raw materials with a total capacity of 3,000 kgs./annum is under implementation.

Vitamins

Two units have been set up for the manufacture of Vitamin A with a total capacity of 20 MMU/annum. Production commenced in 1959. Production of Vitamin B_{12} also started in the latter half of 1959.

A scheme for the production of vitamin B_6 (1 ton/annum), Vitamin C (60 ton/annum) has been licensed and is expected to go into production in 1961.

A new undertaking has been established with a licensed capacity of 4 kgs./annum for the manufacture of Vitamin B_{12}. The firm has already gone into production from imported intermediate.

Antibiotics

Besides the Hindusthan Antibiotics, two units have been licensed for a capacity of 20 MMU/annum of penicillin and are expected to go into production early in 1962. In addition, three more units are going ahead with their plans for the basic manufacture of tetracyclines in the country. Four units have been licensed for the production of Chloramphenicol besides one firm which is already manufacturing it.

Sulpha Drugs

A few units in the private sector produce sulpha drugs and the combined annual capacity is about 400 tons/annum. Two schemes have been approved for the basic manufacture of sulpha drugs.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Anti-Malarial

Chloroquin and Amodiaquin are being produced by two units one in West Bengal and another in Bombay.

Quinine salts are being manufactured by three Government factories two in Madras State and one in West Bengal.

Anti-Diabetic Drugs

At present only one firm is producing anti-diabetic drugs tolbutamide and carbutamide on a small scale. Shemes have been licensed to other parties also for expansion in the capacity of those drugs and are under implementation.

Anti-Leprosy Drugs

In addition to the three units already existing, a fourth unit has installed capacity for this item. The total installed capacity is 18·3 tons per annum.

Surgeons' Requisites

A new unit has been established for the production of plaster of Paris, bandages etc., in addition to the two units already licensed.

The Indian Pharmacopoeia Committee helps to keep the Indian Pharmacopoeia first published in 1955 up-to-date. A revised edition of the Indian Pharmacopoeia is under compilation.

A National Formulary of India, which contains a list of essential drugs and formulations was published in April 1960.

The Drugs & Magic Remedies (Objectionable) Advertisements Act, 1954, is in force to protect people from self-medication with drugs and remedies advertised in the lay press. Action against advertisements contravening the Act is taken by the State Governments while the Central Government regulates the import and export of such advertised drug. The Rules under the Act are framed by the Central Government.

AUXILIARY WORKERS

In order to meet extreme shortage of doctors in the country as a whole and particularly in the rural areas, it was proposed to introduce a new type of Auxiliary Medical and Public Health Worker.

He would not be entrusted with diagnosis and treatment of diseases beyond what is necessary as a part of ordinary first-aid work, and the training should be such as to enable him to assist the health authorities, in as large a measure as possible, in preventive measures including sanitation, health education, etc. The syllabus of training throws more emphasis on the preventive aspects of the training, rather than the curative side.

During training it was proposed to give the trainees free lodging and a stipend of Rs. 50 p.m.

The Government of India have approved the establishment of training centres at the following institutions :— Public Health Institute, Patna (Bihar), Medical College, Visakhapatnam (Andhra), S.M.S. Medical College, Jaipur (Rajasthan).

NURSING

At the end of the year 1959 there were 30,400 registered nurses and 35,798 registered midwives, 1,321 registered health visitors and 1,605 auxiliary nurse-midwives. The total number of qualified health visitors in India on 31st Dec. 1959 was between 2,000 and 3,000. Separate figures for urban and rural areas are not available.

The Health Survey and Development Committee recommended that there should be a ratio of one nurse to 500 of population, and one midwife for every 100 births. On this basis, the total requirements for nurses would be 8,00,000 and 1,68,900 midwives for the present number of births in the country.

The Second Plan targets were : Nurses 31,000; Midwives 32,000 ; Health Visitors 2,500 ; *Dais* 41,000.

The number of nurses and midwives available in India falls far short of actual requirements. In order to meet the increasing demand for health personnel in connection with the expansion of health programmes under Community Development Projects a scheme for the training of about 6,000 additional auxiliary nurse-midwives had been included in the Second Five-Year Plan at an estimated cost of Rs. 89 lakhs to be shared by the Central and State Governments concerned.

2,514 auxiliary nurse-midwives have been trained under this programme upto the end of Nov. 1960, and about 3,000 were under training.

Training in nursing is offered in centres attached to almost all large hospitals. The College of Nursing, New Delhi, the School of Nursing of the Christian Medical College, Vellore and the Nursing College at Hyderabad offer basic courses in nursing leading to B.Sc. degree. A Nursing College has also been established at Indore and Bombay. Apart from the degree course in Nursing, the College of Nursing, New Delhi, also offers a course leading to Master in Nursing degree of the Delhi University, and post-certificate courses for Ward Teaching Sisters, Sister Tutors, Midwife Tutors and in Nursing Administration. Courses in Public Health Nursing are being given at the All India Institute of Hygiene and Public Health, Calcutta, the J. J. Gruoup of Hospitals, Bombay, and the Graduate School for Nurses, Indore. A course in Public Health Nursing has also been established at the Lady Reading Health School, Dehi, in 1961.

The number of training institutions for nursing personnel and of students under training at the end of 1959 were as follows (The second figure gives the number of trainees) :—

Nurses : 234—9,596 ; Midwives : 264—3,096 ; Health Visitors : 21—1,167 ; Auxiliary Nurse-Midwives : 191—4,120.

About 2,000 trained lady health visitors were expected to be available during the Second Plan period to staff maternity and child welfare centres.

Short-term orientation courses in public health nursing has been established by the States of Assam, Andhra Pradesh, West Bengal, Gujarat, Madhya Pradesh, Madras and Rajasthan besides the Sirur Health Unit, Poona and the Health School at Singur (West Bengal). Over 400 nurses have taken these courses so far.

The Indian Nursing Council started compiling the Indian Nurses Register during 1959 which is expected to be completed in 1961-62. This register will include the names of all the nurses, midwives, health visitors, auxiliary nurse-midwives etc. borne on the registers of the State Nursing Councils. The Indian Nursing Council has also started the work of conducting inspections of training institutions for nurses etc. So far 37 inspections have been carried out by the Council.

FIVE-YEAR PLANS

The total provision for Health schemes in the First Five-Year Plan was Rs. 140 crores : Rs. 101 crores were provided by the States and Rs. 39 crores by the Centre. During the period 1951-56 expenditure on medical and public health amounted to Rs. 105·46 crores which is about 75 per cent of the planned outlay.

The progress under broad heads of development is given below.

Rs. 30 crores were provided by the States in their plans for water supply and sanitation of which Rs. 14 crores were meant for rural and Rs. 16 crores for urban areas.

For the urban areas 196 water supply and 58 sewage schemes were sanctioned. The total amount of money sanctioned was Rs. 12·90 crores and the money paid was Rs. 8·3 crores. The number of water supply schemes actually taken in hand was 187 and of sewage schemes 42 in March 1956.

In the rural areas 134 schemes were sanctioned. The total amount of money sanctioned was Rs. 5·8 crores, and the money paid Rs. 2·8 crores upto March 1956.

The urban programme has been more successful than rural, but even here some of the schemes were just getting started and the majority only about 40 to 50 per cent completed in March 1956.

During the First Plan the number of doctors went up by 11,000, of nurses by 5,000, of midwives by 8,000 and of health assistants by 500.

The Planning Commission has estimated that at the end of the Second Plan the number of doctors will be 83,000 and the number needed 7,000.

There were about 1,13,000 beds in the country and 8,600 hospitals and dispensaries at the commencement of the First Plan. By 1955-56, the number of institutions rose to about 10,000 and beds to 1,25,000. The Second Five Year Plan placed a target of additional 30,000 beds and about 2,600 institutions. It is likely that the target in both these categories would be exceeded and that the country would be having about 1,60,000 beds by 1961.

Adequate health protection to the rural population is the most outstanding feature of the Second Five-Year Plan programme—the establishment of more primary health units in as many development blocks as possible. The primary health centre is the cornerstone of the health-care organization of the rural population. While 725 health units were set up in the First Plan, it was hoped that with a provision of about Rs. 19 crores, 3,000 health units would be started in the Second Plan.

The State Governments opened 2,013 primary health centres upto the end of Feb. 1960 and 2,743 were expected to be opened by the end of the Second Plan.

The Second Plan included a provision of Rs. 63 crores for urban Water Supply and sanitation schemes. Till October, 1960, 405 schemes (331 water supply and 74 sewage schemes) estimated to cost about Rs. 77 crores had been sanctioned under the programme including those approved in the First Plan. It is estimated that these schemes when completed would benefit an additional urban population of some 13 million.

There is a provision of Rs. 28 crores for the rural water supply schemes. So far 297 schemes (including those approved in the First Plan) estimated to cost Rs. 18·46 crores have been approved, and grants-in-aid totalling to Rs. 9·8 crores have been paid. These schemes cover some 15,000 villages and the population benefited would be roughly 16 million.

Arrangements have also been made for training public health engineers, overseers, sanitary inspectors for which a sum of Rs. 30 lakhs had been earmarked in the Plan.

There were about 3,681 registered dentists in the country in 1958.

In order to meet the shortage of qualified dental surgeons in the country, the Government of India, included in the Second Five-Year Plan a scheme for opening of new dental colleges and expansion of existing ones. A provision of Rs. 75 lakhs has been made in the Central Plan for this purpose. At the beginning of the plan period there were only 6 dental colleges with an annual admission capacity of 178. The number of dental colleges rose in 1959 to ten with annual admission capacity of 351 students. This is partly due to the opening of a Dental Wing at Government Medical College, Patiala during 1958 where 12 students are admitted annually and partly due to expansion of admissions in Dental Wing, Madras Medical College, Madras, Calcutta Dental College & Hospital, Calcutta, King George's Medical College, Lucknow. The State Governments of Andhra Pradesh and Kerala have also

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

started Dental Wings at Osmania Medical College, Hyderabad and Medical College, Trivandrum with an admission capacity of 25 and 40 respectively from 1959. During 1955 the number of students who passed out from 6 dental colleges was 39. The number of students who passed out from dental colleges in 1959 was 83.

Other schemes include establishment of dental clinics in district hospitals, development of public health, laboratory services and school health service and school feeding.

149 dental clinics in various States were sanctioned by the Government of India during 1956-60 against the Plan target of 350.

Funds have been set apart for launching a pilot project under the scheme for school health services, including school nutrition service.

About the utilisation of funds, against the total Plan allocation for each State, it was officially estimated that one State would have used over 50 per cent by the end of this financial year, four over 40 per cent, five between 30 and 40 per cent and the rest less than 50 per cent.

The overall average of utilisation of provision made in the Central Plan for assistance to the States for various schemes was 49 per cent, ranging from 4·5 per cent to 74 per cent.

MEDICAL EDUCATION

There were at the end of 1959, 53 medical colleges with an admission capacity of over 4,000. At the end of 1960 there were 60 medical colleges.

The Second Plan underlined the expansion of facilities for medical education. Admissions went up from 2,500 in 1950-51 to 3,750 in 1957. About 15,500 doctors were expected to qualify during the Second Plan period, adding to the present strength of over 70,000 against the country's estimated requirement of 90,000. A provision of Rs. 20 crores had been made for this purpose.

There are seven dental Colleges in the country. The colleges have an admission capacity of 230. In 1958 there were about 3,681 registered dentists in the country.

Below we give a list of medical and dental colleges :

The Andhra Medical College, Vishakapatnam.
The Assam Medical College, Dibrugarh.
The B. J. Medical College, Ahmedabad.
The B. J. Medical College, Poona.
The Medical College, Baroda.
The Christian Medical College, Ludhiana.
The Christian Medical College, Vellore.
The Darbhanga Medical College, Laherisarai (Bihar).
The Gajra Raja Medical College, Gwalior.
The Grant Medical College, Bombay 8.
The Guntur Medical College, Guntur.
Karnatak Medical College, Hubli.
The Kasturba Medical College, Manipal (South Kanara Dt., Mysore State).
The Lady Hardinge Medical College, New Delhi 1.
The Medical College, Madras.
The Mahatma Gandhi Memorial Medical College, Indore.
The G. S. V. M. Medical College, Kanpur.
The Medical College, Ranchi.
The Medical College, Amritsar.
The Medical College, Calcutta.
The Medical College, Mysore.
The Medical College, Nagpur.
The Government Medical College, Patiala.
The Medical College, Trivandrum.
The Calcutta National Medical Institute, Calcutta.
The Nilratan Sarkar Medical College, Calcutta.
The Osmania Medical College, Hyderabad.
The P. W. Medical College, Patna.
The R. G. Kar Medical College, Calcutta.
The S. N. Medical College, Agra.
The Sawai Man Singh Medical College, Jaipur.
The Seth G. S. Medical College, Bombay 12.
The Sriram Chandra Bhang Medical College, Cuttack.
The Stanley Medical College, Madras.
The Topiwala National Medical College, Bombay 8.
The Medical College, Bangalore.
The Gandhi Medical College, Bhopal.
The Medical College, Jabalpur.
The M. P. Shah Medical College, Jamnagar.
The K. G. Medical College, Lucknow.
The Madurai Medical College, Madurai.
All-India Institute of Medical Sciences, Safdarjang, New Delhi.
Govt. Medical College, Aurangabad.
Medical College, Kurnool (Andhra).
Medical College, Pondicherry.
The Gandhi Medical College, Hyderabad.
The Medical College, Kozhikode.
The Bankura Sammilini Medical College, Bankura (W. Bengal).
The Maulana Azad Memorial Medical College, New Delhi.
S. R. M. Medical College, Kakinada.
Bikanir Medical College, Bikanir.
Burla Medical College, Orissa.
Medical College, Calicut.
S. V. Medical College, Tirupati.
Tanjavur Medical College, Tanjavur.
Medical College, Rohtak.

Medical Schools

The Arya Medical School, Ludhiana.
The University Medical School, Bangalore.

Dental Colleges

The Calcutta Dental College & Hospital, Calcutta.
The Punjab Govt. Dental College & Hospital, Amritsar.
The Dental College & Hospital, Lucknow.
The Madras Medical College (Dental Wing), Madras.
The Nair Hospital Dental College, Bombay 8.
The Sir Currimbhoy Ebrahim Memorial Dental College and Hospital, Bombay 8.
Government Medical College (Dental Wing), Patiala.
The Dental College, Bangalore 2.
The Dental College, Trivandrum.
The Osmania Medical College (Dental Wing), Hyderabad.
The Patna Dental College & Hospital Patna.

Others

The All-India Institute of Hygiene and Public Health, Calcutta.
The College of Nursing, Delhi.
The Malaria Institute of India, Delhi.
The School of Tropical Medicine, Calcutta.
Sri Vallabhbhai Patel Chest Institute, Delhi.
All-India Institute of Mental Health, Bangalore.

AYURVEDIC AND UNANI INSTITUTIONS

Below we give a list of Ayurvedic institutions (it is not an exhaustive list) :

Ayurvedic College, Gauhati, Assam.
Gopobandhu Ayurvedic Institute, Puri, Orissa.
The Asafia Tibbia College, Bhopal.
Shri Narain Prasad Awasthi Ayurvedic School, Raipur (M.P.).
Ayurvedic Vidyalaya, Jamnagar, Saurashtra.
Ayurvedic Medical School, Bhawnagar, Saurashtra.
Govt. Ayurvedic College, Gwalior (M.P.).
Shri Raj Kumar Singh Ayurvedic College, Indore (M.P.).
Nizam's Tibbi College, Hyderabad.
Govt. Ayurvedic College, Hyderabad.
Govt. Aided S.Y.N.A. Ayurvedic College, Bhagalpur, Bihar.
Govt. Ayurvedic College, Patna.
Govt. Tibbi College, Patna.
Ayodhya Shiva Kumari Ayurvedic College, Begusarai, Monghyr, Bihar.
Ayurvedic Vibhag Vidyalaya, Patiala.
Shri Dhanwantri College, Sangrur, Punjab.
Shri Ayurved Vidyalaya, Barnala, Punjab.
Shri Venkateswara Ayurvedic Kalasala, Vijayawada, Krishna District, Andhra Pradesh.
Shri Ram Mohan Ayurvedic College, Guntur.
Aryavaidyapatasala, Kottakkal, Kerala.
The Venkataramana Dy & Ayurvedic College, Mylapore, Madras.
College of Indigenous Medicine, Kilpauk, Madras.
Madhava Memorial Ayurvedic College, Cannanore.
Keraleeya Ayurvedic Mahapatasala, Shoranur (Kerala).
Akhila Travancore Sidhamruth, Kalloore & Siddha Medical Training College.
Govt. Ayurvedic College, Trivandrum.
J. S. Maha Gujarat Ayurvedic Medical College, Nadiad (Gujarat).
Shri Ochhavlal N. Ayurvedic Mahavidyalaya, Surat.
Ayurveda Mahavidyalaya, Poona.
Aryangla Vaidyak Mahavidyalaya, Satara City.
Ayurveda Vidyalaya, Jamnagar.
R. A. Podar Medical College (Ayurvedic), Worli, Bombay.
Ayurved Mahavidyalaya, Ahmednagar.
Jamini Bhushan Ashtanga Ayurved Vidyalaya (College), Calcutta.
Vishvanath Ayurvedic Mahavidyalaya (College), Calcutta.
Shyamadar Vaidya Shastrapith (College), Calcutta.
Govt. Ayurvedic College, Jaipur.
Maharana Ayurvedic College, Udaipur.
Rajputana Ayurvedic & Unani Tibbi College, Jaipur.
Dayanand Ayurvedic College, Amritsar.
Govt. Ayurvedic & Unani College, Mysore.
Ayurvedic College, Hindu University, Banaras.
Ayurvedic College, Lucknow University, Lucknow.
Ayurvedic College, Gurukul University, Kangri.
Ayurvedic College, Gurukul Vrindaban, Distt. Mathura (U.P.).
Budelkhand Ayurvedic College & University, Jhansi.
Rishikul Ayurvedic College, Hardwar.
Lakit Hari Ayurvedic College, Pilibhit.
Kanya Kubja Ayurvedic College, Lucknow.
Ram Sahai Ayurvedic College, Meerut.
Lekh Ram Ayurvedic College, Dorli (Distt. Meerut).
Ayurvedic College, Dehra Dun.
Arjuna Ayurveda Vidyalaya, Banaras.
Baldeo Ayurvedic College, Baragaon, Banaras.
Ayurvedic College, Farrukhabad.
Narendra Vidya Mandir, Kirooli (Distt. Agra).
Moolchand Rastogi Ayurvedic College, Lucknow.
Uttra Khand Vidyapith Vidyalaya, Guptakashi (Distt. Garhwal).

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Tibbia College, M.U., Aligarh.
Takmil-ut-Tib College, Lucknow.
Unani Medical College, Himmat Ganj, Allahabad.
Tibbia College, Saharanpur.
Darshanand Ayurvedic College, Banaras.
Shiv Ganga Ayurveda Mahavidyalaya, Madhubani, Bihar.
The Suddha Ayurved Vidyalaya, Sion, Bombay.
The Punarvasu Ayurved Vidyalaya. Bombay.
The Ashtang Ayurved Mahavidyalaya, Poona.
The Karnatak Ayurved Vidyalaya, Belgaum, Mysore.
The Suddha Ayurved Vidyalaya, Hubli.
The Suddha Ayurved Vidyalaya, Nasik.
The Suddha Ayurved Vidhalaya, Bijapur.
Vidarbha Ayurveda Mahavidyalaya, Amravati.
Government Ayurvedic College, Raipur.
Bidyabhushan Sanskrit College, Bolangir, Orissa.
Sanskrit College, Parlakimedi, Orissa.
Sadasiv Sanskrit College, Puri, Orissa.
Dayanand Ayurvedic College, Jullundur.
Ayurvedic College, Sikar.
Ayurvedic College, Bikaner.
Gurukul Vishwa Vidhyalaya, Virmdaban.
State Ayurvedic College, Lucknow.
Nabadwip Ayurvedic College, P.O. Nabadwip, District Nadia, West Bengal.
Vaidya Sastrapith Parisad College, Calcutta.
Ayurvedic Sewak Sangh Vaidyak Pathshala, P.O. Contai, Midnapore.
Banwari Lal Ayurvedic Vidyalaya, Delhi.
Jamia Tibbia College, Delhi.
Dharma Samaj Sanskrit College, Muzaffarpur, Bihar.
Shudha Ayurved Vidyalaya, Malbipole, Baroda.
Shri Ayurved Mahavidyalaya, Samanvaya Rugnalaya Mahal, Nagpur.
Ayurved Medical College, Nanded, Maharashtra.
Radhakrisan Toshniwal Ayurved Mahavidyalaya, Akola.
Government Ayurvedic College, Dabala.
Birla Sanskrit (Ayurvedic) College, Pilani.
Meerut Ayurvedic College, Nanchandi, Meerut.
Ayurvedic College, Atarra, District Band.
Mahila Ayurvedic College, Meerut.
Divedi Ayurvedic College, Kanpur.
Ayurvedya Partisthan, 123, Harish Mookerjee Road, Calcutta-26.
Dayanand Ayurvedic Kanaya Mahavidyalaya, Delhi.
Government College of Indian Medicine, Mysore.
Taranath Ayurveda Vidyapeetha, Bellary (Mysore).

OTHERS

Training of nurses, midwives and auxiliary nurse-midwives is offered in most of the hospitals in the States. The names of States and the number of hospitals in each State offering such training: Andhra Pradesh 37; Assam 20; Bihar 14; Maharashtra and Gujarat 70; Kerala 15; Madhya Pradesh 28; Madras 35; Mysore 20; Orissa 7; Punjab 24; Rajasthan 13; Uttar Pradesh 34; West Bengal 23; Delhi Union Territory 6; Tripura 1; Manipur 1; Himachal Pradesh 3. There are eight military hospitals in the country where the training is offered. The College of Nursing, New Delhi, offers higher training in B.Sc. (Honours) course in Nursing and the following post certificate courses:— Ward Sisters course; Nursing Administration course; Sister Tutors course; Midwife Tutors course.

The Christian Medical College, Vellore, provides training in B.Sc. course in Nursing and Sister Tutors course.

Health Visitors are trained in Bombay, Calcutta, Delhi, Hyderabad, Madras, Lucknow, Nagpur, Poona, Ludhiana, Amritsar, Visakhapatnam, Indore, Patna, Ranchi, Trivandrum, Allahabad, Bareilley, Srinagar, Khed and Rajkot.

Courses in malaria are conducted at the Malaria Institute of India, Delhi.

Pharmacy

Facilities for training in pharmacy are being developed or improved in the following institutions:—

Department of Pharmaceutics, Andhra University; Department of Pharmacy, Saugor University; Department of Pharmacy, Banaras Hindu University; Department of Pharmacy, Punjab University; Department of Pharmacy, Medical College, Madras; Department of Pharmacy, Birla College of Science, Pilani; L. M. College of Pharmacy, Ahmedabad; Department of Chemical Technology, Bombay University.

The total cost of the scheme for the above institutions is of the order of non-recurring Rs. 13·5 lakhs and recurring Rs. 1·73 lakhs.

The Central Government or the University Grants Commission have agreed to provide about Rs. 9·81 lakhs of the non-recurring cost and Rs. 70,000 of the recurring cost.

When the scheme is fully implemented, facilities will be available for an annual admission of about 200 candidates for a three-year degree course in pharmacy.

The All-India Council for Technical Education has recommended that efforts should be made for developing at least one centre in each major State for training in pharmacy. Accordingly, those States which do not have such training facilities at present have been addressed by the Central Government regarding the setting up of necessary centres.

The All-India Council is also examining the question of developing facilities for training in pharmaceutics technology in certain selected institutions which conduct courses in chemical engineering and chemical technology.

A course of study in Pharmacy aimed at training pharmacists who will be eligible for registration under the Pharmacy Act is being provided by the following institutions:—

1. Medical College, Amritsar.
2. L. M. College of Pharmacy, Ahmedabad.
3. Birla College, Pilani.
4. D.A.V. College, Kanpur.
5. Madras Medical College, Madras.
6. Pharmacy Training Centre, Jalpaiguri.
7. Bombay College of Pharmacy, Bombay.

The pharmacy Council of India has approved these courses of study under Section 12 of the Indian Pharmacy Act, 1948.

LABOUR

THE achievement of Independence and the emergence of India as a Republic wedded to the idea of a welfare State has made the welfare of the working classes a prime responsibility of the State. Several administrative and legislative measures of far-reaching significance have already been introduced in the country. Health, education, housing and social welfare for the masses find a prominent place in the First and Second Five Year Plans.

The general position in 1957-58 was as follows:—

Total Labour Force .. .. (men 98,700,000; women 40,600,000).	139,300,000
No. employed in factories coming under the Factories Act of 1948	3,412,985
No. of trade unions on register ..	10,045
No. of trade unions which submitted returns of membership	5,520
No. of members of trade unions submitting returns	3,015,052

The Central co-ordinating authority in India for questions connected with labour legislation is the Ministry of Labour and Employment of the Government of India with the Labour Minister in charge. The administration of matters, connected with the English and Indian Merchant Shipping Acts, the Mercantile Marine Department and Indian Seamen is with the Ministry of Transport and Communications. In respect of all the Railways, the Labour Minister is responsible for the administration of the Payment of Wages Act, 1936, trade disputes, hours of work for employees not covered by the Factories Act and regulation of employment of children. He is also responsible for regulation of labour and safety in respect of mines and oilfields; trade disputes in industries, businesses or undertakings carried on by the Central Government, and inter-State migration.

Among the more important Acts that govern labour conditions and relations in India are the following: 1. Indian Factories Act, 1948; 2. Indian Mines Act; 3. Payment of Wages Act; 4. Minimum Wages Act; 5. Workmen's Compensation Act; 6. Maternity Benefit Acts (States); 7. Indian Trades Union Act; 8. Industrial Disputes Act; 9. Industrial Disputes (Appellate Tribunal) Act; 10. Tea Districts Emigrant Labour Act; 11. Shop Assistants Acts (States); 12. Employees' State Insurance Act; 13. Collection of Statistics Act; 14. Employees Provident Funds Act.

FACTORIES ACT, 1948

The Act covers all industrial establishments employing 10 or more workers and using power and establishments employing 20 or more workers and not using power. The State Governments have been empowered to apply the provisions of the Act to any premises, irrespective of the number of persons employed, where a manufacturing process is carried on with or without the aid of power, except where the work is done by the worker solely with the aid of his family.

The Act prescribes that every factory should be kept clean and free from effluvia arising from drains, privies, etc., and lays down stipulations regarding sweeping, cleaning, disinfecting, white-washing, ventilation, temperature, drinking water, latrines, etc.

In existing factories 350 cubic feet of space should be provided for every workman. In new factories to be built the space for each workman should be 500 cubic feet.

Elaborate provision regarding safety such as fencing of machinery, etc., has been laid down. Women and children are prohibited from employment on certain types of machinery.

Washing facilities for the workers, appliances for first-aid, rest shelters, creches, canteens, etc., are prescribed under the Act. In every factory where 500 or more workers are employed the occupier shall employ Welfare Officers.

Weekly hours of work have been fixed at 48 and daily hours at 9. The maximum spread-over allowed is 10½ hours. No worker shall work for more than 5 hours before he has had an interval for rest of at least half an hour.

Payment for overtime has been prescribed at double ordinary rate of wages.

No woman or child shall be employed in any factory except between the hours of 6 a.m. and 7 p.m.

A weekly day of rest has also been prescribed.

No child who has not completed his fourteenth year shall be required or allowed to work in any factory. A child who has completed his fourteenth year or an adolescent (a person who has not completed his eighteenth year) shall not be allowed to work in a factory unless a

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

certificate of fitness by a certifying surgeon is in the custody of the manager of the factory and he carries while at work a token giving reference to such certificate. No 'child' shall be employed or permitted to work in any factory for more than 4½ hours in a day or between the hours of 7 p.m. and 6 a.m.

Every adult worker who has completed a period of 12 months' continuous service in a factory (later amended, see below) shall be allowed during the subsequent period of 12 months leave with wages including dearness allowance for a period calculated at the rate of one day for every 20 days of work performed by him during the previous 12 months, subject to a minimum of 10 days. In the case of children the leave should be at the rate of one day for every 15 days of work subject to a minimum of 14 days.

It may be added here that the recent tendency for many units particularly in south India has been to allow holidays with pay in excess of the minimum stipulated.

In many awards given by Adjudicators leave with pay upto 14 days has been granted.

Where any worker in a factory contracts any disease specified in the schedule appended to the Act, the manager of the factory shall send notice thereof to such authorities, and in such form and within such time, as may be prescribed.

The administration of the Act is left to the State Governments. The Central Government have set up an advisory organisation, namely the Office of the Chief Adviser, Factories.

The Act was amended in 1954. Under this amendment eligibility for leave with pay would be 240 days' service during a calendar year. Proportionate leave will be granted to those whose service starts after the beginning of the calendar year.

The annual leave with wages will be exclusive of holidays during or immediately before or after the period of leave.

The leave can be carried forward from one calendar year to another provided the maximum does not exceed 30 days in the case of an adult and 40 days in the case of a child.

No prior notice will be necessary when a worker requires leave to cover a period of illness.

The Act permits six hours' work at a stretch without any interval when the total number of hours to be worked on any day in a shift does not exceed six.

It also permits newspaper printing presses to work their entire night shift of six hours at a stretch.

It allows a worker a maximum of 50 overtime hours in a quarter year which is deemed to have begun on the first day of January, April, July or October.

It enables continuous employment of workers in case some of the subsequent shift workers do not turn up in time.

For the purpose of computing the rate of wages of a person who takes advantage of the concessional sale of foodgrains and other articles the basis will be the maximum ration admissible to a standard family of a specific number of consumption units.

Women and children are also prohibited from cleaning, lubricating or adjusting any prime mover of transmission machinery while it is in motion if such work exposes them to risk of injury.

FACTORY STATISTICS

Under the provisions of the Factories Act, 1948, registered factories submit annual and half yearly returns on employment to the Chief Inspectors of Factories in the various States. All-India figures are compiled by the Labour Bureau and are published in the *Indian Labour Gazette*.

The number of factories on registers in the areas covered by the States during 1957 and 1958 were 37,896 and 41,579 respectively.

The following table sets out the statistics of the average daily numbers of persons employed in factories during the half year ending 31st December 1958.

WORKERS EMPLOYED 1958.

Industry	Average Number of Workers Employed Daily
Processes allied to agriculture ..	148,034
Food except beverages	489,087
Beverages	6,887
Tobacco	191,431
Textiles	1,140,766
Footwear, other wearing apparels and made up textile goods	18,526
Wood and Cork except furniture ..	43,190
Furniture and fixtures	13,528
Paper and paper products	35,293
Printing, publishing and allied industries	94,211
Leather and leather products (except footwear)	19,780
Rubber and rubber products	31,388
Chemicals and Chemical products ..	119,464
Products of petroleum and coal ..	16,694
Non-metallic mineral products (except products of petroleum and coal)	158,236
Basic metal industries	133,029
Metal products (except machinery and transport equipment) ..	103,638
Machinery (except electrical machinery)	146,205
Electrical machinery, apparatus, appliances and supplies	46,174
Transport equipment	300,674
Miscellaneous industries	100,246
Electricity, gas and steam	34,575
Water and sanitary services ..	6,498
Recreation services	4,704
Personal services	10,727
Total ..	3,412,985

State-wise Figures

The following para shows the average daily employment in factories in 1958 by State :—

Andhra Pradesh 221,954; Assam 75,378; Bihar 183,238 ; Bombay* 1,066,677 ; Kerala 166,182 ; Madhya Pradesh 161,059 ; Madras 326,305 ; Mysore 122,359 (1957) ; Orissa 25,974 ; Punjab 103,981 ; Rajasthan 53,075 ; Uttar Pradesh 278,178 ; West Bengal 686,428 ; Delhi 59,399 ; Himachal Pradesh 1,344 ; Andaman & Nicobar Islands 1,609 ; Manipur 136 ; Tripura 2,068 ; Total 3,412,985. Figure for the 1st half of 1959 for Mysore : 1,86,289 (Provisional).

MINES ACT

With a view to amending and consolidating the law relating to the regulation of labour and safety in mines, the Mines Act, 1952 was passed and brought into force from July 1952. The Act extends to the whole of India except Jammu and Kashmir. The main features of the Act are given in the 1960-61 Directory.

The Mines Amendment Act 1959, received the assent of the President on 27th December 1959. Some of the important features of the Amendment Act are as follows :—The definition of the term "mine" has been made clear so as to include quarries, open cast workings, private railways, aerial ropeways and conveyors etc. The Act provides for the maintenance of first-aid rooms in mines where more than 150 persons are employed instead of 500 persons as under the original Act. The Act prohibits the employment of persons in a mine when its owner fails to comply with the notice of the Mines Inspectorate for remedying any matter connected with a mine which is dangerous to human life, limb or safety. The Act provides also for the payment of over-time at a uniform rate of twice the ordinary rate of wages for persons employed both above and below ground whereas in the original Act the rates were 1½ times and twice for persons employed above, and below ground respectively. Under the Amendment Act, workers employed below ground are entitled to annual leave with wage at the rate of one day for every 16 days of work and those below ground to one day for every 20 days of work. The workers can accumulate the leave period upto a maximum of 30 days. The present Act enhances the penalty for contravention of the different provisions of the Act by raising the scales of fines and also provides for improvement with fine for contravening orders under section 22 of the Act.

MINING STATISTICS

Figures are published in a Monthly Bulletin which is issued by the Chief Inspector of Mines. The average daily number of workers employed in mines in 1939, 1951, 1952, 1953, 1954, 1955, 1956, 1957 and 1958 was 298,650 ; 549,048 ; 559,196 ; 593,868 ; 568,254 ; 590,776 ; 428,581 ; 651,321 and 649,360 respectively. The available figures are given in the following table :—

EMPLOYMENT IN MINES BY STATE—1958

DOCK WORKERS' ACT

The Dock Workers' (Regulation of Employment) Act, 1948 passed in March 1948 has in view the elimination of hardship caused to workers on account of the casual nature of the work. It enables the Central and State Governments to frame schemes for the registration of dock workers to ensure greater regularity of employment and to regulate the employment of workers whether registered or not and the terms and conditions of such employment.

It provides for registration, rates of wages, hours of work, holidays with pay, prohibits, restricts or controls the employment of workers to whom the scheme does not apply, training and welfare, health and safety measures, minimum payment for the period of unemployment. It also provides for the setting up of an Advisory Committee consisting of Government, labour and employers, and for the employment of Inspectors.

PAYMENT OF WAGES ACT

The Act applies only to wages and salaries which average below Rs. 400 per month.

For the purpose of the Act "wages" means all remuneration capable of being expressed in terms of money and includes any sum payable under an award or settlement, any remuneration for overtime work or holidays and bonus but does not include the value of housing, employer's contributions to pension or provident funds or travelling allowance.

No wage period is to exceed one month and wages are to be paid within a prescribed time not exceeding 10 days from the end of the wage period. All wages are to be paid in coin and, or currency notes. Fines are not to exceed half anna in the rupee. Permissible deductions from wages have also been specified.

The administration of the Act, as far as factories are concerned, has been entrusted to the Inspectors of Factories in the States. In regard to persons employed in mines and in railways the responsibility of administering the Act rests upon the Chief Labour Commissioner (Central).

MINIMUM WAGES ACT, 1948

The Act covers the following industries or types of establishments. Woollen carpet making or shawl weaving; rice, flour or dal mills; tobacco manufactories (including bidi making); plantations; oil mills; employment under any local authority; road construction or building operations; stone breaking or stone crushing; lac manufactories; mica works; public motor transport; tanneries and leather manufactories; and agriculture. The appropriate Governments can extend the application of the Act to any industry wherein, in their opinion, minimum wages should statutorily be fixed.

The Act requires the Central or State Governments, as the case may be, to fix minimum rates of wages payable to persons employed in the industries mentioned above.

The Act provides for the fixation of minimum time rates, minimum piece rates, guaranteed time rates and overtime rates appropriate to different occupations, or localities and for adults, adolescents, children and apprentices. The minimum rate may consist of a basic rate and a cost of living allowance and/or cash value of concessions or it may be an all-inclusive rate.

The Act authorises the appropriate Governments to appoint Committees and Sub-Committees to hold inquiries and advise them to fix minimum rates of wages in respect of any scheduled employment or for the revision of these rates. They may also appoint an Advisory Board for co-ordinating the work of various Committees and also to advise Government generally in the matter of fixing or revising minimum rates of wages.

The Central Government have set up a Central Advisory Board for advising the Central and State Governments and for co-ordinating the work of State Advisory Boards. The Committees and Sub-Committees as well as the Central and State Advisory Boards are to consist of equal number of representatives of employers and employees, and of independent persons not exceeding a third of the total number of members.

The Central or the State Governments, as the case may be, can fix the number of hours of work per day, provide for a weekly holiday, etc., in regard to any employment in which minimum wages have been fixed under the Act.

WORKMEN'S COMPENSATION ACT

Under the Act payment of compensation has been made obligatory on all employers whose employees come within its scope, and injured workmen or the dependents of those killed can obtain compensation in all cases where personal injury has been caused by accident *arising out of and in the course of employment* and where, except in the case of injury resulting in death, the accident is not directly attributable to the workman having been at the time of the accident under the influence of drink or drugs or to wilful disobedience of rules or orders or wilful disregard of safety devices.

Besides bodily injuries the contracting of certain occupational diseases such as anthrax and mercury, lead and phosphorus poisoning were deemed and treated for the purposes of compensation, as injuries caused by accident, provided however, that the worker concerned was in the service of the same employer for more than six months.

The main provisions of the Workmen's Compensation Act as it stands today are as follows:

In all cases persons employed in an administrative or clerical capacity and those whose monthly earnings exceed Rs. 400 (except Railway Servants) are excluded.

As far as seamen are concerned, those employed on ships registered in India are covered. But if accidents take place within the three mile limit of the territorial waters the Act applies even to those employed on ships not registered in India.

Not only workmen employed within the precincts of a factory or a mine but also men engaged in any kind of work incidental to or connected with a factory or any mining operation are entitled to the benefits of the Act.

Any person who is covered by the Employees' State Insurance Act, 1948, and who is entitled to receive disablement or dependent's benefit from the Employees' State Insurance Corporation is not entitled to claim any compensation from the employer under this Act.

The amount of compensation payable depends, in the case of death, on the average monthly wages of the deceased workman and in the case of an injured workman both on the average monthly wages and the extent of disablement. The term 'wages' includes overtime pay and the value of any concessions or benefits in the form of food, clothing, free quarters, etc.

The amounts of compensation payable in the case of an injured workman whose monthly wages are not more than Rs. 10 are Rs. 500 for death, Rs. 700 for permanent total, and half the monthly wages for temporary disablement. For a workman whose monthly wages are between Rs. 50 and Rs. 60, the corresponding figures are Rs. 1,800, Rs. 2,520 and Rs. 15 respectively. The maxima for persons earning over Rs. 300 per month are Rs. 4,500, Rs. 6,300 and Rs. 30 per month respectively. In the case of minors the amounts of compensation for death and for permanent total disablement are at the uniform rate of Rs. 200 and Rs. 1,200 respectively, and half the monthly wage for temporary disablement.

The interests of dependents in cases of fatal accidents have been safeguarded by ensuring that (1) all cases of fatal accidents should be brought to the notice of the Commissioner; (2) in all cases where an employer admits liability the amount of compensation payable is to be promptly deposited with the Commissioner; and (3) in cases where the employer disclaims liability and there are good grounds for believing compensation to be payable, the dependents get the information necessary to enable them to judge if they should make a claim or not.

An employer is permitted to make to any dependent advances on account of compensation not exceeding an aggregate of one hundred rupees.

The Act is administered by Commissioners appointed by State Governments. In areas in which the Employees' State Insurance Scheme has been implemented, the payment of workmen's compensation is the responsibility of the E.S.I. Corporation.

The Workmen's Compensation Act was first enacted as already mentioned in 1923 and has since undergone a number of important amendments. The basic structure of the Act, however, has remained more or less the same and a comprehensive amendment of the Act has been for long under consideration.

The basic points relating to such an amendment were: a revision of the current rates of compensation and extension of its coverage by raising the present wage limit from Rs. 400 to Rs. 500.

These two important matters were before an Actuarial Committee, which went into the question of the financial burden any such proposal would impose on the industry. The Sub-Committee constituted to examine the report of the Actuarial Committee has recommended that the present system of payments of compensation should be replaced by a system of periodical payments which should be disbursed through the agency of the Employees' State Insurance Corporation and the rates of compensation should be raised in accordance with

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

the recommendations of the Study Group on Social Security. The Sub-Committee has also supported the proposal to increase the wage limit for coverage from Rs. 400 to Rs. 500 p.m.

An Amendment Bill—Workmen's Compensation Amendment Bill 1958—was passed by Parliament in Feb. 1959.

The Amendment aims broadly speaking at the following:

The removal of distinction between adult and minor in the matter of compensation; the waiting period during which the worker is not entitled to compensation would be reduced from seven to five; if the disablement lasts 28 days or more there would be no waiting period; if payment of compensation is delayed more than one month from the due date an interest of 6 per cent would be levied on the employer; there would be a penal compensation of 50 per cent if the delay in payment was not justified; the time limit for filing claims would be raised from one year to two years, delays in this might also be condoned; in case of transfer of assets of factory compensation would be the first charge; failure to carry out provisions of the Act would entail a penalty of Rs. 500 as against Rs. 100; factory inspectors and mine inspectors could be authorized to file claims; the number of injuries mentioned in the schedule would be raised from 14 to 54; the definition of workman would be enlarged; the definition of establishments to which the Act refers would also be enlarged; the schedule relating to occupational diseases would also be amended.

STATISTICS

An annual note on the working of the Act is published regularly in the *Indian Labour Gazette*.

The latest available statistics on the subject will be found in the following table :—

Year	Total number of cases	Total compensation paid
		Rs.
1947	53,574	33,26,495
1948	66,776	42,20,068
1949	60,511	52,17,162
1950	61,958	57,37,278
1951	63,133	58,98,253
1952	58,734	56,37,368
1953	61,742	61,38,389
1954	66,118	64,25,062
1955	75,793	59,67,194
1956	61,610	51,83,057
1957	71,908	61,86,746
1958	83,338	84,87,795

Facilities for accident insurance are now being provided by a number of leading insurance companies in the country and the most important of these are the Claims Bureau in Calcutta and Madras.

The table below shows the accident rate per thousand workers and the average compensation paid in the main industry groups during 1958.

MATERNITY BENEFIT ACT

The first Maternity Benefit Act in India was passed by the Government of the former Bombay State in 1929. After that, Maternity Benefit Acts were passed by the Governments of all the States.

The West Bengal Legislature passed a separate Act in 1948 for women employed in tea-plantations under the title of the West Bengal Maternity Benefit (Tea Estates) Act, 1948.

The Government of India passed the Mines Maternity Benefit Act in 1941.

The scope, qualifying conditions and rate of benefit are not uniform under the various State Acts.

The qualifying period of service is generally 9 months.

The rate of benefit is annas eight per day in Madras and Andhra under the Acts. In the Hyderabad Act and the Mines Benefit Act the rate is Ans. 12 or average daily earnings whichever is more. In Orissa, it is the actual daily wage or salary subject to a maximum of Ans. 12 per day. The Travancore-Cochin and West Bengal (Tea Estates) Acts provide for Rs. 5-4-0 per week. Women workers on plantations in Assam receive under the Act Ans. 11 Pies 6 per day in addition to the usual food concessions and women in other industries in the State get their average weekly earnings subject to a minimum of Rs. 2. Although maternity benefit legislation does not apply to plantations in other parts of South India, the employers' associations have recommended payment of benefit on a voluntary basis at the rate of Ans. 12 per day for a period of 8 weeks.

The Mines Maternity Benefit Act and the Assam, Bihar and U.P. Acts provide for some additional benefits which take the form of free medical treatment, maternity bonus, provision of creches, additional rest intervals for nursing mothers, etc. In the Central Act for women employed in mines and in the U.P. and Bihar Acts, an additional bonus of Rs. 3 and in Rajasthan Rs. 5 is paid if the women avail themselves of the services of a qualified midwife. But if such assistance is provided by or in an institution of an employer, the bonus is not paid.

The U.P. and Bihar Acts lay down that factories employing 50 or more women or where women employed form 25 per cent. or more of the workers, should maintain creches, and appoint female attendants to look after the children.

The administration of the Acts in the States is the responsibility of the Factory Inspectorates. The enforcement of the Mines Maternity Benefit Act in the coal mines is the responsibility of the Coal Mines Welfare Commissioner. In other mines, it is administered by the Chief Inspector of Mines.

MATERNITY BENEFIT IN THE VARIOUS STATES AND MINES DURING 1958

States.	Average No. of women employed.	No. of women who claimed maternity benefit.	No. of women who were paid maternity benefit in full or in part.	No. of cases in which a bonus was given or maternity benefit was paid for miscarriage or death.	Total amount paid.

Number of Indians and non-Indians employed by foreign-owned/controlled companies on salaries on Rs. 1,000 and above from 1954 to 1959 as on 1st January. The first figure within brackets indicates Indians and the second non-Indians: 1954 (3,455; 7,008); 1955 (4,139; 6,810); 1956 (4,862; 6,566); 1957 (5,906; 6,025); 1958 (6,959; 5,652); 1959 (7,916; 5,304).

The membership of the four Central Trade Union Organisations recognised by the Central Government, *viz.* the Indian National Trade Union Congress, the All-India Trade Union Congress, the Hind Mazdoor Sabha and the United Trade Union Congress, was as follows:

Name of Organisation.	No. of Affiliated Unions		Membership	
	1957-58	1958-59	1957-58	1958-59
Indian National Trade Union Congress	727	885	9,10,221	10,20,653

United Trade Union Congress	182	172	82,001	90,629

* Bilingual.

TRADE UNIONS ACT, 1926

This Act was brought into operation with effect from 1st June 1927 and was slightly amended in 1928.

Apart from the necessary provisions for administration and penalties, the Indian Trade Unions Act, 1926, makes provision for three matters: (1) conditions governing the registration of trade unions; (2) the obligations to which a trade union is subject after registration; and (3) the rights and privileges accorded to registered unions. 'Trade Union' has been defined in such a way as to cover both combinations of workers and of employers but not of workers and employers. Persons under the age of 15 are debarred from membership of any registered union.

The administration of the Act is entirely on a State basis and each State Government is required to appoint a Registrar of Trade Unions. Any seven or more members of a union can apply for registration but no union can be registered unless at least fifty per cent of the executive consist of members actually engaged in the unit or group of units which the union proposes to cover.

The general funds of registered trade unions cannot be spent on objects other than those specified in Section 15 of the Act nor on political objects; but the Act makes provision for the creation of a separate political fund, subscription to which may be collected from such members as voluntarily desire to contribute to it. All registered unions are required to submit annually to the Registrar duly audited statements of accounts in prescribed forms together with changes in officers and the executive and a copy of the rules corrected up to date.

A registered trade union is immune from prosecution for criminal conspiracy in respect of an agreement, unless it is one to commit an offence, made between its members for the furtherance of a trade dispute or for restraint of trade and from any legal difficulties arising therefrom.

INDUSTRIAL DISPUTES ACT

The Act provides for the setting up of two types of organisations, namely, (1) Works Committees and (2) Industrial Tribunals for the prevention or settlement of disputes. It makes conciliation compulsory in all disputes in public utility services and optional in other cases.

Section 22 of the Act declares any strike or lock-out in a public utility service to be illegal if it is commenced or declared (i) without giving to the employer or employees, as the case may be, a notice of strike or lock-out in a prescribed manner, within six weeks before striking or declaring a lock-out, or (ii) within 14 days of giving such notice, or (iii) before the expiry of the date of strike specified in any such notice; or (iv) during the pendency of any conciliation proceedings before a conciliation officer and 7 days after the conclusion of such proceedings, etc. The Act also prohibits certain other strikes and lock-outs and declares them illegal if commenced or declared during the pendency of (i) conciliation

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

proceedings before a Board and 7 days after the conclusion of such proceedings ; (ii) proceedings before a Tribunal and 2 months after the conclusion of such proceedings, or (iii) during any period in which a settlement or award is in operation, in respect of any of the matters covered by the settlement or award.

The Act was amended once in 1953 and twice in 1956. It now provides that no workman, who has been in continuous employment for more than a year, shall be retrenched unless he has been given a month's notice or wages in lieu thereof and also compensation calculated at the rate of 15 days' average pay for every completed year of service. If a workman who has put in more than a year's continuous service is laid off, he is required to be paid compensation which should be equal to 50 per cent. of the total of basic wages and dearness allowance for a maximum of 45 days in a year unless periods of lay-off after the first 45 days are of the duration of one week or more on each occasion.

According to a decision of the Supreme Court in November 1956 on retrenchment compensation, workers cannot, under the Act, claim compensation for retrenchment in case of *bona fide* closure of business or termination of their services by the employer on the business being sold to another employer.

The definition of the term "workman" has been extended to cover technical personnel and supervisory staff drawing upto Rs. 500 per month.

The machinery for adjudication of disputes has been recast and a three-tier machinery consisting of National Tribunals, Industrial Tribunals and Labour Courts is brought into being. Functions of these tribunals are demarcated and the importance of the dispute will determine which tribunal should adjudicate upon it. The tribunals are authorised to appoint experts having special knowledge as assessors to advise them. Schedules covering subjects which should go before each tribunal are attached to the Act.

Every employer who proposes to effect any change in the conditions of service of his workmen in respect of wages, hours of work, rationalisation, shift-working, increase or reduction in complement, etc. is required to give 3 weeks' prior notice to the workmen concerned.

The Act also provides for voluntary reference of disputes to arbitration by agreement between the employer and the workmen. Such a reference may be made to the Tribunals constituted under the Act.

All State Acts relating to the settlement or adjudication of disputes are expressly saved and the Industrial Disputes Act will not override them.

STATISTICS

While in 1958 the time-loss was 7·8 million man-days, it was 5·6 million in 1959 and 4·6 million in 1960.

As for 1959, there was a decrease of 27·8 per cent over the figure for 1958 in time-loss due to industrial disputes in the country.

The percentage distribution of industrial disputes by duration, however, did not show any marked variation from that in 1958 which was 8·4 days.

About 76·6 per cent of the total time-loss was accounted for by disputes in the manufacturing sector as compared with 51·9 per cent in the previous year. In this sector the time-loss recorded in the cotton mill industry was 26·3 per cent of the total. Next in order came cement (6·8 per cent) and jute mill industry (3·2 per cent). Mining and quarrying also recorded a considerable time-loss during the year accounting for nearly 10·9 per cent. Transport and communications accounted for 3·2 per cent of total time-loss.

About 67 per cent. of the work-stoppages did not last more than 5 days. The disputes which lasted for a month or more accounted for only about 10 per cent.

Classification of the disputes by causes shows that wages, allowance and personnel involved 41·4 per cent of the workers and 43·5 per cent of the man-days lost; bonus 14·3 per cent workers and 9·3 per cent of man-days; leave with wages 3·8 per cent. workers and 0·5 per cent man-days; retrenchment 2·0 per cent. workers and 4·8 per cent man-days; others 38·5 per cent workers and 41·9 per cent. man-days.

32·3 per cent. of the disputes during 1959 were unsuccessful from the point of view of the employees. 23·7 per cent. were decided in their favour, and 14·0 per cent. resulted in their favour partially. In about 30 per cent. of the disputes, employees resumed without any final decision having been reached. The percentage of 'indefinite' disputes increased to 30 per cent. from 23·7 per cent. in 1958.

About 40 per cent. of the disputes terminated as a result of Government's intervention. About 26 per cent. of disputes terminated through mutual settlement.

The following table sets out the number of disputes in some of the years since 1950, the number of persons affected by these disputes and the total time lost in man-days :

Year	Number of disputes	Number of workpeople involved	Number of man-days lost
1950 ..	814	719,883	12,806,704
1951 .	1,071	691,321	3,818,928
1952 ..	963	809,242	3,336,961
1953 ..	772	466,607	3,382,608
1954 ..	840	477,138	3,372,630
1955 ..	1,166	527,767	5,697,848
1956 ..	1,203	715,130	6,992,040
1957 ..	1,630	889,371	6,429,319
1958 ..	1,524	928,566	7,797,585
1959 ..	1,531	693,616	5,633,148

An analysis of the disputes for the year 1959 by State is given in the following table :—

State	No. of disputes	No. of workers involved	No. of man-days lost
Andhra ..	90	42,405	3,34,794
Assam ..	27	15,019	39,918
Bihar ..	127	47,288	3,23,888
Bombay† ..	299	1,99,681	6,64,244
Kashmir ..	9	443	3,101
Kerala ..	128	35,402	2,93,262
Madhya Pradesh ..	67	15,555	2,00,302
Madras ..	200	86,788	10,53,267
Mysore ..	78	56,274	3,11,265
Orissa ..	10	13,757	4,54,827
Punjab ..	21	4,258	11,479
Rajasthan ..	29	7,320	1,03,427
Uttar Pradesh	80	14,817	1,52,900
West Bengal..	330	1,42,767	16,42,735
Andaman & Nicobar Islands ..	4	1,730	5,013
Delhi ..	26	8,780	27,966
Himachal Pradesh ..	1	110	660
Tripura ..	5	1,222	10,100
Total ..	1,531	6,93,616	56,33,148

Time-loss per dispute was 3,679.

Time-loss per dispute by State was as follows : The figures show the number of days :—Andhra 1,691 ; Assam 2,797 ; Bihar 7,081 ; Bombay† 5,216 ; Kashmir 2,280 ; Kerala 5,138 ; M.P. 2,522 ; Madras 3,135 ; Mysore 5,781 ; Orissa 13,022 ; Punjab 725 ; Rajasthan 3,140 ; U.P. 1,138 ; W. Bengal 9,428 ; Andamans 9,594 ; Delhi 461 ; Tripura 2,227 ; Total 5,117.

Statistics presented in this section relate to industrial disputes which have resulted in work-stoppages involving 10 or more workers.

In March 1960 Government set up a tribunal to deal with the disputes between employees and management of banks consequent on the strike in the State Bank.

LABOUR APPELLATE TRIBUNAL

The Tribunal was abolished on May 31, 1959. The Law Commission has recommended that the Tribunal should be revived. This proposal is now under the active consideration of the Government of India.

The Industrial Disputes Amendments and Miscellaneous Provisions Act, 1956 abolished the Tribunal with effect from 1st September 1956. After that date no appeals were to be entertained. Pending appeals were however, to be disposed of by the Tribunal as if the Act had not been repealed.

COLLECTIVE AGREEMENTS

A description of some major collective agreements between employers and labour is given in the 1959-60 edition of the *Directory*.

WORKING JOURNALISTS' ACT

(See under article on the Press)

THE EMPLOYEES' PROVIDENT FUNDS ACT, 1952

The Employees' Provident Funds Scheme, 1952 framed under section 5(1) of the Employees' Provident Funds Act, 1952 came into force in its entirety with effect from 1st November, 1952.

The rate of contribution is 6¼ per cent of the basic wage and dearness allowance including cash value of food concession if any. The provisions of the amending Bill which has since been passed by both the Houses of Parliament will come into force shortly (Dec. 1960). It provides for deduction of provident fund contribution from retaining allowance usually paid in sugar factories and other seasonal establishments. The question of raising this rate to 8⅓ per cent is under consideration of the Government who have appointed a technical committee to examine which of the industries are able to bear the burden of the enhanced rate of contribution.

The Act initially applied to factories engaged in any of the following six industries :—Cement; Cigarettes ; Electrical, mechanical or general engineering products ; Iron and Steel ; Paper ; Textiles.

The Act has since then been extended to the following additional industries raising the total number of industries covered to 47 :—Edible oils and fats ; Sugar ; Rubber and rubber products ; Electricity including generation, transmission and distribution thereof ; Tea (except in the State of Assam where the Government of Assam have instituted a separate provident funds scheme for the Industry including plantations) ; Printing, including the process of composing types for printing, printing of letter-press, lithography, photogravure or other similar process or bookbinding, but excluding printing presses, covered under "newspaper establishments" to which the Employees' Provident Funds Act has separately been extended under section 15 of the Working Journalists (Conditions of Service) and Miscellaneous Provisions Act, 1955 ; Stoneware pipes ; Sanitary-wares ; Electrical porcelain insulators of high and low tension ; Refractories ; Tiles ; Match factories having a production of over 5 lakh gross boxes of matches a year ; Sheet glass factories, glass shell factories and other glass factories having an installed capacity of over 600 tons per month ; Heavy and fine chemicals, including fertilizers, turpentine, rosin, medical and pharmaceutical preparations, toilet preparations, soaps, inks, intermediates, dyes, colour lakes and toners and fatty acids, oxygen, acetylene and carbon-dioxide gases industry.

† Bilingual.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

The Act was actually enforced in oxygen, acetylene and carbon dioxide gases industry with effect from the 31st of July, 1957.

Indigo; Lac including shellac; Non-edible vegetable and animal oils and fats; Newspaper establishments; Mineral oil refining industry; Tea plantations (other than the tea plantations in the State of Assam); Coffee Plantations; Rubber Plantations; Cardamom Plantations; Pepper Plantations; Iron-Ore Mines; Limestone Mines; Manganese Mines; Gold Mines; Industrial and Power Alcohol Industry; Asbestos Cement Sheets Industry; Coffee Curing Establishments; Biscuit making industry including composite units making biscuits and products such as bread, confectionery and milk and milk powder; Road motor transport establishments, mica factories, mica mines, plywood industry, automobile servicing and repairing industry, cane farms owned by a sugar factory, rice milling, dal milling, flour milling.

The Act applies to all establishments engaged in any of the scheduled industries employing 50 or more persons (20 or more persons in the case of newspaper establishments) and having completed 3 years of their existence irrespective of whether they are owned by Government, a local authority or by private employer. The scope of the Act has now been extended to cover small establishments employing a minimum of 20 workers.

The amending Bill seeking to prescribe the employment strength for purpose of coverage to 20 or more has been passed by both the Houses of Parliament and its provisions will come into force shortly (Dec. 1960).

Qualifications for membership:—Basic wage, dearness allowance and cash value of food concession not to exceed Rs. 500 per month; and one year's continuous service or 240 days' actual work during a period of 12 months or less.

Employees working outside the precincts of a covered establishment in connection with its work and also those with emoluments exceeding Rs. 500 per month, if they apply for membership of the Fund with the consent of their employers, have now been brought within the ambit of the Scheme.

Where an establishment has its own Provident Fund, gratuity or pension scheme and if the total quantum of benefits is not less than that under the statutory Scheme, either such an establishment could apply for exemption under section 17(1) of the Act from the provisions of the Scheme or its employees as a class can opt out under para 27-A of the Scheme.

Full accumulations with interest are refunded in the event of death, permanent disability, superannuation, retrenchment or migration from India for permanent settlement abroad and also on leaving service for any reason after 15 years' membership. In other cases, the member's own share of contribution together with the interest thereon is refunded along with the employer's contribution depending upon the length of membership.

Under para 69(4) of the Scheme, the Central Government have also authorised full refund of employer's contribution in the following contingencies:—Where a factory is closed, the employees who are not retrenched but transferred by the employers to other establishments not covered under the Employees' Provident Funds Act; Where the office establishment is shifted with its employees from the factory premises; Where a member is transferred from a covered establishment to another under the same employer but not covered under the Act; Where employees are discharged and are given retrenchment compensation under the Industrial Disputes Act.

Advances from the Fund can be made for payment towards a policy of life insurance of the member; For serious or prolonged illness of a member or of a member of his family; for purchase of a dwelling house, a dwelling site or for construction of a dwelling house privately or under the subsidised housing schemes for industrial workers.

The Fund vests in the tripartite Central Board of Trustees. The Central Provident Fund Commissioner is the Chief Executive Officer. He is appointed by the Central Government and is subject to its general control and superintendence. He is assisted by fifteen Regional Provident Fund Commissioners one in each region.

In the following regions tripartite Regional Committees have been constituted to advise the Central Board of Trustees on matters referred to them:—Bombay,* Bihar, Madhya Pradesh, Madras, Uttar Pradesh and West Bengal.

A special reserve fund has been created to pay the provident fund accumulations to outgoing members or their heirs, where the employers have failed to pay the whole or a part of the provident fund contributions, to the fund and which were deducted from the wages of the members. A sum of Rs. 20 lakhs has been transferred to this fund from the reserve and forfeiture account of the fund. Initially, relief from this fund will be restricted to cases of death, permanent disability and superannuation.

Statistical data as on 30th November 1960:—

No. of industries covered: 47 (upto Dec. 1960).

No. of Covered establishments: 7,825.

No. of subscribers: About 28 lakhs (out of about 32·5 lakhs—about 86 per cent).

No. of workers getting benefit at end of Dec. 1960: 28·2 lakhs.

Amount of provident fund contributions: Out of Rs. 250·35 crores received a sum of Rs. 63·39 crores was paid as loans, advances, final settlement etc. leaving a balance of Rs. 186·96 crores. This amount includes interest.

No. of exempted and unexempted establishments covered by the Act upto end of Aug. 1960: 7,825. No. of subscribers in such establishments: 27·70 lakhs (ending Aug. '60); total accumulations of provident fund in such establishments: Rs. 180·24 crores.

Rate of interest paid at present on members' accumulations: 3¾ per cent.

Provident fund for workers in the coal industry was introduced by an Ordinance, namely, the Coal Mines Provident Fund and Bonus Schemes Ordinance, promulgated in December 1948. The Ordinance was later repealed by an Act which authorised the Central Government to frame a scheme for bonus and another for provident fund in coal mines.

The scheme applies to the coal mines, in Bihar, West Bengal, Orissa, Madhya Pradesh, Assam, Rajasthan and Andhra Pradesh.

The rate of contribution is one anna per rupee of the total of basic wages, dearness allowance and value of food concessions in cash or in kind. An equal contribution is paid by the employer. Accumulations with interest are refundable to the members or their nominees in the event of death, permanent disability retrenchment or migration from India for permanent settlement abroad, retirement after the attainment of 50 years of age, of the members. A portion of the employers' contribution and interest thereon are forfeited to the fund according to the period of membership.

Full accumulation with interest are also refunded in the event of death, retirement on attaining the age of 50 years, permanent disability and retrenchment.

Statistical data as on 30th Oct. 1960: Members enrolled till end of Oct. 1960: 12,72,832; actual subscribers during 1959-60: 3,49,101; total amount of C.M.P.F. contribution: Rs. 20,89,26,086·82 nP.; total Govt. securities punchased: Nominal value Rs. 23,63,51,400; cost price Rs. 22,93,39,843·23 nP.; total claims settled upto 31st Oct. '61: Rs. 1,09,279; total amount refunded: Rs. 1,84,81,117·91 nP.; amount of employers' contribution and interest thereon forfeited: Rs. 22,49,159·40 nP.; total no. of workers in whose cases employers' contributions have been forfeited: Rs. 62,102; rate of interest paid on members' accumulations: 4 per cent; monthly income and expenditure: Income Rs. 1,00,000; expenditure Rs. 50,000.

TEA DISTRICTS EMIGRANT LABOUR ACT

The Tea Districts Emigrant Labour Act, 1932, was brought into effect from the 1st of October 1933.

The forwarding of recruits to Assam must be made through the prescribed routes where arrangements for feeding, rest and medical treatment have been made and by authorised forwarding agents. It is made unlawful to assist persons under 16 to migrate unless they are accompanied by their parents or guardians. A married woman who is living with her husband may only be assisted to emigrate with the consent of the husband.

To start with, power was vested in the State Governments, subject to Central control, over recruitment as well as over the forwarding of assisted emigrants. Now this power is vested in the Central Government alone.

Repatriation.—It is provided that where an employer fails to make all the necessary arrangements for the repatriation of a worker within fifteen days from the date on which a right of repatriation arises to an emigrant labourer, the Controller may direct the employer to despatch such labourer and his family or to pay him such compensation as may be prescribed within such period as the Controller may fix (sections 13 and 15).

Section 3 of the Act makes provision for the appointment of a Controller of Emigrant Labour with some staff and possibly one or more Deputy Controllers for supervising the general administration of the system which the Act seeks to establish.

The cess is collected by the Controller by the sale of certificates of emigration. Every assisted emigrant has to be provided by the employing interest on whose behalf he was recruited with such a certificate. All particulars about the emigrant together with a running record of the details of his employment in Assam are given on it. Failure to provide a certificate is punishable with a fine which may extend to Rs. 500. The rate of the cess is fixed at Rs. 8.

According to the statistics collected under the Act the labour force in Assam in 1959 consisted of 157,479 men, 155,487 women and 22,847 minors representing 321 gardens out of 603.

In 1959 the number of adults recruited was 4,620 and of minors and dependents 2,056.

There has been a fall in recruitment since 1953. This fall is largely attributable to illicit recruitment as is evident from the fact that by occasional checks on the forwarding route 2,991 such cases were detected in 1959.

During 1959 the number of emigrants and their dependents repatriated was 27,892.

PLANTATION LABOUR ACT, 1951

The Plantation Labour Act was passed by the Government of India in 1951 with a view to ameliorating the working and living conditions of about 12 lakhs of workers employed in plantations. The Act applies to tea, coffee, rubber and cinchona plantations and the State Governments have been empowered to extend it to any other class of plantations.

Though the Act came into force on April 1, 1954 only such provisions as could be given effect to without framing rules became operative on that date. Only seven States have (Feb. 1960) so far framed the Plantation Labour Rules: Assam, Bihar, Madras, Mysore, Punjab, U.P., W. Bengal, Himachal Pradesh and Tripura. In Kerala both the Travancore Cochin and Madras Rules are in force.

* Bilingual.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

The Act fixes the maximum weekly hours of work for adults at 54 and for adolescents and children at 40. The daily hours of work are so arranged that they do not spread over including rest intervals and the time spent in waiting 12 hours a day. Grant of leave with wages at the rate of one day for every 20 days of work for adults and for every 15 days of work for young persons has been provided.

The more important provisions of the Act in respect of health and welfare relate to supply of drinking water, provision of housing and medical facilities, establishment of canteens, maintenance of creches and appointment of Welfare Officers.

The Act applies to plantations of 25 acres or more or where 30 or more persons are employed or were employed on any day during the preceding twelve months.

In the Second Plan Rs. 2 crores were allotted for welfare schemes.

Names of States showing within brackets the dates from which the plantation labour rules were effected in the respective States, the number of estates covered and the number of workers employed in the estates (1957 position):

Madras (Dec. 28, 1955; 261 estates; 79,489 workers).

Mysore (Oct. 1956; 705 estates; 78,000 workers).

Uttar Pradesh (March 30, 1957; 16 estates; 1,994 workers).

West Bengal (Dec. 1956; 283 estates; 1,37,281 workers). This relates only to the 172 estates which submitted returns.

Tripura (Sept. 12, 1955; 55 estates; 11,000 workers). The number of workers is approximate.

SHOPS AND COMMERCIAL ESTABLISHMENTS ACTS

Subject to certain exceptions the Acts apply to shops, commercial establishments, restaurants and places of amusement in certain selected urban centres. Some employees such as those employed in a confidential capacity and those whose work is of an intermittent character are excluded from the scope of the Acts.

The Bombay, Madhya Pradesh and Assam Acts have fixed daily hours of work at nine. In the U.P. and Madras Acts the daily hours are eight while in the West Bengal and the Punjab Acts a ten-hour day has been prescribed. Rest intervals, of half an hour are prescribed in the West Bengal, U.P. and the Punjab Acts while an hour's interval has been granted in the Assam, Bombay*, U.P. and Madras Acts. Opening and closing hours have also been fixed by the Acts. The Assam and West Bengal Acts, however, prescribe only closing hours. Most of the Acts also fix the maximum overtime work that can be taken from the employees. In some cases slightly different hours of work have been fixed for employees of commercial establishments, restaurants and places of amusement.

Provision has been made in all the Acts for weekly closure of shops and establishments although in some Acts, for example the Bombay and Assam Acts, theatres, hotels, etc. are exempted from this provision. In addition to the weekly holiday, provision for privilege leave of 12 to 15 days in a year has been made in all the Acts. The Assam, West Bengal, Madras and U.P. Acts make further provision for casual leave and sick leave of 10 to 12 days and 12 to 30 days respectively.

All the Acts, except the Bengal Act, have made provision for the regulation of employment of children and young persons. The minimum age for the employment of children in the Assam, and Madhya Pradesh Acts is 12 while in the Madras and U.P. Acts it is 14. The hours of work for children and young persons are 7 per day in the Punjab, Madras and Madhya Pradesh Acts and 6 in the Bombay* and U.P. Acts. Children cannot work after 7 p.m. according to the Bombay*, Madras and the Punjab Acts and after 9 p.m. according to the Madhya Pradesh Act.

By the Madras and U.P. Acts the wage period should not exceed one month and by the Punjab Act it should not exceed a fortnight. The Assam Act fixes the wage period at one month. After they become due wages should be paid within 10 days in Assam and West Bengal, 7 days in U.P. and 5 days in Madras. In the area covered by the Punjab Act wages should be paid on demand at the expiry of the wage period. Overtime wages are payable at twice the ordinary rates in Madras, U.P. and the Punjab, at one and a half times in Bombay* and the area covered by the Madhya Pradesh Act and at one and a quarter times the ordinary rate in West Bengal. Hotels, restaurants and other eating places in Bombay* are, however, required to pay overtime wages at twice the ordinary rate. Fines and deductions are regulated under the Madras and U.P. Acts.

One month's previous notice or one month's wages in lieu of notice before discharge is stipulated in the U.P., Punjab, Madras and Madhya Pradesh Acts. The Bombay* Act provides for only 14 days' notice or pay in lieu thereof. The Madras and Bombay* Acts make provisions relating to cleanliness, ventilation, lighting and precautions against fire in establishments covered by the Acts.

The Weekly Holidays Act, 1942 provides for a weekly closure of shops and for the grant of a weekly holiday to employees. The Act has been in force in the Bihar, Ajmer, Coorg, Orissa, Rajasthan, Vindhya Pradesh and Hyderabad areas.

The number of establishments and the number of persons employed by States for 1958 are given below. The first figure shows the number of establishments and second of persons employed :—

Andhra Pradesh 1,08,111; 83,655; Assam 5,936; 9,813; Bihar 7,961; 6,005; Bombay* 4,33,643; 6,52,336; Kerala 24,951; 48,350; Madhya Pradesh 65,676; 45,085; Madras 1,76,021; 2,19,010; Mysore 71,321; 80,556; Orissa 1,752; 6,756; Punjab 1,39,561; 75,168; Rajasthan 11,579; 7,299; West Bengal 1,84,573; 3,79,836; Andaman & Nicobar 219; 261; Delhi 47,367; 85,969; Himachal Pradesh 2,353; 1,435; Tripura 1,283; 2,016;

There was no information from Jammu and Kashmir, U.P. and Manipur.

INDUSTRIAL EMPLOYMENT (STANDING ORDERS) ACT, 1946

The Industrial Employment (Standing Orders) Act, 1946 which applies to industrial establishments employing 100 or more workers provides for the framing of Standing Orders laying down the conditions of employment of workers employed in the establishments.

The Act extends to the whole of India except the State of Jammu and Kashmir, and is administered both by the Central and State Governments.

So far as the Central Government is concerned it is responsible for administering the Act on railways, major ports, mines, oil-fields and other establishments under its control. Both the Central and the State Governments have been empowered to extend the scope of the Act to establishments in any industry employing less than 100 workers or to any other class or classes of establishments or to exempt any establishment from any of the provisions of the Act.

The total number of establishments coming within the purview of the Act at the end of 1958 was 12,352 of which 10,872 establishments with 32·68 lakh workers belonged to the State sphere and 1,480 with 6·06 lakh workers, to the Central sphere. The employment strength of all these establishments was about 38·74 lakhs.

The number of establishments which had certified Standing Orders in both the spheres at the beginning of 1958 was 5,797 which formed 46·9 per cent of the total covered. Of these 4,700 were in the State sphere and 1,097 in the Central sphere.

The percentage of workers having certified Standing Orders to the total number of employees came to 79·8.

COLLECTION OF STATISTICS ACT, 1953

This Act which replaces and embodies the main provisions of the Industrial Statistics Act is designed to facilitate the collection of statistics of certain kinds relating to industries, trade and commerce. It empowers the Central and the State Governments to direct that statistics shall be collected about—

(a) any matter relating to any industry or class of industries,

(b) any matter relating to any commercial or industrial concern or class of commercial or industrial concerns and in particular any matter relating to factories, and

(c) any of the following matters, so far as they relate to the welfare of labour and the conditions of labour, namely, (1) price of commodities, (2) attendance, (3) living conditions including housing, water supply and sanitation, (4) indebtedness, (5) rents of dwelling houses, (6) wages and other earnings, (7) provident fund and other funds, (8) benefits and amenities provided for labour, (9) hours of work, (10) employment and unemployment, (11) industrial and labour disputes, (12) labour turnover, and (13) trade unions.

The Central or State Government can appoint an officer to be the Statistics Authority for the purpose of collecting any statistics and such authority has the power to call upon the owner of an industrial or commercial concern to furnish the necessary information. He has also the right of access to any relevant records or documents in the possession of any person required to furnish the information and can enter any premises where he believes such records or documents are kept for the purpose of inspecting them or taking copies. The Act prescribes penalties for improper disclosure of information or returns or for wilfully furnishing false information.

WAGES

Central Wage Boards were set up for three industries—cotton, cement and sugar. All the three Boards have made their reports. (See under individual industry.)

The function of a Wage Board is to fix a wage structure on the principle of fair wages.

A steering group consisting of representatives of Government, employers and workers is engaged in drawing up a wage map of India both industry and region to serve as a guide for authorities who have to fix wages.

A census inquiry about wages is also in progress. Its object is to collect occupational wage rates. About 3,000 establishments are planned to be covered.

No serial statistics of wages and earnings are available in India except for those compiled under the Payment of Wages Act. The returns under the Act, however, relate only to persons in receipt of wages and salaries of Rs. 200 per month.

SHARE OF LABOUR

The Study Group on Wages appointed by the Central Government has prepared a paper on the share of labour in factory output. The available data covers the period 1948 to 1953 beyond which year it was not possible to carry forward the estimates.

The percentage share of workers' earnings in net value of factory output (29 major industries) was as under for different States :

PERCENTAGE SHARE OF WORKERS' EARNINGS IN NET VALUE OF FACTORY OUTPUT (29 MAJOR INDUSTRIES)

	1948	1949	1950	1951	1952	1953
All India	42·43	54·27	49·20	45·14	52·87	50·64
Assam	39·34	43·99	60·46	56·44	64·13	53·45
Bihar	41·32	41·81	37·51	44·81	37·89	41·60
Bombay*	44·52	57·72	47·30	47·24	59·51	59·05
Madhya Pradesh ..	47·83	72·72	59·31	53·23	50·94	54·60
Madras	39·42	43·04	49·55	42·32	49·74	47·96
Orissa	41·81	49·22	39·64	32·89	35·15	29·09
Punjab	43·35	49·73	46·48	41·02	48·08	45·13
Uttar Pradesh	38·56	52·25	44·25	44·32	47·87	48·06
West Bengal	48·69	58·68	45·05	44·42	47·59	49·83
Delhi	37·41	58·26	56·48	42·16	51·69	46·05

* Bilingual.

This table shows that Bombay had the highest percentage for workers' share and Orissa the lowest.

The following table shows the percentage share of workers' earnings in net value of factory output for 7 major industries :

PERCENTAGE SHARE OF WORKERS' EARNINGS IN NET VALUE OF FACTORY OUTPUT (7 MAJOR INDUSTRIES)

	1948	1949	1950	1951	1952	1953
Sugar	26·96	18·44	24·11	29·81	27·59	28·73
Paper and Paper Products	39·11	38·08	38·58	30·13	30·60	30·26
Jute Textiles	55·86	60·20	52·01	42·68	57·57	29·47
Iron and Steel	39·72	34·01	38·42	46·56	42·23	35·64
General & Electrical Engineering	50·07	53·04	50·52	45·68	50·01	53·05
Cement	27·38	29·64	25·78	26·31	21·32	23·31
Cotton Textiles	46·22	64·68	64·97	53·84	66·45	62·42

The State-wise distribution of the above figures shows that for the Cement Industry the share was highest for Uttar Pradesh and lowest for Bombay.

In the Paper Industry the figures for Bombay and West Bengal were comparatively stable while in Uttar Pradesh and Madras they were not. The share in the jute industry was generally highest but Madras was an exception. As regards the Iron and Steel Industry workers in the Punjab fared the best, those in Bihar the worst. In the Cotton Textile Industry no consistent trend in the inter-State variations was noticeable but Bombay,* Madhya Pradesh and Uttar Pradesh were generally in the vanguard.

An interesting departure from normal practice was recently suggested by the Ministry of Labour.

The Union Ministry of Labour and Employment has recommended that all State-owned industrial undertakings should try to increase productivity by introducing the system of payment by results as recommended by the Planning Commission.

The Labour Ministry circulated a memorandum in November 1957 directing those Ministries of the Government of India employing industrial labour to investigate the possibilities of bipartite agreements at the unit level in all industrial undertakings under their control to give effect to this system of payment of wages.

The Planning Commission had recommended that in addition to a basic minimum wage, all extra earnings of the workers should be based on a piece-rate system to step up productivity.

The Commission added, however, that adequate measures should be taken to avoid fatigue and undue speed-up of production.

A piece-rate scheme has been functioning for some years with success in Bombay port and has been extended to Madras. The private sector has made a beginning, notably at the Tata Steel Works, Jamshedpur.

At Jamshedpur, where the piece-rate scheme was introduced after the 1958 strike, it was made clear that wages could be stepped up only in line with increasing production.

DEARNESS ALLOWANCE

The scale of the allowance varies not only from centre to centre and industry to industry, but also, except where these matters are adjudicated upon, from unit to unit in the same industry at the same centre.

Several Adjudicators have granted dearness allowance either at the Bombay Millowners' Association scale which was Rs. 85·85 in January 1961, or at a percentage, varying from 66⅔ per cent to 85 per cent, of that scale. The rate of dearness allowance payable to Bombay City cotton mill workers itself was increased by a decision of the Labour Appellate Tribunal by 5 per cent when the Bombay Cost of living Index Number is between 326 and 335 ; by 7½ per cent when it is between 336 and 350 ; and by 10 per cent when it is above 350. The enhanced rate was given retrospective effect from May 1953 ; the average dearness allowance for a month of 26 working days comes to Rs. 89·25 for 1960.

INDEX OF EARNINGS (1939 = 100)

Year	All India Consumer Price Index	Factory workers		Miners	
		Index of earnings	Index of real earnings	Index of earnings	Index of real earnings

1958	430	424·2	98·7	704·6	163·9

CENTRAL PAY COMMISSION

On 21st August 1957, the Government of India appointed a 6-member Commission of Enquiry under the Chairmanship of Mr. Justice B. Jagannath Das, Judge of the Supreme Court to examine the structure of emoluments and conditions of service of Central Government employees and recommend changes therein.

The Commission submitted its report to Government in August 1959 and the report was published for general information in November 1959.

The main recommendations of the Commission are as follows :—

(*a*) The minimum remuneration should be increased from Rs. 75 to Rs. 80 per month.

(*b*) Dearness allowance should be paid at the rate of Rs. 10 to employees whose basic pay is below Rs. 150 and at Rs. 20 if the pay is between Rs. 150 and 300.

(*c*) Typical scales of pay have been recommended for all services and posts.

(*d*) The age of superannuation should be 58 years for all classes of public servants.

* Bilingual.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

(*e*) The rate of gratuity should be changed so as to make the maximum amount available on completion of 30 years' qualifying service.

(*f*) All employees should subscribe at least at 6¼ per cent of their pay to a General Provident Fund.

(*g*) The revised scales of pay and dearness allowance should be given effect to from 1st July 1959.

(See detailed note under 'Late Particulars').

The Central Wage Board for the Cotton Textile Industry appointed by the Government of India on 30th March 1957, to evolve a wage structure based on the principles of fair wages as enunciated in the Fair Wages Committee's Report, has submitted its report to Government. The Board consisted of two independent members, two representatives each of the employers and workers with an independent Chairman.

The Wage Board for the Cement Industry, whose composition was similar to that of the Cotton Wage Board, has also submitted its report to Government. Both these reports have been accepted by the Central Government and have been published.

The Wage Board for the Sugar Industry recommended an interim relief in February 1959. Later, the Board has recommended a basic minimum wage of Rs. 60 for unskilled workers in the industry throughout the country. The Board's decisions were to take effect from November 1, 1960.

The Industrial Committee on Jute had resolved that Wage Board for the Jute Industry should be appointed.

The Government of India have constituted a Central Wage Board for the Jute Industry consisting of the following: L. P. Dave (*Chairman*); G. L. Oza, M.P., Dr. P. Prasad (*Independent Members*); D. C. Pilkinton, Dr. D. P. Gonekor (*Employers' Representatives*); Inderjit Gupta, M.P., Kali Mukerjee (*Workers' Representatives*).

Terms of Reference of the Board: (*a*) To determine the categories of employees (manual, clerical, supervisory, etc.), (*b*) to work out a wage structure based on the principles of fair wages as set forth by the Committee on Fair Wages, (*c*) to bear in mind the desirability of extending the system of payment by result, and (*d*) to work out the principles that should govern the grant of bonus if any to workers in jute industry.

The Board has recommended an interim relief that every worker employed in jute industry shall be paid interim relief at the rate of Rs. 2·85 per month from 1st Oct. 1960 to 31st Dec. 1960 and at the rate of Rs. 3·42 from 1st Jan. 1961.

COST OF LIVING

The Government of India has sponsored family budget inquiries—the enquiry started in Sept. 1958—covering factory workers, miners and plantation labour with a view to compiling a new series of consumer price index numbers on a uniform basis.

It is stated that the existing series of consumer price index numbers are based on old and out-of-date inquiries and, therefore, do not reflect correctly the present cost of living of industrial workers.

The enquiry is undertaken by the Labour Bureau of the Central Government with the help of the National Sample Survey Organisation which will do the field work.

The survey will take about a year to complete. The selected centres are:

Factory Centres: Digboi, Jamshedpur, Monghyr, Jamalpur, Bombay, Ahmedabad, Nagpur, Bhavnagar, Sholapur, Bhopal, Indore, Gwalior, Madras, Madurai, Coimbatore, Guntur, Hyderabad, Sambalpur, Kanpur, Varanasi, Saharanpur, Calcutta, Howrah, Asansol, Bangalore, Alwaye, Alleppey, Amritsar, Jamunanagar, Jaipur, Ajmer, Delhi and Srinagar.

Mining Centres: Jharia, Kodarma, Naomundi, Balghat, Gudur, Barbil, Raniganj and Kolar Gold Fields.

Plantation: Labac, Rangapara, Mariani, Doomdooma, Coonoor, Darjeeling, Jalpaiguri, Chikmagalur, Ammathi and Mundakkayam.

INDEX FIGURES

Consumer Price Index Numbers for Working Class (Excluding Labour Bureau Series) for 1959.

EMPLOYMENT AND TRAINING

Many of the larger and more progressive concerns have Labour Officers who are directly responsible for all new recruitment.

The Millowners' Association, Bombay conducts special classes for the training of Mill Labour Officers and actively supervises and controls the work done by all such Officers where they have been appointed through the Association. Following the example of the Millowners' Association, Bombay, the University of Calcutta, in co-operation with the Indian Jute Mills Association, has a special course of social work for giving suitable training to Labour Welfare Officers engaged in jute mills. Among other institutions imparting training for Labour Officers mention may be made of the Tata Institute of Social Sciences, Bombay; Institute for Training of Welfare Workers, Bombay; Delhi School of Social Work, Delhi; Institute of Social Sciences, Banaras; Xavier Labour Relations Institute, Jamshedpur; Department of Labour and Social Welfare, Patna University; J. K. Institute of Sociology and Human Relations, Lucknow University; and the training course conducted by the Madhya Bharat Millowners' Association, Indore.

Employment

The Directorate-General of Resettlement and Employment set up by the Government of India periodically conducts training course for Employment Officers. Intensive training is given during such courses on employment exchange work and procedure as well as the collection of employment market information and administration of Vocational Guidance and Adult Counselling.

Employment Exchanges

The number of exchanges was to be increased from 135 at the commencement of the Second Five Year Plan to 330 by the end of the Plan—to provide in course of time an exchange in each District as recommended by the Shiva Rao Committee.

The number of Exchanges functioning in Nov. 1960 was a little over 300 which includes 5 University Employment Bureaux* and one Special Exchange for the Handicapped.

Under the existing rules recruitment to all Central Government posts and services except those within the purview of the Public Service Commission or those for which special methods are prescribed is made through the exchanges. With the Employment Exchanges (Compulsory Notification of Vacancies) Act coming into force on May 1, 1960 private employers have to notify certain categories of vacancies and furnish staff strength returns at regular intervals to Employment Exchanges.

Government has also devised a scheme for the collection of employment market information so as to be in a better position to advise on future manpower requirements. The collection of employment market information in respect of the private sector has commenced in 82 selected employment market areas in different States. The collection of information in respect of the public sector is being collected all over the country including Jammu and Kashmir.

D.G.R.E. has, in fact, as one item on the programme, the collection and dissemination of occupational information. A National Classification of Occupations containing standard and alternative titles, definition and description of all occupations in the country has been published under this programme. Information useful for young persons and school-leavers on various careers are also being prepared as a part of this programme. Eighty-five pamphlets on careers have been published in English and 82 in Hindi and are available for sale at the nominal price of 5 nP. per pamphlet at all Employment Exchanges and establishment selling Government publications. Another publication issued by the D.G.R.E. is the handbook on Training Facilities which contains training facilities, both inplant and institutional, available throughout the country. Separate State volumes giving training facilities in each State have also been brought out.

The number of registered unemployed was 15,84,868 in September 1960. This was 2,983 less than the figure at the close of the previous month. 24,718 persons were helped to secure jobs. 47,147 vacancies were notified. Of the placements, 5,768 were under the Central Government, 12,840 under the State Governments and 3,621 under quasi-Government establishments.

In 1960 over 14,800 women sought employment opportunities through the exchanges every month. On an average 1,740 women were provided jobs every month.

WORKING OF THE EMPLOYMENT EXCHANGES IN INDIA

1959-60	No. of exchanges at the end of the month	No. of registrations during the month	No. of applicants placed in employment during the month	No. of applicants on the live registers at the end of the month†	No. of employers using the exchanges	No. of vacancies notified during the month

September	276	2,22,196	24,718	15,84,868	9,111	47,147

* The Universities are Delhi, Calcutta, Kerala, Varanasi and Aligarh. † At the end of 1960 the number on the live register was a little over 16 lakhs. ‡ Average for 1959.

There is a Working Group of the National Employment Service consisting of reprenentatives of the Government of India and representatives of Governments of States. This meets periodically to review Employment Exchanges procedures and to effect such changes as are warranted by the experience gained in the working of the Employment Exchanges in all the States.

The Central Government has doubled the strength of the pool constituted for temporary placement of well-qualified scientists and technologists returning from abroad, to 200 (Aug. 1960).

Rural Employment Bureau

The scheme for setting up employment information and assistance bureau in selected community development blocks has been put into operation (Nov. 1960). These bureaus will disseminate information regarding employment opportunities and be a link between the rural employment seekers and the employment exchange in the districts.

Training of Craftsmen

Before the start of the Second Plan there were 59 industrial training institutes in the country where training was imparted in 29 engineering and 20 non-engineering trades. The number of seats was 8,622 in engineering and 1,912 in non-engineering trades, thus making a total of 10,534 seats. To meet this increased need of trained craftsmen during the Second Plan, about 31,600 more seats were sanctioned bringing the total seating capacity to 42,134 at the existing institutes as well as at the new institutes. 98 new institutes had been sanctioned during the Second Plan bringing the total number of institutes to 157. It is proposed to add another about 55,000 seats with 150 new institutes during the Third Five Year Plan.

Bisides, there are two other schemes, viz., National Apprenticeship Scheme and the scheme for the Evening Classes for Industrial Workers. During the Second Five Year Plan about 2,000 seats under each of these schemes had been sanctioned. It is proposed to increase the seating capacity of these two schemes by 14,000 and 12,000 seats respectively. The object of the former scheme is to provide apprenticeship training to the persons with a view to enabling them to find suitable jobs in the industry and that of the latter is to improve the theoretical knowledge of the workers by providing training in Evening Classes. Certain salient features of the schemes mentioned above are as given below :—

(1) *Craftsmen Training Scheme :* The period of training extends to two years in engineering trades and one year in non-engineering trades. 12½ per cent of the seats are reserved for scheduled caste candidates and 5 per cent for those belonging to the scheduled tribes. Training is free and no fees of any sort are charged from the trainees. A stipend of Rs. 25 p.m. each is awarded to about 33⅓ per cent of the trainees. Successful trainees are awarded Trade certificates of the N.C.T.V.T.

(2) *National Apprenticeship Scheme :* Training is given free and each trainee is awarded a stipend of Rs. 40 p.m. during the period of training. The period of training extends from 3-5 years.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

(3) *Evening Classes for Industrial Workers:* Selected workers attend these classes after their hours of work and an examination is given at the end of the course. Successful candidates become eligible for a certificate.

(4) *Training of Craft Instructors:* In May 1948, a Central Institute was set up at Koni-Bilaspur in Madhya Pradesh for the training of instructors. The seating capacity was for training 120 in the beginning.

The duration of training in each trade extends at present to five and a half months and it has since been decided to extend it further to nine months. Admission to the institute is open to instructors deputed by the Central and State Governments, to those nominated by private industrial concerns and educational institutions and to private candidates who have already qualified in one of the trades and who desire to take up the profession of instructors. Training is given free to Government nominees. Those deputed by private industrial concerns and educational institutions are charged Rs. 10 p.m. and private candidates Rs. 15 p.m. Proficiency certificates are awarded to Instructor-trainees on the results of an examination held on completion of their courses.

In April 1955, a Central Training Institute for craft women instructors' training was started in the industrial training institute for women at Curzon Road, New Delhi. Its seating capacity is proposed to be increased from 32 to 112 in the Third Five Year Plan.

During Second Plan the seating capacity of the Central Training Institute at Koni-Bilaspur in Madhya Pradesh was raised to 258 and it was decided to permanently locate this institute at Calcutta with a seating capacity of 400. The training with 100 seats, in the first instance, was expected to commence at Calcutta in January 1961, with 9 months training course and the entire institute was to shift to Calcutta during 1961 and the first training course with 400 seats will start from Oct. 1961. Another institute has been established temporarily at Aundh-Poona with 144 seats, pending construction of a permanent one at Bombay. It is now proposed to transfer the institute from Aundh to Bombay in July 1962 and the attached industrial training centre for craftsmen trainees is proposed to be established there in February 1962.

During the Third Five Year Plan, it is proposed to establish four more Central Training Institutes for Instructors at Kanpur, Madras, Hyderabad and Ludhiana and to reorganise and expand the Central Training Institute for Instructors for Women, New Delhi. The Institute at Kanpur was being established from January 1961 with a seating capacity of 152 and its seating capacity is proposed to be increased to 324 before the close of the Third Plan. The C.T.I. at Madras has proposed to have a seating capacity of 244. With the implementation of these schemes the seating capacity of craft instructors will increase from 544 at the end of the Second Plan, to 1,844 at the end of the Third Plan.

Training of Principals and Inspecting Officers: The Government of India have established a refresher course of training for the principals of various Industrial Training Institutes and Inspecting Officers to keep them up-to-date on matters both administrative and technical connected with the training of craftsmen. Three courses have so far been arranged at C.T.I., Aundh (Poona).

(5) *National Council for Training in Vocational Trades:* Government of India have set up the National Council for Training in Vocational Trades.

It is a Central body, tripartite in character with representatives from industry, labour and government, as members for co-ordinating training programme in the country with a view to setting down uniformity of standards and lay down policies in respect of matters connected with different types of training. The Council operates through committees and sub-committees in regard to various training programmes.

Special emphasis is being laid on the affiliation of private training centres, so as to make the best use of the existing training facilities in the country.

Trade tests on all-India basis are being organised under the aegis of National Council for Training in Vocational Trades. Papers are set and moderated by experts from industry. The tests in the institutions are also conducted by experts drawn from industry. In the year 1958-59, 11,088 trainees passed from the various institutions all over India.

It is estimated that the first four years of the Second Plan have created 4·5 to 5 million jobs as against the Plan target of 6·5 million. The back-log at the end of the Second Plan would be between 7·5 and 8 million people. The number of new entrants into the labour market during 1961-66, that is, the Third Plan would be 14·5 million.

WOMEN LABOUR FORCE

(A note on this is given in the 1959-60 *Directory.*)

EMPLOYMENT IN FOREIGN COMPANIES

The position in regard to employment of Indians and non-Indians on salaries of Rs. 1,000 and above in foreign-owned/controlled concerns on the 1st January each year was as follows :—

Year	Indians	Foreigners	Total
1948 ..	742	6,360	7,102
1949 ..	1,085	6,709	7,794
1950 ..	1,406	6,871	8,277
1951 ..	1,784	6,953	8,737
1952 ..	2,290	7,104	9,394
1954 ..	3,455	7,008	10,463
1955 ..	4,139	6,810	10,949
1956 ..	4,862	6,566	11,428
1957 ..	5,906	6,025	11,921
1958 ..	6,959	5,652	12,611
1959 ..	7,916	5,304	13,220

The percentages of the total "wage-bill" paid to Indians and non-Indians in each of the five salary groups are given in the table below :

Salary Groups	Indians	Non-Indians	Total
Rs. 1,000 to Rs. 1,500	16·1	3·1	19·2
Rs. 1,501 to Rs. 2,000	8·5	5·3	13·8
Rs. 2,001 to Rs. 3,000	8·2	14·5	22·7
Rs. 3,001 to Rs. 5,000	4·3	22·2	26·5
Rs. 5,001 and above	0·9	16·9	17·8
Total (All Salary Groups)	38·0	62·0	100·0
	(Rs. 108·44 lakhs)	(Rs. 176·97 lakhs)	(Rs. 285·41 lakhs)

Of the total of 5,652 foreigners employed in foreign controlled concerns in 1958, 4,927 (87·2 per cent) were British. Americans constituted 3·5 per cent, their number being 200 in 1958. Italians, Germans, Australians, Chinese, Norwegians and Ceylonese had recorded small increases in their number as against a diminution in the number of Britishers, Americans, Swiss, Greeks, Danish, French, New Zealanders, Dutch, Swedish, Austrians, Czechs, Japanese and Pakistanis.

ABSENTEEISM

One of the commoner complaints of Indian industrialists has been the high percentage of absenteeism and the large labour turnover in Indian factories, mines, etc.

ABSENTEEISM IN MANUFACTURING INDUSTRIES IN INDIA

Patna : Salimpur Ahra, Patna 3.

Gauhati : Dr. D. Bhujan's Building, Dr. Bhubaneshwar Barooah Road, Gauhati.

Cuttack : 10, Cantonment Road, Cuttack 1.

Ahmedabad : Gomtipur Road, Ahmedabad 10.

The Employees' State Insurance Corporation came into existence as an autonomous body with the passing of the Employees' State Insurance Act in 1948, which applies to all non-seasonal factories using power wherein 20 or more persons work. All employees employed directly or through an immediate employer on any work of the factory whether in a manual or non-manual capacity, on a remuneration not exceeding Rs. 400 per month, are covered by this Act. The Corporation is entrusted with the administration of the Act, whereas a Standing Committee acts as the executive of the Corporation. On matters concerning administration of medical benefit, certification and the like, the Corporation is advised by a Medical Benefit Council. All these bodies are tripartite in character *i.e.* they include representatives of industrial workers, employers and the Government. The Scheme is contributory.

The Scheme at present provides for medical care for the insured persons and in some areas for their families also and sickness, maternity, disablement and dependants' benefit in cash.

The year 1960 saw implementation of the Scheme in Fort Cochin, Mattancherry, Ballia-patam, Cannanore, Tellicherry in Kerala State, Brajrajnagar, Chawdwar, Barang, Rajgangpur and Cuttack in Orissa. Perianaickenpalayam, Peelamedu, Sivakasi, Rajapalayam, Dalmia-puram in Madras, Rajnandgaon in Madhya Pradesh, Hubli in Mysore, Sirpur, Adoni and Kakinada in Andhra Pradesh, Dalmianagar, Japla, Banjari and Dhanbad in Bihar, Udaipur and Bharatpur in Rajasthan, and Shyampur Police Station in West Bengal. Families were also covered for medical care in the areas of Cuttack, Rajgangpur, Brajrajnagar, Chowdwar, Barang, Dalmianagar, Barjari, Japla, Hubli, Sirpur, Adoni, Kakinada, Udaipur, Bharatpur, Dhanbad, Rajnandgaon and Nagpur.

The Scheme covered an additional number of 81,450 employees and 213,400 family units during 1959-60. A sum of about Rs. 3,05,00,000 was disbursed by way of cash benefits during 1959-60.

The Scheme has been enforced in the Union Territory of Delhi and all States except Gujarat (Dec. 1960). The benefit provisions of the E.S.I. Act were extended to about 5,000 workers in Meerut, Moradabad and Firozabad in U.P. from the midnight of March 25, 1961. During 1960-61 the Act was extended to cover about 16 lakh workers in 112 centres. One-third of this number has been covered along with their families.

In Assam, Bihar and West Bengal about 24 to 50 per cent of insurance workers have been covered while in other States the coverage ranges between 50 and 100 per cent.

As on Oct. 30, 1960 the scheme covered 51,76,850 employees in over 100 industrial centres. By the end of March 1962, the scheme would cover an additional 6,61,750 persons—both employees and family units.

The Mahatma Gandhi Memorial Hospital, a 600-bed hospital at Parel, Bombay, exclusively for the benefit of industrial workers insured under the E.S.I. Scheme and estimated to cost Rs. 115 lakhs is nearing completion and will be declared open on Oct. 2, 1961.

During the Second Plan it was proposed to implement the scheme in every industrial centre which has a concentration of 1,500 factory workers, thus carrying the benefits of the scheme to about 2,200,000 employees.

Total receipts of Corporation for 1959-60 : Rs. 7,87,37,163·81. Total benefits : Rs. 5,25,61,301·49. Administrative Expenses : Rs. 90,14,889·84. Employees' Contribution : Rs. 4,08,09,251·63. Employers' Contribution : Rs. 3,18,53,731·01.

Budget estimates for 1961-62 : Receipts Rs. 10,62,78,000 ; expenditure Rs. 10,32,16,000 ; surplus Rs. 30,62,000.

The rates of contribution payable in respect of an employee have been fixed as follows :—

Group of employees	Employees' contribution (recoverable from employees)		Employers' contribution		Total contribution (employees' and employers')	
	Rs.	nP.	Rs.	nP.	Rs.	nP.
1. Employees whose average daily wages are below Re. 1	*Nil*		0	44	0	44
2. Employees whose average daily wages are Re. 1 and above but below Rs. 1-50	0	12	0	44	0	56
3. Employees whose average daily wages are Rs. 1-50 and above but below Rs. 2	0	25	0	50	0	75
4. Employees whose average daily wages are Rs. 2 and above but below Rs. 3	0	37	0	75	1	12
5. Employees whose average daily wages are Rs. 3 and above but below Rs. 4	0	50	1	00	1	50
6. Employees whose average daily wages are Rs. 4 and above but below Rs. 6	0	69	1	37	2	06
7. Employees whose average daily wages are Rs. 6 and above but below Rs. 8	0	94	1	87	2	81
8. Employees whose average daily wages are Rs. 8 and above	1	25	2	50	3	75

The insured persons are entitled to the following benefits : (*i*) sickness benefit, (*ii*) maternity benefit, (*iii*) disablement benefit, (*iv*) dependents benefit and (*v*) medical benefit.

Amounts (Rs.) distributed under some heads for 1959-60* are as follows :—

State	Maternity	Temporary Disablement	Sickness	Dependent Benefit
Andhra Pradesh	82,039	50,000	5,15,000	3,600
Assam	—	3,000	21,000	—

Total	58,734	4,90,000	36,47,000	48,600
	13,59,572	22,01,000	2,16,00,000	10,26,900

* Subject to audit.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

The areas covered, the date of implementation and the date of extension of benefit to families —all these State-wise are shown below :—

Andhra : Hyderabad and Secunderabad (May 1, 1955 ; Jan. 26, 1959) ; Chittivalsa, Eluru, Guntur, Mangalagiri, Vishakapatnam, Nellimarla, Vijayawada (Oct. 9, 1955 and Jan. 26, 1959) ; Warrangal (Nov. 15, 1959 and Feb. 14, 1960) ; Sirpur (March 27, 1960)—48,000 (No. of persons covered upto the end of 1959-60).

Assam : Gauhati, Dhubri, Dibrugarh, Tinsukia-Makun (all 28th Sept. 1958 and 28th Dec. 1958)—4,150.

Bihar : Patna, Monghyr, Katihar, Samastipur (all 15th Dec. 1957 ; 2nd Oct. 1958) ; Banjari, Dalmianagar, Japla (March 27, 1960)—28,000.

Bombay (Greater) : Bombay (Oct. 3, 1954)—5,90,000.

Bombay (Vidarbha) : Nagpur (11th July 1954), Akola and Hinganghat (27th May 1956)—35,000.

Delhi : (24th Feb. 1952 and 1st July 1959)—66,000.

Kerala : Alleppey, Quilon, Trichur including Alagappanagar, Alwaye, Udyogamandal including Ernakulam (all 16th Sept. 1956), Trivandrum (31st Aug. 1958), Feroke, Kozhikode (12th July 1959), Fort Cochin including Mattancherry (3rd Jan. 1960)—52,000.

Madhya Pradesh : Gwalior (23rd Jan. 1955 and 15th Feb. 1959), Indore (23rd Jan. 1955 and 26th Jan. 1959), Ujjain (23rd Jan. 1955 and 1st March 1959), Ratlam (23rd Jan. 1955 and 1st March 1959), Burhanpur (2nd Sept. 1956 and 15th Feb. 1959), Jabalpur (29th Sept. 1957 and 26th Jan. 1959), Bhopal, Nagda (27th Sept. 1959 and 27th Dec. 1959)—80,000. The scheme was extended to Rajnandgaon from Sept. 24, 1960 and 3,200 more factory workers will get medical benefits.

Madras : Coimbatore (23rd Jan. 1955), Madras (20th Nov. 1955), Madurai, Tuticorin, Vikramsingapuram including Ambasamudram (all on 28th Oct. 1956), Salem including Mettur, Tirupur including Udumalpet (all on 30th Nov. 1958), Peelamedu, Periyanayakanpalayam, Rajapalayam, Sivakasi (all on 28th Feb. 1960), Dalmiapuram (27th March 1960)—1,80,000.

Mysore : Bangalore (27th July 1958 and 10th Oct. 1958), Hubli (27th March 1960 and 26th Oct. 1960)—66,000.

Orissa : Barang, Brajrajnagar, Choudwar, Cuttack, Rajgangpur (31st Jan. 1960)—23,000.

Punjab : Amritsar including Verka, Batala, Chheharta, Bhiwani, Jullunder, Ludhiana, Yamunanagar including Abdullapur, Jagadhri and Ambala (17th May 1953 and 1st Nov. 1958), Khasa (10th May 1959 and 9th Aug. 1959), Dhariwal (29th Nov. 1959 and 28th Feb. 1960)—46,500.

Rajasthan : Bhilwara, Bikaner, Jaipur, Jodhpur, Lakheri, Pali Marwar (2nd Dec. 1956 and 2nd Oct. 1958), Beawar (27th Oct. 1957 and 2nd Oct. 1958), Sawai Madhopur (2nd March 1958 and 2nd Oct. 1958), Dholpur, Sri Ganganagar (29th March 1959 and 28th June 1959)—30,000.

Uttar Pradesh : Kanpur (24th Feb. 1952), Kalyanpur, Allahabad, Rampur, Varanasi (31st March 1957), Agra, Lucknow, Saharanpur (15th Jan. 1956), Aligarh, Bareilly, Hathras, Shikohabad (30th March 1958), Ghaziabad, Modinagar, Mirzapur, Sahjanwa (29th March 1959), (Date of extension of medical care for families—14th Nov. 1959 in all the above cases)—1,65,000.

W. Bengal : Calcutta City and Howrah Dt. (14th Aug. 1955)—3,00,000.

SOCIAL SECURITY REPORT

There is a report by a Study Group on Social Security published in Dec. 1958.

A summary of this is given in the 1959-60 edition of the *Directory*.

ACCIDENTS

The Indian Factories Act requires the manager to report all accidents which cause death or bodily injury whereby the person injured is prevented from returning to his work in the factory during the 48 hours next after the occurrence of the accident.

It is the duty of the Inspector of Factories to make an investigation as soon as possible into the causes of and the responsibility for a fatal or serious accident, and to take steps for the prosecution of the person concerned if it is found that the death or serious injury resulted from any infringement of the provisions of the Act or of the rules framed under the Act.

The Department of Mines has been strengthened to facilitate more frequent inspection of mines. As an emergency measure, the Coal Mines (Temporary) Regulations, 1955 have been promulgated for the prevention of apprehended danger and for the speedy remedy of the conditions likely to cause danger. The entire codes of coal and non-coal mines regulations are being revised to provide for more comprehensive measures for safety in mines.

Figures for the years 1951 to 1958 are given in the table below.

Year	FACTORIES			MINES		
	Fatal	Non-Fatal	Total	Fatal	Non-Fatal	Total
1951	234	75,713	75,947	425	2,658	2,993
1952	257	91,033	91,290	453	3,887	4,340
1953	256	93,431	93,687	388	4,286	4,674
1954	267	92,709	92,976	407	4,491	4,898
1955	274	1,16,010	1,16,284	377	4,385	4,762
1956	278	1,28,177	1,28,455	335	4,281	4,616
1957	346	1,31,149	1,31,495	261	3,732	3,993
1958	369	1,36,031	1,36,400	504	3,925	4,429

From 1951 to 1954 the non-fatal accidents in mines represent 'serious accidents'.

WELFARE ACTIVITIES

Welfare work is undertaken by the Central Government, the State Government, private employers and trade unions.

HOUSING

The total provision for industrial housing under the Second Plan as originally earmarked was Rs. 45 crores. As a result of the re-appraisal of the Plan, this figure had to be curtailed to Rs. 27 crores. However, it was decided that projects under this scheme may be sanctioned upto a total of Rs. 37 crores to enable advanced planning of the construction of houses, provided the actual expenditure during the plan period did not exceed Rs. 27 crores. A sum of Rs. 10·87 crores was utilised by various constructing agencies during the first three years of the Second Plan period. A sum of Rs. 7·22 crores had been provided for the construction of houses under the scheme during 1959-60. The remaining amount of Rs. 8·91 crores was expected to be available for utilisation in the fifth year of the plan.

Administrative sanction was accorded for 1,16,101 houses out of which construction of about 85,000 houses was completed by the end of 1959, the remaining being at various stages of construction. Since September 1952 when the Subsidised Industrial Housing Scheme was launched upto the end of 1959, a sum of Rs. 23·8 crores (Rs. 11·1 crores as loans and Rs. 9·7 crores as subsidy) was disbursed to various constructing agencies. The total number of houses constructed during the First Plan was 77,000.

The measures taken by Government for popularising the scheme include increasing the loan assistance to 50 per cent in case of employers and 65 per cent in case of co-operative societies against assistance of 37½ per cent and 50 per cent respectively originally provided ; raising the cost of construction to a maximum of Rs. 3,300 for one-room tenements in places other than Bombay and Calcutta ; provision of short-term loans to State Governments for acquisition and development of land ; giving employers the option to pay loans either in 15 or 20 years. However, these steps have not succeeded in evoking any appreciable response from employers. The subject was considered at the last Housing Ministers and Indian Labour Conferences and it was agreed that the proposal to enact suitable legislation to compel the employers should be seriously considered in case the employers continue to show inadequate response.

OTHER AMENITIES

Section 47 of the Factories Act, 1948 makes it obligatory for all factories employing more than 150 workers to provide adequate shelters and a suitable lunch room for the use of workers during periods of rest. Almost all large industrial establishments had provided tiffin rooms and rest shelters for their workmen. Most concerns had also permitted the establishment of tea stalls on the premises but apart from this, little effort had been made to run co-operative canteens on the lines of those which are associated with most of the large factories in the West.

The Act of 1948 provides for the setting up of creches in factories that employ more than 50 women.

Except for the Ahmedabad Textile Labour Association, the Railwaymen's Unions, and the Mazdoor Sabha of Indore, labour unions have not done much by way of labour welfare. This has been due largely to lack of funds. Some of the Railwaymen's Unions have organised co-operative societies, and various kinds of funds for the provision of specific benefits, such as, legal defence, death and retirement benefits, unemployment and sickness benefits and life insurance, etc.

Labour welfare centres exist in most States.

Other types of welfare work done by factories relate to the provision of recreational facilities, amenities for the education of workers and their children, the provision of cost price grain shops, the establishment of co-operative societies, etc.

On railways there are educational facilities for the children of the employees mostly free of charge. Staff Benefit Funds have also been created which give monetary help to the children and widows of the deceased employees.

Medical facilities provided by employers range from first-aid posts and dispensaries to first-class hospitals.

COAL MINES WELFARE FUND

This Fund was constituted under the Coal Mines Labour Welfare Fund Act of 1947 for financing measures for promoting the welfare of labour employed in the coal mining industry. The principal objects for which this fund is to be utilised are : (1) the improvement of standards of living including housing and nutrition, the amelioration of social conditions and the provision of recreational facilities for the benefit of the labour employed in the coal mining industry ; (2) the provision of transport to and from work ; (3) the improvement of educational facilities ; (4) the provision and improvement of supplies of water ; and (5) the improvement of public health and sanitation, the prevention of disease, the provison of medical facilities and the improvement of existing facilities. The Fund is administered by the Central Govt. on the advice of an Advisory Committee consisting of Government Officers and an equal number of members

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

representing colliery owners and workers employed in the coal mining industry with at least one woman.

Miners in about 900 collieries derive benefit from the Fund.

The main source of income to the Fund is a cess levied on all coal and coke despatched from collieries by rail and road. The Government has decided to increase the cess from 36·9 nP. per metric ton to 49·21 nP. with effect from Jan. 1, 1961: (Dec. 1960). The income of the Fund which was Rs. 1·63 crores during 1959-60 was expected to be Rs. 1·80 crores during 1960-61.

The Fund is maintained under two accounts, *viz.*, Housing Account and General Welfare Account. The money in the former account is utilised for providing housing accommodation to colliery workers and that in the latter on other general welfare measures. Up to 1956-57 the cess was apportioned between the Housing Account and the General Welfare Account in the ratio of 2 : 7. With effect from April 1, 1957 the ratio has been changed to 31 : 6 with a view to providing more funds for the Housing Account.

Two modern well-equipped hospitals of 250 beds each for specialised treatment one in Bihar and the other in West Bengal are functioning. A deep X-ray Therapy Section and a Blood Bank have been provided at the latter. A net work of Regional Hospitals—with facilities for maternity treatment has been provided at Katras and Tisra in the Jharia Coalfields, Chora and Searsole in Raniganj Coalfields, Naisarai and Phusro in the Hazaribagh Coalfields and Jamai and Dhanpuri in Madhya Pradesh Coalfields where another hospital is also under construction.

Besides the maternity and child welfare facilities provided in the hospitals, about 50 centres are also run through Mines Boards in Bihar and West Bengal in addition to 3 centres run by the Fund in Madhya Pradesh, Andhra Pradesh and Orissa Coalfields. Six more centres are to be provided in Madhya Pradesh and Assam Coalfields.

Facilities provided for the treatment of T.B. include 49 beds maintained by the Fund in Clinic or Hospital and 86 beds reserved in various Sanatoria in Bihar, Madhya Pradesh, Andhra Pradesh and Assam. A scheme of domiciliary treatment has been introduced in Bihar, West Bengal, Madhya Pradesh, Andhra Pradesh and Rajasthan Coalfields.

In addition to free treatment the Fund gives grants-in-aid for special diet up to a maximum of Rs. 50 per month per patient for a maximum period of 6 months. Subsistence allowance up to Rs. 50 is also paid to dependents of each T.B. patient under treatment for a maximum period of 6 months. Two 100 bedded T.B. blocks as adjuncts to the two Central Hospitals are under construction.

Two allopathic and 13 ayurvedic dispensaries are run in various coalfields. Two mobile medical units by Colliery owners are paid annual grants-in-aid for maintaining dispensary services of the prescribed standard and interest-free loan is also given to them for building and equipping dispensaries.

Fifty-four beds are maintained for the treatment of leprosy cases at three Leprosy Hospitals run by voluntary organisations in Bihar and West Bengal. Supply of X ray plants to colliery hospitals and of artificial limbs, dentures and spectacles free of cost to miners are also made by the Fund.

Free advice on family planning is given and contraceptives supplied free of cost at the Funds hospitals. Two more family planning clinics, 10, urban and 20 rural clinics are to be opened shortly (Dec. 1960). A scheme for payment of grants-in-aid to colliery owners for family planning work has been introduced.

The Malaria Control Operations of the Organisations have been switched over to eradication programme. Filaria survey is being carried out.

Miners' Institutes each comprising a Welfare Centre for women and children and an Adult Education Centre for miners are maintained—29 in Bihar, 10 in West Bengal, 9 in Madhya Pradesh, 7 in Andhra Pradesh, 2 each in Chanda and Orissa and 1 in Assam. Over 80 Feeder Adult Education Centres are also being run. Four Mobile Cinema Units have been provided, 2 in Bihar and one each in Raniganj and Madhya Pradesh coalfields.

Award of scholarships to the children of colliery workers at Rs. 20 per month per scholar for higher general education and Rs. 30 per month per scholar for technical education, grants-in-aids to educational institutions, organising games and sports, miners' welfare weeks and health weeks in different coalfields are some of the other welfare measures on the educational and recreational side. All-India Coalfield sports meet and All-India Coalfield Football Tournament are also being arranged.

A little over 2,100 houses for miners were constructed by the Fund in the beginning under its township scheme. Under the subsidised housing schemes introduced later, about 3,700 more houses have been constructed. A new housing scheme envisaging the construction of about 30,000 houses direct by the Fund has now been introduced. Upto end of Aug. 1960, construction of 11,463 houses had been completed and construction of 6,017 more houses was in progress. A sum of Rs. 26 crores had been invested.

Other Welfare measures include a scheme of financial assistance to the wives and school-going children of those colliery workers who die of accidents in mines, provision of a Holiday Home for miners at Rajgir, running of a Special Train for Bharat Darshan, provision of rehabilitation centres for disabled colliery workers and cured T.B. patients, etc.

The Fund Organization is also responsible for enforcement of Coal Mines Pithead Bath Rules, 1946 and Mines Creche Rules, 1959, which required provision of pithead baths and creches at collieries by their owners.

The Govt. of India have constituted a Court of Inquiry to examine the question of abolition of contract labour in the coal mining industry.

No. of subscribers to the The Coal Mines Provident Fund Scheme was about 3·49 lakhs in 1959-60. Total accumulations at the end of Oct. 1960. about Rs. 20·89 crores.

Mica Mines Labour Welfare Fund.—The Mica Mines Labour Welfare Fund Act, 1946, which was designed to constitute a similar fund for the benefit of mica workers, provides for the levy of an *ad valorem* duty not exceeding 6¼ per cent on all mica exported from India. The Govt. of India apportions the cess so realised annually among Bihar, Andhra Pradesh, Rajasthan and other States. Under the Act Advisory Committees for Bihar, Madras, and Rajasthan were constituted.

In Bihar, the Fund has provided the following facilities for the Welfare of mica miners:—

Medical Facilities: A 70 bedded Central Hospital, attached with a T.B. Ward of 12 beds; 6 Static Dispensaries; 3 Mobile Medical Units; 2 Maternity and Child Welfare Centres; 2 Ayurvedic dispensaries; 10 beds for the Mica miners and their family members suffering from T.B. at the Mahadevi Birla T.B. Sanatorium, Ranchi.

Educational and Recreational Facilities: 6 Primary schools; 6 Miners' Institutes; 2 Community Centres; 6 Feder Centres; 2 Mobile Cinema Units; Provision of 22 Radio Sets at different mines; Provision of Scholarships to miner's children for technical and general education; Excursion-cum-Study tour of mica miners.

Departmental Wells: 9 (14 are under construction).

Other Welfare Activities: Payment of financial assistance to dependents of mica miners who die from accidents in mines; Payment of subsistence allowance to mica miners suffering from T.B. and undergoing treatment at the Funds Clinic or at the Sanatorium; a Unit is maintained for carrying out anti-malaria programmes in the mica fields.

Andhra-Pradesh: The percentage share of cess is 18·5. The income and expenditure of the Mica Mines Labour Welfare Fund in Andhra Pradesh in 1959-60 was Rs. 2,05,233 and Rs. 3,26,511 respectively.

Facilities provided by the Fund: Medical: A 14 bedded hospital at Kalichedu, two dispensaries at Sydapuram and Talupur, a mobile dispensary at every mine, four maternity centres at Kalichedu, Talupur, Sydpuram and Utukur.

Educational and recreational: One high School and six elementary schools; midday meals to children of mica mine labourers, free books, slates, dress, etc. to the children, two boarding homes at Kalichedu and Sydapuram, scholarships to the children, two community centres at Kalichedu and Shah mine, nine radio's and 11 recreation clubs.

Wells: Three wells by the Fund and six at subsidised rates.

Financial Assistance is granted to the widows of deceased labourers who die from accidents in mines and also to the dependents of the deceased.

Iron Ore Labour Welfare Fund: A proposal to set up the above fund on the pattern of the Coal Mines Labour Welfare Fund was approved by the tripartite industrial committee on mines other than coal at a meeting at Delhi on 24th April 1961.

AGRICULTURAL LABOUR

A second all-India agricultural labour enquiry ended in Sept. 1957.

The report was placed on the table of Lok Sabha on December 21, 1960. The first enquiry was conducted in 1950-51.

The first agricultural Labour Enquiry was conducted in 1950-51 and, as the Report states, one of the main objects of the Second Enquiry was broadly to assess the impact of developmental schemes undertaken under the First Plan on the conditions of agriultural labourers as between 1950-51 and 1956-57.

The results thrown up by the Second Enquiry as compared to those of the First Enquiry are briefly given below: The findings of the first enquiry are given in the 1960-61 Directory.

Occupational structure of agricultural labour households

(*i*) The estimated number of agricultural labour households was 16·3 millions in 1956-57 as against 17·9 millions in 1950-51 i. e. a fall of 1·6 millions.

(*ii*) The landless agricultural labour households in 1956-57 accounted for 57 per cent of the total as against 50 per cent in 1950-51.

(*iii*) According to the 1950-51 Enquiry, the proportion of attached and casual agricultural labour households was 10 : 90. The results of the 1956-57 Enquiry showed that attached labour households accounted for about 27 per cent of the total for all-India, the remainder being casual labour households.

(*iv*) The average size of the agricultural labour household rose slightly to 4·40 in 1956-57 from 4·30 in 1950-51. The average number of wage earners was 2·03 per household, comprising 1·13 men, 0·74 women and 0·16 children. The corresponding figures for 1950-51 were 2·0 wage earners, made up of 1·1 men, 0·8 women and 0·1 children. The slight increase in the earning strength during 1956-57 would appear to be due to more children having come to the labour market in 1956-57.

(*v*) The estimated number of agricultural labourers during 1956-57 was 33 millions composed of 18 million men, 12 million women and 3 million children. The corresponding figures for 1950-51 were 35 millions consisting of 19 million men, 14 million women and 2 million children.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Employment and Unemployment

(*i*) Casual adult male workers were employed, on an average, for wages for 200 days in 1950-51 and for 197 days during 1956-57. They were self-employed for 75 days in 1950-51 and for 40 days in 1956-57.

(*ii*) Casual adult female workers were employed on wages for 134 days during 1950-51 and for 141 days during 1956-57.

(*iii*) As regards children, their wage-employment had increased from 165 days in 1950-51 to 204 days in 1956-57.

(*iv*) Casual adult male workers were unemployed for 128 days in 1956-57, as compared to 90 days in 1950-51.

According to the Report, measurement of employment was not meticulously done in the First Enquiry (1950-51). Wage-employment for half the day or more was counted as full day's occupation and less than that was ignored. All those who worked even for a day in a month were taken to have been gainfully employed. In respect of unemployment, data were collected only for those adult male labourers who reported wage-employment in each month. In the Second Enquiry (1956-57), four intensity classes were laid down, namely, full, half, nominal and nil. A full-day's work meant three-fourth or more of the normal working hours, the "norms" being 10 hours. More than one-fourth and less than three-fourth of the normal hours was considered as work with half intensity. Less than one-fourth was deemed as work with one-eigth intensity. In the tabulation of employment data, the intensities were duly taken into account.

Self-employment data were not collected separately in the First Enquiry, but were only of an inferential nature, as the residual days left after deduction of wage-employment and unemployment from 365 days were taken to represent the quantum of self-employment.

Wages

(*i*) About 76 per cent of the average income of agricultural labour households was derived from wage-employment in agricultural operations as well as from non-agricultural occupations during 1950-51 as against 81 per cent during 1956-57. About 56 per cent of the man-days worked were paid for in cash in 1950-51 and 48·7 per cent in 1956-57. Payments made entirely in kind accounted for 31·3 per cent in 1950-51 and 40·5 per cent in 1956-57. Wage payments made partly in cash and partly in kind related to 9·8 per cent of the total man-days worked in the First Enquiry and formed 10·8 per cent in the Second Enquiry.

(*ii*) The average daily wage rate of adult male workers decreased from 109 nP. in 1950-51 to 96 nP. in 1956-57 and, the average daily wage-rate of adult women also fell from 68 nP. in 1950-51 to 59 nP. in 1956-57. Child labour received an average wage of 70 nP. in 1950-51 and 53 nP. in 1956-57.

(*iii*) In comparing the average wage-rates obtaining in 1956-57 and 1950-51 the difference in imputation procedure of payments in kind as between the First and Second Enquiries, and the relative importance of payments in kind at both the points of time have to be kept in mind, since evaluation of kind payments was done at wholesale prices during 1956-57 as against ruling retail prices during 1950-51.

(*iv*) The estimated wage-bill in agriculture worked out to roughly Rs. 520 crores in 1956-57 as against Rs. 500 crores in 1950-51. The increase was mainly due to the proportion of attached labour households being considerably higher (above 27 per cent) in 1956-57 as compared with 1950-51 (about 10 per cent), and the average annual income per attached labour household as also of all households taken together from agricultural wage-employment in 1956-57 being higher than in 1950-51.

Household income

(*i*) The average annual income of an agricultural labour household in 1950-51 was Rs. 447, while in 1956-57 it was Rs. 437.

(*ii*) The average income realised from different sources during the First and Second Enquiries by agricultural labour households is given below:

Source of income	1950-51	1956-57
	Rs.	Rs.
Cultivation of land ..	59·90	30·07
	(13·49)	(6·87)
Agricultural labour ..	286·97	319·55
	(64·02)	(73·04)
Non-agricultural labour..	53·19	34·94
	(11·09)	(7·99)
Others	46·94	52·91
	(10·51)	(12·10)

Figures in brackets are percentages to total income from all sources.

Income from farming and non-agricultural labour declined during 1956-57 but that from agricultural labour had increased.

Consumption and cost of living

(*i*) The average annual consumption expenditure of agricultural labour households increased from Rs. 461 in 1950-51 to Rs. 617 in 1956-57. The percentage expenditure according to different consumption groups is given below for 1950-51 and 1956-57:

Period	Food	Percentage to total		
		Clothing and footwear	Fuel and lighting	Miscellaneous and services
1950–51	85·3	6·3	1·1	7·3
1956–57	77·3	6·1	7·9	8·7

(*ii*) The average income per household during 1956-57 was Rs. 437 while average consumption expenditure was Rs. 617. The deficit was thus Rs. 180. This deficit, to a considerable extent would seem to have been met from past savings, sale of stocks, remittances received and loans.

Indebtedness

(*i*) About 64 per cent of agricultural labour households was indebted during 1956-57 as against 45 per cent in 1950-51. The average accumulated debt per household increased from Rs. 47 in 1950-51 to Rs. 88 in 1956-57.

(*ii*) The average debt per indebted household also rose from Rs. 105 in 1950-51 to Rs. 138 in 1956-57. One of the reasons for the higher percentage of indebted households as also the higher volume of debt in 1956-57 was the higher proportion of attached labour households, some of whom were under debt bondage and/or tie-in-allotment.

(*iii*) The total estimated volume of indebtedness of agricultural labour households in 1956-57 was Rs. 143 crores as against Rs. 80 crores in 1950-51.

(*iv*) Of the total debt, about 46 per cent was incurred for meeting the consumption expenditure. Social purposes accounted for 24 per cent and productive purposes for 19 per cent, the remaining 11 per cent of the total debt being incurred for meeting the expenditure on other miscellaneous items.

(*v*) Of the total loan, 34 per cent was taken from money-lenders, 44 per cent from friends and relatives, 15 per cent from employers, 5 per cent from shop-keepers and one per cent from co-operatives.

The above is the all-India picture. In the Report, however, the variations in the different States have also been given and significant differences as between 1950-51 and 1956-57 highlighted and accounted for.

Below we give some relevant tables:

The table below shows the average number of days worked by casual male workers in a year:

State and Zone	Wage employment	Self-employment	Unemployment
Central Zone	252	53	60
Uttar Pradesh	280	37	48
Madhya Pradesh	213	75	77
Eastern Zone	216	70	79
Bihar	198	82	85
West Bengal	232	40	93
Orissa	237	75	53
Assam	242	53	70
Manipur	98	145	122
Tripura	283	3	79

All-India	109	186

The average annual income per agricultural labour family (casual and attached taken together) was Rs. 447 and average annual expenditure Rs. 461 at the all-India level.

Of the total income of Rs. 447, an agricultural labour family derived 64·2 per cent of it in the form of agricultural wages, 11·9 per cent from non-agricultural wages, 13·4 per cent from land and 10·5 per cent from other sources.

Of the total expenditure incurred, 85·3 per cent was spent on food, and 6·3 per cent on clothing and footwear and bedding and household requisites.

About 44·5 per cent of the agricultural labour families (casual and attached taken together) were in debt. The average debt per indebted family was Rs. 105. The following table gives the average annual income, expenditure and indebtedness per agricultural labour family:

State, Zones	Average annual income per family	Average annual expenditure per family†	Average debt per indebted family
Central Zone	478	478	62
Uttar Pradesh	551	548	32
Madhya Pradesh	391	395	79
Eastern Zone	506	529	78

Himachal Pradesh	628	656	262
Jammu & Kashmir	654	785	63
All-India	447	461	105

† Excluding ceremonies.

One of the protective measures to improve incomes of agricultural labourers is the Minimum Wages Act, 1948, which *inter-alia* applies to employments in agriculture. The Act envisages the fixation of wage minima before Dec. 31, 1959. In so far as agricultural employments are concerned section 3(1)(*ii*) of the Act lays down that the appropriate Government may, instead of fixing minimum rates of wages for the whole State, fix such rates for a part of the State or for any specified class or classes of such employment in the whole State or part thereof.

Minimum wages for agricultural workers have been fixed for the whole State in Kerala, Orissa Punjab, Rajasthan, Bihar, Madhya Pradesh, Mysore, West Bengal, Himachal Pradesh, Delhi and Tripura and for part of the State, *i.e.* for specified areas in Assam, Andhra Pradesh, Bombay* and Uttar Pradesh. Wages have also been fixed by the Central Govt. in certain agricultural farms/research institutes under the Ministry of Food and Agriculture, military farms and depots under the Ministry of Defence and archaeological gardens at Delhi, Agra, Lucknow, Deeg and Khajuraho.

* Bilingual.

The Minimum Wages Act also envisages that minimum rates of wages fixed or revised under the Act in respect of scheduled employments may consist of a basic rate of wages and special allowance to be adjusted periodically according to variation in the cost of living index to the practicable extent; it may be a basic rate of wages with or without the cost of living allowance and the cash value of concessions allowed; or it may be an all-inclusive rate allowing for the basic rate, the cost of living allowance and cash value of concessions, if any.

In view of this statutory provision, the Ministry of Labour and Employment have undertaken the construction of consumer price index numbers for agricultural labourers on the basis of "weights" provided by the 1950-51 Agricultural Labour Enquiry. The collection of retail prices for about 70 selected commodities from a number of villages selected on the principle of stratified random sampling was entrusted to the field staff of the National Sample Survey Directorate. The price collection started simultaneously with the conduct of the Second Agricultural Labour Enquiry from the end of 1956.

On the basis of prices furnished by the National Sample Survey Directorate, consumer price index numbers for re-organised States have been compiled by the Labour Bureau, Ministry of Labour and Employment upto October 1960. It is proposed to publish the index numbers at the All-India and State levels.

WORKERS' EDUCATION

The Government of India in co-operation with the Ford Foundation appointed an International Team to suggest steps to be taken for (*a*) education of trade union representatives in the techniques of trade union organisation, management and financing, (*b*) education of union members for intelligent participation in union affairs and (*c*) education of union representatives in responsible and effective participation in management.

The Team submitted its report in June 1957.

The main recommendations of the Team are given in the 1960-61 edition of the *Directory*.

A Central Board for Workers' Education was constituted by the Central Government in September 1958 and a sum of Rs. 48 lakhs had been provided for the scheme for the Second Plan period.

The Board has established 12 workers' education centres in different parts of the country. It has organised two training courses for top-level instructors known as teacher-administrators at Bombay and Calcutta respectively in 1958 and 1959 and trained 67 teacher-administrators for employment under the Board. 33 trade union nominees were also trained along with them by way of helping the trade unions to organise their own Workers' Education Programme. The third training course for teacher-administrators for a batch of about 40 trainees is expected to be held in Bombay.

Ten workers' education centres had upto Oct. 31, 1960 trained 777 worker-teachers in 34 sessions and 186 were under training. 219 unit level classes were in existence by the end of Oct. 1960 against 38 at the end of Oct. 1959.

The duration of courses for the Teacher-Administrators, Worker-Teachers and Workers is about six, three and four months respectively.

The scheme is being continued in the Third Five Year Plan with a tentative provision of Rs. 2 crores.

Other training schemes are given below:—

Craftsmen Training in Institutes: The object of this scheme is to train craftsmen for the engineering and non-engineering trades. The training period is of two years of which six months are spent in industry. Before the commencement of the Second Five Year Plan, there were 10,534 seats at the various Institutes. It was hoped that by the end of the Second Plan 30,530 more seats would be added.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

National Apprenticeship: The object of this scheme is to provide apprenticeship training to men in existing industrial establishments. The response from the industrialists to take in apprentices has not been encouraging, and therefore, it is proposed to enact legislation to make it obligatory on industry to take in apprentices. It was expected to have 3,296 apprentices in industry by the end of the Second Five Year Plan.

Evening Classes: This scheme is for providing facilities to industrial workers to improve their theoretical knowledge of the craft. The workers are required to attend evening classes of two hours thrice a week. It was expected to have 2,645 workers attending evening classes by the end of the Second Five Year Plan.

Principals and Inspecting Officers: The object of this Scheme is to provide a refresher course to Principals and Inspecting Officers employed in the Training Schemes for Craftsmen. The first course of this Scheme was conducted in September, 1959. Other courses were to be held in the remaining period of the Second Plan.

Scheme for the Training of Craft Instructors: The object of this Scheme is to train Instructors for the Industrial Training Institutes. At present there are two Institutes, one at Koni-Bilaspur and the other at Aundh-Poona with a seating capacity of 258 and 144 respectively. It has been proposed to move the Institute at Koni to Calcutta and that at Aundh to Bombay. The seating capacity of these Institutes would be raised to 400 each.

There is a proposal to set up four more such Institutes in the Third Five Year Plan.

There are schemes for the educated unemployed as already mentioned:

Work and Orientation Centres: The object of this scheme is to assist educated unemployed persons to equip themselves for employment in other than white-collar jobs. A review Scheme has been working in Delhi and Kerala since Feb. 1959. Sanctions for 16 more Centres have been given.

Small Scale Industries: Two production Centres were sanctioned by the Ministry of Commerce and Industry to be established in Kerala and the Ministry of Labour and Employment arranged for training for about 344 persons. Of these 84 per cent have been absorbed in suitable employment and efforts to absorb the remaining are being made by the Small Scale Industries Organisation. There has been a proposal to start more production centres on these lines.

Goods Transport Co-operatives: A pilot scheme for the establishment of five Goods Transport Co-operatives one each in West Bengal, Bombay,* Madras, Kerala and Delhi was prepared by the Ministry of Transport and circulated to States. The Government of Madras, West Bengal and Kerala have already agreed to implement the scheme. Proposals from the Government of Orissa and Tripura Administration for allotment of one unit each to them have been received. These requests are under consideration of the Ministry of Transport.

CODE OF DISCIPLINE, EFFICIENCY

A Code of Discipline was evolved in Oct. 1957 and was adopted by the Indian Labour Conference at its session at Naini Tal in May 1958.

This Code lays down certain do's and don'ts both for managements and unions with a view to ensuring better discipline in industry and includes (1) no strike or lock-out without notice and no go-slow tactics, (2) no acts of violence, intimidation or coercion, (3) utilisation of existing machinery for settlement of disputes and (4) speedy implementation of awards and agreements.

A model procedure for the redress of grievances was evolved and accepted by both parties.

The Code also provides for sanctions against breaches of the Code. The sanctions will be enforced by the Central Organizations of employers and workers against the constituent units.

The sanctions are: ask the unit to explain the infringement of the code; give notice to the unit to set right the infringement within a specified period; warn and in cases of a more serious infringement, censure the unit concerned; impose on the unit any other penalty open to the organization; disaffiliate the unit from its membership in case of persistent violation of the code.

Code of Efficiency: The Committee appointed for exploring the means for realising the objectives for which the code of efficiency has been suggested, has drawn up a questionnaire on guiding principles in labour-management co-operation. The questionnaire have been widely circulated with a view to collecting necessary data for the purpose of the background material for further discussion in due course.

The Labour Ministry has established an Evaluation and Implementation Division and an Implementation Committee consisting of four members each from employers and employees and four officials.

An important function of the Evaluation & Implementation Division is to assess the working of important labour laws, awards, policy decisions and major breaches of the Code. The Officer-in-charge of the Division conducted case studies of strikes in T.I.S.C.O., Jamshedpur, Premier Automobiles Ltd., Bombay and Calcutta Tramways which took place in 1958. He enquired into the working of the Calcutta Dock Labour Board also.

The Code has met with a large measure of success. It has produced a sobering effect on the parties and has created a favourable climate for industrial peace. The number of man-days lost during 1959 and 1960 due to strikes and lockouts has already shown a decline as compared to that in the preceding years.

All State Governments have now appointed Implementation Officers and almost all of them have set up tripartite Implementation Committees to deal with the complaints of non-implementation of labour enactments, awards, Code of Discipline, etc. in the State sphere. The Central E & I Machinery co-ordinates the activities of the State Implementation Machineries to ensure uniform implementation of major policy decisions, Code of Discipline, etc.

The Central E & I Division and some of the State Implementation Machineries have met with a fair measure of success in the new policy of bringing about out-of-court settlement of industrial disputes pending in High Courts or Supreme Court. To minimise litigation in future, the Central E & I Division has been able to persuade all the Central Employers' and Workers' Organisations to set up committees to screen cases of industrial disputes before they are taken by their members to higher courts. It is one of the tasks of the Division to ensure that these committees function effectively.

WORKERS' PARTICIPATION IN MANAGEMENT

A study group set up to report on the question of workers' participation in management published its report at the end of May 1957.

The study group was led by the Secretary to Government, Ministry of Labour (at the time Mr. Vishnu Sahay).

The main recommendations of the group are mentioned in the 1960-61 Directory.

The Indian Labour Conference which met in July 1957 appointed a tripartite Committee to compile a list of major industries in the public and private sectors in which workers' participation in management could be introduced.

This Committee compiled a list early in August.

The industries selected from the private sector are: cotton textiles, jute, engineering, chemicals, tobacco, paper, sugar, cement, mines and plantations.

Those from the public sector include: railway workshops and yards, posts and telegraphs, ports, shipyards, transport workshops, mines, printing presses and electricity undertakings.

A seminar on labour-management co-operation was held in New Delhi on 31st Jan. 1957. Workers' and employers' representatives from more than 30 units attended the seminar.

Position in 1959

Till March 1960, 24 joint management councils had been set up.

Public Sector: Hindustan Machine Tools Ltd., Jalahalli P.O., Bangalore. Kerala State Transport Department, Trivandrum. The Punjab Government Press, Chandigarh. The Travancore Rubber Works, Trivandrum. The Hindustan Insecticides Ltd., New Delhi. The Fertilizers & Chemicals Travancore (P) Ltd., Udyogmandal P.O., Kerala. Messrs. Nalan Foundry, Nahan (Himachal Pradesh). Messrs. Gwalior Leather, Tannery & Tent Factory, Morar (Gwalior).

Private Sector: Messrs. Simpson Group & Co. Ltd., 202, Mount Road, Madras. The Indian Aluminium Co. Ltd., 31, Chowringhee Road, Calcutta-16. Messrs. Modi Spinning & Weaving Mills Co. Ltd., Modinagar (U.P.). Messrs. Bally Jute Co. Ltd., Bally, District Hooghly. The Kanknarrah Co. Ltd., 4, Clive Row, Calcutta-1. Panitola Tea Estate, Assam, c/o Indian Tea Planters' Association, Royal Exchange, Calcutta. Sonabheel Tea Estate, c/o Indian Tea Planters' Association, Royal Exchange, Calcutta. Messrs. Malleable Iron & Steel Castings (P) Ltd., Lower Parel, Bombay-13. The Rajkumar Mills Ltd., Indore. Bombay Silk Mills Ltd., Industrial Estates, Lalbaug, Bombay. Messrs. Tata Iron & Steel Co. Ltd., Jamshedpur. Shri Digvijay Cement Co. Ltd., Sikka *via* Jamnagar, Saurashtra. Shri Arvind Mills Ltd., Post Box No. 56, Ahmedabad. Hahairathe Tea Estate, Dooars, West Bengal. Messrs. Devidayal Cable Industries (P) Ltd., Bombay-10. Shri Ganganagar Sugar Mills, Ganganagar, Rajasthan.

A meeting of the Workers' Participation Sub-Committee in Delhi in Sept. 1958 reviewed the progress made generally in this direction and came to the conclusion that this left much to be desired. Every effort, it said, should be made to bring in more units into the scheme.

Position in 1960

Second Seminar on Labour Management Co-operation was held on 8th and 9th March, 1960.

At the Seminar the participants shared their experience in the matter of functioning of Joint-Management Councils, brought out the difficulties they had to face at the initial stages and how these difficulties were met. The discussions at the Seminar revealed a wide measure of agreement that the stage had now been reached when the Scheme could be taken out of the pilot stage and extended to as many establishments as possible. The main recommendations made by the Seminar for intensifying the drive for the extension of the scheme were as follows: (i) The existing arrangements at the Centre for promoting the scheme should be strengthened and suitable machinery should also be created at the State levels; (ii) Suitable arrangements should be made for collection and dissemination of information on the working of Joint Management Councils in various undertakings; (iii) A small tripartite committee should be constituted at the Centre which should review the progress of the scheme from time to time, sort out difficulties that might have arisen in the functioning of Joint Management Councils, and suggest measures for overcoming these difficulties; (iv) The recommendation

* Bilingual.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

made by the Indian Labour Conferece at its 15th Session, that it was not necessary to undertake legislation for the present for implementing the scheme, was endorsed by the Seminar and it was agreed that it should continue to be operated on a voluntary basis.

In pursuance of the recommendations made by the Seminar, the Government of India have already set up a small cell in the Ministry of Labour and Employment to deal with all matters connected with the scheme. The Ministry have addressed the Central Organisations of employers and workers requesting them to suggest names of suitable units from amongst their affiliates where Joint Management Councils could be set up. Assistance of the National Productivity Council has also been sought for the selection of units where the Scheme could be introduced. State Governments have been requested to set up suitable machinery at the State level to look after matters connected with the implementation and extension of the Scheme. The existing Sub-Committee on Workers' Participation in Management, set up by the Indian Labour Conference, has been reconstituted as an independent body.

The details of the scheme for giving workers a voice in the management of the public sector undertakings through joint management councils, are being worked out (Feb. 1961).

TRIPARTITE LABOUR MACHINERY

The Tripartite Labour Machinery at the centre consists of (*a*) Indian Labour Conference, (*b*) Standing Labour Committee and (*c*) Industrial Committees. Besides, there are such bodies as the Joint Consultative Board, the Central Advisory Council, the Labour Ministers' Conference etc.

The Indian Labour Conference is composed of 24 members representing the Central and State Governments and 9 members each representing the employers and workers, nominated by the Government of India in consultation with the all-India organisations of employers and workers.

The function of the Conference as laid down at the fourth Indian Labour Conference is to "advise the Government of India on any matters referred to for advice taking into account suggestions made by the Provincial Governments, States and Chamber of Princes† and the representative organisations of employers and workers recognised for the purpose of the Conference".

The Standing Labour Committee was constituted by a resolution of the Indian Labour Conference adopted in August 1952. At present the Committee consists of 5 representatives each of the employers and workers and 12 representatives of the Governments. The representatives are nominated by the Government of India in consultation with the all-India organisations of employers and workers.

The function of the Committee is to consider and examine such questions as may be referred to it by the Plenary Conference or the Central Government.

The Eighth Session of the Indian Labour Conference decided to establish Industrial Committees to discuss various specific problems special to industries covered by them and submit their reports to the Conference. The first Industrial Committee to be set up in pursuance of the decision was that on Plantations in January 1947. In 1948 Industrial Committees were set up for four important industries *viz.* Cotton Textiles, Coal Mining, Cement and Leather goods, and in 1955 for Building and Construction Industry. There is no uniformity in the representation accorded to Government, employers and workers in these Committees but the representation given to employers and workers is equal in all cases.

The Joint Consultative Board for Industry and Labour was constituted to promote agreements between employers and workers and to ensure their proper implementation following a recommendation in that regard made by the Development Committee on Industries in 1951. The Board as originally constituted consisted of three representatives each of employers and workers with the Union Minister for Planning as Chairman. Since February 1954 the Board has been reconstituted as a purely bi-partite body and it now consists of 8 members, 4 representing employers and 4 workers. It considers such questions as rationalisation, productivity studies, payment by results, association of workers with management, etc. At its last meeting held in September 1956 the Board decided to set up a subsidiary Joint Consultative Board for the Cotton Textile Industry.

Bombay* was the first State to set up a tripartite Labour Advisory Board in March 1947. This example was followed by Uttar Pradesh, Bihar, West Bengal, Madras, etc.

The function of these boards is to help maintain harmonious industrial relations and advise Government on matters affecting labour.-

LABOUR ADMINISTRATION

Apart from the main Secretariat of the Ministry of Labour it has several attached and subordinate officers. The activities of some of these have been described in the relevant sections, such as Miners' Welfare Fund, and notes on some others are briefly given below.

Labour Bureau.—To meet the ever growing needs of Government, industry and labour for accurate and reliable information relating to labour conditions, labour legislation, etc., the Central Government established on 1st October 1946, a Labour Bureau.

Among other things the Bureau edits the *Indian Labour Journal* and the *Year Book*.

Chief Labour Commissioner.—The Central Government, in the Ministry of Labour, have also appointed a Chief Labour Commissioner. This officer is in charge of industrial relations and conciliation, labour welfare, operation of labour laws, and maintenance of information regarding wage rates and conditions of work in Central undertakings. There are a number of deputies working under him known as Regional Commissioners.

Chief Adviser of Factories.—In order to ensure uniformity in the administration of the Indian Factories Act and to improve conditions generally in Indian factories, the Government of India have appointed an officer designated the Chief Adviser of Factories. The Chief Adviser has a number of deputies, including deputies who attend to matters relating to the health of the workers and the sanitation and cleanliness of factories.

CENTRAL LABOUR INSTITUTE

As a step towards meeting the need for an agency designed to afford facilities for the scientific study of the various aspects of industrial development as relating to the human factor, the Planning Commission, as part of the First Five Year Plan, recommended the establishment of a National Museum of Industrial Safety, Health and Welfare to serve as a nucleus of an Insitute for conducting specialised courses of training and education in labour and allied problems.

The Institute will be a composite one, comprising (1) a Museum of Industrial Safety, Health and Welfare, (2) an Industrial Hygiene Laboratory, (3) a Productivity Centre, (4) a Training-Within-Industry Centre, (5) an Industrial Physiology Section, (6) an Industrial Psychology Section, (7) a Library-cum-Information Centre, and (8) a Training Centre.

The Government of Maharashtra has made available free of cost an 18-acre plot of land near Sion in Bombay. The Central Government has issued sanction for an expenditure of about Rs. 25 lakhs for the construction of the main building. Sanction has also been issued for an expenditure of Rs. 5 lakhs for the construction of an administrative block. The construction work of these two buildings has just started (Dec. 1960) and it is expected to be completed in 2-3 years' time. Under the various technical assistance programmes, such as operated through T.C.M., I.L.O., plant, equipment and technical publications have been procured for equipping the various sections of the institute. Some more equipment are also expected to be received under the Colombo Plan of Technical Assistance. Certain equipment have also been received either on loan or as free gift from some of the indigenous manufacturers and through the representatives of foreign Firms in India. The following sections of the Institute have already started functioning:

Museum of Industrial Safety, Health and Welfare: Pending construction of the building a 10,000 sq. ft. floor space has been acquired in the Old Victoria Mills Compound at Gamdevi (Bombay) where the various exhibits on Safety, Health and Welfare aspects are being displayed. So far (Dec. 1960) wood working machinery, docks and steam plant sections have been completed. Display arrangements of other machinery and personnel protective equipment sections are in hand.

Industrial Hygiene Laboratory: The Laboratory was established under the Chief Adviser, Factories, New Delhi, in 1952 with the assistance of a team of Industrial Hygiene Experts made available under the Point Four Programme. It has carried out a number of investigations on health and environmental problems and has made available considerable amount of basic information on hazards associated with a variety of occupations and processes. So far 18 technical reports have been published (Dec. 1960). A separate section of the laboratory now functions in Bombay.

Industrial Physiology Section: This section has been set up recently with the object of conducting research on reduction of fatigue and on influence of environmental factors on man.

Productivity Centre: The Centre was set up in Bombay in 1955 with the I.L.O. technical assistance. The main function of the Centre is to help in creating among labour and management attitudes receptive to the idea of higher productivity and assist in the application of industrial engineering techniques with a view to increasing productivity and improving conditions of work. During the five years of its existence, the Centre has conducted 9 projects concerning top management, foremanship for the middle supervision, methods improvement for technical personnel and labour seminars for workers and trade union representatives. Nine courses on advanced work study of 6-14 weeks duration for technical personnel from different industries were conducted by the Centre. The Centre has also undertaken ten other training courses in the various fields of Industrial Engineering for junior technical personnel, for shop supervisors and foremen. These courses are essentially either Refresher Courses or Appreciation Courses. Ten field investigations were undertaken by the Centre which were either in collaboration with professional institutions or in response to a specific request from the Government. Some of the field investigations are (a) Survey of Industrial Estates at Rajkot. (b) Technical assistance to the Industrial Tribunal on wages for Air India International in carrying out the Job Evaluation Programme. (c) Layout of new workshops for the Posts & Telegraphs Department, in Bombay. (d) Study of Grain Storage in Calcutta. (e) Study of Central warehousing in Warrangal, Andhra Pradesh. (f) Study of office procedures and paper work at the Regional Provident Fund Commissioner's Office in Bombay and (g) Study of procedures at the Purchase Department at Sachivalaya, Government of Maharashtra, Bombay.

† Does not now exist.

* Bilingual

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Training-Within-Industry Centre : This Centre was also set up in Bombay in 1955 with the I.L.O. assistance. It carries out training programmes for trainees in Job Instruction, Job Relations and Job Methods on a project basis. The Centre also organises conferences and management seminars on supervisory training and publishes a quarterly News Letter containing articles and information which will be of interest to management supervisors and training officers. The Centre has so far conducted 19 Projects (Nov. 1960) training over 200 training officers. The scheme has been introduced in over 170 Organisations.

The remaining sections of the Central Labour Institute are also being set up and when the Institute building is ready for occupation, all these sections will be brought together.

Regional Labour Institutes : As a part of a coordinated plan for education, research and training in labour and allied problems and to meet the specific needs of the various regions which cannot be effectively served from one single centre, it was proposed to set up under the Second Five-Year Plan three Regional Labour Institutes in Calcutta, Madras and Kanpur, with the Central Labour Institute, Bombay, serving as a focal point of the planned programme of work. The Institutes will be modelled on the lines of the Central Labour Institute.

The State Governments concerned have made available free of cost plots of land for the location of the Institutes. The Govt. of India have accorded administrative approval for the construction of the buildings. The Institutes will be fully equipped to carry on research and investigations on problems of particular importance or significance to the region. A request for technical aid under the U.N. Special Fund to the extent of $ 3,30,000 ($ 1,50,000 for equipment and $ 1,80,000 for experts) for the Regional Institutes has been approved. According to the plan of operation which was signed on 6th Oct. 1960 by the rpresentatives of the Govt. of India and the U.N.T.A.B. these institutes were to start functioning from March 1, 1961.

INDIA AND THE I.L.O.

India joined this organisation at the very start and since 1922 has been one of the ten countries of chief industrial importance and as such has been allotted a permanent seat on the Governing Body of the Organization. India also contributes liberally towards the finances of the Oranisation. For 1961 India's contribution amounts to U.S. $ 323,313 which is 3·28 per cent of the total contribution of all member States, as against U.S. $297,129 for 1960 which is 3·30 per cent. of the total contribution of all member States. India's share in the appointments of the office is, however, somewhat inadequate.

At the headquarters in Geneva the number of Indian nationals employed in 1960 as Assistant Members of Division and above is 13. Among these the highest post is held by Mr. R. Raghunath Rao who is the senior-most Assistant Director General. The entire staff of the Indian Branch in New Delhi is Indian, while in the I.L.O. Asian Field Office in Bangalore the number of Indians varies from time to time.

India has been the venue of two Asian Regional Conferences, the first in 1947 and the fourth in 1957. Both these were presided over by India's Labour Ministers.

India has been receiving technical assistance from the I.L.O. in the spheres of Manpower, Training-Within-Industry, Productivity, and so on and experts from India have been recruited by the I.L.O. for assignments in other underdeveloped countries in such subjects as cooperation, cottage industries and employment information.

Whether in following international standards, or participating in the work of the International Labour Conference, Industrial Committees and Regional Conferences, and so on, India has been one of the keenest members of the I.L.O. Out of 114 Conventions adopted by the International Labour Conference, India has so far ratified 26 Conventions. She has in addition incorporated into her national legislation the essential features of many other Conventions.

The following is a list of Conventions ratified by India together with the dates of ratification within brackets :—

*1. No. 1 Hours of Work (Industry), 1919 (14-7-1921).
†2. No. 2 Unemployment, 1919 (14-7-1921).
3. No. 4 Night Work (Women), 1919 (14-7-1921).
4. No. 5 Minimum Age (Industry), 1919 (9-9-1955).
5. No. 6 Night Work of Young Persons (Industry), 1919 (14-7-1921).
6. No. 11 Right of Association (Agriculture), 1921 (11-5-1923).
7. No. 14 Weekly Rest (Industry), 1921 (11-5-1923).
8. No. 15 Minimim Age (Trimmers & Stokers), 1929 (10-12-1922).
9. No. 16 Medical Examination of Young Persons (Sea), 1921 (20-11-1922).
10. No. 18 Workmen's Compensation (Occupational Diseases), 1925 (30-9-1927).
11. No. 19 Equality of Treatment (Accident Compensation), 1925 (30-9-1927).
12. No. 21 Inspection of Emigrants, 1926 (14-1-1928).
13. No. 22 Seamen's Articles of Agreement, 1928 (31-10-1932).

FORESTS

TOTAL Forests: 280,896 sq. miles. Percentage of Forests to Land: 22·3. Per capita forest area will be about half an acre.

Revenue : 1955–56 : Rs. 26·83 crores ; 1956–57 : Rs. 34·50 crores ; 1957–58 : Rs. 42·10 crores ; 1958–59 : Rs. 46·37 crores.

Financial return per acre of Forest : Rs. 2·60.

Allotment under First Five-Year Plan : Rs. 9·89 crores.

Under Second Plan : Rs. 21·97 crores.

The forests are unevenly distributed and the production is also proportionately low, being only 2·5 c.ft. per acre per year as compared to 56·8 c.ft. in France, 37·3 c.ft. in Japan and 18·1 c.ft. in U.S.A.

Private forests : In Assam 400 sq. miles (in Khasi and Jaintia Hills), Orissa 600 sq. miles mostly in zamindari agencies, Punjab 340 sq. miles in scattered units, and Himachal Pradesh 29 sq. miles in Jabbal Division.

About 16 per cent of the total forest area is inaccessible and 45 per cent of these could yield timber and other forest products.

Systematic management and administration of forests in India dates back to over a century. The first enunciation of policy was in 1894, when forests were classified into four classes : (*a*) protection forests ; (*b*) timber forests ; (*c*) minor forests ; and (*d*) pasture lands.

The limited outlook of this policy was enlarged upon by the Government of India, and the new forest policy laid down in 1952. The details are given in 1960-61 Directory.

Most of the country's forests are worked according to Forest Working Plans prepared by special staff. On the basis of present conditions and past working, these plans lay down, for a 10-15-year period at a time, silvicultural systems, schedules for thinnings and other cultural work, methods of management, staff requirements and exploitation programmes, besides development schemes for roads, buildings.

The formation of forest plantations involving a long-term policy for increased production, is now-a-days an important feature of Indian Forestry, *e.g.* the very valuable and extensive plantations of Teak, Bluegum, Wattle, Casuarina, Sal, Deodar, as also evergreen species and softwoods for matches.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

'Forests' are a State subject.

The Government of India, however, are responsible for forest research and forest education. The Ministry of Food and Agriculture in the Government of India co-ordinates forest activities in the country, but no forests are directly worked by it except the Andaman forests. The Inspector-General of Forests is their technical adviser in forest matters.

All States have separate Forest Departments. Usually a Chief Conservator of Forests (C.C.F.) heads the Department.

For purposes of administration the States are divided into one or more Forest Circles, each in charge of a Conservator of Forests.

Each Circle is in turn divided into four to eight Divisions, each under a Divisional Forest Officer. The unit of administration and execution of forest works is the Forest Range, managed by a Range Forest Officer. Four to eight of these are included in each Division. A Division may be coextensive with Civil districts or larger or smaller than them depending on the importance of the locality and extent of forests in them.

EDUCATION AND RESEARCH

Forest research and education are centralised in one large institution known as the Forest Research Institute and Colleges located at Dehra Dun.

The Forest Research Institute as such came into being in 1906 as an adjunct to the Imperial Forest College, as it was then called. Through progressive stages of development the Institute has now attained a position which has earned for it international prestige as evidenced by its recognition by the Food and Agricultural Organisation of the United Nations as a Centre for training in Forestry for South-East Asia.

The Forest Research Institute and Colleges are under the administrative control of the Ministry of Food and Agriculture of the Government of India. Its administrative Head is designated the President. The Forest Research Laboratory at Bangalore and the newly established Forest Research Centre at Coimbatore Constitute parts of the Forest Research Institute, Dehra Dun.

The education wing of the Institute comprising three Colleges is in the charge of the Director of Forest Education.

The Indian Forest College trains recruits of the State Governments to their gazetted forest services. The course stretches over a period of three years.

The Northern Forest Rangers' College (Debra Dun) and the Southern Forest Rangers' College (located in Coimbatore) offer training for two years to rangers selected by State Governments in the northern and southern regions of the country respectively.

The various branches of the Institute have their research activities published in the technical journals. The work of the Silviculture Branch is to study the rates of growth of the different kinds of trees. The branch has also a museum, a demonstration area and experimental gardens also under its control.

The Botany Branch maintains a herbarium where there is an evergrowing collection of authentic specimens.

The Forest Pathology Branch specialises in investigations of tree diseases and timber decays caused by fungi with a view to evolving methods of control. This branch forms one of the centres of the Indian National Committee on Type-Cultures of Micro-organisms.

The Entomology Branch's function is to reduce the losses to forest trees and forest products caused by harmful insect pests. The Wood Anatomy Branch has one of the finest timber collections in the world at present comprising about 15,000 indigenous and foreign wood samples.

The Composite Wood Branch undertakes to study the problems of improved wood like plywood, compregnated wood, building boards, etc.

The Wood Seasoning Branch has designed a number of seasoning sheds and seasoning kilns including veneer dryers.

The Forest Research Institute conducts research in paper also. The Cellulose and Paper Branch is the only place in India where organised research is being done on the utilisation of forest produce and industrial and agricultural wastes for the production of pulp, paper and boards. A six-ton pilot paper plant has recently been added to the branch.

The Minor Forest Products Branch is engaged in economic research on plants which constitute about 30 per cent of the forest wealth of India and earns a foreign exchange of over Rs. 40 crores. The branch has established the artemisia and santonin industry in India.

Other branches in the Institute are the Wood Preservation Branch, the Chemistry Branch, the Timber Mechanics Branch, the Timber Engineering Branch and the Logging Branch.

The workers in the Institute are provided with adequate housing accommodation. The Institute has a high school, a hospital, a cooperative society, clubs, playground and a Telegraph office.

FOREST PRODUCE

Forest produce is divided into two main heads—(1) Major produce, *i.e.*, timber and firewood, and (2) Minor produce, comprising all other products, such as bamboos, canes, leaves, fruits, fibres, grasses, gums, resins, essential oils, medicinal and poisonous plants, fatty oils and fats, dyes, tans and animal and mineral products.

The annual outturn of timber and fuelwood from all sources averages about 2,696 million cubic feet.

The bulk of the timber supply is used for railway sleepers, constructional requirements, furniture, plywood (especially for tea chests), matches, etc.; but the country imports timber for specialized uses such as jute and textile mill accessories.

Exports from India are limited to selected rosewood logs for high grade furniture to Europe, teak poles for the Middle East and a few other items. Up-to-date, Indian rural economy (and perhaps only to a slightly less extent even its urban population) depends on wood fuel, much of which is derived from the forests. The large-scale use of bamboos and some forest grasses in the expanding paper industry, the exports of sandalwood and its oil and the development of medicinal plants deserve mention in connection with the utilisation of other forest produce.

In the Andamans, the North Andaman forests are leased out to a private agency for working the virgin forests of these islands. The Middle and South Andamans continue to be worked departmentally, mainly to meet the needs of the mainland especially for matchwood and plywood logs. The Andamans also contribute in an increasing measure (by restricting on exports abroad) towards the needs of railways, etc. on the mainland for Padauk, Gurjan and other hardwoods.

Nearly two million people are estimated to be employed on forest work; but the figures are probably below the actuals, as much forest labour is not full-time labour, devoting seven or eight months in the year to agriculture and the rest to forest work.

The general practice of the Forest Departments in the various States is to dispose of standing timber and forest produce by open auctions. Departmental conversion and sales of the produce itself are resorted to only where special considerations necessitate them, *e.g.* working of sandalwood because of its great value.

Timber production in India is not sufficient to meet internal needs. While foreign markets could be readily developed for Indian timber, exports are limited to small quantities of ornamental timbers for European countries, teak poles for the Middle East from the west coast and traditional despatches to markets in Pakistan.

Exports are regulated by quotas which are periodically re-examined.

Imports are regulated by protective or revenue duties and are restricted to such specialized items as are not readily obtainable from local production.

SECOND FIVE-YEAR PLAN

It is expected that over Rs. 18 crores would be utilisted for execution of Forest Development Schemes in the States and Union Territories. The expenditure incurred by the Union Territories Forest Department will be met by the Centre and the States will be helped with loans and grants for the execution of some important schemes. Besides, the Government of India have provided a sum of Rs. 30·55 lakhs for research programmes and development of the Forest Research Institute at Dehra Dun and Rs. 25 lakhs for research activities and development of the Southern Research Institute at Bangalore. A sum of nearly Rs. 70 lakhs has been provided for the Delhi Zoological Park which had made rapid progress in 1959.

During the 2nd Plan period nearly 4·3 lakh acres would be brought under commercial species like teak, sal, conifers, matchwood and other woods of economic value. This also includes afforestation programme along roads, canals and railway tracks, improvement of pastures for grazing and the development of minor Forest produce more specially medicinal plants. Schemes are also in hand wherein rehabilitation of degraded forests to the extent of 3·5 lakh acres, construction of 6,400 miles of forest roads and demarcation of 21,000 sq. miles and 31,000 miles, are likely to be completed. Work for preservation and development of wild life has also progressed satisfactorily during the Plan period.

THIRD FIVE-YEAR PLAN

About Rs. 50 crores would be utilised for forest development programme during the Third Five-Year Plan. The programme comprises mainly the following: Raising the production of forest produce by bringing large forest areas under economic plantations; raising trees along roads, canals and railway tracks and for the rational utilisation and use of the timber which is in short supply; Farm forestry under which quick growing species specially fuel and fodder would be raised over waste and common lands near villages with the co-operation of villagers; protecting forests from insect diseases, fires and illicit fellings; setting up seasoning and preservation plants to increase the durability of the soft woods making them endurable for hard uses in industries as well as in railways; construction of road in inaccessible forest areas; adopting scientific methods, improved tools and implements for better logging, economising in waste and extraction of forest produce; providing amenities such as good camping sites, drinking water, medical and sanitary facilities, for the labour residing in forest villages and working in forests.

AGRICULTURE

INDIA is predominantly an agricultural country. About half of the country's national income is derived from agriculture and allied activities which absorb nearly ¾ of its working force (of about 152 million in 1956 inclusive of dependents).

Some major facts about Indian agriculture (1956-57): Area of India, 806 mil. acres; area available for land utilization, 721 mil. acres (rest is mostly unsuitable for cultivation); uncultivated area 403 mil. acres (forest 126 mil. acres, area not available for cultivation 118 mil. acres, other uncultivated area 100 mil. acres and fallow 58·5 mil. acres); area actually sown 322·4 mil. acres; total cropped area taking into account area sown more than once 368·5 mil. acres; area sown with foodgrains 275 mil. acres*; area sown with non-food crops 93 mil. acres; total area irrigated 55·7 mil. acres.

India virtually holds the monopoly in lac, leads the world in groundnut and tea production, and is the second largest producer of rice, jute, raw-sugar, rape, sesamum and castor seeds.

Average rainfall 45"; deficiency of 25 per cent is classed dry; deficiency of 40 per cent severe drought; usually one year in five is a dry year, one in ten, a year of severe drought, one in 20 to 25 years widespread severe drought.

Out of the total cultivated area in the Indian Union of 368·5 million acres about 55·7 million acres are irrigated annually. Of this area 22·9 million acres are irrigated by canals, 11·1 million acres by tanks, 16·2 million acres by wells, and 5·5 million acres from other sources. The percentage of irrigated area to total cultivated area is, however, small, being only a little over 17 per cent. Protective irrigation works have made agriculture stable instead of precarious in many districts.

About one-fourth of the total irrigation of the country is got from lifting water from wells ranging in depth from a few feet to over fifty feet.

It is officially estimated that ten to 15 per cent of the annual agricultural production is lost on account of insects, pests, crop diseases and weeds. The annual loss in the yield of foodgrains and sugarcane crop alone comes to about Rs. 162 crores. Total loss would amount to Rs. 1,000 crores per annum.

The 2,400 million Indian rat population alone eats away about 2·6 million tons of grain every year.

High priority is being proposed for the establishment of a special insecticidal and plant protection service. The necessary equipment, such as sprayers and dusters, may be manufactured within the country.

Simultaneously, the Warehousing Corporation is designing a new type of modern storehouse that should reduce losses from eight per cent to two per cent. Old storage accommodation is also to be improved and better facilities are to be provided for fumigation.

The Central Government, it is stated, is prepared to give the States financial assistance for a national rat eradication campaign on the same basis as other plant protection measures under the grow-more-food scheme.

The subsidy would go to provide the farmers with rat poison free of charge.

PRODUCTION

The following table will show the area under principal crops and the yield:

* Includes sugarcane.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

AREA AND PRODUCTION

Crops	Area in '000 acres		Production in '000 tons		Average yield per acre in lbs.	
	1958-59	1959-60	1958-59	1959-60	1958-59	1959-60

Opium	74	..	21	..	..	..
Lac	..	..	..	..	..	..

Area under arecanut, cashewnut and cardamon in 1957-58 was 304,000 acres, 207,000 acres and 133,000 acres respectively. The production under the above three in 1957-58 was 69,000 tons, 94,000 tons and 3,000 tons respectively. Area under fodder and green manure crops in 1957-58 was 14,155,000 acres and 218,000 acres respectively.

Green Manure:—According to the estimates about 40 lakh acres were green manured during 1958-59, 70 lakh acres in 1959-60 and 105 lakh acres during 1960-61. On an average about 5,000 lbs. of green manure (green matter) was used per acre, and an increase of one tenth ton per acre of food production was expected from the application of green manures.

A total area of about 18·5 lakh acres had been covered by land reclamation and land development schemes during the last five years. The annual additional food production from reclamation of new lands was estimated at about eight maunds per acre.

Note.—Data for 1958-59 and 1959-60, relate to Partially Revised and Final Estimates respectively and are subject to revision :—(*a*) Production of rice is in terms of cleaned rice ; groundnut as unshelled nuts ; sugarcane as raw sugar or gur ; cotton as lint in thousand bales (of 392 lbs.) and jute and mesta as dry fibre in thousand bales (400 lbs.) ; coconut as million nuts (the average yield being in the number of nuts). (*b*) Area and production of pepper, ginger and turmeric are in terms of 100 acres and 100 tons respectively. (*c*) Area and production of tea, coffee and rubber are in terms of 1,000 acres and 1,000 lbs. and those of tea and rubber relate to calendar year 1957-58. (*d*) Opium production in 1,000 maunds (of 82 2/7 lbs.). This also applies to lac. (*a*) Negligible or less than 500 tons. Figures in brackets indicate area for fibre.

INDEX OF PRODUCTION—ALL COMMODITIES

Year	INDEX NUMBERS OF PRODUCTION		
	Foodgrains.	Non-foodgrains.	All commodities.
1950–51	90·5	105·9	95·6
1951–52	91·1	110·5	97·5
1952–53	101·1	103·8	102·0

* Based on provisional estimates. † Based on Final Estimates.

Note.—The indices for 1957-58 and 1958-59 are based on partially Revised Estimates and those for 1959-60 on Final Estimates. They are, therefore, subject to revision.

The agricultural season is divided into two main sub-divisions the Kharif season of the monsoon and the Rabi season of the cold weather. This is not well-marked in the extreme east or extreme south.

The ground is generally prepared for cultivation in April and May for kharif crops, and by the end of October or early November for rabi crops, *i.e.*, after the kharif crops have been harvested. Kharif crops are sown in the monsoon, generally after the first shower. The usual time for sowing of rabi crops is the middle of November. The crops are harvested from the middle of March to the end of April.

The chief Kharif crops are : rice, jowar, bajra, maize, cotton, sugarcane, sesamum and groundnut. The chief Rabi crops are : wheat, barley, tea, gram, linseed, rape and mustard ; and in south India rice, jowar and cotton.

The harvest comes on the market as follows: Kharif crop (Nov. 1), Rabi crop (May 1), Rice (Nov. 1), Wheat (May 1), Sugarcane (Nov. 1), Cotton (Sept. 1), Jute (July 1), Kharif oil-seeds (Nov. 1), Rabi oil-seeds (April 1), Tea (Jan. 1), Coffee (July 1), Sugar (Jan. 1).

RICE

Rice crop occupies the largest area in the Indian Union, over 81 million acres giving 30 million tons of rice.

Madras, Bihar, Bengal, Orissa, Madhya Pradesh, Uttar Pradesh, Assam, Andhra, Maharashtra, Mysore, Kerala and Gujarat are the main rice growing States and they together claim about 95 per cent of the total rice area in India. About a third of the crop is irrigated, the bulk of the rice is winter crop, *i.e.*, sown in June-July and harvested in November-December, but there are rices grown in different seasons the harvest coming in summer, autumn or winter.

Rice yield in India is, however, one of the lowest in the world. The average yield is a fourth of that of Spain and Italy, a third of Japan, and half of what the Chinese and the American rice farmers obtain. At present 76 research stations spread almost all over the States of the country are working on similar

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

problems of rice. Though about 4,000 distinct types of rice differing in essential characteristics occur in this country, 455 superior strains giving an average of 10 to 20 per cent better yield than the farmers varieties have been evolved.

Japanese Method

In the last few years the Japanese method has been tried with good results specially in areas of assured water supply. But many individual steps in this were evolved through research in India.

The statistics about Japanese method of production are given below :

	1956–57	1957–58	1958–59
Area under Japanese Method (in million acres)	2·374	3·997	5·823
Additional production (of rice in million tons) due to Japanese Method	0·800	1·2	1·79†
Yield in maunds per acre (of rice) by			
(a) Japanese Method	19·90	19·25	18·97†
(b) Local Method	13·33	10·99	10·99†

Complete data for 1959-60 are not available. † Incomplete and provisional.

In the Second Plan it was proposed to cover 8 million acres with Japanese method—1·6 mln. acres every year.

WHEAT

The area under wheat is about 31 million acres and production about 9 million tons. Wheat is grown widely throughout the north as a winter crop, U.P., M.P. and Punjab supplying over 72 per cent of the total outturn in the country. This crop occupies, on an average, about 10 per cent. of the total cultivated area.

More than one-third of the crop is irrigated.

The crop is generally grown after a summer fallow and except in irrigated tracts, depends largely on the conservation of the soil moisture from the previous monsoon. The crop is generally harvested in February to April and the threshing and winnowing go on up till the end of May.

A virulent fungus disease called rust affects the production of wheat to a great extent. In normal years, the loss is about 5 per cent involving about sixty million rupees. In other wheat growing countries, generally, one kind of rust only is a serious menace. Though in peninsular India only black rust is serious, northern India with the largest wheat area has to face the onslaughts of three different rusts, *i.e.*, black, red and yellow, each with a number of races.

Systematically planned work on the development of rust resistant wheats is being done under the ægis of the Indian Council of Agricultural Research and a large number of rust resistant varieties have been produced.

Besides these, varieties which have greater adaptability and yielding power are also bred.

At present improved varieties form only 16 per cent in M.P., 33 per cent in U.P. and about 70 per cent in the Punjab, of the wheat area of the respective States.

MILLETS

Mostly of short duration (2½ to 6 months from seed to seed) millets are grown in localities and in conditions where most of the other cereal crops are not grown, such as poor and infertile soils and low rainfall (of 20–50"). They are associated with the staple diet of lower rather than upper strata of society, and provide the chief cereal supplement for all regions outside the main rice and wheat tracts. Millet stalk form the chief food of the cattle population for about half the year in the millet regions of the country either in green or dry form. Some of them like jowar are grown in substantial areas solely for fodder purposes and special varieties are developed for forage purposes.

Jowar :—Among the millets jowar occupies a premier position because of the size of the crop and the economic importance of the grain. Annually about 43 million acres are grown under this to yield about 9 million tons of grain. Maharashtra, Andhra, Mysore, M.P. and Gujarat contribute to over ¾ of the natural acreage.

Bajra :—U.P., Rajasthan, Punjab, Gujarat and Maharashtra are the chief growing tracts. The duration of the crop varies from about 2½ to 5 months.

Ragi :—Ragi ranks the third in importance among the Millets and occupies about 6 million acres to produce about 1·8 million tons of grain. Its average yield is rather high, 9 mds. per acre. More than half the area is in Mysore, Madras and Andhra. Sixteen improved strains of ragi evolved in Madras and two in Mysore are being grown in these States.

Other Millets :—The others grouped under lesser or minor millets form about 1/6 of the total area under millets and are grown in about 12 million acres and yield about 1·8 million tons of grain. Some of them are of regional or local importance only and also of limited consumer demands. The most important among them are Kora or Kangni, Kodon, Cheena or Varagu, Oodalu, and Sawan.

COTTON

The total production for 1959-60 was actually 38 lakh bales owing to heavy rains in some areas and drought in others.

In the matter of distribution of improved seed also there has been a certain failure. Quantity targeted for 1958-59 season was 1,494,950 Bengal maunds, the quantity procured was 898,074, and the quantity distributed was 773,211. About fertilizers out of 44,650 tons which was the target, only 15,708 tons were available for distribution. In the provision of irrigation facilities however, the target was exceeded. The target area to be covered was 291,811 acres and the area actually covered was 334,178 acres.

During 1957-58 and 1958-59, 71 per cent and 72 per cent respectively of the total acreage under cotton were under improved varieties.

The share of different staple, was as follows :

	Percentage		
	Long	Medium	Short
1958-59	34·8	48·7	16·5
1959-60	43·6	39·8	16·6

The Sea Island cotton is gradually assuming commercial status. The total of lint produced from this cotton was 208 bales in 1958-59. The total area covered by this during the year was 3,955 acres against 1,049 for 1957-58. This cotton is grown on marginal lands in Mysore and Kerala.

The target area for 1959-60 for Kerala was 20,000 acres and for Mysore 10,000 acres.

Hybrid cotton is grown in Surat. But it has not made much progress. It is hoped that the use of a chemical FW-450 might reduce sterility.

The most important in the matter of self-sufficiency is the long staple variety—those possessing 1" to 1⅛" which are capable of spinning 40's and over. The acclimatised Egyptian variety being grown in Mysore could be raised as a summer crop in the Babbur area.

The evolution of Indo-American varieties and of Sea Island Andrews and hybrid cottons which can replace imported cottons constitute an important landmark in the progress of cotton research. Further work for isolating still better and finer types continues under three schemes in operation in the Punjab, Bombay,* Madras.

The target set for the long staples is 8·4 lakh bales.

The most important State so far as the production of long staple cotton in India is concerned is, of course, the Punjab.

FRUIT

A wide variety of fruit and vegetables is cultivated in the country.

The total area under all fruit at present is about three million acres.

Mango : 1,460,000 acres (primarily in U.P., Andhra, Bombay,* M.P., Bengal, Bihar, Madras, Mysore and Kerala).

Over 177·9 million maunds of grafted and seedling varieties of mangoes are produced annually. Out of this it is estimated that 17·7 million maunds go to waste ; 1·1 million are exported and 159·1 million are consumed in the country. About 6·9 per cent of grafted and 41·4 per cent of seedling mangoes are retained by producers and about 36·1 million are utilized for manufacture of products such as pickles, chutney, syrup.

In 1959 from Jan. to May over 14,000 cwts. of mangoes were exported to 37 foreign countries and they earned foreign exchange worth Rs. 7 lakhs.

Citrus (Mosambi, Malta Santra, Kagzhi Lime and others) : total 223,000 acres.

Mosambi and Malta : Bombay,* M.P., Orissa, Punjab, U.P. and Andhra.

Santra : Andhra, Assam, Mysore, Bombay,* M.P., Madras, Bengal, Punjab and Kerala.

Kagzhi Lime : Bihar, Bombay,* U.P. and Punjab ; (*Others :* Assam, Bihar and U.P.).

Jack-fruit : 164,000 acres (Bihar, U.P., Kerala and Madras).

Guava : 69,000 acres (U.P., Bihar, M.P. and Bombay*).

Grapes : 1,600 acres (Bombay,* Andhra, Madras and Himachal Pradesh).

Custard Apple : 110,000 acres (Andhra, Bihar and M.P.).

Pomegranate: 2,000 acres (Bombay* and U.P.).

Litchi : 21,000 acres (in the temperate plains of Bihar and U.P.).

Pineapple : 21,000 acres (in the coastal laterite soils of Assam, Bihar, Bengal, U.P. and Kerala).

Temperate Fruits :

Apple : 3,300 acres in the hills of U.P., H.P., Punjab, Madras and in Kashmir.

Pears : 1,200 acres (in the hills of U.P., Bihar and in Delhi).

Peaches : 1,200 acres (in the hills of U.P., H.P. and in Kashmir).

Plums : 1,100 acres (in the hills of U.P., Punjab and in Kashmir).

Sapota : 758 acres (Bombay* and Andhra).

Fig : 746 acres (Bombay* and U.P.).

Phalsa : 250 (Uttar Pradesh).

Date : 889 acres (U.P., Bombay* and M.P.).

Apricots : 630 acres (U.P. and H.P.).

Walnuts : 474 acres (U.P., H.P., Punjab and Kashmir).

Other fruits grown in India include Strawberries and Cherries in U.P. and Passion fruit, Persimon and Mango stem grown elsewhere in the country.

* Bilingual.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Fruit products amounting to over 23,000 tons are now manufactured in the country by over 800 licensed factories in Amritsar, Bombay, Calcutta, Delhi, Lucknow, Madras, Mathura and other centres.

The production of fruits and vegetable products increased from 14,000 tons valued at Rs. 158 lakhs in 1953 to 32,000 tons valued at Rs. 383 lakhs in 1957. The annual production in 1958 is estimated at approximately 38,000 tons. Since 1958 the indigenous industry has been able to meet fully the local demand for these products.

The export of fruit products has also been steadily increasing. In 1953 this export amounted to 1,432 tons valued at Rs. 26 lakhs which increased to 1,726 tons valued at Rs. 32 lakhs in 1958.

In order to encourage the production and export of fruit products several concessions are given to the manufacturers through Directorate of Marketing by way of loans for starting new factories and renovating old ones, subsidy on tin-plate, rebate on excise duty on sugar etc.

Five million rupees have been allotted in the Second Five Year Plan for the development of the fruit preservation industry in the country. This includes provision (1) to advance loans through State Governments for setting up five large-scale and 200 small-scale units of fruit and vegetable preservation, (2) to grant subsidies on tin plates used in the canning industry, and (3) to set up regional research stations to investigate problems connected with fruit and vegetable preservation. It is expected that by 1960-61 the average annual production of the industry will increase from 23,000 to 50,000 tons with a corresponding rise in their export from 2,000 to 11,000 tons.

Loans of Rs. 1·882 mln. had been allocated through State Govts. during 1959-60 for setting up and renovating fruit and fruit preservation units. Manufacturers were given subsidies of about Rs. one million upto 1960 on tin-plates for sanitary cans used by them.

REGULATED MARKETS

One of the visible benefits of regulated markets, which work on democratic principles, has been the reduction in the market charges to extents varying between 29 to 50 per cent. The saving to the producer on this account is estimated to be Rs. 3 for every Rs. 100 worth of goods sold by him. Open auction system which yields better price to the producer has also been introduced in a majority of the markets. New market yards with modern amenities are also being provided.

Training of officials is arranged in Nagpur, Sangli and Hyderabad. 51 superior personnel of the State Marketing Deptts. and 143 marketing secretaries have received training so far. (Jan. 1961).

The Directorate is also entrusted with the development of the fruit and vegetable preservation industry and administers the Fruit Products Order promulgated under the Essential Commodities Act of 1955. This Order envisages the compulsory licensing of the manufacturers of fruit products for sale. The number of licences issued was 990 in 1958.

The Directorate maintains control over subsidiary laboratories in Kanpur and Rajkot for ghee and oils, in Bombay and Jamnagar for wool and at Cochin for essential oils. There would be three more Regional Laboratories, one at Amritsar, Calcutta and Guntur, and 50 additional laboratories of the composite type.

It has its counterpart in the States, as in Andhra, West Bengal, Bihar, Bombay,* Madras, Mysore and the Punjab.

The main functions of the organisation are: (1) Surveys of markets to collect information for development work, (2) Promotion of grading by fixing grade standards and effecting quality control, and the administration of the Fruit Products Order, (3) Organisation of regulated markets, (4) Training in agricultural marketing as well as co-ordination of the working of the Marketing Acts in the States and other agricultural marketing problems of the country, and also giving advice to the State and the Central Governments.

Surveys of market conditions were started soon after the Directorate was set up. As a result, five reports dealing with the production, qualitative and quantitative, internal and external demands, prices and price spreads, standardisation, markets and their operation, distribution channels, and the improvements imperative for the better marketing of 41 agricultural commodities (including cereals and pulses), 12 dealing with live-stock and live-stock products, 24 dealing with special crops have been published.

Ten major commodities among these, have been re-surveyed and reported again.

During 1960 marketing reports on mangoes, sugarcane, gur, sann-hemp, and pulses and two atlases have been published.

Grading and Standardisation

The Government of India passed the Agricultural Produce (Grading and Marketing) Act of 1937 to promote orderly marketing on the basis of statutory grades.

The Act authorised the Agricultural Marketing Adviser, to fix grade standards for different types and varieties of agricultural produce, prescribe grade designation marks to indicate each quality, and issue certificate of authorisation to persons or co-operative societies to grade and mark with "Agmark" their commodities on the basis of the standards laid down.

The organisation has developed standards for 117 agricultural and livestock products so far.

The following important commodities are graded under "Agmark" for consumption within the country: Rice, wheat, atta, gur, jaggery, fruit (mangoes, oranges, grapes, apples and sapota), potatoes, cotton, sugarcane, creamery butter, ghee, vegetable oils and eggs.

The following commodities are graded primarily for export purposes: cigarette tobacco leaf, sann-hemp fibre, essential oils (sandalwood and lemon-grass oils), wool and bristles.

The value of commodities graded Agmark on compulsory basis during 1959 was Rs. 302·2 mln. as against Rs. 289·3 mln. in 1958.

Extension of compulsory grading for export to the following commodities is envisaged in the Second Five Year Plan: cardamom, pepper, ginger palmrosa oils, vegetable oils, oilseeds, hand-picked groundnuts, cashewnuts, goat skins, goat hair, tanned leather, kapok, lac and myrobalans.

Grading is voluntary in the case of commodities consumed in the country. But, in the case of exported commodities by a notification issued (under Section 19 of the Sea Customs Act), it is ensured that only after grading would specified commodities be permitted for export.

The State Agricultural Produce Market Acts are in force in eleven States, namely, Andhra, Bombay,* Delhi, M.P., Madras, Mysore, Orissa, Bihar, Kerala, Tripura and the Punjab.

Of the 2,300 wholesale assembly markets in the country 701 are under regulation (May 1960). It was expected that more markets would be regulated by the end of the Second Plan, when the remaining States would also enact the necessary legislation.

By the end of the Third Plan all the important centres—these number 2,309 including cattle vegetable and fruit market—will be brought under regulation.

The total number of markets and the number of regulated markets State-wise are as follows (July 1959):—

Andhra 247 and 83; Assam 65 and nil; Bengal 212 and nil; Bihar 146 and nil; Bombay* 354 and 292; Kerala 41 and 4; M.P. 223 and 86; Madras 99 and 26; Mysore 113 and 68; Orissa 69 and 11; Punjab 126 and 128; Rajasthan 130 and nil; U.P. 377 and nil; Delhi 24 and 3; H.P. 14 and nil; Manipur 13 and nil; Tripura 56 and nil. Total 2,309 and 701.

The regulated markets are managed by Market Committees consisting of the representatives of the growers, the traders, local bodies and the State Government nominees. Producers are generally in a majority, and in several cases are elected chairmen.

Marketing, Processing: An integrated programme of marketing development embracing rural credit, marketing, processing, and warehousing is now proposed in the country, as a result of the recommendations contained in the Rural Credit Survey Report.

The main features of the programme are:—(1) Linking credit with marketing in the form of marketing societies; (2) Developing processing and distribution of farming requisite on co-operative lines, and (3) Promotion of storage and warehousing.

The Second Plan provided for the organisation and development of 1,900 primary and district marketing societies and one apex marketing society for each State and Union Territory.

During the first three years of the 2nd Plan, 1,063 societies were organized. The programme for 1959-60 and 1960-61 was to organise 545 and 261 societies respectively with a view to achieving the targets. Govt. of India's assistance in the first 3 years amounted to Rs. 19·5 mln. and provision of Rs. 12·73 mln. for 1959-60.

A National Agricultural Co-operative Marketing Federation was established in 1958 to promote inter-State and export trade through co-operatives.

Besides arranging the sale of agricultural produce the primary marketing societies also undertake the supply of agricultural requisites and other essential commodities to members.

The marketing societies are also being encouraged to take up inter-State export of surplus agricultural commodities.

Provision had been made in the Second Five Year Plan for State contribution to share capital and loans for processing units, *e.g.* sugar factories, cotton gins, jute, barley, rice milling.

It is expected that there would be 50 co-operative sugar factories, which will account for 20 to 25 per cent of the total production. The total investment on this will be about Rs. 500 million. (*See* article on the Sugar Industry). There were 21 cooperative sugar factories in operation during 1954 as against 2 in 1954. During 1958-59 season the cooperative sugar factories contributed 0·179 mln. tons to the total sugar production of 1·919 mln. tons or nearly 10 per cent.

The Second Plan proposed the establishment in all of 166 processing societies for cotton ginning, and rice and oil milling. Against this target, 98 units were established in the first 3 years of the plan as below: cotton ginning and pressing 42, groundnut decordicating 6, rice mills 13, oil mills 5, jute baling 2 and others 30. By the end of 1960-61 another 280 units were expected to be set up.

WAREHOUSES

The Second Five Year Plan envisaged the establishment of 4,000 godowns by large-sized societies, 1,500 godowns (mostly at Mandi centres or centres of trade importance) by marketing societies which are expected to handle about 10 per cent of the marketable surplus of the country, and a number of warehouses by the Warehousing Corporations. This will facilitate the disposal of the produce and prevent distress selling, for the benefit of members.

The primary societies will have godowns of 20,000 to 30,000 tons capacity and the apex societies 25,000 to 100,000 tons. Besides the marketing of agricultural commodities, the marketing societies arrange for co-operative crop processing plants and also distribute essential farming requisites (*viz.*, seed, implements, fertilisers, etc.). About 2,300 rural

*Bilingual.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

godowns and about 840 godowns at Mandi centres were established by 1958-59 and 1,045 and 544 respectively had been provided for 1959-60. Loans and subsidies amounting to about Rs. 37 million were given in 1958 and Rs. 23·55 million had been provided for 1959-60.

To arrest wastage of agricultural produce warehousing has been adopted as a national programme in the public sector. It is estimated that about three million tons of foodgrains alone go waste in the country owing to lack of efficient storage facilities.

A Central Warehousing Corporation was established in 1956 under the Agricultural Produce (Development and Warehousing) Corporation Act, 1956. By the end of 1960, 27 Central warehouses with a total storage capacity of about 12 lakh maunds were opened. They were located as follows: Andhra 3, Bengal 1, Bihar 1, Bombay (Maharashtra & Gujarat) 5, Delhi 1, Kerala 3, M.P. 1, Madras 2, Mysore 3, Orissa 2, Punjab 1, Rajasthan 2 and U.P. 2. The State Warehousing Corporations opened 65 warehouses till the end of September 1959. It was expected that the Central and State Warehousing Corporations would start 10 and 120 more warehouses, respectively, during the remaining months of 1959-60. The 2nd and 3rd Plan targets of the Central Corporation are 40 and 35 respectively.

Under the Second Five Year Plan, 350 warehouses with a total storage capacity of 55 lakh maunds were to be set up all over the country both by the Central and State Corporations. About 59 commodities are now stored in the warehouses including foodgrains, oilseeds, cattle fodder, raw cotton, cotton seed, raw jute, turmeric, gur, ginger and pepper. The storage capacity in Central and State warehouses during 1959-60 were 11 lakhs and 6 lakhs respectively. It is now proposed to provide for storage of other commodities also. In fact, schemes were ready for an air-conditioned warehouse in the Hoogly District of West Bengal for storing lac, a cold storage for potatoes and apples at Theog in Himachal Pradesh and a warehouse for coffee at Mangalore. Special arrangements have already been made for the storage of jaggery at the Central warehouse at Kolhapur, turmeric at Sangli and pepper, ginger and copra at Kozhikode.

A warehouse receipt is acceptable to bankers on the strength of which a depositor can obtain loans at comparatively low rates of interest without transferring physical possession of his goods. The rate of interest charged by the bank on such loans is much lower than at present charged on hypothecation of goods. The producer and the trader can use this loan for carrying on trade or agricultural operations and can also sell the produce when the market price is favourable by simply transferring the receipt to the buyer.

Workable grade standards are being evolved in respect of commodities for storing in the warehouses.

Progress, Organization

The stock position in the Central Warehouses improved from 97,500 maunds in June 1958 to 5,92,278 maunds at the end of Oct. 1959, while the storage capacity increased from 2,52,500 maunds to 8,27,875 maunds. The credit facilities extended by the Scheduled and Co-operative Banks to the depositors against receipts issued by the Central warehouses increased from Rs. 12,10,000 in June 1958 to nearly Rs. 2 crores in September 1959.

The State Corporations which started their activities in 11 out of the 13 States only in 1959, have been able to provide storage accommodation for about 15 lakh bags (about six lakh maunds) in the first six months of the year. Assam and Kerala are yet to open their centres. It is expected that before the end of 1959-60 these States will have their own warehouses.

The State-wise progress in warehousing activities is as follows:—

The first figure gives the number of warehouses already working and the second the number proposed to be set up during the year 1959-60:

Andhra 4, 4; Assam —, 2; Bihar 7, 8; Bombay* 8, 7; Kerala —, 3; M.P. 9, 11; Mysore 3, 5; Madras 7, 3; Punjab 1, 4; Rajasthan 7, 10; U.P. 12, 18; Orissa 4, 4; W. Bengal 7, 2.

Two types of Corporations have been provided for in the Act—the Central Warehousing Corporation which may be called the focal body and a State Warehousing Corporation in each State. Whereas centres of all-India importance figuring in export trade or inter-State trade are to be provided warehouses by the Central Corporation, the State Corporations are supposed to take care of centres of State importance only.

The Central Warehousing Corporation is guided by a Board of Directors consisting of all members of the Executive Committee of the National Co-operative Development and Warehousing Board, two directors nominated by the same Board, representative of the State Bank of India, four directors elected by the shareholders of the Corporation from amongst representatives of Scheduled Banks, Co-operative Societies, Insurance Companies, Recognised Associations and Joint Stock Companies dealing in agricultural produce, and one Managing Director appointed by the National Co-operative Development and Warehousing Board in consultation with the directors mentioned above.

At the State level, each Corporation has a similar Board of Directors consisting of five directors nominated by the Central Corporation, five directors nominated by the State Government in consultation with the directors and with the approval of the Central Corporation.

The authorised capital of the Central Warehousing Corporation is Rs. 20 crores divided into two lakh shares of the face value of Rs. one thousand each. Of this authorised capital, half was issued in the first instance in June, 1957. Under the Agricultural Produce (Development and Warehousing) Corporations Act, 1956, authorised capital of a State Warehousing Corporation will not exceed Rs. 2 crores divided into shares of the face value of Rs. one hundred each. The Central Corporation and the State Government concerned subscribe to the share capital of the State Corporations equally.

To man the warehouses which are being set up all over the country for efficient storage of agricultural produce, 138 warehousemen and Technical Assistants are being trained at Nagpur.

Under the training programme, 138 candidates were trained in 1959 as against 22 in 1957 and 86 in 1958.

The Second Five Year Plan provided for contribution from State Governments to the share capital of the State Warehousing Corporations.

The assistance is sanctioned by the Warehousing Board. The sanctioned assistance is as follows:—

	(Rs. million)
1956-57 for 616 godowns	4·773
1957-58 for 367 godowns	12·432
1958-59 for 1,090 godowns	11·952

In 1957-58 the Central Government advanced Rs. 1·34 lakhs to the States for the construction of 984 godowns by large sized societies and 435 by marketing societies. During 1959-60 and 1960-61 Rs. 60 million and Rs. 74 million respectively were advanced Rs. 40 million and Rs. 47 million respectively being as loans and the rest as grants.

COLD STORAGE

The present capacity of cold storage in the country is about 2·5 million maunds provided by 200 cold storages mostly run by private traders. This may go up to 3·0 million maunds by the end of the 2nd Plan. The plan has, therefore, provided Rs. 4 million for setting up 8 cold storages. Third Plan aim: 20 cold storages.

The Central Warehousing Corporation has set up a warehouse at Theog near Simla to provide specialised storage and quality grading facilities to growers of potato and fruits. A similar cold storage is planned in Delhi. 15 to 20 per cent of fruits and vegetable produced in the country go waste due to want of proper storage and marketing facilities.

Rs. 2 million had been earmarked by the Cooperative Wing as financial assistance for 1960-61 for cold storage. West Bengal, Maharashtra, Gujarat, Jammu & Kashmir, Mysore and Punjab States are expected to have co-operative cold storage plants during 1961.

AGRICULTURAL ECONOMICS

The Directorate of Economics & Statistics is one of the main organizations under the Central Government which deals with all agro-economic problems in the sphere of food and agriculture.

Steps initiated during the First Five-Year Plan continued during the 2nd Five-Year Plan as well and a provision of Rs. 5 million is provided in the State plans for schemes of improvement of land records and statistics.

The Directorate has a scheme for the improvement of marketing intelligence. This is being implemented in Andhra, Assam, Bengal, Bihar, Bombay*, Madras, Mysore, Orissa, Punjab, Rajasthan, U.P. and Delhi, H.P. and Tripura.

A Price Intelligence Organisation has been set up in the Directorate to study on a regular basis the flow of market supplies, market sentiment, factors leading to rise or fall in prices, crop outlook, market behaviour etc. to advise the Govt. from time to time in formulating proper price control measures.

Index numbers of agricultural production were compiled by Andhra, Assam, Bihar, M.P., Madras, Mysore and U.P. Similarly the index numbers of parity between the prices received and prices paid by the farmers were worked out in Assam, Bengal, Orissa and Punjab.

A research division has been set up in the Directorate to co-ordinate Farm Management investigations and also to conduct research in production economics.

The statistical wing of the Indian Council of Agricultural Research does fundamental investigation in statistics and also trains statisticians for field work.

The co-ordination of oil conservation work between the States and Territories is achieved through the agency of the Central Soil Conservation Board which was set up in the Ministry of Food and Agriculture in 1953. Similar boards are also set up in most of the States and Territories.

The Union Ministry of Food and Agriculture have also set up a National Co-operating Committee to organize research in arid and semi-arid regions of India and to collect information on arid zone research in the country and abroad and make it available to other countries through the UNESCO.

The Union Minister for Agriculture is the chairman. The Committee will also approve fundamental and applied research programmes for the several Divisions of the Central Arid Zone Research Institute, Jodhpur.

The Secretary of the Soil Conservation Board is the Secretary of the Committee.

Altogether nine research-cum-training centres have been established at the following places:—

1. Ootacamund (Madras) for erosion control in the Nilgiri and other hills;
2. Bellary (Mysore) for soil conservation studies in black soils;
3. Kotah (Rajasthan) with sub-centre at Agra for erosion control in the Chambal and Jumna ravines;

* Bilingual.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

4. Jodhpur (Rajasthan) for afforestation in the Rajasthan desert;
5. Dehra Dun (U.P.) for studying problems of afforestation in the Sivalik hills with the sub-station at Chandigarh (Punjab) for training *chos* (hill torrents);
6. Vasad (in the Gujarat tract for erosion control in the ravines along rivers in Gujarat.
7. Chandigarh (outer Sivaliks).
8. Chatra (water shed management).
9. Agra (Yamuna ravines).

The Board proposes to set up two more, one each in Orissa and Andhra to undertake research in red soil areas.

The station at Jodhpur has been upgraded as a Central Arid Zone Research Institute to carry out research on fundamental and applied problems of arid zones.

It is estimated that in the country as a whole about 200 million acres are exposed to erosion. Out of this about 100 million come under land under cultivation, 50 million acres are fallow and other uncultivated land and 50 million are desert mainly in Rajasthan.

Rs. 20·5 crores were allotted in the Second Plan (original) for conservation. The target is three million acres. The staff requirements are estimated at two hundred officers and five thousand assistants.

During 1959-60, 180 oil conservation schemes designed to benefit 0·946 mlln. acres and involving Central assistance of Rs. 37·7 mlln., were in progress. Also six pilot demonstration projects in the catchment area of Bhakra-Nangal (three in each in Punjab and H.P.) were also working costing Rs. 2 million to the Centre.

The area of land protected by soil conservation was in 1958-59, 106,000 acres of forest and 385,000 acres of agricultural land and in 1959-60 66,000 acres and 350,000 acres.

A Pasture Development Scheme for the reclamation and control of the Rajasthan desert was launched in the nine districts of Barmer, Bikaner, Churu, Jaisalmer, Jodhpur, Jhunjhunu, Nagaur, Pali and Sikar. The main feature of the scheme is the improvement of grass lands so as to provide adequate grazing to livestock all the year round.

The Desert Afforestation Research Station, Jodhpur was reorganised and research activities accelerated. Over 15 miles of new road-side plantations and about 15 miles of wind-break plantings along the road-sides of the Central Mechanised Farm at Suratgarh were carried out for stabilisation of shifting sands. Thirty-five sq. miles of barren lands have been closed for the natural growth of grass. Two more new tree nurseries were established for raising seedlings, thus raising the total number of nurseries to 17.

A proposal to expand the Central Arid Zone Research Institute, in collaboration with UNESCO in their Major Project on Scientific Research on Arid Lands, is being finalised.

An Integrated All-India Soil and Land Use Survey Scheme has been and is being executed by the Central Soil Conservation Board with four Zonal Centres at Delhi, Nagpur, Bangalore, and Haringhata, with effect from 1st March 1959. In accordance with the recommendations of Dr. C. E. Kellogg, the Survey is being carried out in order of priority in the catchment areas of the six river valley projects, namely Machkud, Hirakud, Chambal, Bhakra Nangal, Kosi and Damodar Valley and also in the non-catchment areas. Till the end of 1960 about 3·25 lakh acres of detailed soil survey and 13·25 lakh acres of reconnaissance soil survey had been completed as against the target of 10 lakh acres and 150 lakh acres respectively.

RESEARCH

The Indian Council of Agricultural Research co-ordinates research work, suggests programmes of research, gives financial assistance for approved schemes, and also undertakes schemes of its own.

The annual grants made to I.C.A.R. fall under two main heads :—(*a*) An annual Government grant for running the administration. This varies from year to year according to requirements, and averages about Rs. 1·35 million a year. (*b*) Payment of the net proceeds of the cess on agriculture produce. The income from this source is estimated at about Rs. 4·4 million annually.

Besides these, specific grants are made to I.C.A.R. for undertaking certain schemes from time to time. The total estimated expenditure (including the special grant) will be Rs. 5 to 8·5 million annually.

During 1959-60, 147 new schemes (agriculture 98 and others 49) were sanctioned at an estimated cost of over Rs. 8 million. These new schemes include investigations on grapes in Andhra Pradesh, date palm in Gujarat, fodder and acid soils in Kerala, rice, pulse and fruits in Madras, fruits and vegetables in Maharashtra, soil and its reclamation in Punjab and dry fruits in Himachal Pradesh. Coordinated scheme for the control of field rats were sanctioned in five States. Studies on various aspects of duck farming were approved for Andhra and Punjab.

In the field of agricultural research, extensive and intensive research was conducted in green manuring of rice, wheat and other crops.

Soil research in the control of weeds at the Bose Institute and at Coimbatore made it possible to prepare a co-ordinated scheme on a model pattern which has been put in operation in Assam, Madhya Pradesh, Bombay,* Punjab and Himachal Pradesh.

Several schemes designed to improve the nutrient status of soil were also undertaken. These include soil tests with a view to reclamation of waste land, research on humification of organic matter in relation to physico-chemical properties of soils and a scheme for the standardisation of methods of soil analysis.

For all-round improvement in vegetables, extensive research was conducted in various directions such as hybridisation, agronomic practices and resistance to disease and pests in Punjab, Himachal Pradesh, Uttar Pradesh, Andhra Pradesh, Bombay,* West Bengal, Jammu and Kashmir and Delhi.

The vegetables covered were brinjal, tomato, cabbage, cauli-flower, bhendi, peas, beans, turnip, gourds and leafy vegetables. Varietal trials were conducted on tuber crops.

Central Committees

A number of Central Committees have been set up to promote the production and marketing of agricultural commodities :

Indian Central Cotton Committee, Bombay.

Indian Central Jute Committee, Calcutta.

Indian Central Tobacco Committee, Madras.

Indian Central Oil-seeds Committee, Hyderabad.

Indian Central Coconut Committee, Ernakulam.

Indian Central Sugarcane Committee, New Delhi.

Indian Central Arecanut Committee, Kozhikode (S. India).

Indian Central Lac Cess Committee, Ranchi (Bihar).

All India Cattle Show Committee, Karnal (Punjab).

A number of research institutes, stations and farms are also maintained by the Central Commodity Committees :

The Indian Central Cotton Committee has :

1. Technological Laboratory, Matunga.
2. Institute of Plant Industry, Indore.

There are also 85 cotton research stations in the country.

The Jute Committee has :

1. Jute Agricultural Research Institute, Barrackpore (West Bengal).
2. Technological Research Laboratories, Tollygunge, Calcutta.
3. Economic Research Section, Indian Central Jute Committee, Calcutta.

There are two main central stations and 13 sub-stations for jute research.

The Tobacco Committee has :

1. Central Tobacco Research Institute, Rajahmundry.
2. Cigar and Cheroot Tobacco Research Station, Vedasandur.
3. Hookah and Chewing Tobacco Research Station, Pusa, Bihar.
4. Cigarette Tobacco Research Sub-station, Guntur.
5. Wrapper Tobacco Research Station, Dinhatta (West Bengal).

The Coconut Committee has:

1. Central Coconut Research Station, Kasaragod.
2. Central Coconut Research Station, Kayangulam.

Three regional stations at Thodupuzha, Kumarakam and Neyyattinkara all in Kerala State. And two more at Rajole in Andhra and Ratnagiri in Maharashtra.

In all, there are 11 sub-stations.

The Sugar Committee has :

Sugarcane Sub-Station, Karnal (Punjab).

Further, about 70 sugarcane research stations exist in the States.

The Indian Central Oil Seeds Committee has two regional centres for research, one at Tindivanam in Madras for the southern region, and the other at Kanpur for the upper India oil seeds.

There are also 90 sub-stations in different parts of the country, under State Governments.

These Committees are financed by the proceeds of a cess levied on the particular commodity. For instance, for the Cotton Committee there is a cess of As. 4 per bale of 400 lb. of cotton ; for the Coconut Committee there is a cess of As. 4 per cwt. on copra consumed in Indian mills ; for the Lac Committee the cess is As. 14 per md. of export of lac and As. 10 for refuse lac exported ; for the Oil-seeds Committee the cess is 1 anna per md. of oil extracted in mills, and annas 2 per md. of oil-seeds.

The Central Arecanut Committee has one central station at Vittal (Mysore) and four sub-stations elsewhere—Kolehalli (Mysore), Panancheri (Kerala), Palode (Kerala), Jalpaiguri (W. Bengal). The States of Kerala, Mysore and Orissa have their own stations.

Research Laboratories

The Ministry of Food and Agriculture maintains directly a number of research laboratories :

1. Indian Agricultural Research Institute, New Delhi.
   Sub-stations at Karnal (Punjab) and Pusa (Bihar).
2. Central Potato Research Institute, Simla. Laboratory, at Potato Multiplication Sub-division, Bhowali (U.P.).
   Laboratory, at Potato Breeding Sub-Station, Patna.
3. Central Rice Research Institute, Cuttack.
4. Sugar Cane Breeding Institute, Coimbatore. Sub-station at Karnal (Punjab) and Sahni Institute, Lucknow.
5. Central Vegetable Breeding Station, Kulu, P.O. Naggar, District Kangra (Punjab).

* Bilingual.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Five regional stations for conducting research on fruit and vegetable preservation have been opened in different States of India, one each in Punjab, U.P., Madhya Pradesh, Bombay* and West Bengal. This arises out of a recommendation made by the I.C.A.R. Fruit and Vegetable Development Committee. It was recommended that two of these regional stations should be opened in 1957-58 and the other three in 1958-59.

Agricultural Colleges

There are 34 agricultural colleges in India. Bapatla and Hyderabad (Andhra), Jorhat (Assam), Tollyganj (Bengal), Sabour and Ranchi (Bihar), Anand and Junagadh (Gujarat), Poona, Nagpur, Akola, Parbhani, Dhulia, Amravati (Maharashtra), Vellayani (Kerala), Coimbatore (Madras), Gwalior, Jabalpur, Sehore, Rewa (M.P.), Dharwar, Hebbal (Mysore), Cuttack (Orissa), Ludhiana, Amritsar (Punjab), Jobner, Udaipur (Rajasthan), Azamgarh, Allahabad, Baraut, Banaras, Agra, Lakhoti, Kanpur (U.P.).

The Central College of Agriculture has been converted into a university to provide courses in post-graduate degrees including Ph.D.

There is also an agricultural university now at Rudrapur in U.P. There will be three constituent colleges, Agricultural, Animal Husbandry and Veterinary Sciences, and Agricultural Engineering and Technology. There will be provision for training 325 graduates annually.

LAND POLICY

The land policy of the Government of India has been formulated for the promotion of agricultural production and for the provision of social justice in the rural economy. The agrarian reform undertaken by the various State Governments during the past few years fall generally into four broad classes :—

(1) The abolition of intermediaries.

(2) Tenancy reform designed to, (*a*) Scale down rents to 1/4–1/5 of the produce, (*b*) to give permanent rights to the tenants (subject to the landlord's rights to resume a minimum holding for his personal cultivation within a limited time) and (*c*) to enable tenants to acquire ownership of their lands (subject to the landlord's right of resumption for personal cultivation) on payment of moderate compensation to the landlord spread over a period of years.

(3) Fixation of ceiling on holdings.

(4) Reorganisation of agriculture including (*a*) Consolidation of holdings, (*b*) Prevention of fragmentation and (*c*) Development of co-operative village management and co-operative farming.

With the exception of Andhra (Hyderabad) and Punjab no State has so far made provision for regulating the standards of cultivation and management of land and resumption of land in case of failure to maintain these standards. Some of the agricultural legislations in Orissa and Himachal, however, have some provision for this, more or less of an obligatory nature.

Judging by the progress already made, it is expected that all the States in the Union would have enacted land reform legislation for the prescription of ceilings and ensuring fixity of tenure to the cultivator by the end of 1959.

This was the time-table adopted by the Nagpur Congress and subsequently endorsed by the National Development Council early in 1959.

With the completion of the necessary legislation, it should be possible to complete the process of implementation of these land reforms by the end of the current plan period.

The view taken in the Planning Commission is that once the land is redistributed on the basis of the current legislation, the land system should not be disturbed for a period of about 15 years thereafter.

Such an assurance of fixity of tenure is considered desirable so that the peasant can give his undivided attention to improving his cultivation and increasing yields without any sense of uncertainty or anxiety.

Since the farmer is being called upon to increase agricultural production in the Third Plan and produce about 110 million tons of food grains by 1965, it is also considered necessary to relieve his anxiety about the trend of agricultural prices.

The Government is accordingly working out a scheme for the fixation of guaranteed minimum prices for rice and wheat and possibly one or two other coarse grains.

It is proposed to announce prices for a period of between three and five years. This will be a long-term floor price at which the Government will undertake to support the market.

Additionally, it is proposed to announce official "purchase prices" before the commencement of each sowing season. The purchase price will be higher than the minimum price and will be the price at which the Government will purchase grains to build up its food reserves.

Ceiling prices may not be necessary as it will be possible for the Government to check any undue upward trend in prices by suitable buffer stock operations.

Guaranteed minimum prices are already in existence for sugar-cane and cotton, but jute prices collapsed last season following a spurt in production and the absence of any price guarantee.

In respect of land reforms, a number of States such as Punjab, Assam, Kashmir and West Bengal adopted the necessary legislation some time ago. Andhra, Madhya Pradesh, U.P., Bihar and Mysore have Bills on the anvil while the Kerala Agrarian Bill obtained the President's assent and has been passed by the Assembly.

Some States such as Mysore proposed to hold special sessions of their legislatures in order to enact legislation before the end of 1959.

The legislation already adopted or now before the legislatures is expected generally to conform to the ceiling and exceptions proposed by the Planning Commission.

The Commission has recommended ceilings at a level that will yield an income of Rs. 3,600 per annum on the basis of current agricultural prices.

In the interests of agricultural production, it has further recommended that large and efficiently managed farms as well as plantations and orchards should be exempted from the ceiling.

The Andhra Bill, which is before a select committee, proposes a ceiling of Rs. 5,400 per annum and makes no exemptions.

The Revenue Minister of the State was, however, advised by the Planning Commission that the Bill should conform to the pattern of ceilings and exemptions outlined in the Second Plan report.

The Madhya Pradesh Bill, which is also at the select committee stage, provides for a ceiling of 32 standard acres. The State Government has been asked to work out what this will mean in terms of income as it appears that the current income accruing on such a property is likely to exceed Rs. 3,600 per annum.

The U.P. Bill, also at the select committee stage, fixes the ceiling at 40 acres. The State authorities have been requested to work out the income ceiling on this acreage.

The Kerala Bill, sponsored by the Namboodiripad Government, placed the ceiling on an acreage—fifteen acres of wet land—that is likely to yield less than Rs. 3,600 per annum. The exemptions are also less liberal than those recommended by the Planning Commission.

The Maharashtra Bill, which has been passed, prescribes an acreage ceiling, but with an income yield of approximately Rs. 3,600.

Bihar proposes to introduce a Bill with a ceiling in terms of standard acres, but again with an income yield of about Rs. 3,600 per annum.

Details on specific questions are given below.

ABOLITION OF INTERMEDIARIES

Intermediaries have been abolished practically throughout the country with the exception of a few small pockets. There is no legislation yet for temporarily settled estates in Assam and for certain *Inam* estates in Madras.

In Orissa legislation for the abolition of intermediaries has not been fully implemented.

The share of the intermediaries who formerly cultivated about 43 per cent of the cultivated area of the country has now been reduced to about 8·5 per cent.

The position with regard to the abolition of intermediaries in the country as a whole is as follows :

	In million acres	Percentage of total area.
Area in which intermediary tenures existed	343·8	43
Area in which legislation for the abolition of intermediaries has been passed	322·3	40
Area in which the abolition of intermediaries has been effected ..	306·0	38
Area in which intermediaries remain ..	37·8	5

Andhra Pradesh : Intermediaries have been abolished in the former State of Andhra, and *Jagirs* have been abolished in the Telangana area. Legislation for the abolition of *Inams* (other than religious, charitable and village service *Inams*) has been passed but not implemented.

Assam : Zamindari rights have been abolished over an area of 1·82 million acres, of permanently settled estates in Goalpara District. Subordinate tenures remain as also temporarily settled estates.

Bengal (West) : Intermediaries have been abolished.

Bihar : Intermediaries have been abolished.

Gujarat : Intermediaries have been abolished in the Saurashtra area. A draft bill for the abolition of the *Jagirdari* system in the Kutch area was under consideration.

The State Assembly passed into law the Gujarat Land Ceilings Bill on February 23, 1961 fixing compensation for the excess land.

Jammu and Kashmir : Legislation for the abolition of intermediary interests in land held by occupancy tenants and inferior owners is under consideration.

Kerala : *Edavagai* estates are abolished. Bills are under consideration for the abolition of intermediary interests in *Pandaramvake* (Temple) lands and to acquire the interests of *Jemmies*.

Madhya Pradesh : Intermediaries have been abolished in the State except where land is held under *Muafis* and *Inams*.

Madras : Intermediaries have been abolished except in post-1936 *Inams* and *minor Inams*.

Maharashtra : Intermediaries have been abolished in the area covered by the former Bombay State with the exception of religious and charitable *Inams*. Intermediaries have been abolished in the Vidarbha area also.

Mysore : Religious and charitable *Inams* have been abolished in the area of the former Mysore State. Legislation for the abolition of personal and miscellaneous *Inams* has been passed. Proposals for the abolition of *Jagirs* in the Coorg area are under consideration. And *Jagirs* have been resumed in the North Karnatak.

* Bilingual.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Orissa : All *Zamindaris* have been abolished. Abolition of *Inams* and subordinate tenures of intermediary nature is in progress.

Punjab : Intermediate tenures (superior owners and landlords of occupancy tenants) have been abolished and inferior owners and occupancy tenants made the owners of lands.

Rajasthan : In former Rajasthan all settled *Jagirs* with rental income of Rs. 5,000 resumed. *Jagirs* of religious and charitable institutions are being resumed. Legislation for the abolition of *Zamindari* and *Biswedari* tenure was passed in December 1958. Abolition of estates is being completed in Ajmer region. Estates with a total income of Rs. 1·469 million have been resumed.

Uttar Pradesh : Intermediaries have been abolished (except in the Kumaon Hills where a Bill for this purpose is on hand). 1·5 million sub-tenants and tenants of *Khudkasht* holding 2 million acres have thus been brought in direct contact with the State.

Delhi : All intermediary interests acquired.

Himachal Pradesh : Legislation for abolition of intermediary interests made, but not enforced.

Tripura : Legislation for abolition of intermediary interests is in progress.

COMPENSATION

Apart from the annual payment to be made to religious and charitable institutions whose estates were brought under the State, the compensation payable for the aquisition of intermediary rights was estimated at Rs. 625 crores (including 389, 86 and 150 crores of rupees for compensation, rehabilitation grants, and for interest payments respectively).

The entire position in regard to compensation as at the end of 1960 is shown by the table below:

(Rupees in Crores)

State.	Compensation and rehabilitation grant payable (including interest).	Amount paid.
Andhra Pradesh ..	16·24*a*	11·23*a*
Assam	5·18	0·96
Bihar	240·00	4·61
Bombay*	28·74	7·96
Madhya Pradesh ..	22·10	9·78
Madras	6·37	4·17*b*
Mysore	3·91	1·07
Orissa	10·50	0·47
Rajasthan	40·50	6·74
Uttar Pradesh	179·00	78·88*c*
West Bengal	70·00	3·01
Kerala	0·20	..
Total	622·74	128·38

a. Including the whole of former Hyderabad. *b.* Including interim payments to religious and charitable institutions in lieu of interests and annuities amounting to Rs. 11·9 and Rs. 7·2 million respectively. *c.* Excluding interim annuity, interest and contributions to religious and charitable institutions.

TENANCY REFORM

With the abolition of intermediaries, the tenures come under two broad categories, *i.e.* (*i*) owners who hold land directly from the State ; (*ii*) and the tenants who hold land from owners. Their rights and obligations are regulated under tenancy laws enacted in the States. Thus the multiplicity of tenancy has been considerably reduced, and in the most parts, tenants who hold land under intermediaries have now become owners of land.

Scaling down rents—Land revenue assessment : Legislation has been adopted in all States for the regulation of rent.

The Plan recommendation is that it should not exceed one-fourth or one-fifth of the gross produce.

But the rent fixed however varies with the State.

In the following States the maximum rent is fixed at one-fourth of the gross produce : Assam, parts of Mysore, Orissa, former Hyderabad, the territories of Delhi and Himachal Pradesh. It is seven-twentieths in Bihar, one-third to two-fifths in Madras, and one-third in the Punjab.

In the following the maximum is one-sixth : pre-reorganization Bombay and Rajasthan.

In the following the maximum is fixed at half: former Andhra, West Bengal and Jammu and Kashmir.

In Kerala the Agrarian Relations Act provides for a maximum rent of between one-fourth and one-sixth for paddy lands, and between one-third and one-twentieth for other lands. The Act came into force on March 1, 1961.

In other States the rent is fixed at one-third.

The enforcement of laws for the reduction of rent has been difficult, as rent regulation cannot be effective unless it is accompanied by security of tenure.

Further, regulation of crop share rent is difficult to enforce. Therefore in some States like Andhra and Bombay* the maximum rent is fixed as a multiple of land revenue as suggested in the Second Plan.

Security of Tenure : The Second Five Year Plan has recommended that ejectment of tenants and sub-tenants should be avoided except in the case of non-payment of rent and misuse of land. A large number of States have already taken steps to protect the tenants by the provision of (*i*) temporary protection to tenants from eviction till comprehensive Tenancy Act is passed, (*ii*) fixity of tenure on qualifying basis, and also by (*iii*) allowing resumption by the landlord on a prescribed basis, and (*iv*) giving permanent protection or ownership.

Temporary Protection : Pending enactment of adequate legislation, ejectment of tenants and sub-tenants have been stayed for varying periods prescribed by law in Andhra, Kerala, Madras, Madhya Pradesh, Manipur, Mysore, Orissa and Punjab.

Fixity of Tenure : A number of States legislated to provide for fixity of tenure and restricted grounds on which landlord could eject them, either on a qualifying basis (*i.e.* tenants holding land for a specified period and or by prescribing conditions for the resumption of limited land by the landlord). Security of tenure on the qualifying basis of occupancy or other conditions have been granted in some States 6-10 years in Andhra ; 12 years in Mysore, the PEPSU area of the Punjab and Bihar ; 3-7 years in Madhya Pradesh, and 6-12 years in the Punjab.

The following table shows the position about security of tenure :

Position.	Area in million acres.	Percentage of total.
I. *Complete Security :*		
Area in which landlord is not allowed resumption by ejecting tenants	73·0	9
II. *Partial Security :*		
(*a*) Area in which landlords' resumption is permitted after leasing a minimum holding to the tenant	278·4	34
(*b*) Area in which a ceiling limit is put on resumable area, but, no provision against tenant's becoming landless	193·8	26
(*c*) Area in which tenants have temporary protection	156·0	19
III. *No Security :*		
Area in which no security of tenure exists ..	99·7	12
TOTAL	800·9	100

Resumption : Security of tenure was conferred on tenants subject to landlords' right to resume land for personal cultivation in Bombay,* Himachal Pradesh, and Rajasthan. Tenants can retain a minimum holding or a portion thereof, such as half the area in Bombay,* ¾ in Himachal Pradesh, 5 standard acres in Punjab or a minimum holding with a net income of Rs. 1,200 (exclusive of the cost of the labour and the labour of the family) in Rajasthan. Subject to the above conditions the landlord's right to resume and for personal cultivation is limited to 3 economic holdings (*i.e.* 12-48 acres) in Bombay*, 5 acres in Himachal Pradesh, 30 standard acres in Punjab and the area in excess of the minimum holding to be left with the tenants in Rajasthan.

In other States also a limit has been fixed on the area which a land owner may resume for personal cultivation.

Legislation has been put through in most of the States prescribing a basis for the resumption of the land by the landlords, as shown below : *Assam :* Landlords can resume ⅔ of the area owned subject to a minimum of 5½ acres and a maximum of 33⅓ acres ; *Bengal :* Limit on resumption has been placed at ⅔ of the area owned ; *Jammu and Kashmir :* 2-6 acres ; *Madras :* Owners with 12½ acres of wet land or less can resume for personal cultivation half the area leased, subject to a maximum of 5 acres ; and in *Orissa :* Owner has a right to resume an area upto 7 standard acres of wet land or 14 acres of dry land for personal cultivation. But in Bengal with regard to *Bargadars* (crop sharers) the landlord may resume only ⅓ of the area if it is more than 7½ acres, but all, if it is less.

Himachal : ¼ upto a maximum of 3 acres ; *Andhra :* 3 family holdings ; *Mysore :* 50 to 75 per cent ; *former Bombay :* ½ upto a maximum of 3 economic holdings ; *Hyderabad :* 3 family holdings.

A basis for resumption had to be found to prevent large-scale ejectments. In the Second Plan a distinction was made between owners who own a family holding or less and others who own land exceeding a family holding. It was suggested that owners in the former class may be permitted to resume one-half of the area leased, and if thereby a tenant's holding is reduced to less than a basic holding the Government should find extra land for the tenant. About land-owners in the second category resumption is subject to the tenant's right to retain minimum land between a basic and a family holding.

The definition of 'personal cultivation' also presented difficulty. In most State legislation the definition is made specific and comprehensive.

* Bilingual.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Ownership Right for Tenants: In most States legislation provides for the conferment of ownership right on tenants and in some cases with the option left to the tenants. The right of purchase relates only to areas which a landowner cannot resume even on grounds of personal cultivation.

In Uttar Pradesh, West Bengal and Delhi all tenants and sub-tenants were brought in direct relation with the State. No compensation was payable by tenants as the State undertook the reponsibility for paying compensation to landlords out of the rents recovered from the beneficiary tenants. But in Delhi compensation was recovered from tenants who would be required to pay land revenue to the State.

Restrictions and Conditions: In some States tenant's right to purchase was restricted as follows: *Andhra* (Hyderabad), *Bombay** (Marathwad, Kutch): Only protected tenants were conferred the rights; *Madhya Pradesh and Himachal:* Only for occupancy tenants; *Punjab:* Only such tenants of non-resumable areas (in continuous possession for six years) were permitted to buy; *Mysore:* For continuous possession for twelve years; *Bombay*:* Only protected tenants. The time limit for purchase was fixed as follows: Where the right to purchase ownership is optional, the tenant can exercise it in time at his discretion. But in Bombay* and Madhya Pradesh (former Madhya Bharat area) the right must be exercised within a prescribed period.

Compensation to Landlords: Compensation payable by tenants for the aquisition of ownership varied from State to State except in the Punjab (where it is fixed at ¾ of the average market value), compensation is generally a multiple of rent or land revenue. In Andhra (Hyderabad 6–15); Madhya Pradesh (Madhya Bharat: 2–8 of the net income of landlord); Ajmer: 12; former Vindhya Pradesh: 15; former Madhya Pradesh (7–10); Rajasthan (for unirrigated lands): 10 and Uttar Pradesh 10.

In the Travancore part of Kerala it is fixed at eight and a half times the net annual income.

The compensation is fixed as a multiple of the assessment in four States:—Bombay*: 20–200 times of the assessment; Delhi: 20–40; Himachal Pradesh: 48 and Punjab (PEPSU): 90 times of the assessment. This compensation is generally payable in instalments (except in former Madhya Pradesh) spread over a period of 5–15 years.

The optional right to purchase is seldom exercised. Tenants required persuasion and help. In Gujarat and Uttar Pradesh the State Governments had to organise administrative drives to persuade tenants to become owners of land. The State Government (in former Saurashtra) provided even credit facilities amounting to about Rs. 20 million through the Land Mortgage Banks to enable the tenants to acquire ownership rights.

The Second Five Year Plan had recommended that tenants of non-resumable areas should be brought into direct relationship with the State, but the total burden, including land revenue and instalment payments towards purchase price, should not exceed the level of rent recommended in the Plan.

FIXATION OF CEILING

Ceiling on Holding: There is a general movement towards fixing a maximum and minimum on land holdings, as an aspect of land reform. This relates to (1) the absolute amount of land which any individual may hold and (2) the future acquisition of land.

Existing Holding: Legislation was enacted in the following States for the fixation of ceiling on existing holdings:—Andhra (Telangana): 4½ family holdings (18-270) acres; Assam: 50 acres; Bengal: 25 acres; Gujarat (Kutch): 72-270 acres; Himachal Pradesh: 30 acres in Chamba (in other areas land assessment at Rs. 125); and Jammu and Kashmir: 22¾ acres.

Maharashtra (Marathwada 18-270 acres and Vidarbha 42-240 acres); Mysore (former Hyderabad area) 18-270 acres; Punjab (Pepsu) 30 standard acres and for displaced persons 40 standard acres.

The legislation is enforced only in Andhra† (Hyderabad), Bengal and Kashmir. Implementation has been completed in Jammu & Kashmir where 23 million acres have been distributed. In Bengal Government came into possession of 13 million acres of land which is given on yearly lease to landless workers. The Punjab Government has begun implementation of the law to assume management of lands held by owners under personal cultivation in excess of 30 standard acres (50 standard acres for displaced persons). This does not apply to the efficiently managed estates whose break up may lead to a fall in production.

Ceiling has also been applied to lands held by intermediaries in Madhya Pradesh, and Rajasthan (Ajmer). In Maharashtra the Land Ceiling Bill was passed in the Legislative Assembly on 30th March 1961.

Future Holdings.—In various States ceiling has been placed on future acquisitions:—Andhra (Telangana): 3 family holdings (12-180 acres); Assam: 50 acres; Bengal: 25 acres; Gujarat (former Bombay 12-48 acres, Saurashtra 60-120 acres and Kutch 36-135 acres); Delhi: 30 standard acres; Jammu and Kashmir: 22¾ acres; Madhya Pradesh (Madhya Bharat): 50 acres (and for displaced Persons) 40 standard acres; Maharashtra (former Bombay area 12-48 acres, Vidarbha 12-120 acres); Mysore (North Karnatak 12-48 acres, former Hyderabad 2-180 acres); and Uttar Pradesh: 12½ acres.

Legislation is under way in the following States:

Kerala: fixation of ceiling on future acquisition and existing holdings varying from 15 to 30 acres.

M.P.: provides ceiling on future acquisition.

Mysore: provides ceilings on existing holdings as well as future acquisitions at a level yielding a net annual income of Rs. 3,600.

Andhra: ceilings on existing holdings at a level yielding a net annual income of Rs. 5,400 and a ceiling on future acquisition at the level of Rs. 3,600 annual income.

The idea of ceilings is accepted. Census to collect data have also been held in most States. The ceiling recommended in the Second Plan is three family holdings. To define precisely what a family holding is Government appointed a a small group of experts.

State	Existing Holding		Future Holding	
	Land yielding net income of Rs.	Acres	Land yielding net income of Rs.	Acres
Andhra Pradesh	5,400	....	3,600	....
Bihar	....	30 – 90	....	30 – 90
Bombay*	3,600	–	3,600	–
			or existing limit whichever is lower	....
Kerala	....	15 – 37½	....	15 – 37½
Madhya Pradesh.. ..	....	32 – 96	....	32 – 96
Mysore	3,600	....	3,600	....
Orissa	....	33 – 99	....	33 – 99
Rajasthan..	....	30 std.	....	30 std.
U.P.	....	40 – 80	....	40 – 80

Manipur	....	25	....	25
Tripura	....	25 std.	....	25 std.

CONSOLIDATION

(a) Size of Holding: The average size of a holding for the whole of India is 7·5 acres, but this varies from State to State: Assam 5·3 acres, Bihar 4·1 acres, Bombay* 4·5 acres, M.P. 13·9 acres, Madras 9·7 acres, Orissa 5·6 acres, Punjab 11·8 acres, U.P. 5·3 acres, W. Bengal 4·7 acres.

Kashmir 3·8 acres, Kerala 2·4 acres, Mysore 7·2 acres, Rajasthan 16·9 acres.

The majority of the holdings will be less than 5 acres, a great majority indeed less than 2.

The proportion of households that held either no land or less than five acres was about three-fourths, and the total share was about one-sixth of the whole area of cultivated land.

(b) Consolidation of Holdings: Legislation towards consolidation of holdings has been enacted in the States of Bombay*, Madhya Pradesh, Punjab, Delhi, U.P., Jammu and Kashmir, Assam and Himachal. Special provision for consolidation of holding has also been incorporated in the Tenancy Acts of Bengal, Bihar, Mysore, Orissa, Andhra. Consolidation work has so far been undertaken in Andhra (Hyderabad), Bihar, Bombay*, Delhi, Himachal Pradesh, Madhya Pradesh, Mysore, Rajasthan and Uttar Pradesh. The total area consolidated upto the end of June 1959—the latest available—

* Bilingual.

† The Andhra Govt. announced on May 4, 1961 Ceiling on Agricultural Holdings Act would come into force from June 1961.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

is over 19 million acres completed and 10½ million acres in progress as shown in the table below.

The Second Plan target was 38 million acres. The State plans had a provision of Rs. 3·82 crores for the purpose. The Centre was to contribute 50 per cent of the net expenses incurred by each State. During 1958-59 a Central grant of Rs. 5·935 million was approved and in 1959-60, Rs. 7·917 million.

Area consolidated

(In million acres)

States	Completed upto June 1959	In progress
Andhra Pradesh ..	..	0·236
Assam	..	..
Bihar	..	0·072
Bombay*	1·812	1·895
Delhi	0·202	..
Himachal Pradesh ..	0·063	0·020
Madhya Pradesh ..	3·339	0·260
Madras	..	..
Mysore	0·749	0·401
Orissa	..	..
Punjab	9·555	4·283
Rajasthan	0·397	0·716
Uttar Pradesh	3·070	2·645
Total	19·187	10·528

(b) Prevention of Fragmentation: Legislation disallowing fragmentation has either been enacted or in the process of enactment in fifteen states. U.P. below 6¼ acres; former Hyderabad below a basic holding ranging from 2-24 acres; Rajasthan below a size to be determined by the State Government; Delhi below 8 standard acres; Madhya Pradesh below 5 acres of irrigated or 10 acres of dry land.

SERVICE CO-OPERATIVES

The National Development Council reviewed the co-operative programme and called for the organisation throughout the country of service co-operatives.

In a sense, all co-operatives are engaged in providing services to their members. A distinction can, however, be drawn between production co-operatives, which undertake production in their corporate capacity like a joint co-operative farming society and service co-operative, where the operations of agriculture are carried out individually by the members while common services are provided by the co-operative.

The service co-operatives, are expected to assume total responsibility for economic development at the village level by providing all essential supplies and services necessary for increasing agricultural production. The aim is to ensure that every family engaged in agricultural production is represented in the service co-operative, and that everyone obtains credit and supplies necessary for implementing his agricultural production programme.

The service co-operative concerns itself with the provision of short and medium term credit, the supply of agricultural production requisites and standardised consumer goods. It should also arrange for the marketing of agricultural produce through marketing societies in mandis and help in formulating and implementing agricultural production plans of the members and do such educative, advisory and welfare work as may be feasible.

The membership and turnover of the service co-operative in the initial stages will naturally be restricted, while the minimum expenditure that it will have to incur will be considerable. Government have, therefore, decided to subsidise each society to the extent of Rs. 900 a year over a period not exceeding five years.

The village co-operatives are also to have the facility of godowns constructed for a group of villages by the marketing co-operatives to whom necessary loans and subsidies are to be provided by Government.

The service co-operatives are to be linked to district co-operative banks, on the one hand, and marketing societies in the Mandis on the other.

Deposits today constitute only about 8 per cent of the working capital of agricultural credit societies. Since nearly 45 per cent of the national income in India comes from the rural sector, it is obvious that, unless co-operatives mobilise savings from the rural sector, it will be difficult to find adequate resources from outside. Hence thrift and savings are to be an integral and vital function of the service co-operative.

According to the National Development Council's resolution, village co-operatives are to cover the entire rural population by the end of the Third Five Year Plan. During the Second Plan 3,000 co-operatives should be started. Six hundred were to be started in 1958–59. At the beginning of 1960 over 38,795 service co-operatives were in existence—about 50 per cent of the villages and 20 per cent of the rural population are within the fold of co-operatives. There are about 168,000 societies, out of which about 100,000 require activisation. The programme envisaged by the National Development Council involves revitalisation of these dormant and moribund societies and organisation of another 100,000 new societies and expansion of membership and functions of all village co-operatives.

The programme for 1960–61 envisaged the establishment of about 33,000 societies. By the end of Second Plan thus there would be 70,000 odd service co-operatives throughout the country. Together with the existing societies, these are expected to serve 20 million rural families and to supply credit of the order of Rs. 200 crores.

Co-operation is now a subject for the degree in commerce at the universities of Bombay, Madras, Gujarat, Baroda, Andhra, Kerala and Vallabh Vidyanagar.

CO-OPERATIVE FARMING

(For statistics see the tables in the article on the Co-operative Movement.)

A note on different types of co-operative farming would be in place here.

Co-operative farming is an organization "in which each cultivator would retain his right in his own land, but the cultivation operations would be carried on jointly. The expenditure would be met from a common fund and deducted from the gross income. The net income would be distributed among the cultivators in the proportion of the land belonging to each".

The main features of co-operative farming are thus: that land is formed into a single unit; proprietorship rests with the individuals; management is carried on jointly, the members are paid for their work; and the net profits distributed among the members after setting aside money for building reserves.

The main purpose of such type of farming is to secure economy in the use of machinery, and the advantages of large-scale farming.

The societies formed for co-operative farming get State assistance in the form of lower assessment, loans for the purchase of seeds, supply of manure and other implements at concessional rates, and contribution towards share capital without sharing in profits. The money along with the interest is repayable in instalments.

The co-operative farming societies have been classified into four kinds:—

(i) Co-operative Better Farming Society: This is organised for the purpose of introducing improved methods of agriculture. It helps to promote the use of improved seeds, implements and manures. It can undertake bunding, irrigation, joint harvest and marketing of produce. In this system each member is responsible for the cultivation of his own land except for the specific purpose for which he joins the society. Land is not pooled.

(ii) Co-operative Joint Farming Society: The objects are: to purchase or take on lease lands for cultivation; to purchase, erect and repair residential buildings, cattle-sheds and godowns to facilitate joint farming; to purchase farming requirements, to sell and process the farm produce; to raise funds on the security of lands, crops and other assets for the purpose of giving loans to the members; to undertake cattle breeding, dairy farming, vegetable growing and fruit gardening; to arrange for expert advice and the spread of agricultural education among the members of the society. This type of society is particularly suited for solving the problem for fragmentation and sub-division of holdings.

The land belonging to the members is pooled but proprietorship rests with the individual members. Members work on the pooled land in accordance with the decisions of a Committee elected by it. A manager is appointed by the Committee. They work jointly and each member gets wages for his daily labour. The produce is jointly disposed of and the proceeds after meeting all the expenses of cultivation are shared by the members in proportion to the wages earned by them.

(iii) Co-operative Tenant Farming Society: This type of society is suitable where large areas of land are available on lease from landlords or the Government. If the society owns land on free-hold or lease-hold, and its holding is divided into smaller holdings or plots, each of which is leased to individual tenants, who are members of the society for the purpose of cultivation, then it is called a co-operative tenant farming society. Every member agrees to cultivate the land allotted to him as a tenant member in accordance with a plan framed by the society in return for the payment of a fixed rent for his holdings and to make his contribution also by way of labour and also in other ways schemes of land improvement and reclamation in accordance with the rules and regulations prescribed by the society. The main functions of the society are to purchase or take on lease lands; arrange for the joint purchase of farming requirements of members and joint processing and sale of farm produce; arrange for the supply of credit, seed, manure. Such a type of society is generally suitable in places where new land is to be brought under cultivation. This method is employed in the Ganga khadir in U.P. and in Madras.

(iv) Co-operative Collective Farming Society: Such a society undertakes joint cultivation. Lands are cultivated jointly, and the produce is raised collectively and distributed among the workers in proportion to the labour and other resources contributed by them. The co-operative collective farming society has all the features of a joint co-operative farming society except that in the former, the lands belong to the society as free-hold or lease-hold, whereas in the latter, the lands are held by the members as owners or tenants.

For details on farming societies see article entitled Co-operative Movement.

Three regional centres would be set up for training personnel (North and Central, Western, Eastern) in co-operative farming.

Besides co-operative farming, collective farming is undertaken in some States, *i.e.* Andhra (Hyderabad), Gujrat (Saurashtra), Madhya Pradesh (Bhopal), Mysore (Coorg), U.P. and Tripura.

* Bilingual.

One big State farm conducted by the Government of India is at Suratgarh (Rajasthan).

NIJALINGAPPA COMMITTEE

The Government of India have announced their decisions in regard to the recommendations of the Working Group on Co-operative Farming (Nijalingappa Committee).

A Co-operative Farming Board is to be formed at the Centre with State Co-operative Farming Boards for promoting co-operative farming and 3,200 co-operative farms are to be set up on a voluntary basis under a pilot project scheme. District co-operative unions will look after the co-operative farming societies along with other types of district co-operative societies.

Co-operative farming societies are to be eligible for assistance on a priority basis under the various schemes which provide for assistance to individual cultivators. But for purposes of special assistance the societies are required to attain a prescribed minimum size in terms of membership and area of operations in order to ensure that such assistance is available only to those societies as have a chance of becoming viable.

The State Governments are to participate in the share capital of co-operative farming societies (upto a limit of Rs. 2,000 per society) composed predominantly of landless cultivators and marginal and sub-marginal farmers. State's share which is not to exceed the amount raised by the members themselves is to be retired over a period of 10 years.

The short-term credit required by a co-operative farming society is to be made available either by the Central Bank direct, or by the village service co-operative according to convenience and local facilities and resources available. The co-operative farming society should be able to take full advantage of the primary service co-operatives in respect of supplies, marketing, etc. and thereby strengthen its activities.

A co-operative farming society is to receive the following assistance from the Government:—(1) A total subsidy not exceeding Rs. 1,200 for a period of 3 to 5 years for managerial expenses; (2) An amount not exceeding Rs. 5,000 (25 per cent subsidy and 75 per cent loan) for the construction of a godown-cum-cattleshed provided such assistance does not duplicate or overlap the construction of accommodation by service co-operatives; (3) Medium and long-term loans amounting to Rs. 4,000 for programmes of development; (4) Additional requirements, if any, are to be met out of the funds available in the agricultural sector of the Plan and those in the schematic budget of the community development blocks.

Membership of co-operative farming societies is to be confined to those who are prepared to work on the farm, or in its ancillary activities. Absentee landowners are not, ordinarily, to be admitted as members, except persons who cannot work on the farm due to physical disability, government service, etc. However, the number of absentee land holders is not to exceed ¼th of the total membership of the society.

Land is to be pooled by members for a minimum period of 5 years during which no withdrawals are to be permitted except under exceptional circumstances and subject to the terms and conditions prescribed by each society. Members are to receive a suitable return for the land pooled by them.

Cattle, implements, etc. of a member are to be taken over by a society after careful and fair valuation, the value so realised being treated as share capital, to the extent necessary, and the balance as deposits of the member concerned.

Consolidation of holdings is not to be a condition precedent to co-operative farming but advantage is to be taken of consolidation proceedings to encourage co-operative farming.

In order to enable a co-operative farming society to raise the necessary medium and long-term finance, its members are to be persuaded to authorise the society to mortgage the pooled land. Failing such authorisation, the Society may be enabled to create a charge of the pooled land on the lines of the provision in the Bombay Co-operative Societies Act.

In regard to training in co-operative farming, it has been indicated that this should be provided by expanding the existing arrangements so as to cover training for co-operative farming also.

AGRICULTURAL LABOUR

About 30·4 per cent of the rural families were agricultural labourers, half of them possessing no land whatsoever, and the other half owning some land. Minimum wages for agricultural workers have been fixed throughout Kerala, Orissa, Punjab, Rajasthan, Delhi and Tripura and specified areas in Andhra, Assam, Bengal, bilingual Bombay, Himachal Pradesh, M.P., Mysore and U.P. Minimum wages have also been fixed by the Central Government in agricultural demonstration farms and military farms under Food and Agriculture Ministry and Defence Ministry respectively.

Landless agricultural workers were settled on the Central Mechanized Farm, Bhopal, under a scheme for the settlement of 5,000 families over an area of about 6,800 acres.†

The Central Mechanized Farm in Jammu is now under the control of the State Government.

At Suratgarh in Rajasthan there is a Russian-sponsored collective farm (*See Rajasthan State for details*).

(See also article on labour for further details on agricultural labour).

Financial help has been offered to States like U.P. for initial spadework in land utilisation such as land reclamation and layout, building tenements, health and social amenities and also administrative staff for the initial stages of 2-3 years. The Second Five Year Plan provided Rs. 150 lakhs for the purpose. But the amount spent was less than Rs. 150 lakhs spent mainly in Uttar Pradesh (in Lakhimpur Kheri and Pilibhit Districts) and in Madhya Pradesh (Bhopal). Small schemes in Andhra, Madras and Mysore also got the support of the Government.

During 1959-60, a total amount of Rs. 58·53 lakhs had been provided for the settlement of 1,555 families of landless agricultural workers in Assam, Bihar, Kerala, M.P. and U.P. States.

BHOODAN

(See under 'Late Particulars'.)

First Five Year Plan : Details are given in the 1960-61 edition of the Directory.

2nd & 3rd FIVE-YEAR PLANS

In the Second Plan agricultural programmes were intended to provide adequate food to support the increased population and the raw materials needed for a growing industrial economy and also to make available larger exportable surpluses of agricultural commodities. The basic objective of the Third Five Year Plan is to achieve self-sufficiency in foodgrains and increase the production of other agricultural and commercial crops to meet the requirements of the industry and the export trade.

The outlay during the Plans itemwise:

(in million Rs.)

	Agriculture	Community Project	Agriculture & C.P.	Irrigation	Total
1st Plan ..	2,340*(9·9%)	1,230(5·2)	3,570(15·1)	2,130	3,570 2,130 5,700
2nd Plan ..	2,940 (6·1)	2,740(5·7)	5,680(11·8)	3,760	5,680 3,760 9,440
3rd Plan ..	6,250 (8·6)	4,000(5·5)	10,250(14·1)	6,500 + 2,400	10,250 6,500 2,400 19,150

* Figures in the brackets are percentages of the total plan outlay.

\+ Outlay in fertilisers.

The targets to be attained during the 2nd Plan were an additional production of 15·4 million tons of foodgrains, 2 million tons of sugar, 2·1 million tons of oilseeds, 2·3 million bales of cotton, and 1·5 million bales of jute, over the estimated production for 1955-56 in the First Five Year Plan.

The additional area to be benefited by irrigation in the 2nd Plan amounted to 19·4 million acres.

The targets to be attained during the 3rd Plan are an additional production of 25 to 30 million tons of foodgrains, 1·8 to 2 million tons of sugarcane, 2 to 2·3 million tons of oilseeds, 1·8 million bales of cotton and one million bales of jute. The additional area to be benefited by irrigation will be 27 million acres (major 13 million and minor 14 million). The target for foodgrain production for the 3rd Plan is tentatively fixed at 100-105 million tons against the estimated production of 75 million tons at the end of the 2nd Plan.

Percentage increase in 1965-66 over 1960-61 : Foodgrains 33 to 40 ; sugarcane 25 to 28 ; oilseeds 28 to 32 ; cotton 33 ; jute 18.

The production of coconut, arecanut and cashewnut is to be similarly increased by 28, 8 and 106 per cent respectively ; pepper, cardamom, lac and tobacco by 3, 16, 24 and 8 per cent respectively and plantation crops like tea, coffee and rubber by 17, 78 and 71 per cent respectively. Agricultural production as a whole is to be stepped by 30-33 per cent by the end of the Third Five Year Plan compared with an increase of 15·5 per cent expected to be achieved during the Second Five Year Plan period.

(For more details see 1959-60 and 1960-61 Directories).

† Now the land is distributed among individual cultivators.

LIVESTOCK

IT is estimated that there were about 307 million total livestock in 1956. Of these the cattle formed about 159 million, buffaloes about 45 million, sheep 38·6 million, goats about 56·6 million, horses, ponies about 1·5 million, other livestock (mules, donkeys, camels and pigs) about 6·7 million and poultry about 97·4 million. India has thus about 19 per cent of the world's cattle, about half the world's buffaloes and about 18 per cent of the goats.

In spite of the large number of livestock, the net value of the livestock products in 1950-51 amounted only to about 16 per cent of the income from agriculture.

Meat from livestock is a valuable source of protein; about 0·9 per cent of the total cattle population is slaughtered for meat, and 36 and 32·5 per cent of the goat and sheep population respectively. The annual production of meat from goat is about 0·15 million tons and that of mutton 0·11 million tons. Production of beef, buffalo flesh and pork amounts to 0·12, 0·09 and 0·02 million tons respectively. The total annual production of meat from all species is estimated to be over 0·46 million tons valued at Rs. 760 million.

Live animals worth Rs. 1·642 million, Rs. 1·313 million, Rs. 1·524 million and Rs. 1·057 million were exported for food during 1957, 1958, 1959 and the first eight months of 1960 respectively. The imports during the same period were valued at Rs. 1·557 million, Rs. 0·388 million, Rs. 0·059 million and Rs. 0·082 million respectively. Other live animals (excluding monkeys) worth Rs. 1·03 million, Rs. 1·038 million, Rs. 1·277 million and Rs. 1·245 million were exported for non-food purpose during 1957, 1958, 1959 and Jan-Aug. 1960 repectively.

Export of monkeys and value in Rs. million:

Year	Number	Value Rs. million
1957	190,844	12·77
1958	101,053	6·21
1959	155,614	8·935
1960 (Jan.-Aug.) ..	93,812	5·105

* Bilingual.

CATTLE

Among the well-defined breeds of cattle (26 in all), three broad divisions are: dairy and draught cattle and those that serve a dual purpose.

Milch:—The Sahiwal, the best milch breed, are responsive to environment, have an yield of 4,000 lbs. a year. The Sindhi are also responsive to environment, the Gir in Saurashtra and Rajasthan have an yield of 3,700 lbs. a year.

Dual:—The Galo in Madhya Pradesh are draught animals but also good milkers, 3,000 lbs. The Kangayam in the south and south-east of the country are powerful draught animals of average milk yield. The Kankrej, are essentially draught but have milk potentialities (3,000 lbs.); they belong to Gujarat. The best known in this group are the Hariana (Punjab, 3,000 lbs.), Tharparkar (Gujarat and Rajasthan, 3,000 lbs.), and Ongole (Andhra).

Draught:—The Amritmahal (Mysore) are poor milkers; then there are the Hallikar (Mysore).

In the order of the productivity of milk we might arrange the cattle as follows: the Sahiwal, the Kankrej, the Ongole.

The best known breeds of buffaloes (26 in all) are the Murrah, Nili and Ravi buffaloes of the Punjab, the Jufferbadi buffaloes of Kathiawad, Mehsana of Gujarat, Nagpuri of Vidarbha and the Surti and Pandharpuri, a type of Nagpuri buffaloes of Maharashtra. All except the Nagpuri are noted dairy breeds. Murrah, is adapted to all climates. They also yield on an average about 3,000 lbs. of milk for over 300 days in a year.

The average annual milk yield of a buffalo is 1,100 lbs. against 413 lbs. of the Indian cow. Buffalo milk being one and a half times as rich in fat content as cow milk, is more valued for butter and ghee production. Buffaloes are also better utilisers of coarse fodder and are less expensive to keep.

Experience of Government farms is that by better feeding and management the production of village cows can be increased by 50 per cent, whereas that of the buffaloes can be increased only by 15 per cent.

LIVESTOCK DEVELOPMENT

Legislation for livestock improvement and control of contagious disease exists in all States (except in Jammu & Kashmir, Tripura, Rajasthan and U.P.).

Livestock Development is stepped up through special schemes such as Key Villages, Gosadan, and Poultry Development Schemes.

Key Villages: Key village scheme was introduced during the 1st Five-Year Plan to increase milk production and raise the productivity capacity of cattle. By the end of 1955–56, 146 artificial insemination centres and 555 key village units had been established.

The 2nd Plan envisaged the expansion of 104 A. I. centres, establishment of 245 new A. I. centres, 254 key village extension centres and grant of subsidies for maintenance of 34,550 selected improved calves. Achievement so far (Jan. 1961): Expansion of 107 A. I. centres, establishment of 198 new A. I. and 45 key village extension centres. 11,882 calves have been subsidized.

Gosadans.—The Gosadan Scheme aims at the removal and segregation of old, unproductive and uneconomic cattle. During the First Five-Year Plan, 25 gosadans were established, one in Tripura, two each in Mysore and Rajasthan, three each in Bihar and Punjab, four each in Madhya Pradesh and Uttar Pradesh and six in Bombay State*.

During 1956-59, 31 gosadans were established, two each in Bihar and Orissa, six each in Bombay* and M.P., eleven in U.P., and one each in Andhra, Kashmir, Rajasthan and Mysore. Two gosadans were added in 1959-60.

Gaushala Development: During 1959-60, 30 new gaushalas were taken up for development bringing the total number developed since the initiation in the 2nd Five-Year Plan to 208. The object is to convert them into efficient milk production centres and to breed better cattle.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

To eliminate the damage to crops by wild and stray cattle a scheme to catch them and dispose of them had been in operation as a part of Gaushala Scheme for the last few years at Delhi, Jammu & Kashmir and Punjab. About 52,958 stray cattle has been caught and disposed off so far.

Old, infirm and useless cattle are segregated and sent to gosadans located in remote forests and other waste lands where grazing facilities are not fully utilised. All male stock were castrated before admission into the gosadans. The remains of dead animals such as skins, hides and hoofs, etc. were to be utilised by setting up a small 'charmalaya' at each centre.

Eight gosadans were equipped with charmalayas. Two charmalayas one at Lucknow and another at Delhi provide also training in flaying, curing, etc. and utilization of carcass.

SHEEP

It has been estimated that the number of sheep in the country is about 40 million and that the total quantity of wool produced is 54 million lb. annually valued at Rs. 10·5 million. The yield of wool per sheep varies greatly in different parts of the country. In Punjab, Uttar Pradesh and Rajasthan, the annual production per sheep is estimated at between 3·1 lb. and 4 lb., while in the rest of the States it does not exceed 1 lb. The average for the whole of the country is in the neighbourhood of 2 lb. per sheep per year.

Sheep also supply meat worth about Rs. 120 million every year in addition to pelts and manure. Sheep manure is very much valued among other manures as it contains twice as much nitrogen and potassium as are present in cattle manure. An individual sheep contributes 0·5 to 0·7 tons of manure annually.

India still requires large quantities of wool. About 16 million pounds of wool, tops and yarns costing about Rs. 120 million are imported. At the same time, we export about 38 million pounds valued at Rs. 81 million annually.

A sheep and wool development scheme has now been launched on the lines of the key village scheme for cattle improvement, in 250 centres in different states.

Research in sheep breeding is promoted in three major sheep rearing tracts, *viz.* Temperate Himalayan, North Indian Plains and in the Deccan Plateaux, to evolve strains of sheep which will yield wool for apparel and also for superior types of carpets.

The major wool clip of the country hitherto, was classed as carpet grade, due to its two primary defects *viz.* extreme hairiness and the presence of 'kemp'. Investigations have shown that both of these could be eliminated by selective breeding, completely in the case of kemp.

In the Himalayan regions and in the western portions of the Deccan plateaux, breeding the imported Merino with the local sheep, has shown great promise. Concerted efforts are being made in the Plan period at about 200 centres in the rural areas. Each centre will comprise an ewe population of 2,000 to 3,000 which would be systematically developed as nucleus ram producing flocks. A minimum of a thousand rams are to be produced annually after ten years from each centre. The flock owners will be adequately assisted with selected rams, first aid, wool and sheep marketing arrangements and such like.

GOATS

Goats form an integral part of Indian agricultural economy. The goat is the principal source of meat supply; it also provides manure, skin, hair (Mohair) and milk. There are about 57 million goats in India, which is a fourth of the world's goat population. About a fifth of this is used for milk production. Annually about 17 million goats are in demand for human consumption. About 21·3 million pieces of goat skins and hides valued at Rs. 75 million are produced in India, of which skins worth about 57·2 million rupees are exported. Goats are of active habit and multiply rapidly. Goats, unlike sheep, eat up even vegetation containing high tannic acid content which other animals shun. Rajasthan has the largest goat population followed by Bombay*, Bihar and U.P.

The important breeds of Indian goats fall under four broad groups:—Himalayan Goats are found in the hills of Kashmir, Punjab and Uttar Pradesh. These are mostly reared for mohair production and also for meat. There is also the Pashmani goat of Kashmir which produces an undercoat of very fine variety of hair which goes into the manufacture of shawls. The plain goats comprise some of the best mutton and milch animals. Some of the better known breeds are Marwari, Konor and Jamnapari. The last yields 600 lbs. in a lactation of 250 days. Deccan plateaux goats yield small quantities of milk and are mostly reared for mutton.

Results from the Punjab and U.P. have shown that selected goats yield (6 to 8 lbs. milk per day going upto even 12 lbs. in U.P.) on an average about 400 lbs. of milk per lactation of 150 days while a few went up to 700 lbs. and even higher.

POULTRY

Poultry-keeping is an important subsidiary industry of the poorer classes. Indigenous poultry of low grade produce on an average 50 small-sized eggs per year.

Even at a low rate of production, the annual contribution of Indian poultry to the country's economy is not less than Rs. 100 million.

At present, the *per capita* consumption of eggs in India is only four per annum as compared with 400 in U.K., U.S.A. or Denmark.

An improved strain of poultry has been evolved at Izatnagar by selective breeding for ten generations which give an average annual egg yield of 150 and sometimes of 234 of the larger egg type.

Poultry Development.—To stimulate poultry development as a subsidiary industry in the rural areas, a pilot project was approved early in 1955.

The 2nd Five-Year Plan has promoted an All-India Poultry Development Scheme to establish five regional poultry farms in Bangalore, Bombay*, Bhubaneswar, Delhi and Himachal Pradesh and 300 demonstration extension centres at a total cost of Rs. 25·88 million. These five regional poultry farms have started functioning and with the help of incubators and other poultry equipment received from T.C.M. programme, production of eggs and birds is being stepped up. Two regional poultry farms at Delhi and Simla and 203 centres had been established upto 1958-59. The rest of the three farms and six new extension-cum-development centres were established during 1959-60 bringing the total to 209.

The following table gives figures about production of eggs, distribution of birds for breeding and no. of farmers trained during the 2nd Five Year Plan:

Year	Eggs produced	Birds distributed for breeding	Farmers trained
1st 2 years	0·202 mln.	11,346	..
1958-59	0·531 ,,	17,174	37
1959-60	0·653 ,,	18,424	690

During 1959-60, 432 farmers were given subsidy.

Piggery.—Under the 2nd Five-Year Plan an All-India Piggery Development Scheme has been promoted to augment food production of high nutritive value at low cost and also to improve the economic condition of Harijans who mostly are engaged in piggery activities. The scheme provides for three regional pig-breeding stations and 10 piggery units for the production and multiplication of pure-bred stud boars, by whose help the indigenous stock would be upgraded in 90 piggery development blocks. Pork and pork products are expected to be manufactured in the bacon factories attached to the three regional stations.

DAIRYING

Like agriculture dairying is one of the major industries in India as milk and milk products contribute not less than Rs. 6,200 million to the national income.

The dairy industry is still unorganised. Of 200 million cattle and buffaloes, 72 million or 36 per cent are milch animals (females over 3 years). Milk yield is, however, low: Cow 413 lb. per year, buffalo 1,100 lb. Though buffaloes form only 30 per cent. of milch animals, due to their comparatively high yield, they account for 55·9 per cent of the total milk produced. Buffalo milk has butter fat content 6·5 to 7 per cent. as against 4 to 5 per cent. of cow.

Gross production of milk is 20·65 million tons, of which 13·2 million tons are marketed, the rest being used for home consumption or fed to calves. *Per capita* daily consumption of milk and milk products varies from 16·89 oz. in the Punjab to 26·4 oz. in Orissa; average 5·5 oz.

Under the 2nd Plan 47 modern dairy projects comprising 42 milk supply schemes, 3 rural creameries and 2 milk product factories were being set up with the aid of the Central Government. Of these 15 are covered by foreign aid under T.C.M., Colombo Plan and UNICEF. Only Indian bulls are used for cross breeding.

Financial assistance amounting to Rs. 5·225 million had been sanctioned by the Government of India for the various State dairy schemes for 1957-58 and Rs. 28·92 million in 1958-59. During 1959-60 provision of Rs. 27·5 million has been made in addition to Rs. 7·73 million for Delhi Milk Scheme.

This includes: (*a*) extension of milk supply to cities *viz.* Chandigarh, Hissar, Agra, Gorakhpur, Gaya, Agartala, Karjat, Sholapur, Bangalore, Trivandrum, Patna, Jaipur, Bhopal, Coimbatore, Cuttack, Hyderabad and Nagpur; (*b*) setting up dry cattle farms in Kerala (Punalur) and Madras (Abhishikapathi, Thuvakudi, Coimbatore and Virudhunagar), and buffalo dairy farm at Mysore (Kurikuppi); (*c*) expansion of existing dairy institutions in several States; (*d*) financial assistance to co-operative milk supply unions for expansion (Allahabad, Guntur, Kurnool and Madras); (*e*) training of technical personnel in Bihar.

Production of infant and other milk food is being started by Messrs. Glaxo, Horlicks, Amul and Asok Nestles.

PROGRESS OF DAIRY SCHEMES

The following dairy schemes are in operation in the respective States.

Gujarat: 1) Anand Dairy; 2) Kaira Co-operative Milk Union; 3) Junagadh Milk Scheme.

Delhi: Delhi Milk Supply Scheme.

Kerala: Kodapannakunnu and Ollukara Dairy Farms Expansion.

Madras: Madras Co-operative Milk Supply Union.

Maharashtra: 1) Bombay Milk Scheme (Aarey); 2) Poona Milk Scheme; 3) Nagpur Milk Scheme.

Mysore: 1) Kudige Milk Scheme; 2) Bangalore Milk Scheme.

Uttar Pradesh: Allahabad Co-operative Milk Supply Union.

West Bengal: Calcutta Milk Project; Haringhata Milk Scheme.

The following dairy schemes are under construction in the respective States:

Andhra: 1) Kurnool Co-operative Milk Unions; 2) Visakhapatnam Dairy Farm Expansion; 3) Nellore Milk Scheme (with a target of 150 mds. of milk per day); 4) Guntur Co-operative Milk Union.

* Bilingual.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Bihar : 1) Patna Milk Scheme (to handle 2,500 mds. of milk per day); 2) Gaya Milk Scheme (to handle 2,500 mds. of milk per day).

Maharashtra : 1) Bombay Milk Scheme (2nd Dairy Project); 2) Karjat and Sholapur Milk Projects.

Gujarat : 1) Rajkot Milk Conservation Plant; 2) Ahmedabad Milk Scheme (to expand from 400 mds. to 1,500 mds.).

Jammu & Kashmir : Srinagar Scheme.

Kerala : Trivandrum Dairy Scheme (to produce 100 mds. of milk).

Madras : 1) Coimbatore Milk Scheme; 2) Virudhunagar Salvage Farm; 3) Madras Milk Project.

Mysore : Kurikuppi Buffalo Dairy Farm.

Madhya Pradesh : Bhopal Milk Scheme.

Orissa : Cuttack Milk Scheme (to handle 250 mds. of milk).

Punjab : 1) Chandigarh Milk Scheme (to handle 250 mds. of milk); 2) Amritsar Composite Milk Plant (to handle 2,500 mds. of milk); 3) Hissar Livestock Farm.

Rajasthan : Jaipur Milk Scheme.

Tripura : Agartala Milk Scheme.

Uttar Pradesh : 1) Agra Milk Scheme (to handle 150 mds. of milk); 2) Expansion of Lucknow Co-operative Milk Union.

West Bengal : Greater Calcutta Milk Scheme.

Short notes on some of the important dairy schemes in operation :

Bangalore Milk Scheme : In the interim scheme, milk output has increased from about 100 to 125 mds. Expanded scheme is to cost Rs. 9·3 million with an output of over 600 mds. of milk.

Calcutta Milk Project : About 5,000 milch animals were removed from the City to Haringhatta Milk Colony and over 1,300 mds. of milk are now handled daily. Toned milk and flavoured vitaminised milk (with one per cent fat) are also supplied.

Delhi Milk Scheme : Started in 1960 at a cost of Rs. 45 million to the Centre and Rs. 150 million to New Zealand Govt., distributes 1, 800 mds. of milk daily through 320 depots meeting a quarter of the demand for Delhi City. The dairy gets milk from places within a radius of 50 miles (in Delhi, U.P. and Punjab) in the rural areas. Loans of about Rs. 8 million have been offered to producers to buy good cattle. The dairy plant is capable of handling 12,000 mds. daily.

In addition to assistance for milk projects in Bengal, Bombay††, Delhi and Madras, T.C.M. of U.S.A. offered assistance worth 0·57 million dollars in the form of equipment for two milk plants in Bombay and Trivandrum, three rural creameries in Bihar, Bombay†† and Madhya Pradesh and one milk product factory in the Punjab, and the services of a dairy consultant and technologist.

Cattle Power : Over 69 million cattle are engaged in agricultural operations to work approximately 38 million ploughs in addition to other farm work. Out of the 11 million carts in the country used for farm transport, about 0·5 million are located in the urban areas and the rest are in the countryside. Nearly 1·2 million working cattle are used for carting alone. Over half a million sugarcane crushers in the country are worked by bullocks. Over 0·3 million bullock driven ghanies are also run in the country each requiring at least one bullock.

ANIMAL DISEASES

The chief diseases that the Animal Husbandry and Veterinary Departments have to deal with are glanders and surra in equines, foot and mouth disease, haemorrhagic septicaemia, black quarter and anthrax in ruminants while tuberculosis, Johne's disease and contagious abortion are assuming greater importance than in the past. Glanders and surra are both scheduled diseases under the Glanders and Farcy Act. Glanders is incurable but surra can now be successfully treated with Naganol or Antrypol. This disease (surra) also affects camels, cattle and dogs and in recent years its importance as a bovine disease has been more widely recognised.

A major scourge affecting Indian cattle is Rinderpest which causes a mortality of about 60 per cent resulting in an annual loss of 0·4 million head of cattle, valued at about 300 million rupees. The First Plan had provided Rs. 1·67 million for Rinderpest eradication. The Second Plan has provided Rs. 18·3 million. Because of the eradication campaign of the past, Kerala, Mysore and Madras are now free from the disease. But, further north, in Andhra Pradesh, Mysore and Bombay†† States the disease is prevalent and a pilot scheme to vaccinate and brand about 12 million cattle and buffaloes has been in operation since October, 1954. As a result of the last five years' work over 57 million cattle and buffaloes have been protected out of an inoculable population of 131·6 million. The scheme is in operation in the States of Andhra Pradesh, Bombay††, M.P., Orissa, Bihar, West Bengal, Punjab, U.P., Delhi, Jammu & Kashmir, Assam, Himachal Pradesh and Rajasthan.

The quantity of vaccine produced during the First Plan period (October 1954 to March 1956) and the number of animals vaccinated were 7·5 million doses and 5·7 million animals respectively. During 1956-57, 10·573 million doses of vaccine were produced and 5·46 million animals were vaccinated. In 1957-58, 29·02 million doses of vaccine were produced and 14·389 million animals were vaccinated. In 1958-59, 52·142 million doses of vaccine were produced and 24·833 million animals were vaccinated.

In 1959-60, 44·627 million doses of vaccine were produced and 22·770 million animals vaccinated.

To meet the demand for vaccine in various States, six vaccine production centres have been established during the Second Plan period at Izatnagar, Lucknow, Calcutta, Ranipet (Madras), Mhow and Hissar.

Of the diseases of ruminants mentioned, all, with the exception of foot and mouth disease, can now be controlled either by means of sera or by vaccines.

Indian poultry are also subject to several contagious diseases.

During the First Plan 842 veterinary dispensaries were established.

Research and Educational Institutions

The Chief Research Centres under the Central Government :—Indian Veterinary Research Institute is situated at two places in Uttar Pradesh, Izatnagar, and at Mukteswar near Bareilly. They undertake both research and training.

The Institute supplies the veterinary demands of the whole of India for sera and vaccines and except for two minor institutions (one in Madras and the other in Mysore), it is the only source in India for these products. The present output of these products meets only ⅔rds of the demands. Recently on the advice of a foreign expert in the manufacture of Biological Products through modern methods, steps are being taken to modernise the equipment and processes.

Similarly, research in dairying is done at the Indian Dairy Research Institute, Karnal (Punjab) and at its southern regional station at Bangalore (Mysore). The Indian Dairy Research Institute is the principal educational and research centre in the country in Dairy Science. The institute and its southern regional station at Bangalore give courses in Animal Husbandry and Dairying. There is also the Agricultural Institute, Allahabad.

Practical training for the technical personnel required for the various dairy projects are provided at Aarey Colony, Bombay, Kaira Milk Union, Anand and at Haringhatta, Bengal.

There are 16 Veterinary Colleges in India, one each at Hyderabad, Tirupathi, Gauhati, Patna, Calcutta, Bombay, Nagpur, Mathura, Madras, Hissar, Bikaner, Bapatla, Mhow, Cuttack, Trichur and Jabalpur.

LIVESTOCK STATISTICS

The following table shows the estimates of livestock population for 1956 (*Latest available*) : (In thousands).

Area	Cattle	Buffaloes	Sheep	Goats	Horses & Ponies	Other Livestock	Total Livestock	Poultry
STATES								
1. Andhra Pradesh	10,958	5,743	7,428	3,601	96	708	28,534	14,058

FOOD

THE areas covered by the Punjab and the former Vindhya Pradesh (now part of Madhya Pradesh) are generally surplus in wheat.

The areas covered by the following States are generally surplus in rice: Orissa, Madhya Pradesh, Andhra, Punjab.

From the point of view of food generally the position is roughly as follows:

Surplus areas: Madhya Pradesh, Punjab, Orissa, Andhra.

Self-sufficient areas: U.P., Rajasthan, Madras, Mysore, Assam.

Deficit areas: Maharashtra, Gujarat, Himachal Pradesh, Bihar, West Bengal, Kerala, Kashmir, Tripura.

Manipur is marginal.

PRODUCTION

In 1959-60 food production was 71·8 million tons and the index figure 124·3.

Total foodgrains production in the country from 1951-52 to 1959-60 was as follows (figures in million tons): 1951–52: 51·17; 1952–53: 58·27; 1953–54: 68·72; 1954–55: 66·60; 1955–56: 65·3; 1956–57: 68·7; 1957–58: 62·5; 1958–59: 75·5; 1959–60: 71·8.

The following are the comparative production figures of rice, wheat, barley, millets and pulses during the period 1957–58 to 1959–60.

(000 tons)

Year	Rice	Wheat	Barley	Millets	Pulse
1959–60† ..	29,338	9,734	2,605	15,222	11,236
1958–59 ..	30,354	9,772	2,672	16,452	12,872
1957–58 ..	24,885	7,741	2,238	15,104	9,507

† Subject to revision.

The production of gram in 1959–60 was 5·4 million tons, Tur 1·6, and of maize 3·6 million tons. In 1960–61 the production of rice was 337 lakh tons. That of wheat was expected to be 104 lakh tons. The area under rice cultivation went up from 82·83 million acres in 1959-60 to 83·36 million acres in 1960-61. The average yield per acre works out at 906 lbs., an increase of 9·2 per cent over 1959-60.

State-wise details of production of foodgrains in 1959–60 (in 000 tons) are as under :—

Andhra Pradesh 6,296; Assam 1,660; Bengal (West) 4,615; Bihar 5,939; Jammu and Kashmir 487; Kerala 1,055; Madhya Pradesh 9,031; Madras 5,096; Mysore 3,627; Orissa 2,447; Punjab 5,367; Rajasthan 4,726; Uttar Pradesh 13,182; Andaman and Nicobar Islands 5; Delhi 48; Himachal Pradesh 330; Laccadive, Minicoy and Amindivi Islands (Not known); Manipur 93; Tripura 153; Naga Hills (Tuensang Area) 86; Gujarat 2,450 (1958-59); Maharashtra 6,009 ('000 metric tons).

The index of production of foodgrains is as follows (1949–50 = 100) :—

1950–51 : 90·5 ; 1955–56 : 115·3 ; 1956–57 : 120·8 ; 1957–58 : 107·9 ; 1958-59 : 130·1 ; 1959–60 : 124·3.

The index for Food grains (1949–50 = 100):

Food grains	1957–58	1958–59	1959–60
Rice..	104·8	127·6	123·3
Wheat	116·5	147·1	146·5
Jowar	120·4	127·2	114·8
Bajra	112·3	120·7	111·0
Ragi	112·0	126·3	125·2
Maize	133·1	134·3	143·6
Small Millets ..	87·9	108·4	105·3
Barley	95·1	113·5	110·7
Cereals	108·5	129·3	125·3
Gram	129·7	179·1	140·3
Tur ..	76·6	90·9	86·4
Other pulses ..	87·4	105·3	103·6
Pulses	104·2	135·2	117·2
Food grains ..	107·9	130·1	124·3

In Jan. 1961 rice price index stood at 99 as against 102 in Jan. 1960. In Jan. 1961 wheat price index stood at 91 as against 97 in Jan. 1960.

SUPPLY

The demand and supply of cereals from 1957 to 1959 :

(000 tons)

		1957	1958 (*e*)	1959 (*e*)
Production (*a*) ..		57,245	53,004	61,295
Procurement		290	577	1,832
Net Imports		82	399	379
Opening Stocks in Godowns	States ..	208	747	511
	Centre ..			
	Total ..	290	1,146	890
Offtake from Godowns	States ..	1,002	2,163	2,564
	Centre ..	1,946	1,729	2,422
	Total ..	2,948	3,892	4,986

The balance sheet of foodgrains distributed by Governments during 1958 and 1959 was as follows :

(in thousand tons)

—	1958	1959
Opening Stock with States ..	399	379
Procurement	77	1,832
Net Supplies to States ..	—	—
Total Availability	976	2,211
Offtake in States	2,163	2,564
Transfer of Stocks to Centre	—	—
Stocks with States at the end of the year	399	379
Central Sales during the year	1,779	2,422
Central Reserves at the end of the year	747	511

(*a*) Production figures refer to the agricultural year (*i.e.* July–June) and production under 1957 relates to the agricultural year (1956–57).

(*e*) Figures for 1958 and 1959 are provisional and subject to revision.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

During 1960, 44·1 lakh tons of foodgrains comprising 34·7 lakh tons of wheat, 9·2 lakh tons of rice and a small quantity of coarse grains were issued from Central Govt. stocks either to retailers, flour mills etc., or to State Govts. for distribution through their own arrangements. The total number of fair price shops in different States at the end of Dec. 1960 was about 51,000.

The total procurement of rice in 1958–59 was 1·3 million tons. Of this a little more than 700,000 tons was procured by the Centre and the rest by the States—Andhra, Orissa, M.P., and the Punjab.

The amounts of subsidy involved in the supply of rice and wheat at the prescribed issue prices to West Bengal, Bombay* and Madras States during 1958-59 and 1959-60 respectively were approximately as follows (Rs. in lakhs): West Bengal (315 ; 338) ; Bombay* (189 ; 244) ; Madras (12 ; 35).

Supplies of rice and wheat to State Govts. from Central stocks in 1960 (upto Nov.) amounted to 694,000 tons and 1,176,000 tons respectively.

IMPORTS (1951-60)

In 1959, 290 thousand tons of rice, 3,497 thousand tons of wheat, 9,000 tons of corn and 11 thousand tons of sorghum were imported. In 1960, 50·56 lakh tons of food grains were imported.

The imports of foodgrains over the years were as follows ;

(figures in million tons)

1951—4·7 ; 1952—3·9 ; 1953—2·0 ; 1954—0·808 ; 1955—0·7 ; 1956—1·42 ; 1957—3·58 ; 1958—3·173 ; 1959—3·807 ; 1960—5·06.

The imports of individual grains were as follows :

(in million tons)

	1958	1959	1960
Rice	0·391	0·290	0·688
Wheat (including flour)	2·673	3·497	4·316
Others	0·109	0·020	0·052
TOTAL	3·173	3·807	5·056

In 1959 : Sorghum 0·011, corn 0·009.

The cost of import of foodgrains was as follows :

(figures in crores of rupees)

1951—216·8 ; 1952—209·1 ; 1953—85·95 ; 1954—48·53 ; 1955—33·11 ; 1956—56·34 ; 1957—16·239 ; 1958—120·51 ; 1959—141·41.

Countries from which imports were obtained from 1957 to 1959 with quantity (in million tons and C & F value (in lakhs of rupees) were as follows :

Country	1957		1958		1959	
	Quantity	Value	Quantity	Value	Quantity	Value
U.S.A. ..	2·868		2·007		3·147	
Australia ..	0·161		0·015		0·096	
Argentina ..	—		—		—	
Canada ..	0·011		0·760		0·274	
U.S.S.R. ..	—		—		—	
Pakistan ..	0·012		—		—	
Burma ..	0·509		0·384		0·290	
Viet Nam ..	0·007		0·007		—	
China ..	0·014		—		—	
TOTAL ..	3·588	16,239	3·173	1,20,51	3·807	1,41,41

Countries from which imports of individual grains were made in 1959 were as follows :

(in thousand tons)

	Wheat	Rice	Millets	Maize
China	—	—	—	—
U.S.A.	3,127	—	11	9
Australia..	96	—	—	—
Burma	—	290	—	—
Viet Nam	—	—	—	—
Pakistan	—	—	—	—
Canada	274	—	—	—
TOTAL	3,497	290	11	9

The Plan provided for an import of 6 million tons of foodgrains costing about Rs. 48 crores a year.

An important event which had a salutory effect on the market sentiment during 1960 was the conclusion of the long-term P.L. 480 agreement with U.S.A. in May 1960 for the import of 16 million tons of wheat and one million metric tons of rice over a period of four years.

PRICE LEVEL

The movement in the price of some items is shown by the following table of index numbers of wholesale prices :

(Base 1952–53 = 100)

	1957		1958		1959		1960	
	January	December	January	December	January	December	January	November
All commodities	107·2	107·0	106·0	111·4	112·4	117·9	118·9	126·0
Food Articles	103·2	104·0	102·5	113·3	114·3	118·2	117·7	120·2
Cereals	95·0	98·3	97·0	105·0	105·2	100·8	101·7	103·5
Pulses	86·0	80·0	80·0	111·1	117·1	91·9	92·0	94·3
Rice..	93·0	102·0	101·0	97·5	92·1	100·9	101·7	106·0
Wheat	94·0	86·0	86·0	114·4	124·8	95·6	96·6	89·8
Jowar	119·0	109·0	103·0	104·2	107·1	119·7	119·0	126·0
Bajra	132·0	117·0	114·0	127·8	131·9	120·5	124·6	134·9
Ragi	97·0	109·0	103·0	101·1	101·3	112·4	111·6	123·5
Gram	78·0	65·6	64·0	107·9	120·9	70·2	72·2	92·4
Arhar	83·0	73·0	74·0	131·0	137·2	116·4	114·0	98·8

The three main production requisites are land reclamation, seeds and fertilisers and manures. During 1959-60, 6,600 acres of land were reclaimed by the Central Tractor Organisation. During the same period central assistance of Rs. 47 million was provided for setting up 788 seed farms. During the 2nd Plan 2,700 seed farms were set up against a target of 4,000. Quality seed from surplus areas were procured and distributed. 192·5 thousand mds. of wheat land and 60 thousand mds. of gram seeds were arranged for flood affected areas.

* Bilingual.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

FERTILIZERS & MANURES

India's requirement of nitrogen fertilizer is placed at between 2 and 2·5 million tons. Minimum requirement would probably be estimated at 1·5 million tons on the basis of 30 lbs. per acre.

It is estimated that the use of one ton of fertilizer on an area of 75 acres results in an extra 10-ton production of food grain.

The demand, production and short-fall of nitrogenous fertilisers were as follows (The figures are in million tons):

	Demand	Production	Imports	Shortfall
1959–60 ..	1·882	0·846	0·348	0·688
1960-61 ..	2·311	0·656*	—	1·655

* Estimated.

For 1959-60 the import programme as in January 1960 stood at 2·7 lakh tons.

Ammonium sulphate is made available to individual cultivators by the State which gets this at a uniform rate of Rs. 350 per ton from a Central pool. The State gets a loan from the Centre to buy this, as well as to buy fertilizer from the open market.

The progress made in the implementation of schemes to expand production of chemical fertilisers indicates that by the end of 1961 or early in 1962 the target capacity of 3·8 lakh tons of fertilisers (in terms of nitrogen) would be attained.

This would mean that the production capacity in terms of ammonium sulphate would be about two million tons, nearly five times the present output of ammonium sulphate in the country or six times the present output of the Sindri factory.

In recognition of these facts, a substantial expansion of fertiliser production capacity was provided for in the Second Plan.

This is being achieved through the expansion of the Sindri factory itself and the setting up of four new large units at Nangal in the north, Neyveli in the south, Rourkela in the east, and at Trombay near Bombay. Two more are proposed—one in Andhra (Kothagudum) and the other in Assam (Nahorkatiya). In the private sector there will be one at Varanasi. It is also planned to expand the unit at Alwaye. Besides there is the additional production of fertiliser nitrogen as a bye-product in the new steel plants.

The whole position about synthetic fertilizers is shown in a system form below:

The total capacity for the production of the fertilizer ammonium sulphate in 1959 was about 4,32,000 tons per annum.

This is made up of 4,01,000 tons represented by plants where the fertilizer is manufactured directly and 31,000 tons by plants where it is a bye-product. Details are given below:

	Tons
Direct manufacture	
Sindri Fertilizers	3,50,000
Travancore Fertilizers & Chemicals, Alwaye	44,550
Mysore Chemicals & Fertilizers, Mysore	6,600
Bye-Product	
Tata Iron & Steel, Jamshedpur ..	16,500
Indian Iron & Steel, Burnpur ..	10,230
Indian Iron & Steel, Kulti ..	1,650
Burrakur Coal Co., Calcutta ..	1,320
Bararee Coke Co., Calcutta ..	1,155
Schemes under implementation are:	
Trombay Fertilizer..	90,000
Nangal Fertilizer	80,000
Rourkela Fertilizer..	80,000
Neyveli Ferlilizer	70,000
Sahu Chemicals, Varanasi* ..	10,000
Travancore Fertilizers (expansion)	10,000

* Now in operation (Apr. 1960).

The likely dates of starting are: Trombay 1964, Nangal end of 1961, Rourkela Sept. 1961, Neyveli end of 1961.

The investment in crores of rupees and the capacity in tons over the years would be as follows: The foreign exchange is given in brackets:

1960: 250,000 tons; Rs. 9 crores (Rs. 4·2 crores).

1961: 350,000 tons; Rs. 9 crores (Rs. 4·2 crores).

1962: 380,000 tons; Rs. 42 crores (Rs. 18·8 crores).

1963: 400,000 tons; Rs. 51 crores (Rs. 23 crores).

1964: 400,000 tons; Rs. 54 crores (Rs. 24·2 crores).

1965: 700,000 tons; Rs. 60 crores (Rs. 27 crores).

1966: 1,200,000 tons; Rs. 15 crores (Rs. 6·8 crores).

Total: Rs. 240 crores (Rs. 108·2 crores).

As a result of larger utilisation of organic wastes, the manure production was expected to increase to 6 million tons by March 31, 1959. Its quality will also improve from the existing 0·4 and 0·5 per cent to 0·8 and 1·0 per cent —these figures representing the nitrogenous element in it.

The night soil compost scheme, which has now been introduced in Madras, Rajasthan, Punjab, Orissa and Mysore, will cover 500 bigger panchayats, for which Central assistance has been given at the rate of Rs. 2,000 per panchayat.

A total number of 2,250 urban centres was also engaged in night soil compost production in the States.

During 1958–59 about 2·3 million tons of urban compost was prepared and in 1959–60 it was proposed to be stepped up to 2·85 million tons.

Distribution of green manure seeds in parcels is encouraged in most States. A subsidy of Rs. 2 per head is given to the State for multiplying green manuring seed.

According to the finding of the Committee of Enquiry appointed by the Ministry of Food & Agriculture on fertiliser distribution, the consumption of nitrogenous fertilisers in the country has gone up very rapidly from 2·82 lakh tons in 1951-52 to 11 lakh tons in 1959-60 in terms of sulphate of ammonia. It has been planned to increase this consumption to 50 lakh tons in 1965-66. Similarly the consumption of phosphatic fertilisers has gone up from 6,880 tons in 1951 to 38,887 tons in 1959, and is expected to rise to four lakh tons in 1965-66 in terms of P 205.

Among the more important recommendations of the Committee are (1) careful education of farmers in the use of mixtures and complex fertilisers, (2) regular taking of samples for test analysis from all varieties of fertilisers at various stages of their marketing, (3) training of sales personnel, (4) the establishment of a single agency in every State for co-ordinating distribution and allocating supplies, (5) encouragement by State Govts. to superphosphate manufacturers to build up their sales organisation to promote the use of new or comparatively less popular fertilisers through suitable incentives, (6) a progressive switch-over to concentrated fertilisers wherever economies in transport cost are badly needed, (7) abolition of sales tax on fertilisers and (8) the creation of an organisation called the "Central Fertiliser Marketing Corporation" to take up the duties now performed by the Central Fertiliser Pool along with the anticipated additional responsibilities.

THE FOOD PROBLEM

The present per capita net availability of cereals is about 12 to 13 ozs. per day, equivalent to about 1,200 to 1,300 calories. The per capita net availability of rice for consumption during 1960 was 6·44 ounces per day.

The *per capita* consumption in India of all food items in terms of calories compares as follows:—Canada: 3,140; U.S.A.: 3,150; U.K.: 3,270; Japan: 2,110; and India: 1,880.

The problem can be summed up in some such way as the following:—

The consumption of food grains and pulses in India has been increasing over the last three years faster than production.

The increase in population of eight million persons per year in itself will require one million tons of additional food grains each year. With an increase of the *per capita* intake of 100 calories per day, India would require an additional five million tons food grains per year.

It will take another five years for India to achieve the 81-million-ton food target of the Second Five-Year Plan. Consumption in the meantime will increase to 87 million tons, leaving a net deficit of six million tons per year.

Of this, India would probably import one million tons per year commercially. The balance of five million tons would need to be met somehow.

A reserve for India is necessary to meet crop failures and other contingencies.

For building such an emergency reserve two things would be necessary—imports in excess of the normal expected needs; and storage capacity. A minimum of six million tons a year would be required to be imported if a reserve of five million tons in five years was to be achieved. Storage capacity far in excess of the one now planned would be needed.

The Government of India already has space for the storage of two million tons of grain and plans have been drawn up for additional storage space for one million tons by the end of the Third Plan. This is inadequate both in terms of time and quantum. On March 5, 1961, the Central Govt. had stocks of 21·53 lakh metric tons as against 7·93 lakh metric on Jan. 1, 1960. Besides, the State Govts. also held a stock of about eight lakh metric tons on March 5, 1961.

If a five-million-ton buffer stock is to be built up in the next two or three years, the necessary storage space must be ready within this period.

Silos for the bulk storage of food grains, mainly wheat, are being built at Kalyani, near Calcutta, and Borivli, near Bombay (Jan. 1960).

These silos—to be constructed in concrete—will be in addition to the 10,000-ton steel grain elevator already in operation at Hapur, near Delhi, and a similar one under construction at Calcutta port.

The Hapur silo was built with assistance from the T.C.M. The new silos in West Bengal and Bombay will be much larger and will be completely Indian-owned.

In the Pusa area of Delhi, several well-constructed godowns of 30,000-ton capacity which were till recently used by the Central Tractor Organisation—now closing down—are likely to be taken over for the storage of food-grains.

(See 'warehouses' in the article on Agriculture.)

The Solution

The strategy of the Food Department is (*a*) to create more or less self-sufficient zones and to segregate heavily deficit areas or other important consuming centres where Government could release adequate stocks of food grains from the central reserve; and (*b*) to take suitable measures against the speculative hoarding of stocks by the trade; (*c*) build up a buffer stock of five million tons of food grains both from internal resources and from imports (3·5 million tons of wheat and 1·5 million tons of rice); (*d*) creation of a statutory Board for fixing the price of all agricultural crops; (*e*) distribution through fair price shops. There are a little over 41,000 of these shops in the country.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

For 1959-60, a provision of Rs. 368·7 million (Rs. 174·8 mln., Rs. 150 mln. and Rs. 43·9 mln. as long-term loans, short term loans and subsidies respectively) was made for giving assistance to States for programmes of agricultural production.

A food science organisation is also being set up at the Centre to educate the people in methods of evolving a low-cost balanced diet from indigenous foodstuffs. The organisation will undertake campaigns to eliminate diet deficiencies and to popularise and organise the distribution of subsidiary foods. At the village level, the work will be done by gram sevaks.

Simultaneously, a scientific panel is being set up in the Union Food Department to devise measures to change the pattern of food consumption in the country.

Government created in 1957 separate rice and wheat zones.

The Southern Rice Zone consists of Kerala, Madras, Andhra, Mysore and Pondicherry. There is another Rice Zone comprising Punjab, Himachal Pradesh and Delhi. This was set up in 1958. A third rice zone the Eastern Rice Zone consisting of West Bengal and Orissa came into being in Dec. 1959.

Originally there were three wheat zones, the Northern Wheat Zone, the U.P. Zone, and the Western Wheat Zone comprising M.P., Rajasthan and Bombay.†

In 1959 Feb., however, the Western Zone was split up into its constituent States and imports into and exports from these States were prohibited.

The creation of the Southern Rice Zone has helped to meet the problem of chronically deficit Kerala, as the surplus from Andhra Pradesh can make up the deficit in Kerala and the Zone is, on the whole, surplus in rice.

Similarly, with regard to wheat, in the Northern Wheat Zone, the surplus of the Punjab will cover the deficit of Delhi and the prices of wheat have also stabilised at a reasonable level.

The Government of India have had to distribute annually about 0·15 to 0·2 million tons of wheat in Delhi in the past. After the creation of the Wheat Zones the markets became easier in the other two Zones, *viz.*, the U.P. Zone and the Western Zone.

Other important restrictions which have been imposed on the movement of foodgrains‡ on a Zonal basis are as follows:—(*i*) *Bihar*, which suffered very heavily in 1958 owing to the failure of both wheat and rice crops, has been cordoned off for all foodgrains; (*ii*) *Eastern Uttar Pradesh:* Export of rice from the eastern districts of Uttar Pradesh was prohibited; (*iii*) The following areas were cordoned off for rice: (*a*) Assam, Bengal, (*b*) Madhya Pradesh, Punjab, Delhi, (*c*) Tripura, (*d*) Manipur, and (*e*) Punjab and Himachal Pradesh (movement from Punjab to Delhi is, however, free).

The anti-hoarding measures adopted by Government in 1957 took the form of (*a*) Control of Bank Credit, (*b*) Requisition of stocks at normal prices, and (*c*) Licensing mills and wholesale trade.

Power under Sub-section (3A) of Section 3 of the Essential Commodities Act, which authorizes government to requisition stocks at the average of the prices prevailing during the three months prior to the issue of the notification have been delegated to the State Governments who have exercised them whenever necessary.

The Wheat Roller Flour Mills Control Order ensures that all the roller flour mills in the country are licensed and their purchases regulated and recorded. The wholesalers are also required to submit periodical returns in most of the States to enable the States to keep a watch on the stocks of foodgrains available with the trade.

A fair and equitable distribution of food is ensured through (*a*) phasal release from Central Stocks, (*b*) Separate allocation of foodgrains for mills, and (*c*) sale through fair price shops.

Government have met the requirements of the flour mills in Andhra, Assam, Calcutta, Bombay City, Bihar, Madras and Mysore. The flour mills in Uttar Pradesh, Madhya Pradesh, Rajasthan, and Bombay† districts have been prohibited open market purchase of wheat, and allotted suitable quotas of imported wheat from Government stocks.

Over 51,000 fair price shops function in the country for the distribution of foodgrains. To ensure that the foodgrains issued from fair price shops reach the genuine consumer and to minimise malpractices in their functioning, identity cards have been introduced.

Inspection organisations have also been set up to watch the working of fair price shops.

Another important measure taken to curb speculative activities is the imposition of ban on forward trading in coarse grains and pulses which had a favourable effect on prices and supply.

The Guest Control Orders have been issued in a number of States imposing restrictions on the number of guests that can be entertained at a time. This is to avoid wastage of foodgrains.

The fact that limited stocks of rice are available was impressed on the State Governments and they were asked to conserve the available supplies wherever possible, and to issue wheat instead of rice. A substantial portion of the ration in West Bengal is being supplied, therefore, in the form of wheat.

CROP CAMPAIGNS

In mobilising and co-ordinating the available resources and agencies in raising agricultural production Crop Campaigns* have played an important role. An intensive Rabi Campaign was started during 1958–59 in nine States (Andhra Pradesh, Bihar, Bombay,† Delhi, Madhya Pradesh, Mysore, Punjab, Rajasthan and Uttar Pradesh) for raising the production of four major Rabi crops, namely, wheat, barley, gram and Rabi jowar.

These efforts were reflected in the increase in production of 3·2 million tons (16 per cent) of foodgrains valued at Rs. 112 crores during the 1958–59 Rabi season as compared with the average production of the last three years ending 1957–58. Food Production registered an increase in all the nine States, which participated in the campaign. In six States—Bihar, Bombay,† Madhya Pradesh, Mysore, Punjab and Delhi—the production rose by more than 15 per cent.

1960 Season

Under the 1959 Kharif Campaign, efforts were concentrated on the production of rice, which is the major Kharif crop. Other major crops covered by the drive were jowar, maize, bajra and ragi.

For 1960 the campaign was pushed forward with greater intensity laying particular stress on minor irrigation, production of green manure seeds, fertiliser, short-term credit, pesticides and implementation of the Nalagarh Committee's recommendations.

(For a detailed summary of the report see the 1959–60 edition of the *Directory*.)

Over 2,700 seed farms have been established.

Consideration is being given to a scheme under which a range of guaranteed minimum prices may be announced for various crops over a period of three to five years.

A permanent committee on which farmers would be represented may be appointed to review and revise the agricultural price structure from time to time.

Subsidiary Foods

Two pilot plants for the production of edible groundnut flour, each with a capacity of 10 tons per day, being set up with UNICEF assistance at Bombay and in a suitable place in Madras State, are expected to go into production in 1961. Eight more similar plants may be set up during the Third Plan period in the light of experience. Other programmes under consideration for the development of subsidiary foods include production and popularization of multi-purpose food, macaroni products, enriched wheat flour and adoption of improved techniques for the parboiling of rice. The Scientific Food Advisory Panel set up in the Department of Food has initiated investigations for the development of cotton-seed protein for human consumption, fortification of common salt with calcium and development of food from green vegetation and further work on parboiled rice and vegetable milk powder.

Pilot Projects

The recommendation of the Ford Foundation Team on Agricultural Production (summarised in 1960-61 Directory) that intensified work on a pilot project basis be taken up in selected areas is also being given effect to. A pilot project has been drawn up—this will also be financed by the Ford Foundation—for selected districts, one each in seven States—four rice-growing States, namely, Andhra Pradesh, Bihar, Madras and, Madhya Pradesh, two wheat growing States, namely, U.P. and Punjab, and one millet-growing State, namely, Rajasthan. The rice districts are Tanjore (Madras), West Godavari (Andhra), Raipur (M.P.), and Shahabad (Bihar). The wheat districts are Ludhiana (Punjab) and Aligarh (U.P.). The millet district in Rajasthan is Pali.

As the result of an offer made by the West German Government six more districts are likely to be chosen for a similar experiment.

The pilot project is part of a "package programme" for 1960 in which all the factors that are likely to contribute significantly to a rapid increase in food production would be combined into one programme. The essence of the scheme is to make available to the farmer in the selected districts all his needs in terms of credit, supplies including fertilizers and seeds and demonstrations. All supplies will be made available at the farmer's door or at least within bullock-cart distance. The programme would include adequate incentives and aids to cultivators to increase production. The project was considered at a meeting of the Agricultural Secretaries of the seven selected States on October 27, 1959, and further action was expected to be taken in consultation with the States concerned.

The Ford Foundation, which sponsored the team on whose recommendation this programme has been adopted, has agreed to finance the pilot project in a big way.

Among other things, the Foundation will underwrite up to a certain percentage losses incurred by co-operative societies in advancing loans to non-credit-worthy farmers, and fully any loss of stocks which will have to be stored three months in advance of need by service co-operatives. The farmer will be guaranteed against any failure of crops.

The Foundation will also help to organise public works programmes to put landless labour to work on projects like soil and water conservation, and to establish modest agricultural implements factories.

It is prepared to supplement Governmental efforts to the extent necessary to try out all the measures essential to raise production in the selected districts provided the scheme is tried for a period of five years and all the suggestions are accepted as a whole.

* A description of this is given in the 1959–60 edition. † Bilingual. ‡ The restriction on wheat movement was lifted throughout the country from early April 1961.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Suitable storage and marketing facilities will be provided. The Government will undertake to buy all the produce at a stated minimum price or the prevailing market rate, whichever is higher.

Another requirement will be well-developed village institutions, particularly co-operatives and panchayats, through which developmental efforts will be made to reach the farmer.

The results will be evaluated from the beginning on a yearly basis to see whether the investment is commensurate with the extra production. Crop-cutting surveys will be undertaken of the actual production before the scheme is launched and every two seasons thereafter to assess progress.

PRODUCTION POTENTIAL

On the basis of an assessment recently made in consultation with States Officers, it is estimated that as a result of the various measures adopted, facilities for an additional production of about 3·2 million tons of foodgrains were created during 1956–57 and 1957–58. The latest available information shows the anticipated achievement in respect of additional foodgrains production potential during 1958–59, as 2·5 million tons and the target during 1959–60, as about 4 million tons, leaving a balance of about 5·8 million tons for the last year of the Plan. A statement showing State-wise figures of foodgrains production potential estimated to have been created during some years of the Second Plan is given below :—

(In '000 tons)

State	1956–57 (Achievement)	1957–58 (Achievement)	1958–59 (Anticipated)	1959–60 (Target)
Andhra Pradesh	162·8	236·6	336·2	358·5
Assam	52·7	43·5	33·8*	60·3
Bengal (West)	101·2	172·3	145·5	226·4
Bihar	104·9	156·6	255·9	497·1
Bombay†	94·2	100·0	142·8*	252·0
Jammu & Kashmir**	20·0	2·2	4·7	40·6
Kerala	42·0	58·8	15·9	135·1
Madhya Pradesh	61·9	89·3	133·8@	222·9@
Madras	204·5	208·8	172·9	316·8
Mysore	54·2	102·1	114·9	195·5
Orissa	32·0	3·3	58·0	418·8
Punjab	124·0	124·6	384·7	361·6
Rajasthan	26·5	69·9	221·4	249·2
Uttar Pradesh	299·0	422·0	489·0	715·0
Union Territories**	5·8	11·9	22·7	29·0
TOTAL	1,385·7	1,801·9	2,532·2	4,078·8

* Actual achievement. † Bilingual.

** Figures are provisional and subject to revision.

Trends in Agricultural Production

Crop	Unit	1959-60 (Final)	1960-61 (Anticipated)	Second Plan target
Foodgrains :				
Rice	Million tons	29·3	75·0	80·5
Wheat		9·7		
Cereals	,,	60·5		
Pulses	,,	11·3		
Total Foodgrains	,,	71·8		
Sugarcane (Gur)	,,	7·6	7·2	7·8
Oilseeds	,,	6·4	7·2	7·55
Cotton	Million bales	3·8	5·4	6·5
Jute	,,	4·5	5·5	5·5

Even with the record food production of 73·5 million tons in 1958–59, the food situation has not been free from anxiety. This emphasises the urgent need for reaching as near as possible to the revised target of 80·5 million tons envisaged under the Second Plan.

FOOD PRIZES

A scheme for the award of community prizes at district and State level had been introduced during the 1959 *rabi* production drive for providing incentive to the cultivators.

The awards were won by six States—Rs. 50,000 each—by registering an increase in production of more than 15 per cent over the past three years' average. The States were Bihar, Bombay†, Madhya Pradesh, Mysore, Punjab, and Delhi.

The total value of the awards amounts to Rs. 13·75 lakhs which will be borne entirely by the Union Ministry of Food & Agriculture.

EXPERT COMMITTEE ON WASTE LANDS

An Expert Committee has been constituted to locate waste lands for their economical utilization with a view to increased agricultural production. The Committee has already submitted reports about West Bengal and Punjab. Bihar and Mysore reports were being finalised (March 1961). Reports of Andhra, Kerala, Madhya Pradesh and Madras are to be finalised after discussion with the State Govts. The conditions in the States of Assam, Gujarat, Jammu & Kashmir, Maharashtra, Orissa, Rajasthan and U.P. are yet to be studied.

According to the Committee's findings 113,640 and 316,650 acres in West Bengal and Punjab respectively could be reclaimed and brought under reclamation.

The 3rd Five Year Plan has tentatively allocated Rs. 100 million for the implementation of some of the recommendations of the Committee. Special provision of Rs. 120 million has also been made for land reclamation costs.

FORD FOUNDATION TEAM REPORT

A U.S.A. team of 13 Agricultural Experts arrived in India under the sponsorship of the Ford Foundation, early in 1959, and with the help of their Indian counterparts, they studied the Indian agricultural problem.

A summary of the Ford Foundation report published during the year 1959 is given in the 1960-61 edition of the Directory.

FIVE-YEAR PLANS

Details about the target and achievement during the First Plan are given in the 1960-61 Directory.

In February, 1955, on the eve of the Second Five Year Plan, the Planning Commission placed before the States the goal of doubling agricultural production within the next ten years.

The target finally fixed was 80·4 million tons as against 65 millions in 1955–56.

If this target was realised the increase in the production of foodgrains would be 25 per cent.

The Plan for each State provided for programmes for utilisation of irrigation facilities; production, multiplication and distribution of improved seeds, especially of paddy, wheat and jowar; use of fertilisers, compost and green manures; spread of Japanese method of cultivation, soil conservation, etc.

The Plan provided for the opening of 4,185 seed farms during the Plan period.

The increased food production was to come as shown below (figures in million tons):

From Major irrigation 3·02, Minor irrigation 1·89, Fertilisers 3·77, Improved seeds 3·40, Land development 0·94, Improved agricultural practices 2·47, Total 15·49. Production of food grains expected in 1960-61 is 75 million tons. The target of total production for 1961-66 is 100 to 105 million tons.

The Planning Commission has always stressed that in every village the panchayat and village co-operative should have a programme for the village—which would be made up of all family programmes for which the entire village would be prepared to work. These should be fitted into block and district programmes and through these into State programmes. The Community Development movement is the agency at the disposal of the States for reaching all families in the countryside.

The responsibility of the villages would involve : the construction of the field channels needed to utilise the irrigation available from multi-purpose, large and medium purpose and their maintenance in an efficient condition from day to day; the responsibility for maintaining minor irrigation works and tube-wells and for excavating and maintaining field channels; contour-bunding, soil conservation and other programmes for dry farming in the dry areas and construction and maintenance of bunds; Producing as a permanent arrangement in the village all the seeds and organic and green manure needed; arranging for the supply of these in kind to those who cannot pay for these in advance, recovering after harvest; Arranging for the distribution of fertilisers received for the village and their supply to the smaller holders on credit in the first instance; Promoting the use of Japanese method of cultivation in all areas suitable for it and other advanced techniques for wheat and other crops which are suggested by the technical departments, and in other ways, work for a diversified agricultural economy

Under the 3rd Plan 20 State farms like Suratgarh, of 10,000 acres each are to be set up.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

FISHERIES

THE fishing industry in India offers employment to about a million persons and contributes annually over Rs. 60 crores towards the national income.

About 73,400 fishing craft are estimated to be employed.

The estimated annual production of fish is about 12 lakh tons, of which 70 per cent comes from sea and estuarine fishing.

The average catch is about 2,500 lbs. per man per year.

About 27,000 tons of fish products, consisting mostly of dry, dry-salted and wet-salted fish, are annually exported to neighbouring countries.

The annual per capita availability of fish in India is estimated to be 3·4 lbs. as against 16 lbs. in Ceylon, 70 lbs. in Burma and 90 lbs. in Japan.

It is estimated that 40·5 lakh tons of fish would be needed to meet this country's minimum requirements.

Surveys conducted recently in the Bay of Bengal and Arabian Sea reveal that if only our rich resources are properly exploited this would more than meet the demand. The greatest handicap in the exploitation of the country's fish resources hitherto has been the traditional methods of fishing. The great part of the 73,400 boats and other craft used for fishing cannot operate beyond a few miles.

Experiments in mechanisation of fishing are being conducted since 1948 with the help and assistance received from Norway, U.S.A. and F.A.O.

Some of the steps taken by Government to improve fish production are mechanisation of fishing craft, training centres for fishermen, cold storage facilities, formation of deep-sea fishing stations and research at the four main central stations, *viz.*, Central Inland Fisheries Station, Calcutta, Central Marine Fisheries Research Station, Mandapam, Deep-sea Fishing Station, Bombay and the Central Fisheries Technological Research Station, Cochin.

Today more than 800 mechanised boats are operating on Indian coastline. In Bombay the local types of boats are being mechanised. New designs have been evolved for boats in Madras, Kerala and Andhra States. Experiment in improved types of fishing with small power craft are also in progress.

Cold storage facilities exist in Bombay, Mangalore, Calicut, Cochin, Quilon, Trivandrum, Madras and Calcutta. Additional plants are being installed in many other places. Some of these plants have been provided under T.C.M. and Norwegian aid programmes.

The Central Board of Fisheries approved of the fisheries development and research programmes of the Central and State Governments for the Third Five-Year Plan and laid stress on the promotion of export trade in fish and fish products. An Expert Committee for higher fisheries training programme was also set up. The Committee recommended the establishment of a Central Institute of Fisheries Education for training District Fisheries Development Officers and operatives and lower grade administrative staff. The institute will be initially housed in the Institute of Science, Bombay. An *ad hoc* Fisheries Enquiry Committee examined the present status of mechanised fishing with a view to recommending suitable measures for meeting the requirements of the fishing industry.

It is estimated that during 1959-60 the Central fisheries establishments would have incurred over Rs. 3 million on various fishery research and development projects.

For training fishermen there are centres at Satpati near Bombay, Veraval in Saurashtra, Cochin in Kerala and Tuticorin in Madras. New training centres are being opened at Mangalore in Mysore State and at Kakinada in Andhra Pradesh. At these centres batches of 20 candidates are admitted for 6 months training.

The Central Deep Sea Fishing Station at Bombay gives training in modern fishing methods.

In Calcutta the fisheries training centre gives instruction in inland fisheries development. Higher training facilities are under consideration by a special committee appointed by the Government of India.

Local fishermen numbering 140 were trained in mechanised fishing and Indian instructors and fishermen-continued to receive training in powered fishing on board the I.N.P. Fishing Fleet at Cochin. 36 candidates including two from S. E. Asian countries completed their inland fisheries training course conducted at the Calcutta station.

Under the Second Five-Year Plan, a sum of Rs. 10 crores was expected to be spent by the Central and State Governments on the development of fisheries. Of this Rs. 82 lakhs were to be devoted to mechanisation and improvement in fishing craft.

PRODUCTION

Production is shown by the table below. About two-thirds of the catch are marine-fishes.

'000 tons

Year	Marine	Inland	Total
1952	520	212	732
1953	572	234	806
1954	579	236	815
1955	586	240	826
1956	707	289	996
1957	875	358	1,233
1958	755	309	1,064
1959	584	239	823

The following table shows the figures by species:

'000 tons

Groups & Species	1957	1958	1959
MARINE FISH			
Flounders, halibuts, soles, etc.	3·7	12·9	10·4
Cods, hakes, haddocks, etc.	1·1	3·9	3·8
Herrings, sardines, anchovies, etc.	293·0	221·6	173·5
Tunas, bonitos, mackerels, etc.	139·3	176·3	103·5
Miscellaneous marino teleosteans	278·4	230·0	202·0
Sharks, Rays, skates, etc.	23·1	24·3	23·5
Crustaceans	136·8	86·7	67·5
A Total marine fish	875·4	755·7	584·2
B Fresh water fishes	357·6	308·7	238·6
C Grand total	1,233·0	1,064·4	822·8

The total landing of marine fish by State is shown below (where available):

(*In metric tons*)

	1958	1959
East Coast:		
Bengal & Orissa	6,267	3,962
Andhra	28,846	29,464
Madras (E)	55,265	103,497
West Coast:		
Madras (W)	62,791	
Kerala	294,655	191,375
Mysore	80,242	52,825
Bombay *	212,756	198,192
Gujarat	10,130	
Mechanised Vessels	4,730	4,755
	755,774	584,193

The catches declined considerably in West Bengal, Orissa, Kerala and Mysore. Decline was not much in Madras and Bombay*. The landings of Bengal and Orissa was only about ⅓ of 1958 mainly due to the less catches of prawns and other crustaceans, ribbon fish, other sardines and pomfrets. The heavy decline in the landing in Kerala coast amounting to over 50 per cent of the previous years was mainly due to the failure of mackerel and sardine fishes which accounted for about 90 per cent of the net landings. Catches of oil sardines and mackerels were shorter by about 50 per cent and 60 per cent respectively.

The salient features of 1959 were the failure of mackerels (in Kerala and Mysore coasts with a slight increase in Gujarat and Bombay coasts), and sardines (Bombay, Kerala and Madras coasts) which accounted for 31 per cent and 27 per cent of the decrease respectively.

RESEARCH

Research in Fisheries is carried out primarily under the aegis of the four main central stations given below.

1. *Central Inland Fisheries Research Station, Calcutta:* The Lacustrine Research Unit near Tungabhadra reservoir initiated detailed investigation on the possibilities of increasing the productivity of reservoirs by stocking operations. A Riverine Research Unit was established at Hoshangabad (M.P.) to carry out a detailed survey of the river fisheries and fish seed resources of the Narbada-Tapti river systems. In Bengal a serious bacterial disease of major carps and common carps was studied and preventive measures worked out. Breeding carps by pituitary hormone treatment was carried out on a commercial scale. Experiments on the breeding and rearing of certain exotic varieties of fish were continued and certain new experiments were initiated in the Hooghli Estuary. Valuable information on fish and prawn populations of the Chilka Lake (Orissa) and fish catch statistics for certain river systems and estuaries were also collected.

2. *Central Marine Fisheries Research Station, Mandapam:* Studies on off-shore fisheries, different varieties of fish *i.e.* mackerel, sardine and shell fish and sea weeds, charting of fishing grounds, experimental fish farming, investigations on fishery technology, marine biology and oceanography and collection of statistics of fish catches. The station also established additional Survey Centres at Calingapatnam, Dahanu and Alibagh. For the extension of tuna fishing a fishing resources survey of the Laccadive area was conducted. With the collaboration of F.A.O. underwater expert, the survey work of the pearl oyster beds of the Gulf of Mannar was made. The Co-operative Research Programme, which is being implemented in collaboration with the Indo-Norwegian Project at Cochin, continues.

* Bilingual.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Deep-sea Fishing Station, Bombay: The vessels of the Deep-sea Fishing Station, Bombay, charted off-shore waters and imparted training in the techniques relating to deep-sea fishing. All officers and crew of the fishing vessels at Bombay were given a training in the Net Making School organised under the guidance of T.C.M. Fishing Gear Technician. The fishing vessels received under T.C.M. aid have been re-organised into four fleets for exploratory work in Bombay, Cochin, Tuticorin and Visakhapatnam.

Off-shore Fishing Stations were opened at Tuticorin, Cochin, Veraval and Vizagapatam.

Central Fisheries Technological Research Station, Cochin, initiated research on fishing gear and craft. A Processing Wing has also been added to the Station. In the planning and work on gear research, a Fishing Gear Technologist advises the Government of India.

The F.A.O., T.C.M. and Indo-Norwegian Foundation continued to give valuable technical assistance. One harbour specialist continued work in connection with the development of fishing harbours in the States of Bombay*, Kerala, Madras and Mysore under the Expanded Technical Assistance Programme of F.A.O. Two fisheries engineers worked on the Madras, Malabar, Kanara and Kathiawar coasts, on the introduction of new types of fishing gear, use of mechanised aids and the training of fishermen in their use. Services of 4 master fishermen were also obtained from Japan. Under the Indo-Norwegian Project, 90 boats of improved types were built and a new 25 ft. boat was designed. A fish marketing expert was engaged in formulating fish marketing schemes in co-operation with the States on a national basis. A bi-weekly refrigerated van service for the carriage of fish between Bombay and New Delhi was started from November 1960 as an experimental measure. The subsidy given to food canning industry is being extended to canning of fishery products also.

Two more Central Fisheries Extension Units were established at Delhi and Patna, thus bringing the total to nine. These Extension Units continued to give technical advice and assistance on various fishing problems to State Fisheries Departments, fishermen and fish farmers, and arranged supply of over 16 million fry and fingerlings to deficit States. Artificial breeding of major carps by the administration of pituitary hormone injections was successfully carried out in a number of places by the Extension Units.

ANDHRA PRADESH

Andhra Pradesh with a coast line of 600 miles in the Bay of Bengal and with 799,000 acres of inland waters is very rich in its fishery resources. There are two fresh water biological stations at Hyderabad and Nagarjunasagar; one bio-chemical station at Hyderabad and one Paddy-cum-Pisciculture Research Station at Masulipatnam.

There are 350 coastal fishing villages with a total fishing population of 176,181. These fisherfolk operate about 19,723 boats and catamerans and 60,504 fishing nets. During 1959 the total landings of marine fish is estimated to be 70,000 tons as per the details shown below: White bait 17,500; Sardine 10,500; Jew Fish 9,800; Prawns 7,000; Ribbon Fish 4,900; Mullet 4,200; Cat Fish 3,500; Shark 3,500; Pomfret 1,400; Silver Bellies 1,400; Seer 4,900.

The total quantity of fish landed from inland water sources during 1959 is about 80,000 tons as detailed below: Carps 20,000; Murrel 19,200; Cat Fish 12,000; Barbus 12,000; Prawns 5,600; Miscellaneous 10,400.

The average retail price per lb. of important food fishes is as follows: Barbus 28 nP.; Carps 44 nP.; Cat Fish 44 nP.; Murrel 60 nP.; Prawns 45 nP.; Miscellaneous 33 nP.

There are 13 fish farms at Ippur, Mopad, Sunkesula, Patha Cuaddapah, Hussain-Sagar, Rajendra Nagar, Dindi, Manair, Koilsagar, Nizambad, Shanigram, Wyra, and Warangal. There is a large fish farm of 120 acres in the private sector in West Godavari District. To step up the fish production 257·46 lakhs of fingerlings of quick-growing type were collected and reared in different inland waters during 1959-60.

There are 14 fish curing yards maintained by the Fisheries Department wherein pure salt is supplied free of cost to fishermen for curing their fish under the technical guidance of the Departmental staff. 1,283 tons of fish was cured in 1959-60 in these yards.

The fishing operations with mechanised boats at Kalingapatam, Kakinada, Nizampatnam, Peddapatnam and Krishnapatam helped in locating good deep-sea fishing grounds. So far 28 mechanised boats have been distributed at subsidised rates to fishermen who have undergone training in the use of mechanised boats and improved types of fishing tackle at the Fisheries Training Institute, Kakinada. 8,865 lbs. Terylene yarn, 90 Nylon nets and 51 Catameran logs were also supplied to fishermen at subsidised rates. Quick transport facilities are also provided to the fishermen to transport their catches from fishing villages to interior markets.

Boats of various designs are tried to find a suitable craft for different coasts. A 20-ton Ice Plant with 250-ton Cold Storage at Vishakapatnam and a 4-ton Cold Storage Plant at Hyderabad have been installed. Another Ice-cum-Cold Storage Plant at Nizamsagar is under construction.

There are 342 fishermen co-operative societies with a total membership of 46,162. The Paid-up share capital of these societies is Rs. 2,70,426. The societies give loans to the members during off season. Government have given concessions also in respect of fishery leases to the societies.

There are 9 schools specially intended for fisher children. Books, slates and pencils are supplied free in the schools. Every year 40 fishermen are given training in operating mechanised boats with modern gear at the Training Institute at Kakinada.

The Chank Fishery in Nellore District and window pane oyster fishery off Kakinada coast are State monopolies. During 1959-60 an amount of Rs. 5,248·75 was realised from these sources.

At Hyderabad, the Department supplied 32,327 lbs. of good quality fresh fish caught from the reservoirs near the city to the public at fixed prices. Liver oils, isinglass, fish manure, etc. are obtained as the by-products of fish.

Under the Second Five-Year Plan 38 schemes involving an expenditure of Rs. 70·28 lakhs are being implemented.

The amount provided for the Third Five Year Plan is Rs. 115 lakhs.

The expenditure for the Department for 1959-60 was Rs. 25,49,759 and the receipt Rs. 6,02,246·96.

The designation of the Department is: Department of Fisheries, Andhra Pradesh.

GUJARAT

Gujarat has a coast line of over 1,031 miles extending from Lakhpat in the north to Umbergaon in the south. It has a total fishable area of 25,000 sq. miles including the Gulf of Kutch and Gulf of Cambay.

There are 42 important fishing ports and about 108 other small roadsted and fishing hamlets. No. of fishermen 1,80,000; no. of active fishermen 40,000; no. of fishing vessels used in estuarine, coastal and offshore fishing: about 4,000 ranging from 1 to 15 tons. Total capital invested in fishing boats, engines, fishing gear and other accessories by fishermen and their co-operative societies amount to Rs. 2·2 crores.

Total landings in 1959-60: 80,000 tons (75,000 tons marine; 5,000 tons estuarine); value of fish landed during 1959-60: Rs. 2·6 crores. Local consumption in the State: 10,000 tons. Balance is exported to Bombay, Delhi, Calcutta, Ceylon, Burma, Mauritius and Singapore. Value of fish exported to foreign countries: Rs. 70 lakhs.

More important landings of the State on the basis of value: Bombay ducks Rs. 1·2 crores; Pomfret Rs. 45 lakhs; Indian Salmon and Jew fishes Rs. 10 lakhs; Prawns and shrimps Rs. 7 lakhs; Perches and Hilsa Rs. 7 lakhs; Shell fishes including pearls, chanks, cuttle bones, window pane oysters (Rs. 1·5 lakhs every year) and other marine sea shells Rs. one lakh. Other miscellaneous fishes include sharks and rays, mullets, cat fish, coilia, etc. The State also produces about Rs. 3·5 lakhs worth of fish icingglass for export to England and China and Rs. 3 lakhs worth of fish fertilizer and 1 lakh lbs. of shark livers.

Important fishing ports: Surat District: Urnarsadi, Kolak, Bulsar, Bhadeli, Jagalala, Kosamba, Surat; Broach District: Broach, Bhadbhut, Kavi; Amreli District: Madhwar, Kotda Velan; Junagadh Dist.: Jaffrabad, Gogha; Jamnagar Dist.: Okha, Bedi, Salaya, Sikka, Jodiya, Navlakhi, Maliya; Kutch Dist.: Surbari, Chrowari, Kharirohar, Tuna, Rampar, Luni, Sekhedia, Mundra.

Inland pisciculture is confined to the districts of Baroda, Kaira, Broach, Dangs and Godhra. There are 2,300 fishermen engaged in inland fisheries. Acreage exploited 13,000.

Per capita production of food: 2·2 tons a year. Per capita earning Rs. 700 a year.

No. of ice factories 20; no. of cold storages available 5; no. of mechanised boats (1959-60): 216; no. of mechanised boats as on 1960-61: 526; quantity of nylon supplies (1960-61): 1,12,000 lbs.; training centre for fishermen: one of capacity of 40 students per year; service stations 2; fisheries schools: one each at Baroda, Bhadbhut, Umarsadi and Kolak; adult education centres 10; shark liver oil extraction centres 4; fish meal plant: one at Jaffrabad; Govt. of India institutions in the State: Marine Fish Research Sub-stations at Kandla and Veraval; Survey Centre at Veraval.

FIRST, SECOND AND THIRD FIVE-YEAR PLANS

First Plan provision: Rs. 44 lakhs (Rs. 40 lakhs for Saurashtra alone). Constructing ice factories and cold storages at Kandla, Jamnagar, Porbunder, Mangrol and Veraval was started during 1955-56. Three of them are under operation. During the Second Plan a fish meal plant was provided for Jaffrabad. Veraval fishing harbour development at a cost of Rs. 25 lakhs was taken up and is nearing completion while a Rs. 7 lakh plan for development of Kutch fishing harbour has been taken in hand. The fishermen use nylon fishing gear and the State requires Rs. 20 lakhs worth of nylon fishing twine a year.

The Gujarat Fisheries Central Co-operative Association with a share capital of Rs. 5 lakhs (now a paid-up capital of Rs. 5·4 lakhs) was started during the Second Plan. Business for 1960-61: Rs. 42 lakhs.

The State has 51 co-operative societies with about 8,500 members.

Second Plan provision for Gujarat: Rs. 60 lakhs (Rs. 50 lakhs for Saurashtra and Kutch). Amount spent in the 1st four years: Rs. 36 lakhs. It was proposed to spend Rs. 36 lakhs during 1960-61 to achieve the 120 per cent target.

The department was expected to be able to achieve the following targets in 1960-61: 66 mechanised boats, 275 outboard motors, 160,000 lbs. of nylon, 16 survey-cum-demonstration carrier vessels, 50 trainees and 10,000 tons additional fish.

The Third Plan envisages an expenditure of Rs. 1·23 crores (Rs. 40 lakhs in Gujarat area, Rs. 68 lakhs in Saurashtra and Kutch area, and Rs. 15 lakhs Statewise). The fish production will be augmented by another 40,000 tons every year by 1965-66 valued at Rs. 1·6 crores.

* Bilingual.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

KERALA STATE

Kerala State, the smallest maritime State in India with just over 340 miles of sea coast, contributes to a little over 25 per cent of the total seafish landed in India. Oil Sardine (Sardinella longiceps) and the chub mackerel (Rastrelliger canagurta), the two most important shoaling fishes of the west coast contribute to the major fishery of the coast, the third important constituent being prawns. The main types of indigenous fishing crafts are the dug-out canoes and plank built boats besides catamarans in the southern region.

The estimated landing of all fish in the State is about 290,000 tons of which 50,000 tons are contributed by inland water fishes the rest being sea fishes. This quantity is valued at about Rs. 5,50,00,000. Though the estimated population of the State for 1960 is 1,37,70,000 only about 70 per cent of the people are estimated to be fish eaters. At the most only 50 per cent of the total production is utilised as fresh fish, 40 per cent as dried and the rest is converted as fish manure or fish meal. Of the fresh and dried fish a very appreciable quantity is exported out of the State and out of India either in the fresh condition or as cured fish. This includes nearly 4,000 tons of Prawn Pulp exported to Burma and Singapore and nearly 600 tons of frozen prawns and lobster to U.S.A. and other foreign countries. Except for a small quantity of foreign tinned product imported into the State, there is absolutely no import of fish into the State spread over 236 fishing villages.

Along the coast there are 67 fish curing yards, some of which are provided with sanitary fish curing sheds, and salt is issued at a subsidised rate which is less than the cost price in the salt factories.

There are three Fishermen Training Centres at Neendakara, Ernakulam and Beypore, to train able bodied fishermen in the use of mechanised fishing crafts and modern fishing equipment. Mechanised boats, Nylon and Fishing hooks, etc. are distributed at concessional rates through the Fishermen Co-operative Societies. A new approach to the reorganization of the whole industry on co-operative lines has been introduced by which the produce of fishermen are organised into primary producers' societies, and 15 to 20 such units of contiguous areas are combined into a marketing unit. All the marketing units are combined into one marketing federation. The scheme is being introduced in stages from the southern region to the north. As many as 75 primary societies have already been organised. Trained fishermen are given capital and equipment to start co-operative fishing with mechanised units through these co-operative societies. Arrangements have been made for registering a regional marketing organization with headquarters at Vizhinjom, affiliating 16 primary producer co-operatives of the southern part of Trivandrum District.

The Indo-Norwegian Fisheries Project near Quilon is engaged in the mechanisation of small fishing craft and in the exploitation of the fisheries' resources of the sea off Kerala. A boat-building yard (where already 105 mechanised boats have been constructed), an ice factory, and cold storage and freezing plant have been established. A Health Centre and a Pipe Factory have also been established under the scheme of improving the health and sanitation of the area. By the end of March 1960, the total assistance had amounted to Rs. 243·62 lakhs. About 121 fishermen were trained either directly or indirectly in improved methods of fishing and about 615 persons provided with gainful employment.

There are 10 private companies exporting frozen shrimps, lobster tails and frog legs, and cold storage plants are working at Trivandrum, Neendakara, Cochin and Kozhikode. In addition to the three Government freezing plants and four cold storages there are four private plants also.

There are 4 Fisheries Research Stations in the State engaged in marine, estuarine and fresh water fisheries and a Fisheries Technological Station conducting researches in fisheries bye-products and other technological works. The Fisheries Technological Station manufactures fish meal, fish manure and semi-dried prawns.

There are three brackish water fish farms, one fresh water fish farm, 19 rural fisheries demonstration centres and eight major reservoir fishery centres.

Third Five Year Plan: The Kerala Government proposes to spend Rs. 4·5 crores in the development of fisheries in the State.

MADRAS

Madras State, with a coast line of 620 miles and with about 4 lakh acres of inland waters, is rich in fisheries resources. There are four marine biological stations at Ennore, Krusadai Island, Tuticorin and Cape Comorin; a Technological Station at Tuticorin; and a Fresh-water Biological Station at Bhavanisagar, in-charge of qualified research officers.

There are 242 coastal fishing villages with a total fishing population of 2,40,000. These fisherfolk possess about 5,000 boats, 23,160 catamarans, and 3 lakhs of fishing nets. The estimated landings of sea fish in 1959-60 is about 81,910 m. tons as detailed below, their total value being Rs. 722·3 lakhs.

Ribbon fish 13,650 m. tons; Cat fishes 11,700 m. tons; Sharks, Skates & Rays 6,810 m. tons; Sabre fish 1,820 m. tons; Lactorius 3,030 m. tons; Clupeids 10,820 m. tons; Flying fish 410 m. tons; Perches 3,310 m. tons; Silver bellies 4,095 m. tons; Jew fish 2,740 m. tons; Mullets 1,840 m. tons; Seer 3,460 m. tons; Mackerel 3,265 m. tons; Caranx 2,830 m. tons; Pomfrets 3,140 m. tons; Prawns and other Crustacea 4,870 m. tons; Miscellaneous forms 4,120 m. tons.

There are about 44,350 inland fisher-folk possessing about 20,000 implements. The estimated landings of inland fish from the various inland waters in 1959-60 is about 42,468 m. tons as detailed below, their total value being Rs. 250 lakhs.

Carps 24,100 m. tons; Cat fishes 6,200 m. tons; Murrels 4,220 m. tons; Hilsa 305 m. tons; Mullets 2,850 m. tons; Prawns and other Crustacea 3,140 m. tons; Miscellaneous forms 1,533 m. tons.

The average wholesale and retail price of the important varieties of fish are as follows: The first figure indicates the wholesale price for 100 lbs. and the second the retail price per lb.

Fresh-water Carps (Rs. 40; 56 nP.); Fresh-water Catfish (Rs. 44; 59 nP.); Fresh-water Prawns (Rs. 45; 62 nP.); Sea Prawns (Rs. 60; Re. 1); Mackerel (Rs. 40; 56 nP.); Pomfrets (Rs. 60; 87 nP.); Seer (Rs. 62; 93 nP.); Sea Perches (Rs. 41; 47 nP.); Murrels (Rs. 50; 75 nP.); Ribbon fish (Rs. 25; 37 nP.); Sharks (Rs. 37; 50 nP.); Silver bellies (Rs. 25; 37 nP.).

21 fish curing yards are maintained by the Government wherein good quality salt is supplied to fishermen at subsidised rates for curing fish under the technical supervision of fisheries departmental staff. Two Ice Plants of 5 tons daily output and storage facilities for 15 tons are under construction at Tuticorin and Mettur dam.

There are 236 fishermen co-operative societies with about 25,200 members on their rolls with a paid up share capital of Rs. 2 lakhs. They issue small loans to the members during the off season; and also inculcate the spirit of thrift and co-operation among the fisherfolk. Long term and medium term loans extending over a period of 10 years and 5 years respectively are issued to these societies by Government for enabling their members to redeem themselves of their prior debts and to undertake fish marketing themselves.

Through exploratory fishing operations, the fisheries department has located rich deep sea fishing grounds off Pulicat, Ennore, Madras, Cuddalore, Nagapattinam, Pamban, Tuticorin, and Cape Comorin, and arrangements are being made for their commercial exploitation. 62 small mechanised boats have already been distributed to fishermen co-operatives together with nylon fishing nets.

The pearl and chank fisheries of the Gulf of Mannar are State monopolies, and yield a substantial revenue besides supporting a large population of divers. The pearl fishery conducted off Tuticorin in March-May 1960 fetched 1,61,75,839 pearl oysters, and a revenue of Rs. 1,11,412·58 was realised by the Department by sale of its two-thirds share of the oysters. During 1959-60, about 11·34 lakhs of chanks valued at about 12·6 lakh rupees were fished.

Census of Inland Fisherfolk:

Men engaged in actual fishing ..	12,745
Men engaged in part-time fishing ..	2,099
Number of women and children ..	29,500
Total	44,344

Schools have been opened for fisherchildren. Fisheries science plays a large part in their curriculum. The children are taught handicrafts like coir rope making, mat weaving, net making, etc. Books, pencils and stationery articles are given free to these children.

An aquarium belonging to the Department is located at Madras and tropical aquarium fishes like Gold Fish, Black Mollies, Sword Tails, Guppies, Tetra, Blue Gourami, Jewel, Fire mouths and food fishes like Catla, Labeo, Gourami, Murrels, Chanos, Etroplus, Eels, etc. are kept. Most important fish farms are Mettur Fish Farm, Poondi Fish Farm, Chetput Fish Farm, Vellore Fort Moat Farm, Bhavanisagar Fish Farm and Chingleput Fort Moat Farm. All the departmental and provincialised tanks in the State are intensively stocked with quick growing fishes every year. The biological station at Ennore supplies biological specimens to various educational institutions throughout the country.

Food fishes play an important part in the manufacture of several bye-products in use in the everyday life. They are fish-oil (body oil and liver oil), shagreen, isinglass, fish glue, fish meal (guano), fish fin soup, pearl essence, fish manure, etc.

Under the Second Five-Year Plan, 15 schemes with a total outlay of Rs. 95·14 lakhs were being implemented.

Receipts of department for 1959-60: Rs. 35·73 lakhs; Expenditure: Rs. 40·51 lakhs.

The designation of the department is: Government Fisheries Department, Madras.

MAHARASHTRA

Maharashtra State has a sea board of more than 450 miles extending from Redi (District Ratnagiri) in the south to Zai (Dist. Thana) in the north. The Inland Fisheries extend to Bhandara District in the East, a crowflight distance of over 500 miles. The total number of fishing villages along the coast is estimated at over 250.

Maharashtra State has a total outlay of Rs. 1,05,52,000 for development of fisheries under the Second Five-Year Plan.

Important varieties of sea fish caught along the coastline: Saranga (White Pomfret); Halva (Black Pomfret); Ghol (Jew fish); Dara (Giant Threadfin); Ravas (Indian Salmon); Kuppa (Tuna); Surmai (Seer fish); Boi (Mullet); Bombil (Bombay duck); Bangda (Mackerel); Mushi (Sharks); Wam (Eels).

Estimated production: about 1·7 lakh tonnes.

Price per ton of fish at present: Rs. 300. The total value of fish caught in this State: Rs. 4,80,00,000.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

The number and names of the more important fishing villages and of the fishing grounds:

Greater Bombay: Lower Colaba, Worli, Danda, Versova; *Thana District:* Bassein, Arnala, Uttan, Edwan, Usarni, Satpati, Navapur, Utcheli, Nagaon, Dativare; *Kolaba District:* Karanja, Versoli, Alibag, Theronda, Revdanda, Murud, Bharadkhol; *Ratnagiri District:* Burondi, Dabhol, Jaigad, Ratnagiri, Vijaydurg, Jaitapur, Malvan, Deobag, Vengurla.

The estimated fishing population: About 2 lakhs.

Trawler Fishing: Bull trawling and other types of fishing will be undertaken departmentally shortly to initiate exploratory fishing for the benefit of fishermen. The trawlers are under construction.

Transport Vessels: Two transport vessels will be constructed in the near future and operated departmentally for the benefit of fishermen in the inaccessible areas like Ratnagiri and Colaba.

The facilities available for curing, storage and refrigeration, co-operative marketing are:

Several ice factories in the city and also at important fishing centres along the coast.

Annually, some addition to the available cold storage space is being made by extension to the existing plants and establishment of new plants.

A seven-ton ice plant and 30-ton cold storage were erected by the State Government at a cost of about Rs. 1,32,000 and handed over to the Satpati Fishermen's Sarvodaya Co-operative Society for operation. The Society has also been allotted by the Government, refrigeration equipment to increase the seven ton ice making capacity of its existing plant to ten ton and a four ton quick freezing plant and refrigeration equipment for a fish storage, ice storage and quick frozen fish storage received under the T. C. M. Programme of the American Government. One eleven-ton plant with 30-ton cold storage received under the T.C.M. Programme has been allotted to the Vesava, Machhimar Vividha Karyakari Sahakari Society Ltd. The factory has been put into commission.

The establishment of ice factories at Ratnagiri and Alibag has been sanctioned.

Marketing facilities. A new building was put up in 1951 by the Bombay Municipality to cater for the City's fish trade. Lifts are being installed for the convenience of shoppers as the retail sale of fish is on the first floor.

The new market adjoining the original congested market was erected at a cost of about Rs. 8 lakhs. In the fish section space is provided for 250 retailers. Due to increased fish trade the present wholesale market is found to be inadequate. Sufficient space is now available to traders to display their products. Two new additional markets one at Grant Road and another at Umarkhadi were also constructed during recent years.

Marketing facilities have also been provided at Kankavli and Malvan in Ratnagiri District.

A loan of Rs. 60,000 has been sanctioned to the Nagpur Municipality for the construction of a fish market on modern lines. The construction work will be undertaken shortly by the Municipality (Nov. 1960).

About four times the quantity of fish at present caught in the entire State will be necessary to meet the nutritional requirement of the people.

The quantity available for sale in Greater Bombay to the public was approximately as follows:—

Year	*Tons*
1953-54	37,812
1954-55	32,034
1955-56	30,072
1956-57	26,000
1957-58	25,000*
1958-59	30,327
1959-60	2,90,257 m. tonnes.

* Reduction due to adverse fishing season.

West Coast Fisheries (Travancore) Ltd. commenced deep sea fishing operations in Bombay waters in February 1953. It employed trawl nets for deep sea fishing and landed about 94 tons of fish during four voyages. The trawler now conducts fishing operations off Travancore waters. New India Fisheries Ltd., a firm registered under the Company's Act, has also been permitted by the Government of India to undertake trawl fishing. The firm in collaboration with Japanese enterprisers imported four trawlers from Japan and commenced fishing operations in Bombay waters. During the year 1959-60 the company landed 3,904 m. tonnes of fish.

GOVERNMENT HELP

Government effort in up-to-date fishing technique, money spent, trawlers gear used, quantity of fish caught: The State Government built the vessel "Tapase", now renamed the "Mysis" in 1947, at Rs. 65,000 for demonstrating the usefulness of mechanised craft for catching fish. The launch has since been converted into a research vessel to meet the requirements of the Taraporevala Marine Biological Research Station, Bombay.

Two improved types of fishing crafts at a total cost of Rs. 54,000 were also built and allotted to two fishermen's co-operative societies in the State on half subsidy and half loan basis for capture of fish.

The Government have sanctioned loan and subsidy to the Satpati Machhimar Vividha Karyakari Sahakari Society Ltd., Satpati, for the establishment of a boat building yard. The work is in progress.

Loans of Rs. 12,70,804 and subsidy of Rs. 8,04,274 were granted for mechanisation during 1959-60. Loans of Rs. 34,28,058 have so far been granted to individual fishermen for purchase of boats, nets and other fishing accessories.

Government have received 322 marine engines of different H.P. valued at $5,01,516·00 under the T.C.M. Programme of the American Government, which have been allotted to groups of fishermen on loan-cum-subsidy basis. Twine and net making plant, which has arrived under T.C.M. Programme, has been allotted to Bambai Rajya Machhimar Sahakari Sanstha on loan-cum-subsidy basis.

The Government have sanctioned a scheme for the grant of subsidy to fishermen in Maharashtra State, for purchase of fishery requisites such as nylon hemp-twine, fish hooks, cotton twine and sail cloth.

Number of power-propelled vessels owned by fishermen: 1,175.

One service station has also been established at Satpati in Thana District to afford facilities to the fishermen owning mechanical vessels.

Fishermen's Co-operative Societies: There are about 90 fishermen's co-operative societies of which one is an apex body, engaged in the marketing of dry and fresh fish produced by the affiliated societies and member fishermen.

The main activities of these societies are: affording credit facilities to the members, supply of fishery requisites, running fair price shops for food grains, transport and processing of fish and fishing in rivers, tanks and sea.

Government efforts in educating fishermen:—

Six fisheries schools have been established in important fishing centres, imparting special training in net making, boat repairing, fish preserving, etc. Ratnagiri District 4, Thana District 1, Kolaba District 1.

Annual expenditure on these schools: About Rs. 60,000.

The Department of Fisheries has also a scheme to train fisher-youths in the operation of power vessels as mechanics and navigators. Under a modified scheme introduced by the Government, facilities are made available to train 40 candidates in the technique of improved methods of fishing. The centre is situated at Versova, B.S.D. and the expenditure on the centre is eligible for assistance from the Government of India. The duration of each course is six months, the scheme having been sanctioned for three years. Each candidate is paid a monthly stipend of Rs. 50 and food allowance of Rs. 10. So far 159 candidates have been trained in the six months' training course.

Besides, the State Government have started a new three months training course to train fisher-youths in handling and operation of marine engines. The trainees are paid a stipend of Rs. 40 per month each. So far 149 candidates have been trained under the three months training course.

Public aquaria: The State Government maintains the Taraporevala Aquarium along the Marine Drive, Bombay. The exhibits include both fresh water and marine forms, found along the coast of the State. Attached to the Aquarium is the Marine Biological Research Station where facilities are available to research students for M.Sc. and Ph.D. degrees. The institute is affiliated to the University of Bombay.

A unit of technical staff consisting of a Research Officer, Biologist and Biochemist, has been provided at the Marine Biological Research Station, Bombay, to intensify research. The station has also been provided with a research vessel by converting the department's vessel M. L. "Mysis" at a cost of Rs. 34,101.

A Marine Biological Research Station has also been established at Ratnagiri.

FRESH WATER FISHERIES

Efforts are made to import quick growing varieties of baby fish in the State such as Catla (*Catla catla*), Rohu (*Labeo rohita*) and Mrigal (*Cirrhina mrigala*) from West Bengal, for their release in perennial waters in the State in larger numbers every year. Large irrigation reservoirs also are being stocked with these varieties so that they may thrive and breed there in course of time. In 1960-61, 62,17,750 carp fry imported from West Bengal were released in different sheets of water.

To overcome the difficulty regarding adequate supply of carp fry, experiments are being conducted to induce the major carps to spawn in confined waters. One such experiment was successful at Nagpur, when the major carps were administered with pituitary hormone injections.

Collection of local baby fish for stocking is attempted at several places around Kolhapur, Bhandara, etc., and efforts are made in all directions to boost up these less developed fisheries.

Despite the handicaps, the total production of fish from tanks and reservoirs stocked by the department with carp fry imported from West Bengal, and the rivers, is 10,68,889 lbs. valued at Rs. 4,00,833 per annum.

ANCILLARY PRODUCTS

A fisheries technological laboratory has been established at Sassoon Dock, for conducting research on problems relating to ancillary industries like shark liver oil, gelatine, glue, fish meal, etc. To ensure quick and clean extraction of oil a Sharple's super centrifuge, a fish liver boiler and a steam boiler have been installed. The laboratory also tests samples of shark liver oil from the public for vitamin 'A' content and also samples of dry fish and fish manure for their chemical composition. A Beckman's spectrophotometer has been imported from the U.S.A. for this purpose.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

In 1959-60, the output of neat shark liver oil was 5,711 gallons with an average vitamin 'A' content of 10,000 I.Us/Gm. The oil when processed, was capable of yielding 8,50,000 lbs. of Oleum-vitaminatum of B.P. standard.

Another important by-product of fisheries is fish meal. The departmental laboratory is also well-equipped for the manufacture of edible gelatin and fish glue both for adhesive as well as photo-processing work.

SECOND FIVE-YEAR PLAN

The Department of Fisheries of the Maharashtra State had drawn up a multi-purpose programme for the development of fisheries under the Second Five-Year Plan envisaging a total revised expenditure of Rs. 1,05,52,000. Starting with the supply of ordinary fishing tackle, the programme envisaged provision of marine engines, curing, refrigerational, transport and marketing facility, training in improved methods of fishing and manufacture of Shark Liver Oil with malt extract and other fisheries by-products. The programme also contained provision for education, research and organisational facilities to the fishermen.

Against the revised plan ceiling of Rs. 105·52 lakhs the Department spent Rs. 92·90 lakhs by end of year 1959-60, *i.e.* 4th year of the plan thus registering an expenditure of 132 per cent of the phased provision for the four years. A provision of Rs. 35·35 lakhs was made in the budget for 1960-61.

A sum of Rs. 25 lakhs has been allotted for the fisheries schemes in the Konkan region. Six schemes have been drawn up for development of this region. Additional allotment of Rs. 13 lakhs has been made during 1959-60 to meet the increasing demand of the fishermen of the Maharashtra region for marine diesel engines and for general purpose loans.

All the schemes have been started and are progressing satisfactorily. Mechanisation programme of the State has made a great success and has led to increased fish production. Fresh-water fishery has similarly made a marked progress and greater number of carp fry is being stocked each year.

Receipts of the department during the financial year 1959-60, are shown below :—

	Rs.
Fish curing yards	1,02,955
Fisheries Tech. Laboratory ..	10,06,478
Other receipts	3,09,953
Taraporevala Aquarium	74,280
Total ..	14,93,666

The State Government's share under the U.S. operational Agreement No. 5 amounts to Rs. 30 lakhs, to be utilised to procure up-to-date equipment to increase existing supplies of fish and to improve the socio-economic condition of fishermen.

THIRD FIVE-YEAR PLAN

Marine Fisheries will receive larger share of the total size of the plan in view of success attained in various fields especially mass mechanization of indigenous fishing vessels, for which a provision of Rs. 61·45 lakhs has been proposed. Other schemes, supply of fishery requisites, improvement of fishing ports, financial assistance for boat building yard, service station, have been given due place in the plan.

Fresh water fisheries will receive further impetus in view of the larger inland fishery resources being now available in the regions of Vidarbha and Marathwada. A special unit for collection of fry has been proposed in the plan, besides other usual schemes already started during first two plans.

Marketing, preservation and transport have also been assigned important place in the department's plan in view of the rapid improvements made during the last decade in exploitation of fish. In order to impress on the local bodies the need to maintain adequate facilities for fish marketing, a provision is made for grant of loans to such bodies for construction of well planned fish markets. Miscellaneous schemes as research both biological and technological, will receive further impetus when expansion of the research activities has been proposed.

In order to afford educational facilities to the fisher-children, High Schools and other training facilities have also similarly been provided in the plan.

With the investment proposed as above, it may be possible to raise the fish production from 1·9 lakh tons at the end of the Second Plan to 2·5 lakh tons by 1965-66.

FISH CURING YARDS

During 1959-60 the department maintained 21 yards in Ratnagiri District. It is proposed to provide improvements in the yards in the 2nd Fiver-Year Plan at an approximate cost of Rs. 80,000. The work of constructing 30 permanent superstructures over the existing cement concrete platforms has already been completed at a cost of Rs. 78,536. Construction of 12 superstructures at Deobag is in progress.

The transactions at the yards in Ratnagiri District during 1959-60 were as follows :

Quantity of fish let in for curing—6,575 m. tonnes.

Quantity of salt issued—1,755 m. tonnes.

Quantity of cured fish removed—5,039 m. tonnes.

The total budget allotment for the department for the year 1959-60 was Rs. 1,76,200.

It is proposed to establish a fish curing yard at Murud, Dist. Kolaba. The yard will start functioning in 1961.

The designation of the department is: Office of the Director of Fisheries, Maharashtra State, Bombay.

MYSORE

Inland Fisheries : There are about 30,000 minor tanks and 2,700 major tanks in the State.

Inland Fisheries are developed only in selected areas of the State and more and more inland fishery resources are being tapped.

There are 14 fish farms in the State.

Induced breeding of quick growing varieties of food fishes by pituitary hormone injections has been taken up in different fish so as to meet the increased fish seed requirements of the State.

The estimated fish production at present from the inland resources is nearly 22,000 tons and the revenue in the form of direct realisation from exploitation of fisheries, through the sale of fishery rights, issue of licences, etc., is about Rs. 75,000.

Marine Fisheries : Mysore State has 200 miles of coast line on the Arabian Sea. All along this sea board, there are many fishing villages, the most important of them being Karwar, Ankola, Kumta, Honnawar, Bhatkal, Majali, Bingi, Chandia, Gangolli, Malpe, Udiyawar, Bokkapatnam and Mangalore.

Nearly 50 varieties of sea fishes are landed out of which the most important are Sardine, Mackerel, Seer and Sharks. The total fish production on Mysore coast is one-seventh of the total marine fish landings in India.

Thus, the marine fisheries confined to North and South Kanara can be regarded as one of the richest in the whole of India.

Value of fish exploited :—

Quantity of fish in tons and the approximate value :—North Kanara : 25,000 ; Rs. 55,00,000 ; South Kanara : 85,000 ; Rs. 1,85,00,000.

There are about 20,000 fishermen actively engaged in fishing, about 6,500 boats and about 30,000 nets. The number dependent on the fishing industry is estimated at over 80,000.

Average catch per fisherman per annum on Mysore coast : 5·8 tons.

Total annual internal consumption :—North Kanara and South Kanara : 40,000 tons.

Capital value of the industry together for North and South Kanara districts is estimated at Rs. 2·5 crores.

No. of fish curing yards :—North Kanara : 15 ; South Kanara : 15.

Process of modernisation : Mechanisation of boats for powered fishing is taken up. Also ice plants and refrigerated storage facilities are being provided. By the close of 1959-60 there were 27 mechanised boats. Four trucks are provided for the transport of fish from coastal centre to inland markets. There are two boat-building yards one at Mangalore and another at Karwar. A Fisheries Technological Research Station has been established at Mangalore.

SUBSIDIARY INDUSTRIES ESTABLISHED AND THE SCOPE FOR DEVELOPMENT :

	Fish-meal plants.	*Fish oil factories.*
North Kanara ..	—	3
South Kanara ..	1	13
Total ..	1	16

There is one fish canning plant in South Kanara.

AMENITIES TO FISHERMEN

Eighty fisher-youths have been trained so far in mechanised fishing at the Fishermen Training Centre, Mangalore.

There were 64 fishermen co-operative societies with a subscribed share capital of Rs. five lakhs upto 1959-60, about Rs. 1,44,000 as long term loans, Rs. 22,700 as Government contribution towards share-capital of the societies and Rs. 9,500 as subsidiary towards managerial cost, were given by the Dept. of Fisheries.

Value of Fish exported : Steps have been taken to explore the prawn fishing grounds north of Mangalore. During 1958-59, nearly six lakh pounds of prawns, lobster tails and frog legs were frozen in the Government factory at Mangalore and exported to the United States of America, earning dollar exchange of the value of Rs. 20 lakhs.

There are 32 fisheries schools of which six are high schools, 12 higher elementary schools and 14 lower elementary schools.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

ORISSA

Kinds of sea-fish caught: Pomfrets, Mackerel, Ribbon fish, Silver bellies, Sardine, Sharks, Rays, White Bait, Bombay Ducks, Cat-fishes, Threadfins, Perches, Jew-fishes, Sur-fishes as well as Prawns. Kinds of estuarine fish caught: Sharks, Shads, Catfishes, Threadfins, Perches, Mullets, Jew-fishes, Prawns and Crabs.

Annual production of Shark Liver Oil: 1950-51 (3,000 lb.); 1951-52 (6,730 lb.); 1952-53 (7,658 lb.); 1953-54 (10,718 lb.); 1954-55 (6,587 lb.); 1955-56 (11,681 lb.); 1956-57 (5,123 lb.); 1957-58 (10,361·75 lb.); 1958-59 (15,041 lb.); 1959-60 (12,860 lb.).

Important marine fishing centres: Patisonapur, Marcondi, Gopalpur, Prayagi, Aryapalli, Arkhakuda, Puri and Chandipur.

Important estuarine fishing centres: Sonapur and Surla (Bahuda estuary), Damodarpur and Gajpatinagar (Rusikulya estuary), Rambha, Kespur, Balugaon, Kuguri, Gangadharpur, Kaluparaghat, Bhusandpur and Satpara (Chilka Zone), Astarang (Devi estuary), Kujang and Hukitola (Mahanadi estuary), Chandanipal and Chandbali (Dhamra and Baitarani estuaries) and Kirtania (Subarnarekha estuary).

Important inland fishing centres: Ansupa lake, Russelkonda reservoir, Hirakud reservoir. Kausalyagang and Mandira dam reservoir.

Number of fish curing yards run by the fishermen's own co-operative stores: 6. Number of ice factories which cater to preservation of fish for transport to Calcutta and elsewhere: 8 including two departmental flake ice plants. Co-operative marketing has developed in the Chilka area. The annual volume of trade ranges between Rs. 25 and Rs. 40 lakhs.

The demand is approximately 100 times more than the supply.

There are no deep-sea fishing companies in the State.

The State has not taken up deep-sea fishing commercially. Experimental power fishing in the sea is continuing with small boats. There are no fishermen's schools; but fishermen are being trained by State Fisheries in inland piscicultural activities in five demonstration fish farms. A scheme for pilot power fishing in sea has been drawn up to be opened in the 3rd Five Year Plan.

There is a small experimental aquarium attached to the Fisheries Department in Cuttack.

A fresh water biological station has been established at Kausalyagang, District Puri. Field researches carried out at Kiakani (Puri), Kothpal (Mayurbhanj), Dighi (Balasore), Naransagar (Angul), Humari (Ganjam) and 20 other fish farms. Field research on marine fish farming is carried out at Khiragachamadeli.

Major experimental farms in the State: Cuttack fish farm; Puri fish farm; Chowdwar fish farm; one model fish farm at Laxmisagar in Puri District. Sonepur; Sambalpur; Balasore; Kausalyagang; Angul: Baudh; Jajpur; Co-operative marketing has developed in the Belguntha; Jeypore (Koraput), Kathpal (Mayurbhanj), Kanjia-Kiakani (Barang), Amarda (Mayurbhanj).

Research is going on in the manufacture of agar agar and hydrolysed protein, breeding of carps with pituitary hormone, haematology of carps, life history of mullets reclamation technique for swamps, improved craft and gear, freezing of fish, canning of prawn, cultural practices in fish rearing, on the suitability of new types of fishing gears in coastal and estuarine waters, improvement of indigenous marine fishing gears with synthetic twines, abundance of economic varieties of sea fish.

Revised Second Five-Year Plan provision 1956-61: Rs. 53·20 lakhs. Third Plan provision is Rs. 156 lakhs.

Income from Fisheries Department ranges between Rs. 1·5 and 3 lakhs per annum which does not include rent for water areas.

Budget allotment: 1960-61: Rs. 15,83,859.

WEST BENGAL

Kinds of sea fish caught: Pomfret, Bhetki, Mackerel, Prawn, Topsi, Hilsa, Chanda, Bhola, Bombay Duck, Ribbon, Shark, Reyn, Skate, Eel, Cat fish, Phasa, etc.

Total quantity of sea fish caught in 1958-59: 7,830·82 mds.

Total value of the sea fish caught in 1958-59: Rs. 1,26,236·33.

Price per maund of different kinds of fish in March 1959:

Varieties	Maximum	Minimum	Average
	Rs. nP.	Rs. nP.	Rs. nP.
Carps ..	110·00	80·00	95·00
Hilsa ..	120·00	110·00	115·00
Bhetki ..	110·00	110·00	75·00
Mullets ..	110·00	90·00	90·00
Butter ..	100·00	60·00	80·00
Lobster ..	110·00	80·00	95·00
Shrimps ..	60·00	110·00	50·00

Approximate strength of the fishing population: 96,400 (1951).

Potential demand for fish in the local market: In West Bengal (10 lakh mds.); In Calcutta (1·25 lakh mds.).

Extent to which production meets this demand: 12·2 per cent.

Money spent by Government in connection with fishing in 1958-59: Rs. 5,03,000.

Gear used: Haddock trawl, Prawn trawl, Herring trawl, etc., all made of cotton twines.

There is one experimental fish farm in sewage fed water maintained by the State Government. There are demonstration fish farms in private parties' tanks in each thana of the State.

Ancillary industries like liver oil, gelatin, glue, fish-meal, and their production: One scheme for production of shark liver oil, fish-meal, processed fish and utilisation of other fish by-products is operated at Contai coast.

Production during 1959-60:

Shark liver oil 10,000 lb.; Fish-meal 17,000 lb.; Fresh fish 74 lb.

Approximate Revenue from fisheries during 1959-60: Rs. 3,17,974.

Budget allotment for the Department for 1960-61: Rs. 36,95,000·00.

The designation of the Fisheries Department: Directorate of Fisheries, West Bengal under the administrative control of Fisheries Department and Development Department, the latter controlling the sea fishing scheme only.

IRRIGATION

THE net area under irrigation in India during 1956-57 was 55·7 million acres and the gross area 64 million acres. The First Plan target was 67 million acres. The net sown area during 1956-57 was 322·46 million acres. The percentage of net irrigated area to the net sown area in the entire country was 17·3. This is the second largest irrigated area in any country of the world, the largest being in China.

The total capacity of India's canals is over 220,000 cusecs, and the canals are over 67,500 miles in length.

The total amount of annual flow of water in the Indian Union is 1,356 million acre feet. Of this only 76 million acre feet or 5·6 per cent are at present being used for irrigation purposes.

Classing a year in which rainfall deficiency is 25 per cent. as a dry year and one in which it is 40 per cent. as a year of severe drought the examination of past statistics shows that, over the precarious area, one year in five may be expected to be a dry year and one in ten a year of severe drought. It is largely in order to remove the menace of these years that the great irrigation systems in parts of the country have been constructed.

In the arid tracts where the annual rainfall is less than 15 inches, no cultivation is normally possible without irrigation.

During the Second Plan period about 12 million acres were expected to be brought under irrigation (9 million from First Plan projects and 3 million from Second Plan projects) by means of large and medium sized projects since revised to 10·4 million acres and 9 million acres by means of minor schemes so that the area under irrigation at the end of the Second Plan would be 85 million acres. The area likely to receive actually irrigation benefits during the Plan will be only about six million acres. If the short-fall of 3 million acres under the First Plan is made up the total area will increase to 88 million acres, which is also the Second Plan target.

The total investment in irrigation and power projects during the First Plan was of the order of Rs. 615 crores.

The revised allocation under the Second Plan for irrigation and power was Rs. 860 crores (Centre 72 and States 788) and for minor irrigation Rs. 96 crores (Centre 3 and States 93).

The estimated cost of the multi-purpose, large and medium projects included in the 1st and 2nd Plans is Rs. 1,330 crores.

By the end of December 1959, 202 Plan projects (6 major, 196 medium) had been completed.

The major and medium irrigation projects taken up in the 1st and 2nd Plan periods on completion and on full development would irrigate about 38·51 million acres and at the end of the 3rd Plan it is expected that 45·5 million acres would be brought under irrigation.

The total irrigation potential created by the major and medium irrigation projects up to the end of 1959-60 was 11·5 million acres at channel outlets against which utilisation was 8·3 million acres.

Additional food production expected through major and minor irrigation works was as follows:

(in million tons):

First Plan: 2·01 and 2·38 respectively.

Second Plan: 3 and 1·9 respectively.

The irrigation potential created by the Plan projects is not fully utilized. The percentage of utilization by State is as follows:—

Andhra 55, Bihar 82, Bombay (bilingual) 59, Kashmir 33, Kerala 98, M.P. 66, Madras 87, Mysore 53, Orissa 68, Punjab 82, Rajasthan 81, U.P. 74, W. Bengal 62. For India as a whole 75.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

The table below gives the irrigation benefits accruing from the First and Second Plan Schemes at the end of the First Plan and during the Second Plan.

Million Acres

End of year	Potential at channel outlets for gross irrigation	Utilisation	
		Gross	Net
1955–56	6·5	3·3	2·9
1956–57	7·3	4·1	3·4
1957–58	8·1	5·7	4·9
1958–59	9·6	6·4	5·9
1959–60 (Estimated)	11·7	8·6	7·4
1960–61 (Anticipated)	14·0	10·5	9·0

THE PROJECTS

The following projects continued from the First Plan period.

Bhakra-Nangal (Punjab and Rajasthan), Damodar Valley (West Bengal and Bihar), Hirakud (Orissa), Chambal (Rajasthan and Madhya Pradesh), Tungabhadra (Andhra and Mysore), Mayurakshi (West Bengal), Bhadra (Mysore), Kosi (Bihar), Nagarjunasagar (Andhra), Kakrapara (Bombay).

The following are the new projects:

Andhra—Vamsadhara; *Bombay**—Ukai, Vir, Purna, Narmada, Banas, Mula, Girna, Khadakvasla, Bhadar; *Jammu and Kashmir*—Lidder Canal; *Kerala*—Bhoothathankethu; *Madhya Pradesh*—Tawa, Chandakeshar, Barna or Kolar, Upper Keri; *Madras*—New Kattalai; *Mysore*—Ghatprabha II, Kabini, Laxman Thirtha; *Orissa*—Salandi; *Punjab*—Gurgaon Canal; *Pondicherry (also Madras)*—Vidur; *Rajasthan*—Banas; *U.P.*—Sarda Sagar II, Ramganga; *West Bengal*—Kangsabati.

Particulars about major schemes taken up under the Second Plan are given below. Only such schemes are mentioned as cost Rs. 5 crores and above.

(Rs. lakhs)

Scheme	Estimated cost	Second Plan provision	Expenditure 1956-57	Budget 1957-58	Proposals 1958-59
BOMBAY *					
1. Vir	533·0	425·0	9·77	30·47	70·00
2. Mula	940·0	275·0	12·41	22·64	20·00
3. Girna	905·4	375·0	15·97	29·00	85·00
MYSORE					
4. Ghatprabha Stage II ..	970·0	100·0	21·21	50·00	20·00
UTTAR PRADESH					
5. Sarda Sagar Stage II ..	984·2	737·0	78·51	96·00	82·89
Schemes not sanctioned by Planning Commission but taken up by States					
BOMBAY *					
1. Khadakvasla	1,214·0	275·0	15·52	60·00	100·00
2. Purna	768·6	500·0	20·44	46·56	95·00
WEST BENGAL					
3. Kangasabati	2,525·90	475·0	52·12	75·00	50·00
UTTAR PRADESH					
4. Ramganga River Project ..	1,599·00	450·0	17·70	32·00	60·00

MINOR IRRIGATION

Minor irrigation works are works that can be conceived and handled to a large extent by the local people themselves, and individually cost Rs. 10 lakhs or less.

Minor irrigation works are very important from the immediate food production point of view. The development of irrigation on the completion of the projects is almost immediate.

Works like wells, pumping sets, persian wheels are executed entirely by individual cultivators. Many other works like tanks, anicuts, and channels benefiting groups of cultivators are also executed by the cultivators themselves on a cooperative basis. Financial assistance from Government, mostly in the form of loan, is given for both categories of these works. Subsidy, subject to a maximum of 25 per cent of the total cost, is also given to encourage construction particularly in backward and unproven areas.

Minor irrigation schemes which require some specialised technical knowledge in surveys and execution are handled by the Departments concerned of the States. Public participation is obtained for these works in the form of cash, or kind (like labour). State Governments levy irrigation rates or cess on the areas benefited.

Minor irrigation works command a larger area than what is commanded by the major works. Out of a total (net) irrigated area of about 55·7 million acres (in 1956-57) about 59 per cent is contributed by minor irrigation through tanks, wells, and other sources (11·1, 16·2 and 5·4 million acres respectively).

Minor irrigation schemes include construction of open wells, tanks and minor drainage schemes; embankments which are important from the point of view of food production and checking intrusion of salt water in coastal areas; restoration of old tanks, stream diversion schemes; and installation of pumping appliances and improvement of water supply from wells and storage dams. There are also such works as construction of kuhls in hilly areas, filter points in coastal alluvium and installation of improved lift appliances, Persian wheels and pumping sets on wells. Tubewells also form part of minor irrigation works.

During the First Five-Year Plan 9·5 million acres were reported to have been brought under minor irrigation against a target of 11·2 millions.

The target for increased food production was 2·38 million tons.

During the First Plan period the Government of India spent Rs. 46·52 crores as loans and Rs. 8·25 crores as subsidy for minor irrigation, in addition to Rs. 19 crores for tubewells and Rs. 7·34 crores on minor irrigation in Community Development and N.E.S. blocks.

The First Plan achievement is as follows:—

Item	Newly constructed/ installed.	Repaired/ Renovated.
1. Tanks	3,134	5,788
2. Wells .. .. (Excluding tubewells)	156,348	62,472
3. Dams	33,872	..
4. Other works ..	14,154	..
5. Persian Wheel, Rahats etc. (installed)	38,485	..
6. Pumps on rivers and channels installed	19,694	..

The target for the 2nd Five Year Plan was 9 million acres. The additional foodgrain production envisaged was 1·9 million tons. During the first two years 5·8 million acres were covered. An additional 2·2 million was achieved in 1958-59. The target for 1959-60 was 2·2 million acres, which was achieved. The target for the Plan as a whole is expected to be exceeded. The Third Plan is tentatively fixed at 14·78 million acres. The entire allocation of Rs. 137 crores will also be fully utilized.

The allocation for minor irrigation is Rs. 92 crores.

The rest of the provision of Rs. 45 crores is under the C.D. Programme.

The target for increased food grains is 1·9 million tons.

The expenditure on minor irrigation has been stepped up from about Rs. 150 million in 1956-57 to about Rs. 220 million in 1959-60. During 1958-59 three regional conferences on minor irrigation were convened by the Ministry of Food and Agriculture which laid stress on minor irrigation programmes.

The expenditure from 1956 to 1960 is estimated at Rs. 107 crores. The sanctioned outlay for 1958–59 was Rs. 20 crores.

TANKS AND WELLS

A descriptive note on the above is given in the 1959-60 edition of this book.

Tank irrigation is very important in Andhra, Madras, Orissa and Uttar Pradesh where over 2·9, 2·2, 1·2 and 1·0 million acres respectively, are irrigated by tanks. Bengal, Mysore, Bihar, and Bombay,* have over half a million acres under tank irrigation.

Wells: Wells are mainly of two types, i.e., surface or sub-surface. Unlike tanks, they can be constructed irrespective of topographical and geological limitations, provided sub-soil water is in reach.

* Bilingual.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Well irrigation commands over 5·4 million acres in Uttar Pradesh and 2 millions in Punjab, Rajasthan, and Bombay. It is also of considerable importance in Madras (where over 1 million acres are irrigated by wells), Andhra, Madhya Pradesh, and Bihar.

Pumping sets of high efficiency have come into common use for water lifting and also for draining. The number of irrigation pumps in use increased from 107,355 in 1951 (*i.e.*, oil powered 82,218, and Electrically driven 25,137) to 177,034 (oil powered 122,230 and Electrically driven 54.804) by 1956.

To encourage maintenance, a levy on the entire irrigable area is imposed in Madhya Pradesh, Madras, and Mysore :—

Type	Cost per acre in Rs.
a) Lift irrigation by Mote (Leather Bucket)	60·0
b) Pump irrigation	20·0
c) Tubewell (per acre inch) ..	1·8

Tubewells

Tubewells are expected to make a significant contribution in raising India's agricultural production.

The Five-Year Plans aim to increase the total irrigated area in the country to 100 million acres and a substantial part of this irrigated area will be under the tubewell programme. Already, under the programme, 5,464 tubewells have been constructed and put into operation at a cost of about Rs. 37 crores. They are capable of irrigating about 2 million acres.

Tubewell irrigation is comparatively new to India. It was only in 1930 that a programme was taken up in Uttar Pradesh. During the following 20 years the State constructed about 2,000 tubewells which in 1950 were irrigating about a million acres. Some of the best of them were running on for over 7,000 hours a year and irrigating 7 to 8 hundred acres. The average area irrigated per tubewell was 420 acres. These results encouraged Government to take up large programmes under the First and Second Plans.

The first project taken up in 1950 aimed at the construction of 996 tubewells as an adjunct to the Grow More Food programme.

Subsequently two other large programmes were undertaken with the assistance of U.S.A. Government. Under these two and other smaller programmes taken up under GMF 4,208 tubewells were constructed :— in the Punjab 1,177, in Uttar Pradesh 2,226, in Bihar 390, in Bombay* 364, and 51 in other areas.

All these tubewells were constructed along the Gangetic plain but as considerable interest was shown in the results obtained here by other States, it was decided to explore the possibilities of tubewell construction in other parts of India where flow irrigation is not possible and where water is needed for irrigation.

A project for exploring these areas was, therefore, prepared under the 1953 Indo-American Technical Aid Programme under which the following areas considered by the Geological Survey of India as offering the best possibility of underground water were taken up for exploration by actual drilling : Narmada Basin (Madhya Pradesh), Tapti Basin (Gujarat and Madhya Pradesh States), Purna Basin (Bombay*), Saurashtra (Gujarat), Rajasthan, Kerala, Madras, Kutch, Andhra, Bihar, Punjab, Orissa, Uttar Pradesh, West Bengal and Assam. This exploration has now been completed and results obtained have justified the programme (see below). Large areas have been proved suitable for the construction of tubewells and States have taken up substantial programmes for developing Tubewell irrigation in these areas.

The most important of these are the following : Narmada Valley—about 780,000 acres along the river, west of Jabalpur ; Rajasthan—about 1,000 square miles around Chandan (east and north-east of Jaisalmer) ; Kutch (Gujarat) —about 300 square miles in central Kutch ; Madras—areas in Chingleput and Tanjore-districts for the development of ordinary tube wells and an extensive belt in South Arcot district for the development of artesian wells ; Orissa—Balasore district ; Andhra Pradesh—East and West Godavari districts ; West Bengal —almost all districts.

Irrigation with these tubewells has developed satisfactorily and in most cases 75 per cent of the potential has been utilised by the third year of operation. It is true that substantial concessions in water rates had to be offered by the State Governments to promote expansion but the total value of these is nothing compared to the value of the increased agricultural production result in therefrom.

In Uttar Pradesh alone the total value of increased agricultural production was worth over 45 crores of rupees in the years 1954-55 to 1956-57.

A tubewell irrigates about 400 acres while a surface well barely 5 acres. The cost of a tubewell complete with accessories is between Rs. 50,000 and Rs. 75,000 depending on whether electric energy is available for running the pump or not. This is for a 300 ft. deep tubewell, discharging 33,000 gallons per hour. A surface well irrigating 5 acres costs about Rs. 1,500. Thus the capital cost of a tubewell is from Rs. 150 to Rs. 200 per acre as against Rs. 300 per care for a surface well.

It is also particularly well-suited to areas of small holdings where the construction of wells raises difficult problems of finance. Also in periods of drought when the water in the surface wells dries up as was found during the drought season of 1957-58, the tubewell continues to give unabated supply of water.

The utilisation is given below :—

HISTORY

Rainfall in the country is as already mentioned unequal and in many areas uncertain. The distribution is as follows :

Range	(in million acres)	Percentage
Area between 0–30 inches	237·6	29·6
Area between 30–50 inches	339·2	42·0
Area between 50–75 inches	143·9	17·8
75 inches and above..	85·6	10·6
Total area ..	806·3	100·0

The annual rainfall varies from 5" (in parts of Rajasthan) to over 100" in the west coast areas. Most of it, however occurs during the four months of June-September, when many rivers are often in spate. On the other hand, about 30 per cent of the area gets less than 30" rainfall a year, necessitating irrigation measures.

The country can be broadly divided according to the rainfall into two zones of certain and uncertain rainfall. Generally speaking, rainfall is certain in Assam, Bengal, Konkan and Malabar and in the Narbada Valley. It is uncertain in large areas of Andhra, Maharashtra, Gujarat, Madras, Mysore, Orissa, Punjab, Rajasthan and Uttar Pradesh.

The total water resources of Indian rivers in terms of annual flow is estimated at 1,356 million acre feet of water, distributed as follows :—

1. Rivers (excluding the Indus system) falling into the Arabian Sea, 251·5 ; 2. Rivers (excluding Ganga and Brahmaputra system) falling into the Bay of Bengal, 334·0 ; 3. Indus basin in India, 64·4 ; 4. Ganga System, 397·1 ; 5. Brahmaputra System, 309·0.

The total run off is about 1·87 million cubic ft. throughout the year.

(mln. acre ft.)

System	Estimated average flow	UTILISATION upto 1951	Addl. in 1st FYP.	Addl. in 2nd FYP.
Indus	168	8·0	11	1·2
Ganges	400	38·0	21·5	14·5
Brahmaputra	300	2·3	..	..
Mahanadi	84	3·1	10·5	0·2
Godavari	84	12·0	1·0	1·5
Krishna	50	9·0	15·6	2·6
Cavery	12	8·0	1·3	0·6
Narbada	32	0·2	..	10·1
Tapti	17	0·2	0·7	3·5

Out of the water resources of 1,356 million acre feet, about 450 million acre feet are utilisable. About 88 million acres (6·5 per cent of total and 19·5 per cent of usable) were utilised by 1951. In he First and Second Five-Year Plans 11 and 13 per cent of the total water respectively are to be used.

RIVER VALLEY PROJECTS

The major river valley projects are as follows:—

(1) Bhakra-Nangal Project, (2) Hirakud Project, (3) Damodar Valley Project, (4) Tungabhadra Project, (5) Kosi Project, (6) Chambal Project, (7) Nagarjunasagar Project, (8) Koyna Project, (9) Rihand Project, (10) Bhadra Reservoir Project, (11) Kakrapara Project, (12) Machkund Project, and (13) Mayurakshi Project.

Below we give notes on some individual projects.

Bhadra Project (Mysore) :—This is one of the biggest irrigation and multi-purpose projects undertaken by the State. The scheme includes the construction of a reservoir on the river Bhadra at Lakkavalli (Shimoga District) with a storage capacity of 63.035 million c.ft. to irrigate 2,44,663 acres of land in the dry taluks of Shimoga, Chitaldrug and Bellary districts and to generate electric power to the extent of 33,200 kW at the dam site. Two channels take off from the reservoir on each bank and the right bank channel has to be taken in a tunnel, three miles in length, across the Ubrani Range of hills before it enters Sulekere valley which commands vast fertile lands in the taluks of Harihar and Davangere. When completed, this will perhaps be the longest irrigation tunnel in India. The left bank channel has been serviced to irrigate 15,000 acres and the right bank channel has been serviced for a short length. The tunnel works are in progress.

* Bilingual.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

The cost of the project is estimated at about Rs. 33·53 crores and the work is expected to be completed by 1961. According to the schedule, water has already been made available to an extent of nearly 31,304 acres of land. The project was actually started on a small scale in 1947 and so far about Rs. 16·63 crores have been spent.

Bhakra-Nangal Project (Punjab): The Bhakra-Nangal project in the Punjab comprises two big dams—The Bhakra Dam and the Nangal Dam, about 70 miles north of Chandigarh—a vast network of canals, four power houses and a large number of transmission lines with scores of grid sub-stations.

It is the largest multi-purpose river valley scheme under construction in India.

The project is expected to irrigate over nine million acres and build up an ultimate power potential of 9,06,000 kW. The States that will benefit are the Punjab, Rajasthan, Himachal Pradesh and Delhi.

The project will irrigate 4·8 mln. acres in the Punjab, and nine lakh acres in Rajasthan. It will also improve irrigation in another 3·5 mln. acres. During the year 1959-60 the Canal system actually irrigated over 19 lakh acres in the Punjab and Rajasthan as compared to 15 lakh acres during 1957-58.

Irrigation started in July 1954 when three lakh acres in the Punjab were irrigated. In 1960-61, 21·44 lakh acres of land were irrigated as against 19·67 lakh acres in 1959-60.

The total expenditure incurred till the end of Dec. 1960 was Rs. 152·87 crores against the sanctioned estimate of Rs. 170 crores.

The Nangal Dam, the Nangal Hydel Channel, and the Bhakra canals have already been completed. The first phase in the construction of the Bhakra Dam to a height of 414 ft. was completed in April 1958.

The dam had been raised to the height of 606 ft. above the deepest foundation *i.e.* the highest elevation attained being 1,566 by the end of Dec. 1960. The total uptodate progress of concrete placed is 4,605,408 c. yds. The concreting of the dam would be completed by Dec. 1961. The remaining work would continue upto the end of 1962.

Of the four power houses the Ganguwal and Kotla power houses on the Nangal Hydel Channel, with a total capacity of 96,000 kW have already been commissioned. Two additional units of 29,000 kW each at Kotla and Ganguwal power houses were expected to be commissioned into service in April and July 1961 respectively.

Rajasthan's share in the total electricity generated at Ganguwal and Kotla power stations is 15·22 per cent.

Of the two power houses to be built on the Bhakra Dam, the building to house the Left Bank Power House is complete and the first generating set of 90,000 kW, was commissioned into service on Nov. 14, 1960 and the second unit on Feb. 1, 1961. The remaining three units are likely to be commissioned at intervals of 3 months each.

The commitments from this plant are: Nangal Fertilizer Factory 1,60,000 kW; Delhi 40,000 kW; Rajasthan 15,000 kW; Kashmir 5,000 kW.

The plans for the construction of the Right Bank Power House were also ready and the preliminary work was started in 1960-61, the final year of the Second Five Year Plan. This power house too will have five units of 90,000 kW. Work was expected to start in 1960-61 itself because of the growing need for power in Delhi, Rajasthan and the Punjab.

The Bhakra Dam which has now reached a height of 660 feet received a major set back on August 21, 1959 in the collapse of the hoist chamber on the right diversion tunnel. Normally, this tunnel was to be closed in October 1959. The hoist chamber was intended to hoist the gates controlling the diversion tunnel. It was a box-like chamber (40′ × 60′ × 57′) costing Rs. 43 lakhs.

The immediate effect of this collapse was the inundation of the inspection galleries of the Bhakra Dam and the cable and the visitors' galleries of the left bank power plant—a major undertaking in the Power Wing of the Bhakra Project.

Immediate steps were taken to direct the water flowing into the power house so as to salvage the machinery being installed in the Power House. Salvage operations were successfully finished by the end of October 1959 with the help of divers and frogmen from the Indian Navy.

Ministry Engineers have been collaborating with the engineers already working on the Dam to choke the upstream mouth of the right diversion tunnel. This was more or less achieved on January 1, 1960.

The hoist chamber was completely dewatered on February 8, 1960 and concreting of the hoist chamber was taken in hand immediately. The syphons were finally closed on April 21, 1960 and two conduits leading from the old hoist chamber were filled with concrete on May 26, 1960, making the concrete block in the right tunnel strong to withstand the reservoir pressure equal to that for elevation 1,500 ft. which was the maximum expectation for the yearly rainy season.

The expenditure on repairs incurred upto the end of January 1960 was Rs. 77 lakhs and the total cost of repairs to civil works would be of the order of Rs. 118 lakhs.

The main dam is, however, safe and it is presumed that the benefits from the Bhakra Dam will flow in accordance with the schedule. But the construction work has been retarded to some extent as all the means and energy available had to be diverted to the repair work.

A committee was appointed to enquire into the accident. According to the report of the Committee released during the third week of July 1960, the hoist chamber on the right diversion tunnel of the Bhakra Dam on August 21, 1959, collapsed due to the vibration caused by the flow of water in the tunnel.

The increase in foodgrains as a result of the irrigation from the project is expected to be 1·13 million tons a year. Other additional yields that will accrue from the project are: sugarcane 5,00,000 tons, cotton 8,00,000 tons and pulses and oilseeds 1,00,000 tons.

For 1960-61 Rs. 10·39 crores were allotted.

The Electricity Wing of the Bhakra Dam has been made over to the Electricity Board which came into being on January 31, 1959.

A comprehensive agreement between Punjab and Rajasthan regarding the Bhakra Nangal project exists. (For details see the Directory for 1959-60.)

Over 41,354 acres of land has been acquired upto Dec. 1960 in Bilaspur, Hoshiarpur, Kangra, Hissar, Mandi and Ambala districts for resettlement of people displaced from the Govind Sagar (Bhakra Reservoir) area.

(*A detailed description of the project is given in previous books.*)

Damodar Valley Project (Bihar and West Bengal).—The Damodar Valley Project which is one of the most important multi-purpose schemes and is to benefit the States of Bihar and West Bengal, has as its main features the construction of (*a*) Multi-purpose storage dams with hydro-electricity plants, (*b*) an irrigation project with a network of irrigation canals and distribution measuring 1,465 miles, (*c*) an 85 mile long irrigation-navigation canal, (*d*) a power transmission grid and (*e*) thermal power stations to supplement the hydro-power.

The ultimate benefits that will accrue from this scheme include (*a*) effective flood control of the Damodar River, (*b*) perennial irrigation of 9,73,000 acres including 2,20,000 acres of old irrigated area in the kharif season and more than 1,00,000 acres in the rabi season resulting in an additional yield of rice and rabi crop and jute valued at Rs. 17 crores a year, (*c*) the generating of 729,000 kW of electric power, which will promote the growth of industry, lead to the electrification of railways, etc., (*d*) cheap transport facilities through the navigation canal, (*e*) annual traffic through the canal of coal, paddy, etc. to the extent of nearly 2 million tons, (*f*) efficient drainage of about 700 sq. miles of waterlogged area in the lower valley in W. Bengal, (*g*) prevention of soil erosion by afforestation, (*h*) land reclamation and improvement, (*i*) anti-malarial measures and public health promotion works, and (*j*) development of fishery, tourism, etc.

About seven lakh acres of land in West Bengal were brought under irrigation.

Of the electric power generated 625,000 kW will be thermal and 104,000 kW will be hydro-electric.

The first phase of the D.V. Project comprises (1) a thermal power station of 150,000 kW capacity at Bokaro, 7 miles by road from the Bermo railway station, in the district of Hazaribagh, Bihar, (2) Tilaiya dam with a power station of 4,000 kW in the same district, 14 miles south of Kodarma railway station on the Grand Chord line of the Eastern Railway, (3) the Konar dam in the same district, 24 miles from Hazaribagh, (4) the Maithon dam with a power station of 60,000 kW in the district of Dhanbad (Bihar), 3 miles from Kumardhubi railway station on the Grand Chord line, (5) the Panchet Hill Dam with a power station of 40,000 kW. (initial) in the district of Dhanbad (Bihar), about 13 miles south of Maithon, (6) the Durgapur Barrage and Canals in the district of Burdwan, Bankura, Hooghly and Howrah (West Bengal) and (7) the transmission line system. All these schemes were later integrated to the National Plan and those included in the original first phase programme were drawn into the First Five-Year Plan.

The construction of the first dam at Tilaiya was started in January 1950. The dam was completed and the hydro-Station put into commercial operation in February 1953.

The Bokaro Thermal Power Station was commissioned in 1953 with an installed capacity of 150,000 kW and with the completion of the fourth unit in 1960-61, it has a capacity of 225,000 kW.

The Konar Dam in the district of Hazaribagh was completed in 1955 and was formally opened by the Prime Minister of India on October 15, 1955.

The Maithon dam was opened by the Prime Minister on September 27, 1957 and the power station with all the units is in commercial operation.

The Maithon Dam, 162 feet high above the river bed, has been built on the Barakar River above its confluence with the Damodar. It consists of a main earth dam, 2,161 ft. long across the bed of the river, with a concrete dam 1,189 ft. long including the spillway of 612 ft. on the diversion channel and a long stretch of earthen dykes on both the banks. The overall length of the dam is 15,892 ft.

It has an underground power station on the left bank, the installed capacity of which is 60,000 kW. The volume of water in the reservoir at design flood stage (el. 504) is 12,00,000 acre ft. and the submergence area at design flood stage (el. 504) is 28,400 acres.

The Panchet Hill Dam was inaugurated on December 6, 1959.

The Panchet dam has been built on the river Damodar about 3 miles above its confluence with the Barakar river. It consists of a main rolled earth dam, 134 ft. high, 7,135 ft. long with a gravity type concrete dam 1,215 ft. long including spillway and a long stretch of dykes on both sides. The overall length of the dam is 22,155 ft. The volume of water in the reservoir at design

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

flood stage (el. 449) is 13,65,000 acre ft. and the submergence area at design flood stage (el. 449) is 41,200 acres.

This dam together with the other three dams provide irrigation for 9,73,000 acres of kharif and 1,00,000 acres of rabi crops and supply water to the industries of the region.

The Panchet Hill Power Station was put into commercial operation on Sept. 14, 1959.

This power house has an initial installed capacity of 40,000 kW.

Maithon and Panchet are the two key dams on which flood control and irrigation in the lower Damodar Valley will mainly depend.

The Durgapur Barrage was completed and was opened by the Vice-President of India on August 9, 1955. Through some reaches of the completed canals, irrigation water was made available for an area of 1·43 lakh acres during 1957-58. During the kharif season of 1958-59, and 1959-60 water was supplied to irrigate an area of 5·20 lakh acres and 6·30 lakh acres respectively. During 1960-61, an irrigational potential of 919,000 acres was created. The work on the irrigation project is almost complete (Jan. 1961).

The D.V.C. power system supplied through an expanding network of transmission lines reaching right upto Calcutta 1,312 million units of electricity in 1959-60. The beneficiaries of the D.V.C.'s power system include such well-known firms as the Tata Iron & Steel Works, Jamshedpur, Indian Iron & Steel Company, Burnpur, the Locomotive Works, Chittaranjan, the Hindustan Cables, Calcutta Electric Supply Corporation, the Eastern Railway, the copper mines at Ghatsila and the coal fields at Jharia and Raniganj.

Work on the transmission system is actively in progress and 816 miles of 132 kV (out of a total of 875 route miles) and 93 miles of 33 kV lines with most of their associated sub-stations, have been completed.

In addition to the unfinished schemes carried over from the First Five Year Plan, the following additional schemes had been taken up during the Second Plan period :

(1) Expansion of the Bokaro Thermal Power Station by the addition of a 75,000 kW generating set, thus raising the ultimate capacity of generation to 225,000 kW (completed); (2) the construction of a second Thermal Station at Oyaria near Durgapur in the district of Burdwan (West Bengal), with a capacity of 150,000 kW (completed); (3) the construction of a third Thermal Power Station at Chandrapura in the district of Hazaribagh (Bihar) with a capacity of 250,000 kW (in progress); and (4) the necessary strengthening of the transmission system.

These extension works were programmed to be completed in time to meet the additional demands for power and new industrial development, such as, the expansion of the steel industry, undertaken by the Government as a part of the Second Five-Year Plan; electrification of the part of the Eastern Railway.

First Plan outlay : Rs. 62·28 crores.

The estimated cost of the project including the new schemes taken up during the period of the Second Five Year Plan is about Rs. 170 crores. The aggregate expenditure on the various projects upto the end of March 1960 works out to about Rs. 141 crores.

Budget

Revised estimates (1959-60) .. Rs. 16,19,75,000
Budget estimates (1960-61) .. Rs. 13,43,83,000

It may be mentioned here that the Damodar Valley Corporation Act was passed in March 1948, and the Corporation itself came into existence on July 7, 1948.

The manner in which the costs are shared among the participating Governments is given in a previous edition of the Directory.

It may be added here that the reorganisation of the States of Bihar and West Bengal does not involve any change in the irrigable areas in these States. In regard to power also, no appreciable change is involved as the benefit from the DVC power system will be shared almost equally by the States of Bihar and West Bengal.

Additional supplies to be made over the next two years will be more than 200,000 kW and the demand will fully consume the capacity of the power-stations under construction at Panchet, Durgapur and Bokaro (4th unit) and of the new power station to be constructed at Chandrapura.

Power is consumed mostly by major industrial concerns, but the D.V.C. also helped considerably in urban and rural electrification.

The Bihar Government, upto May 1960 electrified 91 towns, 1,722 villages, 273 collieries, 119 mica mines, 2,805 surface wells and 1,008 tube-wells.

The West Bengal State Electricity Board has started distributing D.V.C. power to various industries, distributing licencees and other consumers and upto March 1960, electrified seven coal-mines, 109 towns and 263 villages.

The annual gross revenue from power during 1958-59 and 1959-60 was Rs. 4·82 crores and Rs. 6·05 crores respectively and in 1960-61 it is estimated to be Rs. 5·37 crores.

With the completion of the four dams the D.V.C. is now in a position to provide as much practical flood protection as could be expected. In 1958 the four dams controlled the unprecedented floods in the Damodar and the Barakar rivers and reduced the flow to 205,000 cusecs at Durgapur where the peak flow would have been of the order of 665,000 cusecs.

In 1959 another flood breaking all previous records hit the valley. The peak flow which was 810,000 cusecs was moderated to a peak flow of 350,000 cusecs at Durgapur. But for the dams, there would have been havoc in lower Damodar basin, beyond description.

Considering that the work on the D.V. Project was nearing completion, the D.V.C. Act was amended by an Act of Parliament on 24th Dec. 1957 in order that the Corporation may be constituted of part time members if necessary.

Hirakud Dam Project (Orissa).—The Hirakud project was formally opened by the Prime Minister on 13th Jan. 1957. Water from the dam now completed flowed into the Baragarh Canal (right side) in July 1956 and water was available for irrigation in September 1956.

The project will irrigate 570,000 acres of land annually in Sambalpur and Bolangir Districts. This project also envisages to supply perennial water to the Delta Irrigation Scheme which will irrigate 15,95,356 acres annually in Cuttack and Puri Districts.

The project was started in 1948. The full project envisages the construction of a dam with a power house called Hirakud Dam and the second is the subsidiary power house project at Chiplima, sixteen miles below the Hirakud Dam. The main dam, dykes, Power House No. 1 and appurtenant works are already completed and the subsidiary Power House Project is under construction. It is scheduled to be completed by the end of 1962.

Stage I and II together will provide 2,70,000 kW of power. By 1960-61 irrigation facilities were available for an area of 3,80,000 acres under Hirakud dam.

Erection of all the four generating sets in Stage I of the project has already been completed and Hirakud power is now being supplied to Indian Aluminium Co. at Hirakud, Rourkela, Ferromanganese Factory at Joda, Cement Factory at Rajgangpur, Orient Paper Mills at Brajraj Nagar and many other industries in the districts of Cuttack, Puri, Sambalpur, Dhenkanal, Sundergarh, Keonjhar, Mayurbhanj, Balasore and Bolangir-Patna. The maximum load developed upto the end of March 1960 was 73,000 kW. The installed capacity was 1,23,000 kW in March 1958. Power from the project has been made available since March 1956.

Out of the estimated cost of Rs. 70·78 crores for Stage I, a sum of Rs. 63·40 crores was spent upto the end of September 1960.

As already mentioned, the whole project has three stages. The first stage consists of the main dam (so-called Hirakud Dam) with its power house for 123,000 kW installed capacity and canal systems at either flank. This stage is complete. The second stage consists of the Chiplima power scheme to develop 72,000 kW, and the expansion of Power House I by installing two generating units to develop 75,000 kW. Stage II is expected to be completed by the end of 1962 and will cost Rs. 14·32 crores. Stage II is progressing (March 1961). The amount spent on this scheme upto end of March 1960 is Rs. 6·40 crores. The third stage aims at the construction of a weir across the Mahanadi above Naraj with canal systems in Puri and Cuttack districts and will cost Rs. 14·92 crores. This is planned to utilize the discharge from the upper power houses for irrigating an area of 15,95,356 acres annually in the delta.

The immediate benefit from the completion of the first stage will be an additional quantity of 5·6 lakh tons of foodgrains and 2·4 lakh tons of other commodities.

(*A fuller description of the project is given in previous books.*)

Tungabhadra Project (Andhra, Mysore).—This Project was originally sanctioned by the Governments of Madras and Hyderabad which had territorial jurisdiction over this area at that time, primarily as a famine relief measure. Work on the Project was commenced in 1945 by the Governments of these two States.

It is now being executed by the Governments of Andhra Pradesh and Mysore States.

The Government of Mysore is solely in charge of the execution of the Project on the northern side of the Tungabhadra River.

On the southern side the Tungabhadra Board constituted under the directive of the President of the Indian Union, is in charge of all common works relating to Mysore State and Andhra Pradesh, and the respective States are in charge of other works in which only the concerned States are interested.

The Tungabhadra Dam across the river Tungabhadra at Mallapuram in Bellary District (Mysore) is 7,942 feet long and 162 feet high at the deepest foundation. There is only one canal on the northern side. This is expected to irrigate about 5,80,000 acres in Mysore State.

There are two canals on the southern side of the river—the Low Level Canal and the High Level Canal.

The former has already been executed and the Government of India have sanctioned the execution of the latter in two stages. The first stage of the High Level Canal Scheme costing Rs. 13 crores has been taken up for execution and the works are in progress in various reaches.

The irrigable area on the southern side is as follows: From the Low Level Canal, Andhra 1,56,913 acres and Mysore 92,345 acres. From the High Level Canal when Stage I is completed, in Andhra Pradesh 1,19,115 acres and in Mysore 68,000 acres; when Stage II is completed, in Andhra Pradesh additional 1,32,685 acres and in Mysore additional 68,500 acres.

The areas irrigated from the Low Level Canal in Mysore are in Bellary, and in Andhra Pradesh in Kurnool. The areas irrigated from the High Level Canal in Mysore are in Bellary, and in Andhra Pradesh in Anantapur and Cuddapah.

The 217 mile canal, taking off from the right flank known as Power Canal for the first 14 miles and Low Level Canal thereafter, accommodates 2,500 cusecs of water, feed the canal

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

power house at Hampi and irrigates lands in the States of Mysore and Andhra Pradesh. The area commanded by the canal is 2·5 lakh acres of land which lay in Bellary district of Mysore and Kurnool district of Andhra Pradesh. The Left Bank Canal takes off from the irrigation-cum-power sluices on the Munirabad side and irrigates 5·8 lakh acres in Mysore State.

The High Level Canal taking off from the high level sluices of the dam at the right flank will carry 2,300 cusecs of water when Stage I is completed and 4,000 cusecs ultimately.

Only areas in Mysore are irrigated by the Northern Canal and these are in Raichur Dt.

The Tungabhadra Reservoir as a whole is 146 square miles and has a capacity of nearly 3·1 million acre feet at the full Reservoir level of plus 1633.

When completed, the Hydro Electric Scheme on the southern side will consist of 2 Power-houses with 4 generators, each of 9,000 kW capacity making an aggregate of 72,000 kW. The first station is near the Dam and the second about 13 miles along Canal.

The first and the second generators at the Dam power house were commissioned in January 1957 and May 1957 respectively, and the first and second generators at the Canal Power house were commissioned in February and March 1958 respectively.

The balance of four generators in the two power houses will be installed by 1962-63.

On the northern side of the Project, it was initially proposed to have one power house near the Dam with 4 generators of 9,000 kW capacity each. The civil works relating to this power house were in progress. This power house was expected to be commissioned in 1960-61. It is also proposed to develop later power houses along the Canal.

Over two lakh acres of land were irrigated in 1959-60 by the Tungabhadra Project. In addition the power system produced 160·9 million kWh. of electricity during this period.

Expenditure

The expenditure on the northern side of the river will be borne solely by the Government of Mysore.

The expenditure on the southern side for the works executed by the Tungabhadra Board, is tentatively being shared between the Governments of Andhra Pradesh and Mysore State in the following ratio :

	ANDHRA PRADESH	*MYSORE STATE*
Headworks and Low Level Canal	5	4
High Level Canal	65	35
Hydro-Electric Scheme	80	20

The total probable cost of the whole project is as indicated below :

Irrigation : (*a*) Tungabhadra Headworks and Right Bank Canal (Low Level Canal) Rs. 21·96 crores ; (*b*) Tungabhadra Headworks and Left Bank Canal Rs. 31·01 crores ; (*c*) High Level Canal Rs. 21·90 crores (Stage I Rs. 13 crores ; Stage II Rs. 8·9 crores) ; Total Rs. 74·87 crores.

Hydro-Electric Scheme : (*a*) Right Bank—(i) First Stage power development Rs. 11·08 crores, (ii) Second Stage power development (Scheme sanctioned by the Planning Commission) Rs. 1·44 crores ; Total Rs. 12·52 crores ; (*b*) Left Bank—Dam Power House (three units only) Rs. 4·66 crores ; Other power houses (Scheme not prepared) Rs. 7·95 crores ; Total Rs. 12·61 crores ; Grand total Rs. 100 crores.

The Tungabhadra Dam proper was completed in July 1953 except for the installation of spillway gates in the spillway sections. This work along with other works *e.g.* construction of utility towers, concreting the road on the top of the dam etc. have been completed in all respects.

The water for irrigation on the northern side Canal, and on the Low Level Canal on the southern side has been supplied from 1st July, 1953.

Work on the Left Bank Canal in its length of 127 miles is in progress. It is expected that this work will be completed during the 3rd Five Year Plan.

The irrigation supplied by water in the southern side of the Project will yield 98,000 tons of food grains and 4,19,000 tons of commercial crops under Low Level Canal and 1,60,000 tons of food grains and 79,000 tons of commercial crops mostly cotton under High Level Canal. Similarly the canal on the northern side will also yield 3,15,000 tons of food grains and 4,20,000 tons of commercial crops consisting mostly of cotton and groundnut.

The estimated cost of the entire project (northern and southern sides) when completed in all respects, is about Rs. 100 crores which will ultimately add a total of about Rs. 21·39 crores per annum to the national wealth in the shape of food and industrial production. It will bring 12·2 lakh acres of land under irrigation and generate 172·5 MW of power.

The programme of intensive stocking of fishes has been taken up on the southern side of the river. Exploitation will be done after three years by which time it is expected that the reservoir will become productive. The maximum yield of fish will be about 54,000 maunds and the revenue realised will be Rs. 10·8 lakhs per year.

Kosi Project (Bihar).—At first the Kosi project envisaged the construction of a dam of the unprecedented height of 783 feet above rock foundations on the Kosi river, a mile upstream of Barahkshetra in the Kosi gorge for flood control, power, irrigation, navigation, soil conservation, silt control, fish culture and recreation, etc. The total scheme was to cost Rs. 177 crores, but in view of the prohibitive cost and the long time required for its execution, this plan was abandoned and further investigations to tame Bihar's 'River of Sorrow' were started.

The present scheme estimated to cost Rs. 44·76 crores was prepared by the Central Water & Power Commission in November 1953. The expenditure on the Project upto the end of December 1960 was Rs. 24·22 crores against the estimated cost of Rs. 44·76 crores.

The Project consists of three different units as follows :—

(*a*) Unit I—Hanumannagar Barrage and Head works : This is estimated to cost Rs. 16·79 crores. The barrage is to be constructed about 30 miles below Chatra in Nepal where the river debauches into the plains from the gorge. It consists of a main spillway 3,770 ft. long, with earth dams about 18,500 ft. long on both the flanks connected to two afflux bunds 8 miles each on either bank of the river. The functions of the barrage are (*i*) to arrest coarse silt and flatten the gradient of the river above, (*ii*) to provide for irrigation of 14 lakh acres and (*iii*) to develop power that is possible with the available head. (The earthquake safety factor adopted in the design of the Barrage is 0·15 g horizontal and 0·10 g vertical.)

The barrage is expected to be completed in 1963.

(*b*) Unit II—Flood Banks and Protective Measures : The estimated cost of this is Rs. 11·55 crores involving construction of 75 miles of embankment on the western side below barrage and 63 miles on the eastern side. Besides, a flood bank of 12 miles above the east afflux bund in continuation is also provided. The purpose is to restrict the flood waters between the embankments, thus preventing the usual spill, and also to stop further westward translation of the river Kosi.

(*c*) Unit III—Eastern Kosi Canal System : The canal system at an estimated cost of Rs. 16·42 crores is proposed to have an annual irrigation of about 14 lakh acres in the districts of Purnea and Saharsa.

The system consists of a main canal, four branch canals and a number of distributaries.

A hydro-power scheme with an installed capacity of 20,000 kW will be executed during the Third Plan period. According to the agreement on the project, 50 per cent of the power to be generated has been earmarked for Nepal.

The work on the project is to be implemented by the Government of Bihar. The Central Government will render necessary technical assistance.

The flood banks were taken up for construction first and work near Nirmali on the western embankment was inaugurated by the Chief Minister of Bihar on 14th January 1955. The work on the eastern embankment near Supaul was commenced on 3rd February 1955.

The eastern and western embankments have been completed and 5·5 lakh acres have been rendered flood free. 48 per cent of the earth-work involved in the construction of the embankments was done through public co-operation agencies organised by the Bharat Sewak Samaj. The preparatory works in respect of the construction of the barrage have been completed.

The work of excavation in foundation and concreting of the main spillway and head regulator of Eastern Kosi Canal, are in progress. Earthwork in Kosi canals has been completed to the tune of 78 per cent. The work of rehabilitating 304 villages having a population of 1,14,000 lying in between the two Kosi embankments, is in progress.

Figures showing the economic development in the Kosi area : The net area sown per village increased from 619·26 acres, 940·14 acres and 798·09 acres in 1954-55 to 709·02, 946·67 and 840·90 acres in 1955-56 respectively for villages in Supaul, in Nirmali and in the Kosi area as a whole. Paddy output increased from Rs. 6,106·60, Rs. 51,024·09, Rs. 28,565·35 per village in Supaul, Nirmali and in the Kosi area as a whole to Rs. 10,171·28, Rs. 109,524·03 and Rs. 59,847·65 respectively in 1955-56.

(*d*) Chatra Canal System : As part of India's Aid to Nepal the Chatra Canal Project is being taken up. The canal will take off at 30 miles upstream of Kosi Barrage and will irrigate annually two lakh acres in Eastern Nepal. This scheme will cost about Rs. 4 crores.

Schemes to extend irrigation facilities to the western side of Kosi river and the land between the eastern embankment and present irrigation command have been included in the Third Plan of Bihar. These will irrigate over nine lakh acres in west Kosi area and four lakh acres in Saharsa District.

Rihand (Pipri) Dam and Power Station Project (Uttar Pradesh).—This Project is proposed to impound 8·6 million acre feet of water by a 3,254 feet long and 296 feet high dam across the river Rihand, a tributary of the Sone, near the village of Pipri in Mirzapur Dt. The power house will have five generating sets of 50,000 kW each and a total installed capacity of 250,000 kW. The firm generating capacity is 105,000 kW. It will also bring under irrigation about 16 lakh acres of land in U.P. by providing cheap electricity to about 4,000 tube-wells installed in the eastern districts of the State and also about five lakh acres in Bihar by releasing a minimum flow of 5,000 cusecs water in the Sone canal system in South Bihar.

The estimated cost of the scheme including transmission and transformation, is about Rs. 4,605·13 lakhs. Expenditure upto the end of September 1960 was about Rs. 19 crores on civil works and nearly Rs. 7 crores on power project including transmission lines erected so far. Expenditure upto end of Nov. 1960 was Rs. 26·52 crores.

The project is under construction and is expected to start generating power partly by the end of June 1961 and wholly by the end of 1961.

Nagarjunasagar Project (Andhra Pradesh).—The project in its first stage comprises the construction of a masonry dam of a maximum height of 404 feet above deepest bed-level

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

and 4,780 ft. long including spillway of masonry dam, across the Krishna river near Nandikonda village in Nalgonda District, about 90 miles below Siddeswaram, and two canals taking off from the reservoir, known as the left and the right bank canals. The dam is situated about 15 miles from Macherla railway station. Large areas extending between the Krishna and the Godavari in the north and the Krishna and the Pennar in the south can be commanded by the reservoir, the estimate being over 35 lakh acres.

The Right Bank Canal which will be 276 miles long will carry a discharge of 21,000 cusecs. The Left Bank Canal will be 140 miles long and will lead up to the river Muneru in the first stage. The Right Bank Canal is claimed to be the biggest irrigational canal in the world.

The storage capacity of the reservoir will be 9·18 million acre feet with a water-spread of 110 sq. miles.

Work was inaugurated in Dec. 1955, and the project is expected to be completed by June 1964. The total excavation work for the foundation of the main dam started in 1956 has been completed. The progress of work in the right and left bank canals is satisfactory.

The total cost of the project, namely, construction of the dam and the two canals is estimated to be about Rs. 125 crores. The total area to be benefited by the project will be 35 lakh acres of land spread over the districts of Guntur, Kurnool, Krishna, Khammam and Nalgonda.

The second Stage of the project which will be taken up later will provide for the generation of electric power of 75,000 kW capacity.

The total expenditure incurred on the Project upto the end of December 1960 was Rs. 35·25 crores.

It is estimated that the project will raise production of foodgrains by eight lakh tons.

Chambal Project, Stage I (Madhya Pradesh and Rajasthan).

The full development consists of :—

(*a*) Three dams: Gandhi Sagar, Rana Pratap Sagar and Kotah across the Chambal River with a power-station at each dam site.

(*b*) High tension transmission lines for power transmission to various sub-stations in Madhya Pradesh and Rajasthan.

(*c*) A barrage across the river near Kotah city to divert the water from the storage and power dams into irrigation canals.

(*d*) A net-work of irrigation channels on either bank of river fed from the Kotah barrage.

The revised estimated cost of the whole scheme is Rs. 9,080·63 lakhs and the scheme is expected to generate 2·48 mln. kW of hydro-electric power, and irrigate 14 lakh acres of land annually in Madhya Pradesh and Rajasthan.

The scheme has been taken up in three stages, keeping in view the immediate demand for irrigation and a gradual development of power demand. The details of the stages namely the achievements upto June 1960 are as under :—

STAGE I.

The first stage envisaged the construction of Gandhi Sagar Dam with power station, Kotah Barrage and Canal system. The stage is estimated to cost Rs.6,359·37 lakhs and the details in brief on each of these items are as under :—

The Gandhi Sagar Dam which is situated at a distance of 4·5 miles down stream of the Chaurasigarh Fort is being constructed at the boundary of Rajasthan and Madhya Pradesh States to create a reservoir having a gross capacity of 6·85 million acre feet at the cost of Rs. 1,360·25 lakhs. The work of stone masonry has already been completed and only about 14 per cent of concreting work remains. Out of 256 lakh cft. of stone masonry and concreting to be done 247·66 lakh cft. have already been laid by June 1960. Nearly one half of the total length of 1,685 ft. of the Gandhi Sagar Dam has been completed to its full height. The expenditure upto June 1960 is Rs. 1,216·37 lakhs. It has begun to store water and irrigation facilities were made available in Rajasthan and M.P. from Nov. 20, 1960 when the Prime Minister inaugurated the canals at Kotah Barrage.

The Gandhi Sagar Power station has an installed generating capacity of 92,000 kW. Estimated to cost Rs. 479·12 lakhs, it will supply 80,000 kW of power at 60 per cent load factor. Rajasthan's present share in the installed capacity of 3 generating sets is 34,500 kW.

The work is nearing completion. Out of 25 lakh cft. of masonry and concreting to be done, 23·68 lakh had already been laid by the end of June 1960. The power house was inaugurated by the Prime Minister on Nov. 19, 1960. Areas that would benefit are Indore, Ujjain, Bhopal, Ratlam, Neemuch and Mandsaur. The total expenditure incurred so far is Rs. 311·655 lakhs.

Kotah Barrage which is situated about 32 miles down stream of Gandhi Sagar Dam and about half a mile above the Kotah city, has been constructed by the Rajasthan Government to store the released water from the dams and to divert this water into Irrigation Canals. The construction work on this Barrage, which is 1,970 ft. long and 120 ft. high, has been completed. 19 radial gates had been erected. The total estimated cost of this work is Rs. 3·83 crores. Expenditure upto May 1960 was Rs. 3·44 crores.

The two canals namely Right Main Canal and Left Canal which have the gross commanded area of 24·03 lakh acres and 4·81 lakh acres to provide the annual irrigation of nearly 11·4 lakh acres and 2·6 lakh acres respectively, take off from Kotah Barrage. The construction work on the Rajasthan side has been completed. It involved 119·46 million cft. of earth work, 40·2 million cft. of rock cutting and masonry and 21·9 million cft. of concrete. In Madhya Pradesh the first 40 miles of the Right Main Canal have been completed. The total expenditure of Rs. 2,196·175 lakhs (Rs. 1,269 lakhs for Rajasthan and Rs. 927·175 lakhs for Madhya Pradesh) has been incurred so far as against the total estimated cost of Rs. 3,043·20 lakhs.

The works are already in progress and are expected to be completed by 1962-63.

STAGE II.

(*a*) Construction of the Rana Pratap Sagar Dam and the Bhopal Power Station below it to generate 1,12,000 kW of power at 60 per cent load factor, and suitable extension of transmission lines and sub-stations at an estimated cost of Rs. 1,721·25 lakhs. Work on the project has already started and an attempt made to complete the work by the end of the 3rd Five Year Plan. This will enable irrigation of a further 3 lakh acres in addition to the generation of extra power.

STAGE III.

This caters for a further development of hydro-electric power by building the Kotah Dam about 10 miles upstream of the Kotah Barrage with a power station to generate 61,000 kW of power at 60 per cent load factor, and a further extension of transmission lines, etc., at an estimated cost of about Rs. 10 crores. The work on these items has not been taken up so far; but an attempt is being made to take up and complete the work in the 3rd Plan.

Narmada Project.—The Prime Minister inaugurated this Rs. 93 crore project on 5th April 1961 at Navgaum, 100 miles from Ahmedabad. The project on completion will irrigate 9,62,588 acres of land annually in Broach and Baroda districts in Gujarat. Total cost of the first stage of the project is Rs.4,309·79 lakhs.

GANDAK PROJECT

Though this project is not in operation and is indeed very much in the future a note on this may be given since it is a project that concerns two sovereign States—India and Nepal.

An agreement about the project was signed in Dec. 1959. Preliminary work is proposed to be taken up during 1961-62.

The project envisages the construction of a barrage at Bhaisalotan with one end in Nepal and the other in India. The two main canals on the western and eastern banks also take off within Nepalese and Indian territories respectively.

The total area irrigated by the project in Nepal and India will be 37 lakh acres.

There will be two power houses—one on the Nepalese and the other on the Indian side, each with a firm capacity up to 10,000 kW.

The total cost of the entire project, to be wholly borne by India, is estimated at Rs. 50·5 crores—the tentative apportionment being Rs. 39·5 crores to Bihar and Rs. 11 crores to Uttar Pradesh.

It is hoped to complete the project in ten years.

Moreover, India will contribute upto Rs. 15 lakhs for the construction of water courses below the capacity of twenty cusecs. The Government of India will spend about Rs. 230 lakhs over the irrigation facilities for Nepal.

The power house in Nepal, together with transmission lines from it to the Bihar border at Bhaisalotan and, thence, to Raxaul via Sagauli, will be constructed by the Government of India, at a cost of Rs. 451 lakhs, of which about Rs. 350 lakhs are for works benefiting Nepal.

From this grid, Nepal would be assured supply of firm power at actual cost of production and transmission.

The foremost benefit to India from this project will be insurance against famine in the Saran, Champaran, Muzzaffarpur and Darbhanga districts of North Bihar and Deoria and the Gorakhpur districts in Uttar Pradesh.

This area is densely populated and suffers from chronic food shortage, and the rainfall in it is undependable.

The additional area assured of irrigation facilities in Bihar and Uttar Pradesh from this project will be roughly 33 lakh acres—27 lakh acres in Bihar and 6 lakh acres in Uttar Pradesh.

The power supply from the Power House on the eastern canal will be available for India. Further, firm power not utilised by Nepal and all secondary power from the Power House on the western canal, will also be available for use in Bihar.

(*For more details see 1960-61 Directory*)

ELECTRIC POWER DEVELOPMENT

(By courtesy of the Central Water and Power Commission, Power Wing.)

IT is estimated that well about 80 per cent of India's power requirements are at present obtained from animal dung, wood, agricultural waste, etc. and from living energy (animal and human effort).

India's requirement of domestic fuel is about 83 million tons in wood equivalent, which is 40 per cent of the total energy consumption in the country.

About industrial energy, about 80 per cent comes from coal; petroleum products account for about 14 per cent and the balance comes from hydro-electricity.

The aggregate generating capacity of the country in electric power has grown as follows (kW):—

1935 ..	859,402
1940 ..	1,181,528
1945 ..	1,249,454
1950 ..	1,712,515
1951 ..	1,835,426
1952 ..	2,061,755
1953 ..	2,305,190
1954 ..	2,493,996
1955 ..	2,694,817
1956 ..	2,886,141
1957-58 ..	3,223,111
1958-59 ..	3,511,586
1959-60 ..	3,873,166

The total installed capacity at the end of March, 1960 was 3,873,166 kW, of which 1,530,145 kW was water power and 2,343,021 kW thermal. It is estimated that out of the total capacity of 5·8 million kW at the end of the 2nd Plan, electricity undertakings in the public sector accounted for 3·3 million kW, public limited companies 1·5 million kW and industrial establishments meeting their own requirements one million.

The *per capita* consumption of electric power in India is ridiculously low. In 1959-60 it was 33·01 kW hours as against 5,160 in Canada, 3,602 in Sweden, 4,117 in the U.S.A., 7,068 in Norway and 2,899 in Switzerland. The latest estimates place the hydro-electric power potential of India at 40 million kW, but only a little more than one million kW has been tapped so far.

The production and sale of electric power from 1951 to 1959-60 was as follows (in million kWh):

	Generated	Sold
1951 ..	5,860	4,790
1952 ..	6,120	5,000
1953 ..	6,700	5,600
1954 ..	7,520	6,250
1955 ..	8,592	7,111
1956 ..	9,662	7,959
1957-58 ..	11,321	9,307
1958-59 ..	12,993	10,719
1959-60 ..	14,991	12,328
Jan. 1961 ..	1,461·8	1,216·1

An analysis of electric power consumption in million kWh is given below. The figure in brackets shows the percentage:

	1958-59	1959-60
Domestic or Residential light and small power ..	1,234·044 (11·5)	1,368·884 (11·1)
Commercial light and small power	678·818 (6·3)	758·988 (6·2)
Industrial Power	7,176·034 (67·0)	8,426·596 (68·3)
Traction	441·549 (4·1)	440·594 (3·6)
Public lighting	155·066 (1·5)	175·420 (1·4)
Irrigation	643·482 (6·0)	727·026 (5·9)
Water Works	389·617 (3·6)	430·845 (3·5)
TOTAL	10,718·610 (100·0)	12,328·353 (100·0)

The following statement shows the number of electrified towns and villages at the end of 1959-60.

Population	Number of towns or villages†	Number with electric supply	Percentage with electric supply to total
Over 100,000	73	73	100·00
50,000 to 100,000	113	113	100·00
10,000 to 50,000	1,257	1,042	84·00
Below 10,000	559,666	20,168	3· 4
TOTAL	561,109	21,396	3· 8

INSTALLED CAPACITY

Some individual industries have power-stations of their own. The number of installations and the installed capacity are as follows (as on 31st March, 1960):

Industry	No.	Capacity (kW)
Aluminium (Primary) ..	6	12,834
Aluminium (Secondary)	9	98
Cement (Primary) ..	27	121,759
Cement (Secondary) ..	23	705
Chemicals	35	39,744
Collieries	148	63,571
Copper (Primary) ..	1	4,625
Copper (Secondary) ..	1	..
Cotton Textiles ..	337	124,032
Fertilisers	4	80,560
Gold	1	4,700
Iron & Steel (Primary)	6	298,118
Iron & Steel (Secondary)	20	480
Jute	86	25,910
Paper	24	77,028
Petroleum	4	3,206
Silk	25	1,480
Soap	12	166
Sugar	105	72,456
Tanneries	10	297
Wool	12	3,600
TOTAL†	896	935,369

† Does not take into account the figures for railways.

The generating plant capacity (in public utilities) by ownership is as follows:

	1957-58	1958-59	1959-60
State owned (Public Sector)	1,937,747	2,216,180	2,572,402
Companies (Private Sector)	1,285,364	1,295,406	1,300,764
	3,223,111	3,511,586	3,873,166

The number of generating undertakings reckoned on ownership basis at the end of 1959-60 was distributed as follows:

State Government .. .. } State Electricity Board	17
Power Corporation	2
Municipality	23
Companies	144
	186

It may be pointed out that in 1959-60 six large cities—Bombay, Calcutta, Ahmedabad, Kanpur, Madras and Delhi accounted for 27·0 per cent of the country's installed capacity and 28·4 per cent of the generated energy.

The total number of consumers at the end of 1959-60 was 4,029,740 in all (Domestic 3,100,327; Commercial 634,997; Industrial 150,789; Public lighting 7,382; Irrigation 136,245).

The State-wise analysis of plant, generation and sales for 1959-60 is as follows:

State	No. of stations	Installed capacity (kW)	Energy generated (mln. kWh)	Energy sold (mln. kWh)	Capacity in industrial establishments (kW)	Capacity in railway plants (kW)	Annual *per capita* consumption (kWh)
Andhra Pradesh	60	277,602	701·069	510·360	48,390	NOT AVAILABLE	14·65
Assam	30	19,260	30·909	24·870	3,131		2·46
Bihar	34	267,813	1,402·504	770·819	282,567		17·83
Bombay‡	186	958,155	4,011·223	3,373·147	106,382		62·70
Jammu and Kashmir ..	9	12,981	42·523	50·000	Nil		10·15
Kerala	9	122,262	487·917	419·056	1,661		27·75
Madhya Pradesh	85	196,162	354·123	295·489	70,338		10·16
Madras	10	403,166	1,897·893	1,439·147	24,768		43·07
Mysore	32	190,611	999·713	840·866	22,925		38·88
Orissa	34	135,882	501·732	455·482	93,418		27·89
Punjab	37	171,281	772·790	471·734	17,998		26·21
Rajasthan	46	51,128	103·705	80·299	37,264		4·51

FIVE-YEAR PLANS

At the beginning of the First Plan the total installed capacity in the country was 2·3 mln. kW. At the end of the First Plan (*i.e.* the beginning of the Second) it was 3·4 mln. kW. The Second Plan target was to raise this by 3·5 mln.

About energy generated (in crore kW), it was 657 at the beginning of the First Plan, 11,00 at the end of it. The Second Plan target was 22,00.

During the First Plan period a total of Rs. 206·71 crores was spent on the four multi-purpose projects—Bhakra, Harike, D.V.C., Hirakud. The Plan provision was Rs. 246·03 crores.

The total expenditure on the new major projects during the First Plan was Rs. 18·11 crores—Koyna, Rihand, Kosi, Nagarjuna Sagar, Chambal.

The total expenditure on the power projects during the First Plan period was Rs. 152·89 crores as against the Plan provision of Rs. 178·63 crores.

The total number of power schemes undertaken during the First Plan was 344. The following principal power schemes were put into commission during the Plan period. The installed capacity is also shown :

Bokaro (Bihar) : 1,72,500 kW ; Chola, Kalyan (Maharashtra): 54,000 kW ; Jog (Mysore): 72,000 kW ; Khaperkheda (M.P.) : 30,000 kW ; Machkund (Andhra-Orissa) : 34,000 kW ; Madras city plant extension : 30,000 kW ; Moyar (Madras) : 36,000 kW ; Nangal (Punjab) : 48,000 kW ; Pathri (U.P.) : 13,600 kW ; Sarda (U.P.) : 27,600 kW ; Sergulam (Kerala) : 48,000 kW.

The total provision for power in the Second Plan was Rs. 427 crores. The target was 6·9 mln. kW.

The Government of India had authorized commencement of preliminary works in 1960-61 of seven power projects having a total installed capacity of 885,400 kW, which will be included in the 3rd Five Year Plan. Names of the power projects, name of the State and installed capacity in kW respectively : Kundah Stage III extension scheme ; Madras ; 240,000 ; Mettur tunnel power scheme ; Madras ; 100,000 ; Pamba-Kakki Hydro-electric scheme ; Kerala ; 300,000 ; Cambay Thermal Station ; Gujarat ; 150,000 ; Khaperkheda thermal station extension ; Maharashtra ; 30,000 ; Naharkatiya power station ; Assam ; 50,400 ; Barauni thermal station ; Assam ; 15,000.

Rural

The programme included in the Second Five-Year Plan was an ambitious one. Out of Rs. 427 crores for the entire power programme in the country, as much as Rs. 75 crores had been set apart for extending electricity to villages.

During the Second Plan 12,930 villages were expected to be electrified. The number of villages electrified during the Second Plan upto 31st March 1960 was about 10,900.

The State-wise figures for the Plan period are: Assam 29 ; Bihar 1,285; Bombay* 700; Kerala 1,344 ; Madras 5,000 ; Madhya Pradesh 329 ; Mysore 700 ; Orissa 223 ; Punjab 2,100 ; Rajasthan 113 ; Uttar Pradesh 235 ; Centrally Administered Areas 872.

At the beginning of the First Plan the number of villages which had electric power was 4,051. At the end of the First Plan the number rose to about 10,500.

The total number of villages electrified as in March 1960 was about 21,396.

Even with this achievement, however, only about 3·8 per cent of the villages would have been covered by March 1960.

It is estimated that the average cost of electrification of a village based on present day costs is between Rs. 60,000 and 70,000.

The total cost of reaching all the villages may be put at Rs. 3,000 crores at present day price levels.

ELECTRICITY ACT

The Central Government have enacted legislation, the Electricity (Supply) Act, 1948, to provide for the rationalisation of the production and supply of electricity in the country.

The Act provides for the formation of State Electricity Boards in the States which will be charged with the general duty of promoting the co-ordinated development of the generation, supply and distribution of electricity within the State in the most efficient and economical manner.

So far Andhra Pradesh, U.P., Madhya Pradesh, W. Bengal, Assam, Bihar, Kerala, Madras, Rajasthan, Mysore, Punjab, Maharashtra and Gujarat States have set up such Boards.

The Act also provides for the creation of a Central Electricity Authority.

This Authority was constituted in 1950.

The Indian Electricity Act, 1910 as amended in Sept. 1959, enlarges the scope of facilities available to consumers and also ensures maintenance of higher standards of safety of life and property.

It will now be easier for even scattered consumers to obtain electricity supply. For, the legislation specifies that the minimum number of persons entitled to get mains extended to their premises at the cost of a private undertaking will be only two instead of six.

The gross annual revenue to be guaranteed by a new consumer during the first two years of supply has been specified as 15 per cent of the cost of distribution mains—this figure being based on the actual average revenue derived from consumers in the country.

Another dominant feature of the present enactment is the conferment of greater powers on the State Governments for continued maintenance of electrical supply to consumers, including essential services, and stricter control over private undertakings.

Further, powers have been conferred on the State Governments to forfeit the security deposit of a private undertaking, if compulsory works necessary for the supply of energy are not completed within a specified period.

The Government can even acquire a private electricity undertaking, if it habitually indulges in any omissions.

Provision is made for the inspection of electrical installations of the Central Government as well.

Inspectors appointed to investigate the causes of electrical accidents are also vested with additional powers.

FINANCE

SOURCES OF REVENUE AND EXPENDITURE

THE principal sources of Central revenue are: customs duties, excise duties levied by the Central Government, corporation tax, income tax (excluding taxes on agricultural income), wealth tax, estate and succession duty, the earnings from the mints, terminal taxes on goods or passengers carried by railway, sea or air, taxes on railway fares and freights, taxes (other than stamp duty) on transactions in stock exchange and future markets, stamp duty on bills of exchange, cheques, bills of lading, letters of credit, insurance policies, transfer of shares, etc., taxes on sale and purchase of newspapers and on advertisements in newspapers.

The railways and the posts and telegraphs contribute to the Central revenues. There are also the profits on the Government industrial undertakings.

About as much as 90 per cent of the revenue is derived from the customs, excise duties, corporation and income-taxes.

The principal sources of revenue for the individual States are: State taxes (on agricultural income, lands and buildings, mineral rights, consumption or sale of electricity, sale or purchase of goods other than newspapers, advertisements other than in newspapers, goods and passengers carried by road or on inland water-ways, vehicles, animals, boats, tolls, professions, trades, luxuries, amusements), capitation taxes, stamp duties, excise duties on alcoholic liquors, opium and other narcotics.

A point about the Sales Tax is worth mentioning here. The Union has the power of declaring any commodity as essential for the life of the community and thereby vetoing any sales tax levied on it by a State Government. This power comes from the Essential Goods Act of 1952.

Then there are the subventions from the Central Government. Part of the proceeds of the income-tax are distributed among the States. The jute growing States get part of the proceeds from the export duty on jute. There are also special grants which are made to certain States.

Collection and appropriation of taxes are not always vested in the same authority. Some taxes are levied by the Central Government but collected and appropriated by the States (stamp duties, excise duties, duties on medicines and toilet preparations). Some are levied and collected by the Union but assigned to the States (succession and estate duties on property other than agricultural, terminal taxes on passengers, railway fares, freights, stock exchange, future markets, newspapers or advertisements). Corporation tax is collected and retained by the Union, but taxes on other incomes are levied and collected by the Union and distributed between the Union and States.

The two biggest items of expenditure of the Central Government are outlay on development programmes (capital account) and defence.

Three important heads of expenditure of the States under the revenue account are: irrigation, security and social services.

Then there is public debt which consists of rupee loans, sterling loans and loans received from other countries. The rupee debt may be divided into three classes, long term loans and money market liabilities, the unfunded debt which includes provident funds, postal deposits, saving certificates, and last the deposits.

The following table shows the budget estimates of the Government of India for 1961-62 as compared with the budget and revised estimates for 1960-61:

(In lakhs of rupees)

	Budget 1960-61	Revised 1960-61	Budget 1961-62

SPECIFIC ALLOTMENTS

The following specific allotments for 1961-62 may be noted (figures in lakhs of rupees):

Council of Scientific and Industrial Research	3,10·00
Salt Works	8·50
Hindustan Shipyard Ltd.	1,20·38
Indian Refineries Ltd.	4,00·00
Overseas Communications Service	32·94
Eastern Shipping Corporation*	2,00·00
Air Corporation (Indian Air Lines)	1,87·00
Air Corporation (Air India International)	2,05·00
Purchase of shares of Hindusthan Teleprinters Ltd.	50·00
Investment in Hindustan Organic Chemicals Ltd.	65·00
Nuclear Power Station	45·00
Thorium Uranium Plant	0·50
Investment in Hindusthan Photo Film Manufacturing Co., Ltd.	65·00
Acquisition of Land for Atomic Energy Establishment	69·00
Canada-India Reactor	15·53
Buildings for the Atomic Energy Establishment	288·11
"Zerlina" Reactor	3·00
Hindustan Salt Ltd.	55·00
Other Development Expenditure of Atomic Energy Establishment	86·96
Purchase of shares of Drugs Corporation	60·00
Heavy Structurals Project	10·00
Purchase of Shares of Hindustan Machine Tools Ltd.	70·00
Hindustan Heavy Engineering Corporation	20,00·00
Equipment for School of Mines and Applied Geology	3·50
Investment in British India Corporation.	51·00
Bolani Ores (Private) Ltd.	5·05
Purchase of Shares of the Indian Oil Company	150·00
Oil India Ltd.	142·00
Purchase of Shares of N.I.D.C.	45·00
National Coal Development Corporation	9,00·00
Rehabilitation Industrial Corporation	25·00
Oil and Natural Gas Commission	21,50·00
Mysore Iron & Steel Corporation	25·00
Institute of Small-scale Industries	23·92
Purchase of Shares of National Mineral Development Corporation	1,75·00
Hindustan Housing factory	0·01
Establishment of Second Shipyard	60·00
Purchase of Shares in Neyveli Lignite Corporation	22,00·00
Heavy Plates and Vessels Project.	10·00
Purchase of Shares in Heavy Electricals (P.) Ltd.	1,00·00
Western Shipping Corporation*	2,50·00

DEBT POSITION

(In crores of rupees)

The total outstanding public debt is expected to amount to Rs. 5,554·09 crores at the end of March 1962, as against Rs. 4,970·85 crores at the end of March 1961; it was not more than Rs. 949·77 crores at the end of 1938-39. Out of the estimated total of Rs. 5,554·09 crores at the end of 31st March 1962, rupee loans will account for Rs. 4,348·80 crores, as against Rs. 4,124·63 crores towards the close of 1960-61, sterling loans for Rs. 141·40 crores, as against Rs. 143·15 crores, and "other loans" for Rs. 1,063·89 crores, as against Rs. 703·07 crores. The item "other loans" includes the following, figures in brackets representing the position at the end of March 1961.

U.S. 446·81 (316·36); U.S. Eximp Bank 83·33 (35·73); World Bank 167·76 (155·24); Canada 11·83 (14·07); U.S.S.R. 88·30 (61·53); West Germany 108·21 (108·17); Japan 25·62 (11·97); Czechoslovakia 1·03; Poland 4·00; Yugoslavia 4·00; Switzerland 3·00; loans to be negotiated 120·00.

Excluding the war contribution, the liability in respect of which remains suspended, the total outstanding debt, which stood at Rs. 4,950 crores at the end of 1960-61, will increase to Rs. 5,533 crores at the end of 1961-62.

In addition, the Government is liable to repay the investments of the deposits of the P.L. 480 counterpart funds, the balances in the various provident funds, the post office savings bank, the post office cash, national savings, national plan, national plan savings, and treasury savings deposit certificates, deposits under the cumulative time deposits scheme, the depreciation and reserve funds of the Railways, Posts and Telegraphs, etc., and certain other deposits, mainly relating to deposits of income-tax, super-tax, etc. These balances amounted to about Rs. 1,620 crores at the end of 1960-61 and are expected to be higher at Rs. 1,869 crores at the end of 1961-62.

* It is reported that the Govt. of India has decided to amalgamate the Eastern Shipping Corporation and the Western Shipping Corporation to form the "Shipping Corporation of India Ltd."

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

This outstanding debt is analysed with reference to the purpose on which the money has been utilised or the assets by which it is covered. An analysis is given below :

(In round crores of rupees)

	As on 31st March	
	1961	1962
Railways	1,556	1,716
Posts and Telegraphs and other commercial departments (including Damodar Valley Corporation)	220	244
Investment in commercial concerns (Industrial Development) ..	621	728
Loans and advances to States and others ..	2,521	2,902
Amounts recoverable from the U.K. and the States on account of purchase of annuities for sterling pensions	19	19
Subscription to the International Monetary Fund	282	282
Purchase of shares of the I.B.R.D.	37	37
Subscription to the International Development Association	4	8
Debt due from Pakistan	300	300
Cash and other investments	54	52
Total ..	5,614	6,288

Allowing for these, the uncovered debt will amount to Rs. 1,114 crores at the end of the budget year 1961-62, as against the pre-war figure of Rs. 188 crores.

INTEREST-BEARING OBLIGATIONS AND INTEREST-YIELDING ASSETS

The aggregate interest-bearing obligations of the Government of India are expected to rise from Rs. 6,280·60 crores at the end of March 1961 to Rs. 7,110·13 crores as on 31st March 1962. As against the rise of Rs. 829·53 crores thus, the interest-yielding assets are expected to increase only by Rs. 636·31 crores, that is from Rs. 5,089·65 crores to Rs. 5,725·96 crores, so that the total of interest-bearing obligations not covered by assets at the end of March 1962 will be higher at Rs. 1,311·30 crores, as against Rs. 1,116·41 crores on 31st March 1961. The details of the assets are given below :

(In crores of rupees)

	At the end of		
	1938-39 (Pre-war year)	1960-61 (Revised)	1961-62 (Budget)
Capital advanced to Railways	725·24	1,555·90	1,715·90
Capital advanced to other commercial departments (including Damodar Valley Corporation)	27·42	219·69	243·76
Investment in commercial concerns (industrial development)	—	473·35	545·75
Capital advanced to States	123·28	1,905·69	2,179·39
Other interest-bearing loans	20·71	615·59	722·34
Amount recoverable from the U.K. and the States on account of purchase of annuities for sterling pensions	—	19·43	18·82
Debt due from Pakistan	—	300·00	300·00
Total—Interest-yielding Assets ..	896·65	5,089·65	5,725·96
Cash and securities held on Treasury account ..	30·30	54·01	52·34
Balance of total interest-bearing obligations not covered by above assets	274·63	1,116·41	1,311·30

CENTRAL HELP TO STATES

The following allotments to States are provided for in the 1961-62 budget (figures in lakhs of rupees) :

Share of taxes and duties : 160,03

Grants and subventions from revenue : 209,33

Grants and subventions from capital : 17,16

Loans : 409,22

Grand total of allotments to States : 800,95.

Important Lump sum grants to States are as follows (figures in lakhs of rupees) :

Substantive provision of Article 275 (1) of Constitution 39,50; provisos to Article 275(1) 5,30; Agricultural production 9,83 ; Community Development 16,40 ; National Extension Service 1,73 ; Education Schemes 24,11 ; Scientific and technical education 5,05 ; National malaria eradication 7,25 ; Welfare of backward classes 4,10 ; National employment service and training 5,97 ; development of handloom industries 2,90 ; rehabilitation of displaced persons 3,81 ; relief of displaced persons 3,81 ; natural calamities 6,00 ; Grant in lieu of Tax on Railway Fares 12,47.

Lump sum loans as follows :

Irrigation and multipurpose river schemes 72,39 ; Miscellaneous Development 85,05 ; Agricultural Production, animal husbandry, etc. 60,00 ; Rehabilitation 3,27 ; Industrial Housing 14,91 ; Permanent improvement in scarcity areas 25 ; Natural Calamities 2,00 ; Handloom and Small-scale Industries 6,14 ; Flood Control schemes 9,00 ; Urban water supply scheme 8,00 ; sharing of small savings 80,00 ; Other loans 51,71 ; Total loans 409,22.

ALLOTMENTS BY CENTRE STATE-WISE (1961-62)

The following table shows State-wise distribution of income-tax, etc. (figures in lakhs of rupees) :

	Income-tax	Union Excise duties	Additional Excise duties	Estate Duty	Tax on Railway Passenger Fares
Andhra Pradesh	6,53	3,38	2,89	26	1,10
Assam	1,97	1,25	1,04	7	34
Bihar	8,03	3,83	1,93	30	1,17
Maharashtra	8,56	2,93	7,27	26	1,35
Kerala	2,94	1,39	1,17	12	23
Madhya Pradesh	5,43	2,70	2,08	21	1,04

Punjab	3,43	1,66	2,20	13	1,01
Rajasthan	3,30	1,71	1,22	13	84
U.P.	13,32	5,78	6,86	49	2,34
W. Bengal	8,14	2,75	3,38	20	79
Jammu & Kashmir	91	63	50	3	..
Gujarat	4,35	1,49	3,70	13	68

TAX CHANGES

The following are the new tax proposals* :

DIRECT TAXATION

Income-tax and Super-tax

Rates of Tax for financial year 1961-62 :

1. *Non-company assessees :* It is proposed that the rates of income-tax and super-tax in force for the financial year 1960-61 be continued for the financial year 1961-62 except that the rate of surcharge payable in respect of earned income exceeding Rs. 1 lakh be increased from 5 per cent to 10 per cent of the income-tax and super-tax.

So far as companies are concerned, see under Company Tax.

Amendments to the Indian Income-tax Act, 1922 :

1. *Sports associations etc., :* It is proposed to exempt from payment of tax the income of an association or institution established in India solely for the purpose of controlling, supervising, regulating or encouraging in India the games of cricket, hockey, football, tennis and such other games and sports as may be specified by the Central Government from time to time in the official *Gazette*, provided the association or institution is approved by the Central Government for this purpose and satisfies certain specified conditions.

* Concessions were announced subsequently.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

2. *Foreign technicians :* At present, a foreign technician whose contract of service has been approved by the Central Government before the commencement of his service in India is exempt from tax in respect of salaries received by him for the financial year of his arrival in India and the two subsequent financial years. Depending on the time of his arrival in India, the exemption can thus apply for a period of 24 to 36 months. It is proposed that the exemption be available for a period of 36 months from the date of arrival in all such cases and also that if for a further period not exceeding 24 months, the tax in respect of his salary is paid to the Central Government by his employer, such tax shall not be treated as a part of the technician's total income.

3. *New residential buildings :* In respect of new buildings constructed after the 31st of March 1961 for being let out to tenants, it is proposed that the annual value of each residential unit comprised in the building should be reduced by the amount of the annual value or Rs. 600, whichever is less, for a period of three years from the completion of the building.

4. *Residential quarters built for low-paid employees :* It is proposed to allow an initial depreciation allowance of 20 per cent of the actual cost in respect of buildings erected by an employer after the 31st March 1961 solely for the residence of persons employed by him and receiving remuneration not exceeding Rs. 200 per month. This allowance will be admissible in respect of the previous year in which a building is erected. It will not be taken into account for determining the written down value though it will be taken into account for seeing that the aggregate of all depreciation allowances in respect of any building does not exceed the original cost of the building.

5. *Development rebate :* It is proposed that in respect of new plant or machinery installed on or after the 1st of April 1961, the development rebate shall be admissible at the reduced rate of 20 per cent of the actual cost thereof. New ships acquired on or after the said date will, however, continue to get the development rebate at the same rate as heretobefore, *i.e.*, 40 per cent.

It is further proposed that where, subject to certain conditions, a company is amalgamated with another company or where a firm is converted into a private company and machinery or plant on which development rebate is admissible to the predecessor is transferred by the predecessor to the successor, the development rebate already allowed to the predecessor will not be withdrawn and any unutilised portion of the development rebate will be available to the successor. The rights, liabilities and obligations of the predecessor in respect of such development rebate have thus been transferred to the successor.

6. *Appropriations to reserves in the case of a financial corporation :* At present, any amount appropriated to a reserve account is not admissible as a deduction while computing the taxable profits. It is now proposed that in the case of an approved financial corporation engaged in providing longterm finance for financial development in India, an amount not exceeding 10 per cent of the total income may be allowed as a deduction if appropriated to a special reserve account. No such deduction will be allowed when the aggregate of the amounts carried to the reserve account from time to time equals the paid-up capital of the institution. For this purpose, amounts capitalised from reserves will be excluded from the paid-up capital.

7. *Entertainment expenses :* It is proposed to provide that no allowance on account of entertainment expenses will be made in the case of an assessee other than a company and that in the case of companies, the amount allowable on this account will be restricted to certain specified limits depending upon the amount of profits of the business. In effect, no company will be allowed a deduction of an amount exceeding Rs. 1,00,000 on this account.

8. *Tax holiday for new hotels :* It is proposed that the benefit of the five year tax holiday at present enjoyed by new industrial undertakings under Section 15C of the Income-tax Act be extended to new hotels run by companies and which start functioning on or after 1st April, 1961, and satisfy certain conditions. The exemption will be available for the previous year in which the hotel starts functioning and the following four previous years. Dividends paid out of such exempt profits will also be exempt in the hands of shareholders.

Other Amendments to Income-tax Act

A few other amendments have also been proposed in the Income-tax Act. The purpose underlying these amendments is explained in the Notes on Clauses appended to the Finance Bill.

INDIRECT TAXATION

Customs

The proposals in the finance Bill 1961 include the raising of the rates of duty on 41 items and sub-items of the Tariff. Some changes have also been proposed consequential on the imposition of Central Excise duties on certain articles. A countervailing duty equal to the excise duty is being imposed on each of these articles, so that the indigenous producers may not be placed at a disadvantage in comparison with the importers.

The total additional revenue per annum as a result of all the increases in customs duty proposed in the Finance Bill (leaving out countervailing duties) is expected to be about Rs. 16·57 crores. This would be increased by about Rs. 2·38 crores as a result of the modification of the existing concessional rates of duty on newsprint and certain items of machinery and component parts. As against this should be set off a loss of about Rs. 2 crores per annum as a result of the reduction of export duty on tea. The additional revenue from countervailing duties (on existing as well as new excises) would be about Rs. 12·32 crores per annum. The net additional revenue taking all the proposals into account is expected to be about Rs. 29·27 crores per annum.

Betelnuts : The existing duty is increased by 80 nP per kilogram. Additional revenue estimated at Rs. 57 lakhs.

Unmanufactured tobacco : Existing duty stepped up by about 50 per cent. Likely yield Rs. 89 lakhs.

Certain textile manufactures : Existing *ad valorem* duty raised to 100 per cent. Additional revenue expected is Rs. 68 lakhs.

Iron and steel manufactures : Existing *ad valorem* duty increased to 50 per cent. Extra annual yield approximately Rs. 1 crore.

Machinery and components : Twofold proposal: (1) The statutory rate of *ad valorem* duty raised by five per cent except in regard to items on which there is a commitment under the G.A.T.T. (2) The concessional rate of *ad valorem* duty at present applicable to certain types of machinery exempted under executive notification to be raised by five per cent. Additional revenue estimated at Rs. 7·76 crores.

Spirits, wines and malt : Duty increased. *Hops :* Duty imposed. A revenue of Rs. 24 lakhs is expected from both the items.

Electrical and other instruments, apparatus and appliances (not otherwise specified): The existing *ad valorem* duty is to be raised by an addition of ten per cent. *Railway material* (For permanent way and rolling stock and their components): The existing *ad valorem* duty is to be raised by five per cent. Estimated yield from these two changes is Rs. 1·48 crores.

The *ad valorem* duty on the residuary item of "all other articles not otherwise specified" falling under entry 87 of the Tariff schedule is to be raised by 10 per cent. Additional yield expected is Rs. 2·43 crores.

Newsprint : The existing duty is to be raised to about 10 per cent *ad valorem*. Estimated yield Rs. 38 lakhs.

Tea : Export duty is to be reduced by 9 nP. per kilogram, *i.e.* about 17 per cent. Loss in revenue Rs. 2 crores.

CENTRAL EXCISES

Changes made in the existing rates of duty in respect of fourteen commodities. Duty imposed on eighteen new commodities.

Tea : Duty on loose tea increased by 3 nP. per kilogram. The rate on package tea is being reduced by 6 nP. per kilogram. Yield expected Rs. 1·98 crore.

Coffee : Rate of duty increased by about 33 per cent bringing in Rs. 38 lakhs.

Tobacco : In order to discourage lower rated tobacco being used as a substitute for tobacco bearing a higher rate, it is necessary to narrow the difference between the two rates. It is also necessary to step up the duty on stalks. The structure of duty on air and flue-cured tobacco and on cigarettes and on cigars and cheroots is being simplified. These changes will yield an additional revenue of Rs. 2·58 crores.

Superior kerosene : Duty increased by about 46 per cent, raising the incidence of duty to Rs. 95·55 per kilo litre. This, with the existing additional duty of Rs. 4·45 will mean a total duty of Rs. 100 per kilolitre. Additional revenue Rs. 2·84 crores. Inferior kerosene is being exempt from this increase.

Diesel : Diesel oil not otherwise specified will have its duty increased by Rs. 28·15 per metric tonne. Expected revenue is Rs. 1·33 crores.

Rayon : The duty on all categories of yarn and on staple fibre is being stepped up by about two-thirds. Additional revenue expected is Rs. 1·69 crores.

Vegetable product : The duty is being increased by Rs. 2·80 per quintal, that is 100 kilograms. Additional revenue expected Rs. 80 lakhs.

Paints and varnishes : Duty raised by about 25 per cent.

Paper and Paper-boards : Duty raised by 36 to 59 per cent. No increase in the duty on printing and writing paper. Additional revenue from the above two items estimated at Rs. 2·67 crores.

Cotton fabrics : Basic duty on medium 'A' grey fabrics is to be raised by 25 per cent. The excise levy on processed cloth is also being increased by small amounts. Expected yield Rs. 4·72 crores.

The concession now given to small units has led to abuses and difficulties in administration. To remedy this, full exemption will be admissible only to such units which do not employ more than two looms in respect of cotton, rayon and silk fabrics and one loom in respect of woollen fabrics. The slab rates of compounded levy are also being suitably adjusted.

Matches : It is proposed to make certain changes in the pattern of duty on matches. The ceiling rate is to be revised from 57 nP. per 1,000 sticks to 65 nP. per 1,000 sticks. The rates of duty on standard boxes of 50 will be kept almost at the present level. The increased rate will affect matches packed in non-standard boxes only. At the same time, as a measure of encouragement to the cottage sector which uses bamboo for making splints, the concessional rates are being further liberalised. These proposals are not likely to result in any appreciable change in revenue.

Cycle rims : In order to help smaller units producing cycle rims, it is proposed to grant certain concessions. They will get a relief to the extent of Rs. 10 lakhs.

Chemicals : A small specific duty will be levied on soda ash, caustic soda and glycerine. A duty of 15 per cent *ad valorem* will be levied on coal-tar dyes, 10 per cent on patent or proprietary medicines not containing alcohol and 25 per cent on certain articles of cosmetic and toilet preparations. All these items are expected to fetch Rs. 1·8 crores.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

It is proposed to levy a duty of 20 per cent *ad valorem* on cellophane and on plastic powders and other semi-finished plastic material. Revenue expected Rs. 50 lakhs.

Cotton and woollen yarn (mill-made): A small specific duty is to be levied. Part of the duty is expected to be absorbed in the cost of manufacture. Hosiery and certain other fabrics which do not now bear any duty will be brought within the excise duty net. Revenue yield Rs. 5·55 crores.

Glass, glassware, china, porcelainware, crockery: It is proposed to levy an *ad valorem* duty from five to 15 per cent. There will be a lower rate of duty for laboratory glassware. Revenue estimated at Rs. 1·60 crores.

Copper and zinc: A duty of Rs. 300 per metric tonne on sheets and circles and 10 per cent *ad valorem* on pipes and tubes will be levied. Aluminium pipes and tubes will be brought in line. Estimated yield Rs. 80 lakhs.

Wireless receiving sets, air-conditioning machinery and refrigerators: Twenty per cent duty proposed on air-conditioning machinery and refrigerators. A ceiling rate of 20 per cent *ad valorem* is proposed for wireless receiving sets valued more than Rs. 300 each and concessional rates for cheaper sets. Those valued up to Rs. 150 each will be completely exempt. Revenue yield Rs. 83 lakhs.

Mill-made silk fabrics: An additional excise duty will be levied in lieu of sales tax levied by States. The States have agreed to this proposal.

PRIZE BONDS

The Government of India's decision to issue Prize Bonds, 1965, came into effect from 1st April 1960. The following are the details of the issue :—

The bonds will be due for repayment on 1st April 1965. The bonds are in the form of bearer bonds of the denominations of Rs. 100 and Rs. 5 and do not bear interest but lots are drawn quarterly for prizes on the first June, first September, first December and first March every year, the first draw was held on first September 1960 and the last draw will be held on first March 1965. Lots are drawn under the supervision of the Government of India, separately in respect of each series.

The total number of prizes offered to the holders of winning bonds each quarter is 40 of the aggregate value of Rs. 92,000 and 278 of the aggregate value of Rs. 46,000 in respect of each series of Rs. 100 and Rs. 5, respectively. Each series of Rs. 100 is for Rs. 1 crore (*i.e.* one lakh bonds of Rs. 100 each) and each series of Rs. 5 bonds is for Rs. 50 lakhs (*i.e.* ten lakh bonds of Rs. 5 each). Each bond sold is eligible for participation in all the draws held after the expiry of two calendar months from the month of its sales. All bonds pertaining to a series for which any bonds have been sold will participate in the draw but no prizes will be awarded for unsold bonds or bonds sold within two calendar months immediately preceding the month of the draw.

The number and amount of prizes in each series are as follows :—

Each Series of Rs. 100 Bonds	Rs.
One prize of Rs. 25,000	25,000
Two prizes of Rs. 10,000	20,000
Five prizes of Rs. 5,000	25,000
Twelve prizes of Rs. 1,000	12,000
Twenty prizes of Rs. 500	10,000
Total amount of prize money quarterly, in each series of one lakh pieces	92,000

Each Series of Rs. 5 Bonds	
One prize of Rs. 7,500	7,500
Two prizes of Rs. 2,500	5,000
Ten prizes of Rs. 1,000	10,000
Twenty prizes of Rs. 500	10,000
Twenty-five prizes of Rs. 100 ..	2,500
Two hundred and twenty prizes of Rs. 50	11,000
Total amount of prize money quarterly, in each series of ten lakh pieces	46,000

The prize money is free of income-tax and payment thereof is made in cash. The holder of a prize winning bond may present his claim *together with the bond* at any time after the date of the relative draw at any of the following offices :—(1) The offices of the Reserve Bank of India, Bombay, Calcutta, New Delhi, Madras, Bangalore and Nagpur; (2) Branches of the State Bank of India, State Bank of Hyderabad and State Bank of Mysore conducting Government Treasury business; (3) Treasuries and sub-treasuries in India other than those at any place referred to in item (2); (4) All head post offices. The prize money is paid to him at the office at which he has presented the bond after the claim has been admitted by the Reserve Bank of India.

TAX CONCESSIONS

Replying to the budget debate in the Lok Sabha on 17th March 1961, the Finance Minister announced the following concessions:

Superior Kerosene: The effective incidence of the increase in the excise duty on kerosene is cut by 50 per cent.

Powerlooms: The incidence of excise levies on small powerloom units will also be cut by 50 per cent. Mr. Desai announced that steps would be taken to reduce by 50 per cent the incidence of compounded levy on units of three or four powerlooms and to introduce a rational slab system generally for small units so as to avoid a sharp increase in the burden of duty at the stage of transition.

Yarns: Yarns of counts one to ten would be exempted from the new levy. The exemption is meant to facilitate the production of coarse cloth as well as cotton carpets woven on hand-loom.

Wool: In respect of woollen carpets, a large part of which are exported, there would be a full drawback of the duty on wool.

Plastics, glass and glassware: The proposed excise levy (5 to 15 per cent *ad valorem*) will be applied at only one stage—at the stage of powder, granule or flake in the case of plastics, and sheet and tubes in the case of glass. Other items made from duty-paid materials will be exempted.

Subsequently, on 19th April 1961, the Finance Minister announced the following adjustments in direct taxation and tax reliefs in indirect taxes:

Direct taxation: The tax on the dividends received by a foreign company from a non-subsidiary Indian company formed during the period 1st April 1959 to 31st March 1961 is reduced from 53 per cent to 40 per cent, which is the same as that in respect of a similar company formed after 1st April 1961. The concession has been given restrospective effect covering the period 1959-61. The proposal for specifying certain limits for entertainment expenditure allowance in respect of non-company assessees has been withdrawn. The taxable limit for entertainment allowance will, however, continue.

Indirect taxation: Coffee: The excise duty on robusta and Liberia varieties of coffee has been reduced to the original level of Rs. 41·35 per quintal.

Powerlooms: All powerloom units with three or four looms manufacturing cotton, rayon or silk fabrics are given complete exemption of excise duty payment provided they work only one shift.

Cotton mill cloth: The first 70 per cent of the production of automatic looms is exempted from the surcharge of 25 per cent and, out of the remaining 30 per cent output, any portion of the cloth exported will be entitled to refund of surcharge.

Cotton yarn: The calculation of duty on yarn woven into fabric in composite mills is to be simplified by the proposed introduction of a compounded system of levy under which a manufacturer will be enabled to pay duty on yarn, together with the existing duty on fabrics at the rate of 1·2 nP. per square metre.

Art silk yarns: The basic rates of import duty on art silk yarns has been reduced from Rs. 5·10 per kg. to Rs. 4·45 for yarns below 75 deniers, from Rs. 3·70 to Rs. 3·15 for 75 to 100 deniers, and from Rs. 3·10 to Rs. 2·75 for yarns above 100 deniers. The countervailing import duty rates, however, continue at the levels mentioned in the Finance Bill, the actual rates per kg. on the aforesaid three denier groups being Rs. 3·00, Rs. 2·25 and Re. 1·50, respectively.

Woollen yarn: Provision has been made for alternative specific rates of duty for all yarns. The actual rates per kg. will be Rs. 2·10 for worsted yarn of 60 counts and above, Re. 1·60 for yarns below 60 counts and 40 nP. for other worsted yarns. The duty on nylon twine (used for fishing nets) imported by fishermen's co-operative societies has been cut from 100 to 50 per cent, subject to the condition that the import is recommended by the Director of Fisheries.

Newsprint: Import duty per quintal is reduced from Rs. 7·50 to Rs. 5 on unglazed or machine finished newsprint imported in reels, from Rs. 9 to Rs. 5·50 on other sorts and from Rs. 10·30 to Rs. 4·10 (original rate) on sheet newsprint for small newspapers.

Metals: It has been decided to exempt by 25 per cent the duty charged on copper and brass sheets, circles, etc., which are issued out from rolling mills without trimming and cutting. The corresponding concession in the case of bronze sheets and circles will be 20 per cent. Exemption is also given in respect of strips of copper and copper alloys used for making zari, stars and spangles. Further, strips and files recovered from scraps of copper alloy and used for making anklets, trinkets, etc., used by the poorer people as ornaments are also being exempted from duty.

Glass and glassware: Factories employing not more than 20 workers and not using power are given exemption from duty in the case of glassware manufacturers who utilise broken glass as raw material; in the case of chinaware and porcelain, the limit is 15 workers.

Refrigerators: The duty on refrigerators used for cold storage depots and food preservation, as well as that on air-conditioning machinery used not for comfort but for food preservation, is abolished. The countervailing duty paid at the time of import of compressors will be allowed when used in refrigerators produced in India.

Cosmetics and toilet preparations: The limit of concession in the case of small manufacturers has been increased from 50 kg. to 75 kg. per month.

Medicines: Clinical samples for laboratories and hospitals are exempted from payment of import duty upto a maximum limit of 5 per cent of the total duty-paid clearance.

Plastic moulding powders: Powders manufactured from scraps of plastics are exempted from tax payment.

All these tax concessions and adjustments are estimated to yield a total relief in taxes to the tune of Rs. 6·14 crores. As a result of this relief, the total proceeds (Rs. 63·17 crores, including the States' share of Rs. 2·30 crores) from additional tax proposals originally made in the 1961-62 budget are now placed lower at Rs. 57·03 crores.

Total Gross Revenue	3,39,07	3,43,31	3,58,79	3,70,05
Deduct—Refunds and Drawbacks	— 6,74	— 4,50	—4,50	—4,50
Total Net Revenue	3,32,33	3,38,81	3,54,29	3,65,55
Additional Excise Duties				
Sugar	8,25	12,90	12,90	12,90
Textiles	14,89	21,00	19,96	19,96
Tobacco	5,18	7,30	7,83	7,83
Total	28,32	41,20	40,69	40,69
Grand Total—Union Excise Duties	3,60,65	3,80,01	3,94,98	4,06,24

CUSTOMS

The import tariff is cast in the form of a commodity schedule with broad distinctions indicating the treatment to be accorded to various classes of articles. The general rate of import duty is now about 40 per cent. On certain non-essential items where it is felt that the consumer can well pay a higher rate or where there is sufficient indigenous production to meet the country's needs, higher rates of duty are imposed.

The trend of revenue from customs is given below :—

Year	(Rs. in lakhs)
1956-57	173,23
1957-58	179,99
1958-59	138,29
1959-60 (Revised)	160,00
1960-61 (Budget)	162,50
1960-61 (Revised)	163,00
1961-62 (Budget)	164,00+29,27*

* Effect of Budget proposals.

INCOME-TAX

Income-tax is levied now not only on income as ordinarily understood but also on certain capital receipts which have been included in a special definition of "income." Tax at the rate fixed for the year of assessment is charged on the income of the "previous year." Both income-tax and super-tax are levied according to the slab system.

The more recent trend of collections is given below :—

1956-57 (Accounts)	Rs.	202·92	crores
1957-58 (Accounts)	,,	219·83	,,
1958-59 (Accounts)	,,	226·34	,,
1959-60	,,	255·41	,,
1960-61 (Budget)	,,	240·00	,,
1960-61(Revised)	,,	265·00	,,
1961-62 (Budget)	,,	271·00	,,

While the Corporation tax accrues in its entirety to the Centre, the net proceeds of income-tax, except the tax attributable to Central emoluments and Union territories and any Central surcharge, are divisible between the Centre and the States. Sixty per cent of the net proceeds of such income-tax is paid to the States.

The percentage shares of the different States are as follows :

Uttar Pradesh 16·36 ; Bombay* 15·97 ; W. Bengal 10·08 ; Bihar 9·94 ; Madras 8·40 ; Andhra Pradesh 8·12 ; Madhya Pradesh 6·72 ; Mysore 5·14 ; Punjab 4·24 ; Rajasthan 4·09 ; Orissa 3·73 ; Kerala 3·64 ; Assam 2·44 ; Jammu and Kashmir 1·13.

If a non-resident remits any amount to his wife in India and is invested in Govt. securities, that money will not be included in the total income of the wife.

GUIDE TO TAXES ON INCOME (1961-62)

The following table gives the rates of tax (income-tax, super-tax and surcharge included) applicable to 1961-62 in percentages :

Slabs of income	1961-62	Earned	Unearned
0 - 1,000	nil	nil	nil
1,001-2,000			
(A) Married individuals and Hindu undivided families	nil	nil	nil
(B) Others	4·91	3·15	3·6
2,001-3,000			
(A) Married individuals and Hindu undivided families	4·91	nil	nil
(B) Others	4·91	3·15	3·60
3,001-5,000	4·91	3·15	3·60
5,001-7,500	11·48	6·3	7·20
7,501-10,000	14·76	9·45	10·80
10,001-12,500	21·33	11·55	12·20
12,501-15,000	21·33	14·70	16·80
15,001-20,000	26·25	18·90	21·60
20,001-25,000	32·81	31·50	36·00
25,001-30,000	45·94	42·00	48·00

N.B.—For Hindu undivided families the amount of tax and percentages are also as shown for 'married persons' above, except that such families are not liable to pay tax, if the income is not more than Rs. 6,000 if there are at least two members entitled to claim partition.

COMPANY TAX

Classes of Companies	1960-61		Applicable to 1958-59	
	Income tax and Surcharge	Corporation tax	Income tax and Surcharge	Corporation tax
1. Companies which have made prescribed arrangements for the declaration and payment in India of dividends, and for the deduction of super tax from dividends paid to non-resident shareholders:				
(A) Companies in which the public are substantially interested with total income not exceeding Rs. 25,000/-				
(*i*) On dividend income derived from a subsidiary Indian company	26·25	11	31·5	10
(*ii*) On the balance of income	26·25	11	31·5	15
(B) Other Companies:—				
(*i*) On dividend income derived from a subsidiary Indian company	26·25	17	31·5	10
(*ii*) On the balance of income	26·25	17	31·5	20
2. Companies which have not made the prescribed arrangements referred to in (*i*) i.e. foreign companies:				
(*i*) On dividend income derived from a subsidiary Indian company	26·25	20	31·5	10
(*ii*) On the balance of income ..	26·25	36	31·5	30

Companies—Income-tax: In the Finance Bill 1961, no change is made in the existing rate of income-tax, *i.e.*, 20 per cent. *Super-tax:* The basic rate of 55 per cent subject to rebates, depending on certain circumstances relating to each company, will continue. The effective rates applicable to companies (which do not make bonus issues) will also remain the same as for the financial year 1960-61 except in respect of dividends and certain royalties. At present, on dividends received by a company (Indian or foreign) from an Indian subsidiary, super-tax is charged at 10 per cent. On dividends received from any Indian company (other than a subsidiary) formed and registered on or after 1st April 1959, super-tax is charged at 15 per cent on an Indian company in which the public are substantially interested and whose total income does not exceed Rs. 25,000; at 20 per cent on any other Indian company and at 33 per cent on a foreign company which does not declare dividends in India. On dividends received from an Indian company (other than a subsidiary) formed and registered before 1st April 1959, super-tax is payable at the rate applicable to the other income of the company, *i.e.*, at the rate of 20 per cent, 25 per cent and 43 per cent respectively in the case of the three classes of companies mentioned above. For the financial year 1961-62, the super-tax rate for dividends received by any company (Indian or foreign from any Indian company formed and registered before 1st April 1961 will remain the same as for the financial year 1960-61. It is now proposed (subject to a single exception) to fix a uniform rate of 20 per cent for super-tax on

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

dividends received by all companies (Indian or foreign), from Indian companies (whether they be subsidiaries or not) formed and registered on or after 1st April 1961. The exceptional case is that of an Indian company in which the public are substantially interested and whose total income does not exceed Rs. 25,000. In the case of such a company, the super-tax on the dividends received from an Indian company formed and registered on or after 1st April 1961 is proposed to be fixed at the same rate of 15 per cent which was applicable to dividends received from companies formed and registered on or after 1st April 1959.

The effective rate of super-tax on royalties received by a foreign company (which does not declare dividends in India) from an Indian concern in pursuance of an agreement made with the Indian concern on or after 1st April 1961 and which has been approved by the Central Government, is proposed to be fixed at 30 per cent instead of the present rate of 43 per cent.

The effective rate at which super-tax is payable with reference to bonus shares is proposed to be reduced from 30 per cent to 12½ per cent.

RATES FOR DEDUCTION OF TAX AT SOURCE FROM INTEREST ON SECURITIES, ETC.

There is no change in the rates for deduction of tax at source during 1961-62 except that in the case of dividends and certain royalties payable to such foreign companies as do not declare their dividends in India, changes have been made for this purpose corresponding to the changes made in the effective rates of tax applicable to such companies for assessment.

ESTATE DUTY

The Estate Duty Act came into effect from October 15, 1953 and is applicable to the whole of India, except the State of Jammu and Kashmir.

The main features of the Act are that the levy of duty depends on the domicile of the deceased, the power to assess duty is vested in the Controller of Estate Duty, and the scale of duties is stipulated in the law itself. The Estate Duty proceeds go almost entirely to the States and do not affect the Central Budget. Pending the recommendations of the Finance Commission, a provisional distribution was made on the basis of the States' share of income-tax. The Commission in their interim Report also recommended the distribution of Estate Duty for 1957-58 on the same basis, pending re-adjustment in the light of their final recommendations.* Like the Income-tax law, this legislation also provides for exemption limits and defines what items are eligible for exemption and to what extent.

The minimum exemption limit provided in the Act is Rs. 50,000 in respect of property which consists of an interest in the joint family property of a Hindu family governed by the Mitakshara, Marumakkattayam or Aliyasantana Law as well as in respect of all other property. The rates of duty are given below :—

Principal Value of Estate.	Rate of Duty.
In the case of Joint Hindu Family property governed by Mitakshara, etc., law :	
On the first Rs. 50,000	*Nil*
On the next Rs. 50,000	5%
On the next Rs. 50,000	7½%
On the next Rs. 50,000	10%
On the next Rs. 1 lakh	12½%
On the next Rs. 2 lakhs	15%
On the next Rs. 5 lakhs	20%
On the next Rs. 10 lakhs	25%
On the next Rs. 10 lakhs	30%
On the next Rs. 20 lakhs	35%
On the balance	40%

Principal Value of Estate.	Rate of Duty.
In the case of property of any other kind :	
On the first Rs. 50,000	*Nil*
On the next Rs. 50,000	7½%
On the next Rs. 50,000	10%
On the next Rs. 1 lakh	12½%
On the next Rs. 2 lakhs	15%
On the next Rs. 5 lakhs	20%
On the next Rs. 10 lakhs	25%
On the next Rs. 10 lakhs	30%
On the next Rs. 20 lakhs	35%
On the balance	40%
In the case of shares held by a deceased member in any such company referred to in sub-section (1) of Section 84.	
If the principal value of the shares does not exceed Rs. 5,000	*Nil*
If the principal value of the shares exceeds Rs. 5,000	7½%

Estate duty received in 1959 : Rs. 2,61,59,312. No. of estates assessed 8,522. No. assessed from Oct. 15, 1953 to Dec. 31, 1958 was 25,854. The budget for 1961-62 takes account for a total receipt of Rs. 3 crores, same as in 1960-61 (revised).

GIFT TAX

The value of gifts made during a previous year (which is the same as for income-tax assessments) is the subject of charge ; gifts are valued normally at the market value of the property as on the date of the gift. The taxable gifts made during five previous years immediately preceding the assessment year (excluding gifts made before the 1st day of April 1957) are aggregated and the rate applicable to the aggregated value is the rate at which tax is charged on the value of the gifts made during the previous year.

The Gift Tax Bill was passed by the Lok Sabha on 6th May, 1958. The Bill provides for the levy of a tax on gifts made during the previous year at the rates notified below :

On the first Rs. 50,000—4 per cent, on the next Rs. 50,000—6 per cent, on the next Rs. 50,000—8 per cent, on the next Rs. 50,000—10 per cent, on the next Rs. 1,00,000—12 per cent, on the next Rs. 2,00,000—15 per cent, on the next Rs. 5,00,000—20 per cent, on the next Rs. 10,00,000—25 per cent, on the next Rs. 10,00,000—30 per cent, on the next Rs. 20,00,000—35 per cent and on the balance—40 per cent.

Gifts exempt from tax are :

(*a*) immovable property situated outside India ; (*b*) movable property situated outside India, where the donor is not a citizen of India or where the donor, not being an individual, is a non-resident ; (*c*) savings certificates declared gift-tax free ; (*d*) gifts to Government or local authorities ; (*e*) gifts to recognised charitable institutions or funds ; (*f*) gifts for any charitable purpose up to Rs. 100 in respect of each gift ; (*g*) gifts to female dependant members on the occasion of marriage, subject to a maximum of Rs. 10,000 ; (*h*) gifts to wife, subject to a maximum of Rs. 1,00,000 ; (*i*) gifts of policies of insurance or annuities to wife, children or dependants subject to a maximum of Rs. 10,000 in respect of each donee ; (*j*) gifts under a will and (*k*) gifts in contemplation of death.

Without prejudice to these exemptions, no person need pay gift-tax if the gifts do not exceed Rs. 10,000 in one previous year. But, if the taxable gift to any individual donee exceeds Rs. 3,000 during the year, the donor will have to pay tax in respect of all gifts above Rs. 5,000.

Gifts made before 1st April 1957 do not come within the purview of the Gift Tax Act.

No aggregation of gifts during the preceding five years is made for the purpose of determining the rate of duty.

The amendment to the Gift Tax Act proposed provides that the advance tax payable will be at the same rate as the tax payable on regular assessment. These changes are not expected to have any significant effect on revenue.

The revenue receipts under gift tax are estimated at Rs. 80 lakhs in 1960-61. The budget for 1961-62 takes account of a similar sum.

* See p. 115 bottom table.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

THE CURRENCY SYSTEM

DURING 1959-60, money supply with the public recorded a marked expansion of Rs. 202 crores (to Rs. 2,701 crores), as compared with Rs. 110 crores in 1958-59, Rs. 76 crores in 1957-58, and Rs. 129 crores in 1956-57. There has been a progressive rise in the rate of expansion in money supply from 3·3 per cent in 1957-58 to 4·6 per cent in 1958-59 and to 8·1 per cent in 1959-60. The aggregate expansion during the first four years of the Second Plan amounted to Rs. 517 crores or 27 per cent.

Component-wise, currency with the public rose by Rs. 138 crores in 1959-60 and accounted for two thirds of the expansion in money supply; in 1958-59, the expansion in currency with the public (Rs. 118 crores) had more than accounted for the expansion in money supply (Rs. 110 crores). However, since the other component in money supply, namely, deposit money, also showed a substantial rise in 1959-60, in contrast to a small decline in 1958-59, the share of currency in total money supply (which had risen from 67·3 per cent to 69·0 per cent. in 1958-59) showed a fractional decline to 68·9 per cent in 1959-60. The seasonal swings in money supply were less pronounced than in the previous years.

Among the factors which brought about the year's expansion in money supply, the deficit on Government account continued to be the most important, but its incidence was substantially smaller than in the preceding two years. On the other hand, the expansionist impact of credit extension by banks to the private sector was much larger than in the previous two years. On the contractionist side, the cushioning effect of the payments deficits, characteristic of the previous three years, was virtually absent, while the rise in banks' time liabilities continued to exert a marked countervailing influence, as in the previous years.

The two tables give the details of the course of money supply with the public and the factors contributing to it.

CURRENCY CIRCULATION

Currency expansion recorded a further sharp rise of Rs. 154·5 crores in 1959-60, as compared with Rs. 126·2 crores in 1958-59 and Rs. 52·3 crores in 1957-58. All the three components, namely, notes, rupee coin and small coin contributed to this expansion. The circulation of both notes and rupee coin recorded a larger increase than in 1958-59, while that of small coin also showed a moderate rise as against a small contraction in 1958-59.

The following table shows the circulation of currency :—

(Rs. in crores)

	At the end of		
	1957–58	1958-59	1959-60
Circulation—			
Notes ..	1,535·96	1,658·36	1,801·73
Rupee Coin ..	116·46	120·59	130·28
Total ..	1,652·42	1,778·95	1,932·01

NOTE: Figures are exclusive of *Hali Sicca* currency.

The circulation of rupee coin (the bulk of which represents one rupee notes) recorded a rather sharp rise of Rs. 9·7 crores in 1959-60 following a rise of Rs. 4·1 crores in 1958-59; in the preceding two years 1956-58, there was an aggregate decline of Rs. 5·7 crores. The year's increase was the net result of (*i*) a rise of Rs. 19·1 crores during the eight months April-May 1959 and October 1959-March 1960; and (*ii*) a decline of Rs. 9·4 crores during the four months June to September 1959. At the end of 1959-60, the circulation of rupee coin stood at Rs. 130 crores, representing a net rise of 6·5 per cent over the level of Rs. 122 crores at the end of 1955-56, but a net fall of about 6 per cent as compared to the outstanding circulation of Rs. 138 crores at the end of 1950-51. On 3rd April, 1960, the Reserve Bank, as usual, received from the Government of India, one rupee notes of the value of Rs. 5 crores in terms of Section 36(2) of the Reserve Bank of India Act against payment of legal tender value. At the end of the year, rupee coin holdings of the Reserve Bank, the bulk of which is held in the form of one rupee notes, amounted to Rs. 126 crores.

The Reserve Bank received 4,574 forged notes (including Government of India one-rupee notes) during 1959-60 as compared to 5,489 in 1958-59. The number of counterfeit coins cut at treasuries and railway stations was lower at 5·7 lakhs as compared to 11·3 lakhs in the previous year. The Reserve Bank admitted claims worth Rs. 50 lakhs in respect of lost, destroyed and mutilated notes. Payment made against them amounted to Rs. 48 lakhs.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Small Coin.—The circulation of small coins recorded a rise of Rs. 1·4 crores in 1959-60 as against a decline of Rs. 0·3 crores in the previous year. The following are the details :

MOVEMENTS IN CIRCULATION OF SMALL COIN DENOMINATION-WISE

* Since the inauguration of the Reserve Bank in 1935, silver half rupees have been included in statistics relating to small coin, including pure nickel half rupees introduced in May 1946. ** Including pure nickel four anna pieces introduced in May 1946. † Including nickel two anna pieces introduced in 1917-18. †† Nickel half anna pieces introduced in January 1942. § Including single pice pieces with a circular hole issued from February 1943.

EXCHANGE CONTROL

In the field of exchange control, the changes made during 1959-60 were designed (*i*) to meet the situation arising from the further move by several countries abroad in the direction of full convertibility and (*ii*) to remove the loopholes in the existing regulations. The main changes thus made are given below :

(1) Consequent on the withdrawal of Iraq from the sterling area, regulations governing payments to, and from, that country were amended appropriately and the non-resident rupee accounts of banks resident in Iraq were designated as 'convertible accounts' with effect from 26th June 1959. (2) The terms of settlement for trade transactions agreed to with the Government of the United Arab Republic were revised with effect from 1st August 1959 to provide for all trade with Egypt to be invoiced only in Indian rupees. Proceeds of Egyptian cotton imports would be utilised for payments for Egypt's imports of tea and jute goods and other commodities as may be further agreed between the two governments and also for repayment of loan. Under the previous agreement, payment for some of our exports was accepted in Egyptian pounds, and proceeds of our exports of tea and jute manufactures were utilised to pay for our imports of Egyptian cotton.

(3) In September 1959, Bulgaria, Czechoslovakia, Hungary, Rumania and Yugoslavia were included in the 'Bilateral Account' group which already included the U.S.S.R., East Germany, Poland, the U.A.R. and Afghanistan. All financial transactions between India and countries covered by the bilateral agreements would be conducted on a non-convertible rupee basis and rupee balances held by banks resident in these countries would not be transferable to any other country or convertible into any foreign currency. (4) A 'Limited Payments Agreement' was concluded with Pakistan on 3rd December 1959 to cover for one year exchange on a non-convertible rupee basis of a few specified commodities with specific monetary ceilings. This was substituted on 21st March 1960, by another agreement, which increased the values of the agreement till 20th March 1962. All transactions under the agreement would be routed through a special account opened by the National Bank of Pakistan with the State Bank of India at New Delhi and styled 'National Bank of Pakistan Clearing Account A'.

(5) As a necessary sequal to the introduction last year of special rupee notes for circulation in the Persian Gulf area and simultaneous withdrawal of facilities available to overseas banks for repatriation of ordinary Indian bank notes purchased from travellers from India, a limit of Rs. 75 per person was imposed with effect from 10th December 1959 on the amount of ordinary rupee notes that may be brought in by travellers. Earlier, such restriction applied only to travellers from the Portuguese territories in India. (6) On 17th December 1959, the Chief Controller of Imports and Exports announced that all 'soft currency' import licences (other than those issued under the Capital Goods and Heavy Electrical Plants Schemes and restricted to specified countries) would be valid for imports from the dollar area also upto 100 per cent of their face value. Authorised dealers in foreign exchange were accordingly permitted to open letters of credit and make remittances against 'soft currency' licences for imports of dollar area origin. Earlier these could be used only upto 50 per cent of their face value for imports from the dollar area. The measure eliminates whatever little currency discrimination existed previously against imports of dollar origin.

(7) It was accounted on 9th February 1960 that insurance cover for non-marine insurance risks on assets owned by Indian residents could be arranged in any currency instead of as previously, only in rupees, sterling or the currency of the country in which the assets were located. (8) From March 1960, Indian nationals (including persons of Indian domicile) emigrating to any country outside India are allowed to transfer sums not exceeding Rs. 50,000 per family unit at the time of departure. Assets in excess of Rs. 50,000 are blocked and no remittances permitted from them, though the income earned on these is remittable in full. Earlier there were ceilings of Rs. 75,000-Rs. 125,000 and Rs. 200,000 per family emigrating to the dollar area, the other non-sterling area and the sterling area, respectively. The new regulations while generally tightening up the capital remittances, removed at the same time the discriminating features in controls on export of resident capital.

1951	..	49,28,000
1951-52 to 1958-59	..	Nil

On Oct. 1, 1960 two-anna and half-anna coins of cupro-nickel composition ceased to be legal tender. However, they were to continue to be accepted by the Reserve Bank and its agency banks and Government treasuries, and railways and post and telegraph offices till March 31, 1961; but even after that date they would be accepted by the Issue Department of the Reserve Bank in Bombay, Calcutta, Madras, Kanpur, New Delhi, Bangalore and Nagpur.

DECIMAL COINAGE

DECIMAL coins were first introduced in India on 1st April 1957.

The old coins were to be legal tender for about three years after the introduction of the new coins. During this period, they were to be gradually withdrawn from circulation.

The rupee coin is divided into 100 equal units and the unit designated Naya Paisa. Thus 100 naye paise make one rupee.

The new series have the following units one naya paisa, two naye paise, five naye paise and ten naye paise.

Twenty-five naye paise pure nickel coins were issued with effect from Dec. 1, 1959. It is circular in shape and weighs 2·5 grammes and is lighter than the old four-anna coin. Fifty naye paise pure nickel coins were issued with effect from 1st November 1960. It is also circular in shape with a serrated edge. It weighs five grammes and is slightly lighter than the half-rupee coins.

Later, the new rupee coins are to be issued.

The new coins were issued to the public through the Reserve Bank, the State Bank offices, treasuries and sub-treasuries.

The gross weight of one naya paisa coin is 23·15 grains. The composition (proportion of metals) of the coin is: 97 per cent. copper, 2½ per cent. zinc and ½ per cent. tin. The diameter of the coin is 0·630".

GOVERNMENT ACCOUNTS

Government accounting with effect from 1st April, 1957 has been in terms of rupees and naye paise.

The State Bank and joint stock and co-operative banks have also switched over to decimal accounting with effect from 1st April 1957.

All chalans in support of money tendered in payment of Government dues are, therefore, being expressed in new coinage. Similarly, all bills for withdrawals are expressed in terms of rupees and naye paise.

The forms of bills, chalans and other books of account used by Government Departments have been revised to provide only two columns to show rupees and naye paise separately.

A sum of Rupees 25 and five naye paise is written as Rs. 25·05 (and not Rs. 25·5); Rupees 25 and 50 naye paise as Rs. 25·50 (not Rs. 25·5); and Rupees 55 and 83 naye paise is written as Rs. 55·83.

For entering an amount of Rupees 25 and five naye paise, in forms providing for separate columns for rupees and naye paise, 25 are entered in the Rs. column and 05 in the naye paise column.

In order to enable the public to understand rightly the relationship of each new coin to the rupee the number of such coins required to make one rupee is indicated on the coins themselves. Thus the coin representing one naya paisa has a legend, "rupae ka sauvan bhag" (hundredth part of a rupee), embossed on it.

Similarly, 2, 5, 10, 25 and 50 naye paise units indicate that they represent 1/50th, 1/20th, 1/10th, 1/4th and one-half parts respectively of the rupee.

The design and composition of the new currency units are as follows:

The obverse sides of all the new coins have the design of the lion capital of the Asoka pillar with the terms "Bharat" in Hindi and "India" in English inscribed on them.

The reverse sides of all the new coins indicate the year in which the coins are produced and their value in naye paise specified in international numerals.

The 100 naye paise, 50 naye paise and 25 naye paise are of pure nickel while 10, 5 and 2 naye paise coins are of cupro-nickel alloy (75 per cent copper and 25 per cent nickel). The one naya paisa coin is of bronze.

Until the people got accustomed to the use of the new coinage and sufficient quantities of new coins were put into circulation, the existing coins which continued to be legal tender after April 1, 1957 were to remain in circulation.

Coins of the denominations of two annas and under were withdrawn first, as decimal coins of ten naye paise and below were put in circulation in sufficient quantities at the initial stages.

According to the rate of exchange prescribed in the Indian Coinage (Amendment) Act 1955, there is no exact equivalent in naye paise in respect of coins of two annas and below and their change individually, or in combination with other coins, results in a small profit or loss in the aggregate to either of the parties exchanging the coins.

This element of profit or loss occurs so long as the existing coins continue to circulate, but it will diminish progressively as increasing quantities of new coins enter into circulation.

The public can, however, keep down to the minimum the element of profit or loss in exchange of coins by having their holdings of existing coins exchanged for new ones by tendering amounts in terms of four annas and multiples thereof, for which exact equivalents in terms of new coinage exist.

The mintage of coins by denominations during 1959-60 was as follows:

		Rs.
Pure-nickel	25 nP	1,73,98,000
Cupro-nickel	10 nP	1,12,99,000
,,	5 nP	51,30,000
,,	2 nP	24,16,000
Bronze	1 nP	34,51,000
Total..	.. .. ..	3,96,94,000

During the year 1959-60, new coins of the value of about Rs. 3·75 crores were put into circulation. This included one naya paisa coins of the value of Rs. 40 lakhs, two naye paise coins of the value of Rs. 39 lakhs, five naye paise coins of the value of Rs. 69 lakhs and ten naye paise coins of the value of Rs. 1·26 crores.

Old coins of the value of Rs. 2·31 crores were withdrawn during the year 1959-60, bringing the total withdrawal since 1st April 1957 to Rs. 7·27 crores.

During 1959-60 decimal coins of the value of Rs. 3·97 crores were minted bringing the total mintage of these coins to Rs. 13·5 crores (3,586 million pieces).

Upto Nov. 30, 1959, 1,72,48 lakh one-anna coins and 1,32,48 lakh half anna coins (nickel-brass) were minted and 81,70 lakh one-anna coins and 37,72 lakh half anna coins had been withdrawn.

BANKING

THE Banking Companies Act was enacted in 1949 with the object of improving the efficiency and the tone of the banking system. The main provisions relate to licensing of branches, requirements of minimum capital and reserves and maintenance of cash reserves. During 1952 the Banking Companies Rules were extended to more States and now apply to the entire country.

The policy of systematic inspections of banking companies irrespective of their size and standing, has been an aspect important of the Reserve Bank's supervisory activities. In pursuance of this, 288 banks were inspected during 1959, of which 65 were scheduled banks as against 273 banks in 1958, of which 57 were scheduled banks. Since March 1950, when inspections were commenced, 1,589 inspections have been carried out for various purposes.

TRENDS

The year 1959-60 was characterised by a marked stepping up of the rate of monetary expansion, both money supply and bank credit. The expansion of money supply was almost twice as large as in 1958-59 and the bank credit was also more than double. Indicating the above trend, the slack season decline in money supply and bank credit was much smaller than in the previous year; the busy season rise in bank credit was also slightly larger, though the expansion in money supply was somewhat smaller. As in the preceding three years, the growth of deposits and investments in Government securities of banks continued to be markedly influenced by the counterpart funds arising from P.L. 480 imports. Aggregate net deposits, even excluding P.L. 480 funds, rose at a faster rate than in 1958-59. A feature of the deposit trends this year was the sizeable expansion in demand deposits in contrast to the small decline in 1958-59. The upswing in time deposits, however, continued apace the rise in this item being larger than in the previous year. The expansion in holdings of Government securities of banks was considerably smaller than 1958-59 on account of the much larger expansion of bank credit than in 1958-59 and the larger increase in cash reserves.

The main features disclosed by the trends in scheduled bank data during 1959-60 were (*i*) a larger rise in the volume of bank credit than in the previous two years and (*ii*) a further acceleration of the rising trend in aggregate deposit liabilities noticed since 1951-52. Aggregate deposit liabilities went up by Rs. 267 crores (to Rs. 1,902 crores) in 1959-60 as compared to a rise of Rs. 184 in 1958-59. Since the increase in P.L. 480 deposits during the year was about the same as in 1958-59, the larger expansion in deposit liabilities during the year was entirely due to other deposits. A noteworthy aspect of the deposit trends during the year was the expansion of Rs. 59 crores (to Rs. 781 crores) in demand liabilities which contrasted with a reduction of Rs. 8 crores in 1958-59; the rise was mainly in the nature of a counterpart to the balance of payments surplus on private account and the higher rate of credit expansion during the year.

The rapid growth in time liabilities, noticed since 1956-57, continued, the expansion being larger than in 1958-59. In 1959-60 they rose by Rs. 208 crores as compared to Rs. 192 crores in 1958-59 and Rs. 249 crores in 1957-58. As in the previous three years, the accrual of P.L. 480 funds with the State Bank of India constituted an important component of the increase

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

in time liabilities. The rise of Rs. 114 crores (to Rs. 1,128 crores) in scheduled bank credit during the year was more than double that in 1958-59 (Rs. 51 crores) and only slightly less than double that in 1957-58 (Rs. 63 crores); percentage-wise, the growth was 11 per cent in 1959-60 as compared to 5 per cent and 7 per cent in the preceding two years. While the growth of bank credit during the year reflected the sharp growth of deposits, the marginal credit deposit ratio rose significantly as compared to the 1958-59 ratio. The aggregate growth of bank credit in the first four years of the Second Plan was 48 per cent. The expansion in 1959-60 reflected, in the main, the rebuilding during the year of stocks at rising prices as well as the marked revival in industrial activity as compared to the two previous years, but in the light of the prevailing price situation the rate of expansion should be deemed to be excessive. The credit deposit ratio at the end of March 1960 was 59 per cent as compared to 62 per cent at the end of March 1959, though if P.L. 480 deposits are excluded, the ratio at the end of March 1960 would be about 70 per cent. Investments in Government securities recorded a smaller rise (Rs. 101 crores) in 1959-60 than in 1958-59 (Rs. 173 crores) but the investment deposit ratio remained virtually unchanged over the year at 37·6 per cent, after the high level of 44·4 per cent in early December 1959. The annual average ratio for 1959-60 at 40·6 per cent was, however, higher than the corresponding ratio for 1958-59 (36·5 per cent). Cash and balances with the Reserve Bank showed a sharp rise of Rs. 45 crores to Rs. 153 crores against a rise of only Rs. 3 crores in 1958-59; while this was to some extent due to the larger accrual of deposits, the major part of the rise (Rs. 28 crores) took place after 11th March 1960, from which date the Reserve Bank called for from scheduled banks additional statutory reserves of 25 per cent of the increase in deposit liabilities. The cash ratio consequently recorded a substantial rise from 6·6 per cent to 8·0 per cent; however, if the annual average is taken into account, the ratio further fell to 6·8 per cent as compared to 8·0 per cent in 1958-59 and 8·9 per cent in 1957-58. Borrowings from the Reserve Bank showed a rise of Rs. 18 crores (to Rs. 79 crores) as compared to Rs. 20 crores in 1958-59. The rise in net balances with the Reserve Bank (*i.e.* after adjusting for scheduled banks' borrowings from the Reserve Bank) was Rs. 9 crores over the year. The inflow of foreign short-term funds through the banking system was lower during the year at Rs. 1·4 crores as compared with Rs. 3·8 crores in 1958-59. The Reserve Bank has revoked with effect from Jan. 13, 1961, the additional reserve requirements imposed on scheduled banks under their notification of Nov. 11, 1960.

The Reserve Bank's policy continued to be one of restraint. In the field of credit control, a feature of the year was the resort, for the first time since the Reserve Bank acquired the power in October 1956, to the instrument of variable reserve requirements. The need for a general strengthening of credit controls arose from the continuing excess liquidity in the economy as reflected in the marked expansion of money supply and bank credit and the pressure exerted by it on the general price level as well as its bullish impact on the capital market as indicated by the boom in share values. In recent years, the Reserve Bank's monetary policy has been one of 'controlled expansion' —a policy of general restraint alongside action to augment the flow of credit into specific sectors, in particular agriculture. For about three years now the Reserve Bank's credit restraint policy has been operated through selective credit controls, besides open market operations. At the close of the year under review, these were reinforced by an instrument of general credit restraint, namely variable cash reserves.

LEGISLATIVE MEASURES

The legislative measures taken during the year included (*i*) the passing of the State Bank of India (Subsidiary Banks) Bill, 1959, the State Bank of India (Amendment) Bill, 1959 and the Banking Companies (Amendment) Bill, 1959, (*ii*) the introduction in the Lok Sabha, of the Reserve Bank of India (Amendment) Bill, 1960, designed to enable the Reserve Bank to enlarge the scope of its powers to assist in the financing of industries and (*iii*) further liberalisation of the Bill Market Scheme.

The State Bank of India (Subsidiary Banks) Bill received the assent of the President on 10th September 1959. As provided under the Act, eight major State-associated banks, the Bank of Indore, the Bank of Jaipur, the Bank of Mysore, the Bank of Patiala, the Travancore Bank, the State Bank of Hyderabad and the State Bank of Saurashtra have been taken over by the State Bank of India as its subsidiaries. As agents of the State Bank of India, which is the agent of the Reserve Bank, these banks will be entrusted with the custody of currency chests, thereby enabling them to undertake treasury work and to offer better remittance facilities to the banks and the public. A scheme for the expansion in the number of branches of these banks in the territories of former Part B States, is being framed by the State Bank in consultation with the Reserve Bank of India and the subsidiary banks concerned. The changed status of these banks as well as their branch expansion programme is expected to contribute to a more intensive mobilisation of deposits in comparatively under-developed areas and also to a closer integration of such areas with the organised money market.

The State Bank of India (Amendment) Bill, 1959 was passed by Parliament and received the President's assent on 28th August 1959. The Amendment Act seeks, among other things, to simplify the procedure in regard to the taking over of the business of any banking institution which the State Bank acquires through negotiations in terms of Section 35 of the State Bank of India Act, and to facilitate the orderly winding up of such institutions.

The Banking Companies (Amendment) Act, 1959 came into force on 1st October 1959. The Act, *inter alia* (1) enables a banking company to pay dividends on its shares without writing off the depreciation in the value of its investments in approved securities where such depreciation has not been capitalised or otherwise accounted for as a loss, while in the case of depreciation in the value of shares, debentures and bonds and losses on account of bad debts adequate provision will have to be made before a banking company could pay a dividend, (2) introduces some flexibility in regard to the maintenance and use of the Reserve Fund, (3) empowers the Reserve Bank to remove from office the chairman or any director or manager or chief executive officer of a banking company who has been found by any tribunal or other authority to have contravened the provisions of any law, (4) provides for inspection by the Reserve Bank of offices or subsidiaries of Indian banks outside India, (5) enables the Reserve Bank to apply for the winding up of a banking company under certain circumstances and (6) enables the High Court to direct the winding up of a banking company under specified circumstances.

The Reserve Bank of India (Amendment) Bill, 1960 was introduced in Lok Sabha on 22nd April 1960 and passed on 30th April. The Act empowers the Reserve Bank to act as agent of the Government of India for implementing the Scheme for guaranteeing loans and advances by commercial banks and other financial institutions to small scale industrial units. The Act also enables the Reserve Bank to extend medium-term loans, that is, loans with a maturity upto 18 months to the State Financial Corporations and to other institutions notified by the Central Government, through an amendment to Section 17 of the Reserve Bank of India Act, 1934.

The extension of the Bill Market Scheme to export bills on an experimental basis for one year upto the end of September 1959, was later extended further by another year upto the end of September 1960. The scheme has also been liberalised in certain respects. The facilities under the Scheme, which were formerly available only at Bombay and Calcutta offices of the Reserve Bank, are now made available also at its offices at Madras, New Delhi, Kanpur, Bangalore and Nagpur. Further, the minimum amount of a usance promissory note that may be lodged as security for advances, which were originally fixed at Rs. 2 lakhs and Rs. 0·20 lakh, respectively, have been reduced to Rs. 1 lakh and Rs. 0·10 lakh, respectively, with effect from 7th October 1959. The Reserve Bank has also undertaken, with effect from the same date to bear the whole of the stamp duty on usance promissory notes lodged with it as security for such advances under the Scheme.

RESERVE BANK

The Bank advanced to scheduled banks a gross amount of Rs. 602 crores in 1959, as against Rs. 391 crores in 1958, Rs. 769 crores in 1957 and Rs. 904 crores in 1956. A total amount of Rs. 519 crores was advanced in 1959 by the Reserve Bank for general banking purposes at the Bank rate against Government securities as compared with Rs. 238 crores in 1958. Loans under the Bill market scheme at ½ per cent below the Bank rate aggregated Rs. 183 crores in 1959 against Rs. 153 crores in 1958.

The following table gives the position of the Reserve Bank over a period of years:—

EXCHANGE BANKS

The banks carrying on exchange business in India are merely branch agencies of banks having their head offices in London, on the Continent, in the Far East or the U. S. A. Originally their business was confined almost exclusively to the financing of the external trade of India; but now, most of them, while continuing to play their main role, have also taken an active part in the financing of internal trade. Following the increase in the British bank rate to four per cent in March 1952, exchange banks found it more profitable to tap Indian deposits than to get funds from London. Over the year 1959 the deposits with these Banks amounted to Rs. 226·21 crores as against Rs. 195·76 crores in 1958.

The earlier progress of Exchange Banks was tabulated in the previous editions. The more recent trends are summed up below:—

Liabilities and Assets of Foreign Banks in India

(In lakhs of rupees)

Year	No. of Banks	Deposits					Cash		Bills Discounted and Purchased	Loans and Advances	Investments		No. of Offices	Net Profit

Import, export trade financed by Indian Banks :—The value of imports (estimated on the basis of a sample analysis) and of exports financed by Indian banks in 1958 was Rs. 220·6 crores and Rs. 201·4 crores respectively. The figures for 1957 were Rs. 325·6 crores of imports and Rs. 204·5 crores of exports.

MONEY RATES IN INDIA

	1958	1959
Bank Rate*	4	4
State Bank (former Imperial Bank) Rates:		
Hundi Rate**	5¼–5½	5¼
Advances Rate . ..	4½	4½
Call Loan Rate—		
Rs. 5 lakhs and over	4	4
Below Rs. 5 lakhs ..	4¼	4¼
Bazaar Bill Rates†:		
Calcutta	11½–9	9–10
Bombay	11¼–8¼	9–10 3/16
Call Money Rates:		
Calcutta	4⅝–2	4½–¾
Bombay—		
Larger Banks ..	1⅛	¾
Smaller Banks ..	4 7/16	3¾

* Bank rate was raised to 4 per cent on 16th May 1957. This is the standard rate at which the Reserve Bank is prepared to buy or rediscount bills of exchange or other commercial paper eligible for purchase under the Reserve Bank of India Act.

** The rate at which the State Bank discounts first class three months' commercial bills.

† Rates at which bills of small traders are discounted by shroffs. The quotations are unofficial.

Clearing Houses.—The Principal Clearing Houses in India are those of Calcutta, Bombay and Madras and of these the first two are by far the most important. In 1951-52 Clearing Houses were opened at Bareilly and Jaipur and are being managed by the State Bank of India. This brought the total number of Clearing Houses under the management of the State Bank to 35. In Bombay, a Metropolitan Clearing Association was formed and registered in October 1946 to arrange for clearing for non-scheduled banks as the Bombay Bankers' Clearing House decided to restrict its membership and sub-membership only to scheduled banks.

The total number of cheques cleared has progressively risen since 1950, the amount which has shown a declining trend in 1952 and 1953, has been higher since 1954. The total number of cheques cleared was higher at 4,89,58,820 in 1959, as compared with 4,43,69,120 in 1958 and 4,09,87,003 in 1957.

The figures from 1954 onwards are shown in the table given below :

CLEARING HOUSE STATISTICS

CAPITAL MARKET

THE Government of India has so far (up to March 1960) recognised seven stock exchanges, namely, The Stock Exchange, Bombay, The Ahmedabad Share and Stock Brokers' Association, Ahmedabad, The Calcutta Stock Exchange Association Ltd., Calcutta, The Madras Stock Exchange Ltd., Madras, The Delhi Stock Exchange Association Ltd., New Delhi, The Hyderabad Stock Exchange and The Share Brokers' Association, Indore. The recognition for the last two mentioned has been granted for five years in the first instance. The general principles regarding grant of recognition to a stock exchange as laid down in Section 4(1) of the Securities Contracts (Regulation) Act, 1956, has been followed. The Act does not envisage amalgamation, as such, of stock exchanges either before or after recognition is granted under section 4 thereof. Nevertheless, to avoid undue hardship to members of the exchanges which have not been recognised, the Government has prescribed certain terms and conditions on which active members of the unrecognised exchanges can seek admission to the recognised exchange.

Section 13 of the Securities Contracts (Regulation) Act, 1956, has been made applicable to the Greater Bombay area in Maharashtra State with effect from 15th October 1957. The effect of the application of section 13 to the Greater Bombay area is that every contract in this area which is entered into after 15th October 1957, otherwise than between members of the recognised Stock Exchange or through or with such member, is illegal.

Calcutta Association.—The Calcutta Stock Exchange Association was founded at No. 2, New China Bazar Road (now known as 2, Royal Exchange Place), Calcutta, with 150 founder members in 1908. Fifteen years later, it was registered as a limited liability concern. The Association is controlled and managed by a Committee and has a membership of 232 brokers.

The only registered institution in south India of brokers dealing in shares and securities is the Madras Stock Exchange Association, Ltd., registered in 1937.

During the boom period several stock markets were started at other industrial centres. These include Delhi and Kanpur.

The Ahmedabad Stock Exchange is also a registered body and recognised by the Government of Bombay* under the Bombay Securities Contract Control Act.

There are also organised stock markets in Hyderabad and Indore.

SECURITIES ACT

The Securities Contracts (Regulation) Act, 1956, is the first All-India legislation seeking to control transactions on securities and to regulate stock exchange practices. Prior to this Act, there was no legislation for the purpose except in the old State of Bombay.

Broadly speaking, the Act applies to transactions other than spot delivery contracts. But power has been taken in the Act to regulate spot delivery contracts also, if the Government regards it as desirable in the interest of trade or in the public interest.

As regards contracts other than those for spot delivery, the regulation takes the form of either controlling the activities of stock exchanges in those areas or States where stock exchanges operate, or through a system of licensing of persons who deal in stocks and shares. In those areas where the stock exchanges operate and to which Section 13 of the Act will be applied, every contract which is entered into otherwise than between members of a recognised stock exchange in such State or area or through or with such members is illegal.

The Act permits only those stock exchanges to function which are recognised by the Central Government. For this purpose, each stock exchange is required to make an application in the prescribed manner to the Central Government, who will grant recognition if the Government is satisfied in regard to certain conditions. Every recognised stock exchange is required to furnish to the Central Government such periodical returns relating to its affairs as may be prescribed.

Subject to the previous approval of the Central Government, any recognised stock exchange may make bye-laws for the regulation and control of contracts. But the Government has the power to make or amend these bye-laws.

Important provisions relating to the listing of securities on a stock exchange are also contained in the Act. In regard to the licensing of dealers and brokers in securities, there are no detailed provisions.

So also no direct provisions are contained in the Act to restrict the prevalence of black transfers, but there is a provision to discourage black transfers indirectly.

The Securities Contracts (Regulation) Amendment Bill was passed by the Lok Sabha on 17th November 1959. As a result of the amendments, the contracts made by foreign financial investors involving options, which, by their very nature, are not of a speculative character have been exempted from some of the provisions of the Act. Convertible bonds and share warrants contracted by foreign financial investment corporations are exempted from the purview of section 20 of the

* Bilingual.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Act. Further, the incorporated stock exchanges are empowered to make rules restricting voting rights to members only restricting the right to appoint proxies and introducing the principle of one member-one vote, and override the Companies Act in this respect.

The Government of India has established a Stock Exchange Directorate which functions under the Department of Economic Affairs of the Union Ministry of Finance, with headquarters in Bombay and branch offices at Calcutta and Delhi. The Directorate is composed of expert officials. It maintains close contact with Stock Exchanges and keeps a careful watch over the activities of operators.

GILT-EDGED MARKET

The gilt-edged market continued to rule generally firm during 1959-60, although the net rise in prices over the year, as measured by the Reserve Bank's index of prices of Government of India securities, was less marked than in 1958-59. Support to the market chiefly stemmed from institutional investors, particularly banks, reflecting the continued excess liquidity in the economy. Governmental borrowing operations had yet another successful year, although the net market borrowing this year was smaller than in 1958-59. On 15th June 1959, the Union Government announcement of their decision to float two cash-cum-conversion loans for a total amount of Rs. 175 crores, was received well as the terms offered were generally in line with the market's expectations; the subscription lists, which were opened on 1st July, were closed on the following day, the amount offered having been fully subscribed.

In August, 13 State Governments entered the market for raising new loans aggregating Rs. 61·5 crores and the response to these loans was excellent, the subscription amounting to over Rs. 100 crores. Notwithstanding the new issues the market continued firm, with pronounced enquiry for short and medium dated issues where a paucity of stocks was reported. The Union Government, therefore, created on 9th October, two further issues of the 3½ per cent Bonds 1969 and the 3¾ per cent loan 1974 for a total amount of Rs. 45 crores which were taken up initially by the Reserve Bank of India on its own investment account for being made available for sale to the public through the usual procedure for the sale of special issues. With the onset of the busy season, market activity generally tended to taper off consequent on the withdrawal of institutional support as is usual at this time of the year, but the undertone remained, on the whole, firm. In January 1960, the Madhya Pradesh Government made a further issue of the 4 per cent Loan 1971 for Rs. 2 crores, which was also fully subscribed.

Reflecting the underlying strength of the gilt-edged market, the trend of Reserve Bank's open market operations continued to be one of net sales almost throughout the year. Net sales by the Bank aggregated Rs. 60 crores in 1959-60, as compared with Rs. 89 crores in 1958-59. Scheduled banks augmented their investment in Government securities, for the third time in succession, the rise during the year amounting to Rs. 101 crores as compared with Rs. 173 crores in 1958-59 and Rs. 93 crores in 1957-58. The share of the State Bank in these was substantial and reflected the investment by that Bank of funds accruing to it under P.L. 480 agreements. Most of the State loans, particularly the new issues floated in August 1959, were in good demand from institutional investors almost throughout the year, although the gains, as in the case of the Central loans were less pronounced than in the preceding year.

The Reserve Bank's average index number of prices of Government of India securities (base: 1952-53=100) rose over the year from 100·5 to 101·1. Among State Loans, the maximum rise of Rs. 1·90 was recorded by the 3 per cent 1964 Madhya Pradesh Loan. Almost all the new 4 per cent 1971 State Loans were quoting at the end to the year, at a premium which ranged upto a maximum of Rs. 1·40 in the case of the Bombay Loan. As in the previous year, consequent on the price increases the yields on Government securities generally tended to lower levels, but the declines were less marked. The yields on State loans declined on an average by about 0·10 per cent as compared with 0·30 per cent in 1958-59. Among Central Loans, the yields on short-dated eased on an average by about 0·10 per cent and on medium and long dated by about 0·05 per cent, as compared with the declines of 0·30 and 0·15 per cent, respectively, in 1958-59. The maximum fall in yield of 0·22 per cent was recorded by the 3 per cent 1966-68 Loan. A notable exception to the general trend was provided by the 3 per cent Conversion Loan, the yield on which rose fractionally by 0·02 per cent as against a decline of 0·18 per cent in 1958-59.

SHARE MARKET

The boom in share values noticed since January 1958 continued during the year under review and, despite occasional setbacks, mainly of a technical character the primary trend remained distinctly upward. The Reserve Bank's index number of prices of variable dividend industrial securities (base: 1952-53 = 100) rose from 146·8 at the end of March 1959 to a new peak of 168·8 during the week ended 12th March 1960 and stood at 161·7 at the close of the year. Over the year, there was thus a net rise of 10 per cent on top of a rise of 16 per cent during 1958-59. The aggregate net rise since January 1958, when the current boom started, amounted to 35 per cent, as against a net fall of about 26 per cent in the earlier bearish phase lasting from September 1956 to December 1957.

Compared to the rise in the variable dividend industrial securities, the rise in the price of fixed dividend industrial securities was much less marked. The index for preference shares registered a net rise of only 1·1 per cent during 1959-60, while that for debentures showed no net variation. In 1958-59, the indices for both had recorded net rises of 5 per cent and 2·6 per cent respectively. The pattern of yields on industrial securities showed a mixed trend; while the yields on debentures and preference shares hardened a little during 1959-60, that on variable dividend industrial securities continued to fall. The average yield on debentures rose fractionally from 4·05 per cent in March 1959, to 4·19 per cent in March 1960. The yield on preference shares declined initially from 5·75 per cent in March 1959 to 5·54 percent in August 1959 but subsequently rose to 5·89 per cent by March 1960. The average yield on variable dividend industrial securities, on the other hand, declined more or less continuously from 5·81 per cent in March 1959 to 5·07 per cent in March 1960, a net fall of 0·74 per cent this followed a net decline of 1·43 per cent in 1958-59 and a rise of 1·19 per cent in 1957-58. The average yield on variable dividend industrial securities at 5·07 per cent for March 1960 showed a decline of about 0·6 per cent as compared with the level of 5·64 per cent reached in August 1956, when the market was on the crest of a boom phase.

From December 1946, the Reserve Bank of India started constructing indices of security prices. These indices (all-India) reveal the following trend :—

Average of Weeks	Government & Semi-Government Securities	Industrial Securities		Banks	Insurance	Investment Trusts	Electricity Generation and Supply	Shipping and other Transport	Railways	Tea Plantations	Cotton, Woollen and Silk Mills	Jute Mills	Coal	Mining	Iron and Steel	General Engineering	Sugar and Breweries	Chemicals	Paper	Cement

CAPITAL ISSUES

The new issue market, which had tended to be somewhat slack in 1958-59, blazed into activity during the year under review, reflecting mainly the steadily growing volume of investible funds in the context of a relative scarcity of floating stocks, especially of first class scrips. The response to new industrial issues, as in 1958-59, continued to be excellent, a number of such issues being heavily oversubscribed. According to preliminary official data, the total capital raised by all non-Government companies through shares (other than bonus and debentures amounted to Rs. 65·2 crores in 1959, which was as much as 18 per cent higher as compared to 55·2 crores for 1958. The preliminary figure for 1959 is likely to be revised upwards and it seems likely that the amount of capital raised in 1959 would exceed that in 1957 also (of Rs. 68 crores.)

Data on *consents* for the issue of capital granted by the Controller of Capital Issues indicate a much higher level of investment intentions in 1959 in the private sector. Total consents granted to the private sector (*i.e.* to non-Government companies) for raising capital through shares (other than bonus) and debentures amounted to Rs. 112 crores in 1959—the highest level reached in any year since 1947. The corresponding figures for 1958 and 1957 were Rs. 66 crores and Rs. 77 crores, respectively. Of the increase of Rs. 46 crores in consents to the private sector in 1959, two-thirds were accounted for by initial issues (*i.e.* issues of new companies) which rose steeply from Rs. 18·5 crores in 1958 to Rs. 49·1 crores in 1959, their share in total consents rising from 28 to 44 per cent. Security-wise, ordinary shares accounted for about four-fifths of the total consents to the private sector for shares (other than bonus) and debentures, while preference shares and debentures accounted for about one-tenth each. In 1958, ordinary shares had accounted for 61 per cent, debentures for 25 per cent and preference shares for the balance of 14 per cent of total consents. Foreign participation in the total consents granted to the private sector (*i.e.* excluding Government companies, but including bonus and miscellaneous issues) in 1959 was appreciably higher at Rs. 33 crores as against only Rs. 12·5 crores in 1958. As in 1958, in 1959 also, there were no consents for World Bank loans. Of the total foreign participation of Rs. 33 crores, Rs. 21·7 crores or two-thirds were accounted for by new companies and of this, Rs. 14 crores were in respect of ordinary shares of Oil India (Private) Ltd. In the first quarter of 1960, total consents for shares (other than bonus) and debentures in respect of companies in the private sector (*i.e.* to non-Government companies) amounted to Rs. 11·9 crores of which Rs. 10·6 crores were in the form of shares and Rs. 1·3 crores in debentures. Foreign participation involved, amounted to Rs. 2·2 crores.

An important development in capital issues control during the year was the raising by the Government of India, towards the close of August 1959, of the exemption limit applicable to capital issues (other than bonus issues) laid down under the Capital Issues (Exemption) Order 1959 from Rs. 5 lakhs to Rs. 10 lakhs per year. The exemption limit will apply to all issues of capital (other than bonus issues) except those made by banking and insurance companies and provident societies incorporated as companies, for which irrespective of the amount of issue involved, a consent order would be necessary. For issue of bonus shares either by capitalisation of reserves created out of profits or of share premium also a consent order under the Act would be necessary irrespective of the amount. One other recommendation of the Advisory Committee for liberalisation of capital issues control, which was reported to have been accepted by Government was that, in considering applications for issue of bonus shares, 20 per cent residual reserves test might be relaxed, in suitable cases, on merits at the discretion of the Controller of Capital Issues, and the test of undercapitalisation should be liberalised to the extent of permitting an increase in capital upto the amount of capital employed by the Company.

PUBLIC COMPANIES

The main features of the Company Act are:

(1) Equity shares with differential rights regarding voting, dividend, participation in capital on dissolution, are prohibited.

(2) It puts restrictions on inter-company loans and investments.

(3) There is a ceiling on overall managerial remuneration.

(4) Most decisions of the management and even of the Shareholders of a Company require the approval of the Government before they are put into effect.

(5) The appointment of a managing agent or an associate as a selling or buying agent outside India requires approval by a special resolution.

Working of Companies Act during 1959-60

During 1959-60, a record number of companies totalling 1,452 was registered in the country, according to the fourth Annual report on the working of the Act placed on the table of Lok Sabha on 6th March 1961. Indeed, the current year's registrations slightly exceeded even the total registrations of the year preceding the coming into force of the Companies Act on 1st April 1956. The latest figures would appear to be specially significant in the context of the trend of registrations noticed during the period 1956-57 to 1958-59 when they steadily rose from 848 in 1956-57 to 961 in 1957-58 and to 1,095 in 1958-59.

Of the total number of 1,452 companies formed during the year, 87 were registered as public companies and 1,365 as private companies. The number of newly registered public companies was higher than those registered during the earlier three years. The Statewise distribution of companies further reveals one interesting trend, *viz.* that the number of new company floatations has significantly gone up in the State of Madras during the year under review. As compared with 80 new companies set up in 1957-58 and 113 in 1958-59, the number of newly formed companies during the year under review in that State was as large as 345. During the quarter ending Sept. 30, 1960, 121 companies (15 public and 106 private) with a total authorized capital of Rs. 2,878·33 lakhs were registered in the Western region comprising Maharashtra, Gujarat and Madhya Pradesh.

The total number of Government companies, big and small, set up during the year under review was 23, as against 16 in 1958-59 and 18 in 1957-58. The authorised capital of the 23 Government companies formed during the year totalled Rs. 30 crores as against Rs. 98 crores in 1958-59 and Rs. 9 crores in 1957-58. The total number of Government companies since the present Companies Act came into force upto the end of 1959-60, came to 70.

As before, an overwhelming number of newly formed companies preferred to have managing directors and boards of directors to manage their affairs. In the total of 1,452 new companies 508 proposed to have managing directors and 924 proposed to be run directly by boards of directors. The number of companies which proposed to have managing agents was 14 during the year under review as against 7 in 1958-59 and 15 in 1957-58.

As a result of the vigorous policy to remove the dead weight from the registers of companies, the overall number of joint stock companies at work came down approximately to 26,921 at the end of 1959-60 from 27,479 companies reported to be at work at the end of 1958-59. Notwithstanding this fall in the number of companies, the total amount of paid-up capital of the companies at work increased by Rs. 83 crores during the year under review. In this overall net increase of capital, the amount raised by the newly floated companies was reported to be Rs. 3·6 crores.

During 1959-60, 40 applications involving a total amount of loans worth Rs. 2·26 crores were received seeking approval of the Central Government under Section 295 of the Act, whereas 19 applications relating to the proposed inter-company investments amounting to Rs. 3·25 crores were presented to the Central Government for its approval under Section 372 of the Act. Of the applications made under Section 295 of the Act, 22 applications in respect of loans amounting to Rs. 2 crores were approved and 14 applications relating to loans involving a total sum of Rs. 21 lakhs were either rejected or withdrawn. As regards inter-company investments, of the 26 applications including 7 pending cases from last year, 18 applications relating to the proposed inter-company investments of the

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

order of Rs. 1·98 crores were approved and 66 applications involving investments of Rs. 72 lakhs were rejected

The year 1959-60 was a year of stricter enforcement of the provisions of the Companies Act. The Administration had become strict not only in the matter of launching prosecutions for the defaults committed under the various provisions of the Act but also in such matters as giving sanction for the extension of time to hold annual general meetings, the extension of the period covered by the financial years of the accounts etc. As regards prosecution, during the year under review, the Administration launched 5,252 prosecutions under the various sections as against 2,498 in 1958-59, 1,305 in 1957-58 and 572 in 1956-57. Taking the new and old cases together, the Administration followed up 6,894 cases during 1959-60, of which 3,195 cases were decided during the year.

At the end of the year under review, 3,075 companies were in liquidation; 899 were in compulsory liquidation, 29 liquidation under the supervision of the courts and 2,147 in voluntary liquidation. Of the cases under the last-mentioned category 1,504 cases were under members' voluntary liquidation and 643 under creditors' voluntary liquidation. Of the total, about 154 companies were in liquidation for over 15 years, 315 between 10 and 15 years, 951 between 5 and 10 years and 1,655 for less than 5 years.

Tue year under review marked the beginning of the impact of the provisions of Section 330 of the Act, which provided that in the case of companies having managing agents at the commencement of the Act, the term of office of such managing agencies, if it did not expire earlier, was to expire on the 15th August 1960 unless before that date they were re-appointed for a fresh term in accordance with the provisions of the Act. From 1st April 1959 to 15th August 1960, before which date the companies had to comply with the provisions of sec. 330 of the Act in regard to appointment and re-appointment of managing agents, Government accorded approval to 999 cases and 162 cases were either rejected or withdrawn.

The Commission's Report for the year under review reveals the trend of its thinking on the two important matters, *viz.* guarantee commission and sharing of managing agency remuneration with third parties.

In the course of their examination of the proposals of companies for appointments and reappointments of managing agents etc., the Commission's Report says that, in some cases, the amount paid by way of guarantee commission was very high and out of proportion to the remuneration paid to the managing agents in terms of the managing agency agreement. Having regard to the fact that in the great majority of cases, the guarantees had never to be invoked and the loans or advances granted by the lending institutions were usually fully secured by pledges or mortgages, and since the guaranteeing of loans was generally regarded as part of the comprehensive services to be rendered by the managing agents, the Commission came to the conclusion that it would be necessary to impose certain restrictions on the payment of guarantee commission.

As regards sharing of managing agency remuneration with third parties, the Commission also came across certain cases where the managing agents/secretaries and treasurers were sharing their remuneration with third parties in return for certain services rendered by the latter. In some cases, the sharing of remuneration was stated to be on account of certain arrangements entered into with the third parties with a view to procuring their votes in connection with resolutions to be passed by the companies concerned in general meetings. While there would appear to be no legal objection to such sharing arrangements so long as the managed companies are not in any way bound thereby, the Commission is of the view that the sharing of remuneration for purposes such as the procuring of votes can hardly be regarded as a sound business practice and deserves to be discouraged.

An important administrative measure taken during the year under review was the reconstitution of the Company Law Advisory Commission which enquires into and advises the Central Government on matters concerning company management, such as the appointment/reappointment of managing agents, secretaries and treasurers, managing directors and whole-time directors etc. enumerated in Sec. 411 of the Act.

The Report discloses that the administration of the Companies Act yielded receipts under diverse heads to the tune of Rs. 30 lakhs to the Central and to State Governments during the year under review. Receipts from fees alone amounted to Rs. 26 lakhs. The expenditure on the administration of the Act during the year was around Rs. 36 lakhs, and the excess of expenditure over receipts amounting to Rs. 61 lakhs, considering the nature and scope of the Act, was only of marginal significance.

FINANCE CORPORATIONS

Under the Industrial Finance Corporation Act, a Corporation was established on July 1, 1948 to provide medium and long-term finance to public limited companies and co-operative societies registered in India, including the acceding States, and engaged in the manufacture or processing of goods or in mining or in the generation or distribution of electricity or any other form of power. Individuals, partnership firms or private limited companies are thus excluded from the purview of the Corporation's operations. With the setting up of a number of State Financial Corporations, it was agreed that applicants for loans upto Rs. 10 lakhs or 10 per cent of the paid-up capital of the State Financial Corporation of the State in which they are situated, if that was lower than Rs. 10 lakhs, should be advised to apply not to the Industrial Finance Corporation but to the State Financial Corporation concerned.

An Act to provide for the establishment of State Financial Corporations was passed in October 1951. The Act enables the State Governments to establish a Financial Corporation for the State under a name to be specified by notification; and the State Government concerned, the Reserve Bank, scheduled banks, insurance companies, investment trusts, co-operative banks and other financial institutions will be entitled to subscribe to the share capital. Parties other than these can also be shareholders; but their aggregate holding will not exceed one-fourth of the total capital. The shares allocated will not be transferable except to the State Government, the Reserve Bank or any other recognised financial institution.

One more financial Corporation, namely, the Jammu and Kashmir State Financial Corporation was established on 2nd December, 1959.

Up to the end of March 1960, 14 States had established State Financial Corporations—Punjab, Madras, Bombay*, West Bengal, Kerala, U.P., Rajasthan, Assam, Bihar, Madhya Pradesh, Andhra, Orissa, Mysore and Jammu and Kashmir.

Yet other financial corporations are: The Industrial Credit and Investment Corporation of India, the Refinance Corporation for Industry Private Ltd., The National Industrial Development Corporation and The National Small Industires Corporation. For statistical details about these corporations, the State Financial Corporations and the Industrial Financial Corporation see under 'Late Particulars'.

BULLION

The following table gives details about the trend of silver production from 1956 to 1959:—

(In millions of ounces)

Countries	1956	1957	1958	1959
United States of America	38·7	38·7	36·8	24·0
Mexico	43·1	47·1	47·6	43·2
Canada	28·4	28·8	31·1	32·9

Total Coinage	56·5	84·2	63·1	84·2
Total Consumption ..	266·7	297·2	250·5	296·0

Note : The consumption estimates are by Handy and Harman in their review of the Silver Market of 1959.

In the world silver markets, firm conditions prevailed during the most part of 1959. In the U.S.A., besides the fall in production, the imports were also lower (by about 17 per cent), as the silver from other producing countries normally sold in the U.S.A., was diverted to more advantageous markets. Periodically, domestic consumers bought Treasury silver in varying amounts to meet their requirements, such Treasury sales during 1959 being estimated at 72 million ounces of which sales to industry amounted to 33 million ounces as against only 1·3 million ounces in 1958. The price (per ounce) ranged between 89·88 cents and 91·20 cents as against 89·04 cents in 1958. In the U.K., the last of the wartime restrictions on the import and export of silver were removed during the year and no licences are now required except for import of silver from the U.S.S.R. The price (per ounce) in the London silver market ranged between 75·88d. and 80·25d. during 1959. The average price for the year 1959 stood at 78·82d. as against 76·21d. in 1958.

World production of silver (excluding the Communist bloc countries) fell from 211·3 million ounces in 1958 to 195·6 million ounces in 1959—a decline of 7 per cent. In 1958, the production had risen by 3 per cent. The fall in production during 1959 was attributed largely to the strikes in the non-ferrous metal industry in the U.S.A. On the other hand, demand for silver increased substantially in 1959. World consumption of silver is estimated to have risen by 18 per cent from 250·5 million ounces in 1958 to 296·0 million ounces in 1959 ; in 1958, the consumption had fallen by 16 per cent. Reflecting the improved business conditions the world over the art and industries consumed 13 per cent more (211·8 million ounces) than in 1958 (187·4 million ounces). The coinage consumption too rose from 63·1 million ounces to 84·2 million ounces or by 33 per cent. The marked rise in coinage consumption was due principally to new coinage programmes in France and Italy. Available information indicates that the new coinage programmes will consume 58 million ounces of silver in France and 24 million ounces in Italy. The coinage consumption in the U.S.A., which had fallen from 52·0 million ounces in 1957 to 36·2 million ounces in 1958 also rose to 40·7 million ounces in 1959.

The following table gives the average silver quotations in New York and London from 1952 to 1959:

	New York Average	London Spot
	Cents	Pence
1952	84·94	74·36
1953	85·19	73·94
1954	85·25	73·48
1955	89·10	77·51
1956	90·83	79·13
1957	90·82	78·93
1958	89·04	76·21
1959	91·20	78·82

GOLD

Abroad, fluctuations in international gold prices continued to be confined to a narrow range in 1959 also. In the London gold market, the spread between the high and the low points was slightly lower during the year, being 1s. 9¼d. as compared with 2s. 2¼d. in 1958. In the New York silver market, the range was 1·75 cents—about the same as in 1958.

World production during 1959 (excluding that in U.S.S.R. for which figures are not available) increased by 7 per cent from 30·3 million ounces to 32·4 million fine ounces mainly because of a record production of gold in the Union of South Africa estimated at over 20 million fine ounces. On the demand side, there were indications that the private demand for gold had increased during the year. Although the offtake for purposes of hoarding was reported to have been lower in the Middle and Far East as well as in Europe, the purchase of gold for investment appears to have increased markedly mainly as a hedge against a possible increase in the dollar price of gold. There were important developments during the year facilitating the purchase of gold by private parties. In April 1959, it was announced that the South African Reserve Bank was prepared to sell gold bars to private purchasers resident outside the Sterling Area if the prices offered were better than those quoted on the London market. Substantial purchases of gold were reported to have been made directly from South Africa during the year under the new agreement.

With the restoration, at the end of 1958, of the external convertibility of the pound sterling together with most of the leading world currencies and the permission given in March 1959 to the London gold market for undertaking forward transactions in gold, increasing use was being made of the London market as a clearing house for international settlements. Business which had been diverted to other centres began to flow back to London with the result that the turnover in the London market was reported to have increased by about 50 per cent in 1959. The greater part of the offtake consisted of purchases by Central banks in Europe and elsewhere. During 1959, total official gold stock (excluding the Chinese-Soviet group of countries) increased by $819 million as against $905 million in 1958. Soviet gold sales during the year were larger than in 1958 and were estimated at about 7 million ounces as against 6 million ounces in the previous year. The price of gold in the London market ranged between 248s. 11⅞d. and 250s. 9d. per ounce. The average price for the year 1959 at 249s. 10·34d. was nearly the same as in 1958—(249s. 9·51d.).

Assaying and Refining of Gold and Silver

Some relevant statistical data are given below:— (Thousands of tolas)

Year	Melting and Assaying		Refining	
	Gold	Silver	Gold	Silver
1954–55	75	73,67	13.39	8,19
1955–56	20	45,38	10,42	17
1956–57	11	144,18	10,77	12
1957–58	12	130,71	9,63	7
1958–59	8	84,31	13,53	19
1959–60	8	66,38	8,35	—

In India, the domestic production of gold declined further—for the fifth year in succession—during 1959. The output (the whole of which, is being acquired by the Government of India since June 1958) amounted to 165,396 ounces in 1959 as compared with 170,109 ounces in 1958; it was 239,168 ounces in 1954. The decline in production was mainly due to the continued fall in the grade of the ore mined and temporary suspension of operations due to labour trouble in one of the Mysore mines. In silver, the output, which had declined sharply in 1958 to 109,827 ounces, rose to 124,799 ounces in 1959, which, however, was still somewhat lower than that in 1957 (125,838 ounces). The tight supply position in both metals arising from the virtual drying up of other sources of supplies was further accentuated by sustained demand and led to boom conditions in the market.

During 1959-60, the ready rate in gold recorded a rise of Rs. 10·06 (or 8·4 per cent) from Rs. 120·28 to Rs. 130·34 per tola; in 1958-59 the rise was Rs. 8·97 (or 8·1 per cent). In silver, the rise during 1959-60 was Rs. 16·62 (or 8·3 per cent) from Rs. 199·94 to Rs. 216·56 per 100 tolas; in 1958-59, the rise was Rs. 4·19 (or 2·1 per cent).

Reflecting a tight supply position in the face of sustained demand for the ready, futures trading in the Bombay bullion market under the auspices of the Bombay Bullion Association was characterised by an orgy of speculation, with bulls dominating the market aided among other things, by the boom in the stock and commodity markets.

Automatic margin under bye-laws 33C and 33D came into operation more frequently than in 1958-59. Margins in terms of bye-laws 33C, which are based on price variations, became operative ten times in gold and eleven times in silver as compared to three times in gold and six times in silver during the preceding year. Similarly margins in terms of bye-laws 33D, based on changes in the budla rates, became operative nineteen times in gold and fourteen times in silver as against twelve times in gold and five times in silver during 1958-59. Special clearings, under bye-law 104(2), designed to ensure prompt payment of differences when price fluctuations become excessive were necessitated thrice during the year as against twice in 1958-59.

A small increase in the volume of futures business in silver from 0·8 million bars (each bar weighing approximately 1,000 ounces) in 1958-59 to one million bars in 1959-60; the turnover in gold, however, showed a small decline from 36·8 million tolas to 36 million tolas. The unhealthy trends in the market, as indicated by successive rises in bullion prices, became more pronounced during the latter part of the year, necessitating the resort, in November 1959, to bye-law 33A(3) under which the Board is empowered to impose special margins and more importantly, the adoption by the Board, later in the year, of measures to further tighten up the existing margin system through the amendment of bye-law 33A and to provide relief to bears through the amendment of bye-law 33D.

Smuggled gold seized by Customs during 1956, 1957 and the first half of 1958: 378,183 tolas of gold and 1,887 sovereigns.

This was because price in India was around Rs. 105 per tola, as against Rs. 62·50 per tola outside.

The following statement gives the highest and lowest spot prices of gold and silver in Bombay with import duties from 1952-53 to 1959-60:—

Year.	Gold (per fine tola). Highest.	Lowest.	Average.	Import Duty.	Silver (per 100 tolas gross). Highest.	Lowest.	Average.	Import Duty.

NATIONAL INCOME

ACCORDING to preliminary estimates, national income (at constant prices) for 1958–59 recorded a significant rise over the previous year; this followed a set-back experienced in 1957–58 to the steadily rising trend noticed since 1949–50. At constant (1948–49) prices, the preliminary estimate of national income, that is, net national output at factory cost for 1958–59 is placed at Rs. 11,690 crores as compared to the revised figure of Rs. 10,890 crores for 1957–58; the rise in 1958–59 was of the order of 7·3 per cent in contrast to the decline of 1 per cent in 1957–58. The per capita income at constant prices during 1958–59 rose by 6 per cent to Rs. 293·6, as against a decline of 2·2 per cent in 1957–58. The increase in national income during 1958–59 was brought about mainly by the substantial expansion in agricultural production during the year. Out of a total increase of Rs. 800 crores (at constant prices) in national income in 1958–59, the "agricultural sector" accounted for as much as Rs. 570 crores. Among the other sectors, there was a rise of Rs. 100 crores under "commerce, transport and communications", of Rs. 120 crores under 'other sectors', and Rs. 10 crores under "mining, manufacturing and small enterprises".

Expressed at current prices, national income in 1958–59 worked out at Rs. 12,470 crores or Rs. 10,70 crores higher than in 1957–58 (revised). Per capita income at current prices also showed a rise from Rs. 290·1 in 1957–58 to Rs. 313·2 in 1958–59.

The national income of India in real terms recorded a rise of 0·5 per cent in 1959–60 over 1958–59, according to the "quick" estimates prepared by the Central Statistical Organisation on the basis of the trends disclosed by the current available data. There was a fall of 3·9 per cent in agriculture (proper) the contribution of which accounted for 38·7 per cent of the total national income in 1959–60 as compared with 40·5 per cent in 1958–59. This fall in agriculture, was, however, more than offset by increases in other sectors, which taken together, registered a rise of 3·4 per cent. in 1959–60 over 1958–59, bringing about an increase in the contribution of these sectors from 59·5 per cent in 1958–59 to 61·3 per cent in 1959–60. The present estimates are tentative as they are based on certain advance information and may be revised in the annual paper prepared by the Central Statistical Organisation for 1959–60.

The table below indicates the trend of national income (or net national output) at 1948-49 prices since 1949-50:

Year	Net National Output at 1948-49 prices (Rs. crores)	Per capita net output at 1948-49 prices (Rs.)
1949-50	8,820	248·6
1950-51	8,850	246·3
1951-52	9,100	250·1
1952-53	9,460	256·6
1953-54	10,030	268·7
1954-55	10,280	271·9
1955-56	10,480	273·6
1956-57	11,000	283·5
1957-58	10,890	277·1
1958-59	11,650	292·6
1959-60 .. .. (Preliminary)	11,760	291·6

According to the paper, during the First Five-Year Plan period (1951-52 to 1955-56) the national income in real terms increased by 17·7 per cent, as against the original plan target of 11 per cent. The corresponding rise in the per capita income was 10·5 per cent.

BY ORIGIN

The following table indicates national income (at constant prices) by industrial origin:

(In crores of Rs.)

	1957-58	1958-59 (Preliminary)
Agriculture, animal husbandry and ancillary activities	5,010	5,580
Mining, manufacturing and small enterprises	1,860	1,870
Commerce, transport and communications	2,110	2,210
Other Services	1,920	2,040
Total	10,890	11,690

Expressed at current prices, the rise was very significant and higher, from Rs. 11,400 crores in 1957–58 to Rs. 12,470 crores in 1958–59 or 9·3 per cent.

The per capita national income at current prices, however, showed a slight decline from Rs. 291·5 in 1956–57 to Rs. 290·1 in 1957–58. In 1958–59, it was again higher at 313·2.

In 1958–59, the rise in national income was contributed by the agricultural sector of the economy. The rise in the share of agriculture, animal husbandry and ancillary activities in 1958-59 amounted to Rs. 900 crores. The share of mining, manufacturing and small enterprises rose by Rs. 20 crores. The share of commerce, transport and communications also increased by Rs. 40 crores. The rise in the share of other services was Rs. 110 crores.

In terms of *current* prices, there was a strident improvement in the agricultural sector, from Rs. 5,290 crores in 1957-58 to Rs. 6,190 crores in 1958–59, or by 17·0 per cent.

More detailed figures over a longer period are given below.

INDEX NUMBERS

The index numbers of national and per capita incomes are given below (1948-49 = 100)

VALUE OF PRODUCE

The net value of all agricultural commodities produced in 1950-51 was Rs. 4,112 crores. This figure is derived from the Final Report of the National Income Committee (Delhi, 1954). Corresponding figures for a later year are not yet available. The values of some of the individual commodities are as follows (in Rs. crores):

Arhar 83, Bajra 81, Barley 80, Coconut 76, Cotton 113, Chillies 68, Gram 147, Ground-nut 216, Jowar 194, Rape and Mustard 69, Rice 1,119, Straw 591, Sugarcane 305, Tobacco 71, Wheat 334.

The total net contribution of the manufacturing industries to the national dividend was Rs. 513·4 crores in 1950. The contribution of some individual industries are given below (Rs. crores):

Banking 36·29, Insurance 22·85, Co-operative Societies 5·98.

Automobiles and coach building 7·4, Cement 8·5, Chemicals 14·0, Cotton textiles 107·9, General and electrical engineering 29·4, Iron and Steel 26·9, Jute textiles 46·6, Paper and paperboard 6·6, Rubber and rubber manufacturing 10·1, Sugar 35·8, Tea manufacturing 69·3, Tobacco products 10·5, Vegetable oils 11·7.

Income from health and medical services 116, educational services 69, arts, literature and science 66, legal 32, religions and charitable 47, sanitary 37, domestic service 130.

INCOME DISTRIBUTION COMMITTEE

It must be added that the Planning Commission has constituted a Committee on Income Distribution and Levels of Living. The Committee's terms of reference are: To review changes in levels of living during the First and Second Five Year Plans; To study recent trends in the distribution of income and wealth and, in particular, to ascertain the extent to which the operation of the economic system has resulted in concentration of wealth and means of production.

The Committee will consist of:

Professor P. C. Mahalanobis (Honorary Statistical Adviser to the Government of India), Dr. V. K. R. V. Rao (Director, Institute of Economic Growth, Delhi), Dr. P. S. Lokanathan (Director-General, National Council of Applied Economic Research), Dr. B. N. Ganguli (Director, Delhi School of Economics), Vishnu Sahay (Cabinet Secretary), D. L. Mazumdar (Secretary, Department of Company Law Administration), Dr. B. K. Madan (Executive Director of the Reserve Bank of India), B. N. Datar (Adviser, Ministry of Labour and Employment) and P. C. Mathew (Director, Central Statistical Organisation) (Member-Secretary).

The Committee's enquiry will be at the expert level, its primary object being to ascertain such statistical and economic data as may be gathered at present, to identify the gaps in the existing information and to suggest steps for removing these deficiencies in the future.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

NEW METRIC SYSTEM OF WEIGHTS AND MEASURES

THE country started adopting the metric system of weights and measures on 1st October 1958.

On that date the units of mass were introduced in selected areas, and the metric system generally in certain specified industries and Government departments.

The law (The Standards of Weights and Measures Act, 1956) provides that the system should be adopted in the country within a period of ten years of the date of its enactment.

The law was passed in December 1956. After December 1966, therefore, it will be the only system recognized by law in the country.

Legislation for the enforcement of the new weights and measures has been enacted in all the States and Union Territories. They have also set up Departments of Weights and Measures under Controllers of Weights and Measures. Inspectors of Weights and Measures have been verifying and testing metric commercial weights for use in the areas which have adopted the new weights.

The Act was brought into force in regard to weights in selected areas, covering about a tenth of the country on Oct. 1, 1958. These areas are listed below. The continued use of weights then in vogue was allowed for a period of two years. This period ended on Sept. 30, 1960. The use of any weights other than metric in trade became illegal in these areas on Oct. 1, 1960.

Metric weights and measures were also introduced in transactions by establishments in major industries on Oct. 1, 1958—in the jute industry they came into force on July 1—though the retail trade was unaffected. A list of these industries is given below. Here also a period of two years was allowed in which the old weights and measures could be used. Since Oct. 1, 1960 these industries have been using the metric system.

Progressively more and more industries come within the purview of the Act always with a period of transition when the old and the new exist side by side. At the end of the transition period which could vary with each industry the new weights become compulsory and the old illegal. On Oct. 1, there were about 23 industries in this category. The textile trade was affected in April 1961.

It was also decided that Government departments and industrial undertakings could use the system from Oct. 1, 1958. A list is given below.

The commercial branch of the railways adopted the system on April 1, 1960. In passenger fare and freight tables distances are now expressed in kilometres and weights in quintals and kilogrammes. Distance along the track is now marked in kilometres.

It is necessary to add that industries which have not so far been notified for the use of metric weights and which are situated in the selected areas have also to use the new weights as from Oct. 1.

PROGRESS

About extension to other areas or the introduction of metric measures of length and capacity plans are still in a tentative stage.

On 4th Sept. 1959 a meeting of Controllers of Weights and Measures of the States and Union Territories was held in the Ministry of Commerce and Industry, to review the progress of the preparatory work for the introduction of the metric system in the country.

The meeting also agreed that, as far as possible, all the equipment needed for enforcement of weights and measures should be produced in India. Standard Weights and Measures are manufactured at the Government Mints.

With the coming into force of the States' Weights and Measures (Enforcement) Acts, all weights, measures, and weighing and measuring instruments must conform to the specifications laid down. A large number of machines now in use may not be according to specifications. It will not be practicable to ban the use of these machines immediately. Further, while most users of weighing machines may convert them to the metric system, others may choose to retain them as they are, and use them with conversion tables.

Provision is made in the Enforcement Rules of States to enable the State Government to permit for a specified period the continued use of any weighing or measuring instrument that was in use when the Rules came into force.

There is enough manufacturing capacity in the country to meet the demand for the new weights and measures.

There are about 242 licensed manufacturers, including some units in the public sector, and 972 dealers of metric weights and measures. They can meet the country's demand of weights and measures. It is hoped that manufacture of inspectors' balances would soon be adequate to meet the country's demands.

According to an estimate made by the National Sample Survey, there are about 54 million weights and 1 million measures in use all over the country.

A note may be added here about the adoption of the new system in higher technical education. The question was considered at a meeting of principals of technical institutions in New Delhi in Oct. 1960. The problem had become urgent because the metric system had been adopted in all the major industries.

At the same time, for several years to come, the foot-pound system would also have to be taught. Thus it was necessary that both the systems would have to be used simultaneously in engineering colleges. This might impose an extra load on teachers and students, but this was unavoidable.

The Principals agreed that there would be no major difficulty in adopting the metric system. The conference unanimously recommended the adoption of the metric system in teaching in the first and second year classes commencing from the academic session, 1962-63. The following year, i.e., 1963-64, it would be introduced in the third and fourth year classes, to be followed by the introduction in the fifth and final year classes in 1964-65.

It was explained that heads of technical institutions would take preparatory action to implement the programme. Steps would be taken to provide the institutions with measuring tools and instruments calibrated in metric units. The instruments now in use would be recalibrated wherever necessary and possible. All instruments to be purchased in future would be in the metric system. Steps would also be taken to encourage the production of text books either by translation from German or Russian or by adaptation of English text books.

AREAS

The areas in which metric weights were introduced on October 1, 1958 and became compulsory on Oct. 1, 1960 are as follows:

Andhra Pradesh: Districts of Vishakapatnam, Krishna, Guntur, Kurnool, Hyderabad, Warangal, Nizamabad.

Assam: Municipal area of Gauhati and District of Nowgong.

Bihar: Divisions of Bhagalpur and Ranchi and the Municipal and Notified areas in the districts of Patna, Gaya, Arrah, Chhapra, Muzzafarpur, Champaran and Darbhanga.

Gujarat: Municipal areas of Ahmedabad, Rajkot, Baroda, and all the Regulated Markets in the State.

Kerala: Districts of Kozhikode, Ernakulam and Quilon.

Madhya Pradesh: Districts of Sehore, Indore, Gwalior and Jabalpur.

Madras: Districts of Madras, Chingleput, South Arcot and North Arcot and all the Regulated Markets.

Maharashtra: Municipal areas of Bombay, Poona, Nagpur, Aurangabad, Sholapur, Kolhapur, Akola, Amravati, Wardha, Yeotmal, and the Regulated Markets.

Mysore: Districts of Bangalore, Raichur and Dharwar and the Regulated Markets.

Orissa: Municipal areas of Berhampur, Cuttack and Sambalpur.

Punjab: Districts of Amritsar, Jullundur, Ludhiana, Ambala, Patiala and Gurgaon and all the Regulated Markets.

Rajasthan: Districts of Ajmer, Bikaner, Jodhpur, Jaipur, Kotah and Udaipur.

Uttar Pradesh: Municipal areas of Meerut, Agra, Lucknow, Bareilly, Moradabad, Varanasi, Kanpur, Jhansi, Allahabad and Gorakhpur.

West Bengal: Municipal areas of Calcutta and Howrah.

In the case of Union Territories, the metric system was introduced in the whole of Delhi, in the two districts of Mandi and Sirpur in Himachal Pradesh, in the municipal areas of Imphal in Manipur, in the municipal area of Agartala in Tripura and in Port Blair in the Andaman and Nicobar Islands and the whole of Pondicherry.

Government Departments

The Government Departments in which the provisions of the Act came into force on 1st October 1958 by a notification dated 24th June were as follows:

1. The Indian Airlines and Air India International Corporations in so far as they undertake air transport services, except in matters relating to air distances and speed of aircraft.
2. Government Departments and commercial and industrial undertakings owned or controlled by Government in so far as they undertake the purchase or supply of stores, including drugs.
3. Government Departments in so far as they undertake survey of *land* or *mines*.
4. Government Departments in so far as they undertake the study or publication of any technical, scientific or marketing data relating to weather, irrigation and power projects or undertake drawings and specifications of scientific apparatus for use in laboratories and educational institutions except in matters relating to air distances and speed of aircraft.

The Customs and Central Excise, the Ports the Commercial Branches and Shipping and Import Trade Control adopted the system on Oct. 1, 1960. Legislation has been enacted expressing all customs and central excise duties with reference to metric units. The prevailing rates of duties were converted to metric units and appropriately rounded off without any significant change.

The Rajya Sabha on Dec. 15, 1960, returned, after a short debate the Indian Post Office (Amendment) Bill, as passed by the Lok Sabha.

The metric system came into effect in all postal transactions from Feb. 1, 1961.

The Bill seeks to introduce the metric system of weights and measures in Postal transactions.

Industries

The industries in which the Act came into force on 1st October 1958 were as follows:

*1. Cotton textile mills in so far as they undertake the purchase of cotton or sale of cloth.

* From April 1, 1961, textile mills can use only the metric system in the case of all textile goods.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

2. Iron and Steel factories in so far as they undertake the purchase of raw materials or sale of iron and steel products.
3. Factories engaged in engineering industry in so far as they undertake the sale of their products.
4. Factories engaged in the manufacture of heavy chemicals in so far as they undertake the purchase of raw materials or sale of their products.
5. Factories engaged in the manufacture of cement in so far as they undertake the sale of cement.
6. Factories engaged in the manufacture of salt in so far as they undertake the sale of salt.
7. Factories engaged in the manufacture of paper, pulp, or paper board in so far as they undertake the sale of paper, pulp, or board.
8. Factories engaged in the manufacture of refractories, in so far as they undertake the sale of refractories.
9. Coffee Board in so far as it undertakes the sale of coffee from the surplus pool either by itself or through its agents.
10. Factories engaged in the manufacture of copper, aluminium, lead, antimony and tin in so far as they undertake the sale of copper, aluminium, lead, antimony and tin including alloys and products of these metals.
11. Associations recognised by the Central Government under section 6 of the Forward Contracts (Regulation) Act, 1952 (74 of 1952) in so far as they undertake the regulation and control of forward contracts in cotton.
12. Sale of raw rubber.

On April 1, 1960 four more industries adopted the metric system—vanaspati, paint, biscuits and soap. The transition period for vanaspati and soap is six months, for paint one year and for biscuits two years.

The cement industry began packing cement in bags of 50 kilogrammes net from Oct. 1, 1960.

The distribution of petroleum products also started on April 1, 1960. All the petrol dispensing pumps have been converted to the metric system and petrol is retailed in litres.

THE ACT OF 1956

The Standards of Weights and Measures Act, 1956, is as is already mentioned, the basic law on the subject.

It now extends to the whole of India.

The Act was passed by Parliament in 1956 December, and some of its provisions came into force, as already mentioned, on 1st October 1958.

Within a period of ten years of its enactment the whole country is expected to adopt the metric system in full.

The units mentioned in the Act are as follows:

The primary unit of length is a metre, of mass a kilogram, of time a second, of electric current an ampere, of temperature the degree centigrade, of luminous intensity the candela, of area the square metre, of volume the cubic metre.

The primary unit of mass for precious stones shall be a carat which is equal to one-five-thousandth of one kilogram.

The Central Government may by notification declare the secondary units of mass and measures provided it is a power of ten, positive or negative.

In any area, or class of goods, or undertakings in which any provisions of this Act have been put in force, the Central Government can still permit the continuance of the use of such non-metric weights and measures as may be prevalent immediately before the coming into force of the Act in addition to the standard weights and measures that might have been put into force.

But the period for which the continuance of such use is permitted cannot exceed three years.

The Central Government can make rules to carry out the purposes of this Act, among others about the limits of error which may be tolerated in the use of the standard weights and measures.

The Act repeals the Measures of Length Act, 1889 and the Standards of Weight Act, 1939, and any provisions in the following Acts which correspond to any provisions in the present Act:

1. The Assam Adoption of Standard Weights Act, 1955 (IX of 1955).
2. The Bhopal State Weights and Measures Act, 1953 (XV of 1953).
3. The Bihar Weights Act, 1947 (XVII of 1947).
4. The Bombay Weights and Measures Act, 1932 (XV of 1932).
5. The Central Provinces and Berar Weights and Measures of Capacity Act, 1928 (II of 1928).
6. The Cochin Weights and Measures Act, 1112 (LXIII of 1112).
7. The Coorg Act, 1954 (VII of 1954).
8. The Hyderabad Weights and Measures Act, 1356 Fasli (XIV of 1356 Fasli).
9. The Madhya Bharat Weights Act, 1954 (21 of 1954).
10. The Madras Weights and Measures Act, 1948 (XXII of 1948), as in force in the State of Madras or of Andhra.
11. The Mysore Weights and Measures Act, 1902 (III of 1902).
12. The Orissa Weights and Measures Act, 1943 (VII of 1943).
13. The Punjab Weights and Measures Act, 1941 (XII of 1941).
14. The Rajasthan Weights and Measures Act, 1954 (XIX of 1954).
15. The Travancore Weights and Measures Act, 1085 (VI of 1085).
16. The United Provinces Weights and Measures Act, 1947 (XXIII of 1948).

The tables to enable conversion from non-metric to metric or *vice versa* weights and measures, which are given in the First Schedule to the Act, are reproduced below:

1 grain	= 0·000064799	kilogram.
1 ounce	= 0·0283495	,,
1 pound	= 0·4535924	,,
1 cwt.	= 50·802	,,
1 ton	= 1016·05	,,
1 tola	= 0·0116638	,,
1 seer	= 0·93310	,,
1 maund	= 37·3242	,,

Standards of Length and Capacity

1 inch	= 0·0254	metre (exact).
1 foot	= 0·3048	,, (,,).
1 yard	= 0·9144	,, (,,).
1 mile	= 1,609·344	,, (,,).
1 imperial gallon	= 4·54596	litres.

ENFORCEMENT ACT

The model Bill for the enforcement of weights and measures approved by a Conference called by the Standing Metric Committee in July 1957 has been accepted by all State Governments, and legislation based on the Bill has been enacted in all States. The State Acts are identical in substance.

It should be emphasized that Weights and Measures laws cannot be effectively administered without a special agency like an Inspectorate of Weights and Measures.

The 1939 Law made by the Central legislature was ineffective largely because even those States which made laws for enforcing the standards had no special agencies for this purpose. Enforcement was left to the police.

The only States that had special agencies were Bombay,* Bihar, Mysore, Andhra and the Punjab.

The position is different today. All State Governments have set up special departments of Weights and Measures.

The main provisions of the Madras Act, summarized below in non-legal language will serve as an example of the sort of Enforcement Acts which will be in force:

The Government will have sets of authenticated standard weights and measures which may be called working standards. They will also have sets of secondary standard weights and measures.

There will also be many sets of weighing and measuring instruments to verify the correctness of commercial weights and measures used in trade, business or commercial transactions.

No unit of mass or measure other than standard weight or measure can be used in any transaction once the Act has come into force in any area or in relation to any class of undertakings or goods.

Punishment for the transgression of this is a fine which may extend to Rs. 500 for a first offence, and for a second or subsequent offence with imprisonment for a term which may extend to three months, or with fine, or with both.

The Government has also the power to declare that any specific transaction can be conducted by weight only or by measure only.

Punishment for contravention will be a fine which may extend to Rs. 500.

Every weight or measure used in a transaction shall be made of such material and according to such design as may be prescribed and shall bear the description of the weight or measure marked legibly on it.

No commercial weight or measure or weighing or measuring instrument can be sold or delivered unless it is verified or re-verified, in the proper way.

Punishment for contravention is a fine which may extend to Rs. 500.

No one can have for sale any article which is sold by weight or measure in a sealed container unless the container shows the net weight or measure of the article.

Punishment for contravention for a first offence, a fine which may extend to five hundred rupees, and for a second or subsequent offence, imprisonment for a term which may extend to three months, or with fine, or with both.

If the size of a commercial weight or measure renders it impracticable to have any denomination marked on it Government may exempt such weight or measure from being marked or stamped.

No person can manufacture, repair or sell any commercial weight or measure or any weighing or measuring instrument without a licence.

Punishment for contravention is imprisonment for a term which may extend to three months, or fine, or both.

No one can have for sale any article which is sold by weight or measure in a sealed container unless the container shows the net weight or measure of the article.

Punishment for contravention is a fine which may extend to Rs. 500.

* Bilingual.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Whoever makes or sells weights or measures which he knows to be false, or fraudulently uses weights or measures which he knows to be false or is in possession of them for possible use shall be punished with imprisonment which may extend to one year, or with fine, or with both.

Whoever sells or delivers less than what is purported to be sold or delivered shall, if the deficiency exceeds the prescribed limit of error, shall be punished with fine which may extend to Rs. 500.

Whoever forges or counterfeits any stamp, shall be punishable with imprisonment for a term which may extend to one year, or with fine, or with both.

Whoever knowingly uses or sells or disposes of or exposes for sale weights or measures with such forged or counterfeit stamps on them shall be punishable with imprisonment for a term which may extend to six months, or with fine, or with both.

For administering the Act Government may have a Controller of Weights and Measures, Assistant Controllers and Inspectors.

The Inspector shall verify every weight or measure or measuring instrument which is brought to him, and if it is correct he will stamp it.

He may also inspect at all reasonable times weights and measures and measuring instruments used in transaction of trade and commerce.

Anyone who refuses or neglects to produce for inspection such weights or measures, or refuses to permit an Inspector to inspect or verify, or obstructs or hinders an Inspector shall be punished with a fine which may extend to Rs. 500.

He may also at reasonable times enter any place where weights and measures are used to inspect them.

He may also ask a trader or employee to produce before him weights and measures for inspection.

He may seize and detain a weight or measure with which an offence might be or might have been committed and also seize or detain any article which might have been sold by means of such weights or measures.

He may verify the weight or measure of an article sold or delivered.

He can also break open a sealed package to verify the contents where there is reasonable suspicion, and seize or detain the container and the article.

He can adjust weights and measures in any area where Government thinks such adjustment is necessary.

A manufacturer, repairer or dealer in weights and measures should maintain proper books, records and accounts.

Government may charge fees for grant of licence, verification, marking, stamping and adjustment.

Government may prescribe the limits of error in their own working standards, in commercial weights and measures, in selling articles, in weighing measures and instruments.

Government may make rules to carry out the purposes of this Act.

Any aggrieved person may appeal against a decision of the Inspector to the Controller and of the Controller to the Government. The decision of the appellate officer or of Government is final.

If an Inspector knowingly stamps a weight or measure or weighing or measuring instrument in contravention of the provisions of this Act, or of the rules made thereunder he shall be punishable with imprisonment for a term which may extend to one year, or with fine, or with both.

Cognizance of any offence under this Act can be taken by a court only on a complaint by a Controller or by someone authorized by him.

No court inferior to that of a presidency magistrate's court, or a magistrate of the first class can try any offences under this Act.

INDUSTRIAL STRUCTURE AND POLICY

FOR particulars about industrial structure one is dependent on the census compiled under the Industrial Statistics Act of 1942. The latest available census—twelfth in the series—are for 1957.

For the purpose of the census, only registered factories, which used power and employed 20 or more workers per day, were taken into account. The census was confined to 28 major industries in the country. The industries covered by the census are: cotton, woollen and jute textiles, chemicals, iron and steel, aluminium, copper and brass, bicycles, sewing machines, electric lamps and fans, general engineering and electrical engineering, glass and glassware, ceramics, cement, plywood and teachests, paper and paper-board, matches, tanning, paints and varnishes, soap, vegetable oils, starch, distilleries and breweries, sugar, fruit and vegetable processing, wheat flour, rice-milling and biscuit-making. Although the census is statutory, in practice reports are not received from all factories. In 1957, reports were not received from 15 per cent of the factories, while in 1946 20 per cent of the factories did not submit returns. The total value of output of registered factories in 28 major industries in India rose by nearly 174 per cent in the twelve years, 1946-57. The value of production in 1957 was over Rs. 1,646 crores, as against about Rs. 601 crores in 1946. The productive capital investment in the industries rose from about Rs. 367 crores in 1946 to about Rs. 1,063 crores in 1957. This includes fixed capital like buildings, plant and machinery, etc. and working capital like stock of raw materials, finished and semi-finished products, etc. The capital output ratio (productivity of capital) was 0·46 per unit of capital in 1957. The number of registered factories also increased by over 53 per cent during the period, that is, from 5,013 in 1946 to 7,754 in 1957. The number of persons employed in the factories also rose from 15·14 lakhs to more than 18·13 lakhs. The salaries and wages earned by them during the period have gone up by more than 100 per cent. The bill was for Rs. 101·8 crores in 1946 and Rs. 258 crores in 1957.

The Industrywise break-down of the aggregates is provided in the following table :—

(Value in crores of rupees)

Name of industry	No. of factories covered*	Productive capital		No. of persons employed	Salaries and wages	Materials, fuel, electricity, lubricants consumed	Total production	Value added by manufacture
		Fixed	Working					
Wheat flour	75 (88)	3·46	3·63	7,682	0·99	38·71	42·40	3·11
Rice milling	1,536 (1,744)	7·14	13·53	63,950	2·85	92·41	99·40	6·01

TECHNICAL PROGRESS

India now produces basic and conventional machine tools such as lathes, drilling machines, tool grinders and milling and planing machines. At one major production unit, the Hindustan Machine Tools Factory, the indigenous content in the manufacture of lathes now stands at 95 per cent. For milling machines and radial drills this percentage has come up to 80 per cent now.

Only a few years back almost the bulk of sugar machinery had to be imported. Now some 80 per cent of it, including high speed centrifuges, are being fabricated in India.

Substantial progress has been made in the electrical industry. India is today making all the distribution transformers, electrical motors and switch gear; and when the Heavy Electrical Project in Bhopal goes into production, the country would attain self-sufficiency.

The ratio between the consumer goods and capital goods industries—a yardstick of advance—between 1840 and 1960 has declined steeply.

In 1953 the country had, by and large, only assembly plants for automobiles. Taking the different types of vehicles, the indigenous content varied between 50 and 73 per cent and was expected by the end of the Second Plan to go up to 75 to 85 per cent.

An attempt has been made in India completely to engineer, design and manufacture a penicillin factory. For details about the Penicillin factory at Pimpri, see "Government Industrial Undertakings".

Production of sulphuric acid, which is one of the conventional yardsticks of industrial advance, went up from 100,000 tons in 1951 to about 250,000 tons in 1958. A few years ago, the entire plant and equipment used to be imported. Recently, 50 per cent of a new plant was locally fabricated.

The Sindri Fertiliser Factory was conceived by foreign scientists, and was designed, fabricated and installed by them. The people who are running that Factory have shown enough confidence in themselves to contract for more than Rs. 8 crores out of approximately Rs. 16 crores estimated to be the cost of the new fertiliser project in Rourkela; and out of Rs. 8 crores, work of at least Rs. 5 crores would be done indigenously.

During the year 1959-60 the Shipyard delivered 4 ships (M. V. "Rajkumar", M. V. "Indian Industry", I. N. S. "Dhruvak" & M.V. "Jayalakshmi") aggregating to 14,873 GRT and two ships I. N. S. "Darshak" and M. V. "State of Uttar Pradesh" were launched. The State of Uttar Pradesh was delivered in January 1961. A series of two vessels of 9,500 DWT each were launched and construction of 3 more ships of 12,300 DWT was commenced in 1960-61. The range of vessels built at the Shipyard includes cargo, cargo-cum-passenger, survey, mooring vessels, barges and tugs.

At the Integral Coach Factory, whereas in the earlier batches raw material and fittings worth Rs. 37,000 per coach had to be imported (including steels of requisite weldable quality costing Rs. 19,000), in the latest batches the imported items have been cut down to Rs. 18,000 only per coach. With steel plates and sheets available within the country in 1960-61, the coach would be 95 per cent indigenous in its raw material content.

INDUSTRIAL POLICY

There are general considerations bearing on the formulation of industrial policy in the context of planning. The Government of India's industrial policy after Independence was shaped broadly in terms of the Industrial Policy Resolution of 1948. (The text is given in the 1959 *Directory*.) That Resolution emphasised the responsibility of Government in the matter of promoting, assisting and regulating the development of industry in the national interest. It envisaged for the public sector an increasingly active role. While it reiterated the inherent right of the State to acquire any industrial undertaking whenever the public interest required it, it laid down, in view of the circumstances then existing, a certain demarcation of fields for the public and private sectors.

Important developments took place after the Resolution was adopted in 1948. There was a clearer appreciation of the goals and direction of development. Planning proceeded on a more organised basis, and it became essential to strengthen and accelerate this effort in the coming years.

The 1948 Resolution was reviewed in the light of these considerations and the experience gained so far, and a new Industrial Policy Resolution was placed before Parliament by the Prime Minister on 30th April 1956. The text of this is given below.

This is now the accepted industrial policy of the Government.

The major part of Government's policy is concretised in the Five Year Plans, the first of which started in 1951 as also in a series of industrial undertakings collectively known as the public sector. These are dealt with in the article entitled "Government Industrial Undertakings".

In the First Plan the target outlay on industrial development both in the public and private sectors was Rs. 327 crores, about 8 per cent of the total target, outlay on the whole plan. The main emphasis was on agriculture, irrigation and power.

Of this the target for the public sector was Rs. 94 crores and the private Rs. 233 crores. But while the actual investment in the private sector was about the same as the target, in the public sector the actual investment was of the order of Rs. 60 crores.

In the Second Plan the industries and minerals were allocated Rs. 880 crores out of a total Plan outlay of Rs. 4,800 crores.

In the Third Plan the industries and minerals have been allocated Rs. 1,500 crores out of a total Plan outlay of Rs. 7,250 crores.

During 1957-58 the problem of foreign exchange became so acute that a list of what might be called 'core' projects had to be drawn up.

THREE CATEGORIES

The following is a summary of the text of the industrial policy resolution placed before Parliament by the Prime Minister on 30th April 1956:

These basic and general principles were given a more precise direction when Parliament accepted in December, 1954, the socialist pattern of society as the objective of social and economic policy. Industrial policy, as other policies, must, therefore, be governed by these principles and directions.

The Government of India have in consultation with the Planning Commission, decided to classify industries into three categories having regard to the part which the State should play in each of them. It should also be remembered that it is always open to the State to undertake any type of industrial production.

In the first category will be industries, the future development of which will be the exclusive responsibility of the State. The second category will consist of industries, which will be progressively State-owned and in which the State will, therefore, generally take the initiative in establishing new undertakings, but in which private enterprise will also be expected to supplement the efforts of the State. The third category will include all the remaining industries, and their future development will, in general, be left to the initiative and enterprise of the private sector.

Industries in the first category have been listed in Schedule A of this resolution. All new units in these industries, save where their establishment in the private sector has already been approved, will be set up only by the State. This does not preclude the expansion of the existing privately owned units, or the possibility of the State securing the co-operation of private enterprise in the establishment of new units when the national interests so require.

Railways and air transport, arms and ammunition and atomic energy will, however, be developed as Central Government monopolies. Whenever co-operation with private enterprise is necessary, the State will ensure, either through majority participation in the capital, or otherwise, that it has the requisite powers to guide the policy and control the operations of the undertakings.

Industries in the second category will be those listed in Schedule B. With a view to accelerating their future development, the State will increasingly establish new undertakings in these industries. At the same time private enterprise will also have the opportunity to develop in this field, either on its own or with State participation.

All the remaining industries will fall in the third category and it is expected that their development will be undertaken ordinarily through the initiative and enterprise of the private sector, though it will be open to the State to start any industry even in this category. It will be the policy of the State to facilitate and encourage the development of these industries in the private sector, in accordance with the programme formulated in successive Five-Year Plans, by ensuring the development of transport, power and other services, and by appropriate fiscal and other measures.

The State will continue to foster institutions to provide financial aid to these industries, and special assistance will be given to enterprises organised on co-operative lines for industrial and agricultural purposes. In suitable cases, the State may also grant financial assistance to the private sector. Such assistance, especially when the amount involved is substantial, will preferably be in the form of participation in equity capital, though it may also be in part in the form of debenture capital.

Industrial undertakings in the private sector have necessarily to fit into a framework of the social and economic policy of the State and will be subject to control and regulation in terms of the Industries (Development and Regulation) Act and other relevant legislation. The Government of India, however, recognise that it would, in general, be desirable to allow such undertakings to develop with as much freedom as possible, consistent with the targets and objectives of the national plan. When there exist in the same industry both privately and publicly owned units, it would continue to be the policy of the State to give fair and non-discriminatory treatment to both of them.

In appropriate cases, privately owned units may be permitted to produce an item falling within Schedule A for meeting their own requirements or as by-products. There will be ordinarily no bar to small privately owned units undertaking production, such as the making of launches and other light-craft, generation of power for local needs and small scale mining. Further, heavy industries in the public sector may obtain some of their requirements of lighter components from the private sector, while the private sector in turn would rely for many of its needs on the public sector. The same principle would apply with even greater force to the relationship between large-scale and small-scale industries.

COTTAGE INDUSTRIES

The State has been following a policy of supporting cottage and village and small scale industries by restricting the volume of production in the large-scale sector, by differential taxation, or by direct subsidies. While such measures will continue to be taken, whenever necessary, the aim of State policy will be to ensure that the decentralised sector acquires sufficient vitality to be self-supporting and its development is integrated with that of large-scale industry.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

The State will, therefore, concentrate on measures designed to improve the competitive strength of the small-scale producer. For this it is essential that the technique of production should be constantly improved and modernised, the pace of transformation being regulated so as to avoid, as far as possible, technological unemployment.

Lack of technical and financial assistance, of suitable working accommodation and inadequacy of facilities for repair and maintenance are among the serious handicaps of small-scale producers. A start has been made with the establishment of industrial estates and rural community workshops to make good these deficiencies. The extension of rural electrification and the availability of power at prices which the workers can afford will also be of considerable help.

Many of the activities relating to small-scale production will be greatly helped by the organisation of industrial co-operatives. Such co-operatives should be encouraged in every way and the State should give constant attention to the development of cottage and village and small-scale industries.

REGIONAL DEVELOPMENT

In order that industrialisation may benefit the economy of the country as a whole, it is important that disparities in levels of development between different regions should be progressively reduced.

This programme of industrial development will make large demands on the country's resources of technical and managerial personnel. To meet these rapidly growing needs for the expansion of the public sector and for the development of village and small-scale industries, proper managerial and technical cadres in the public services are being established.

Steps are also being taken to meet shortages at supervisory levels, to organise apprenticeship schemes of training on a large-scale both in public and in private enterprises, and to extend training facilities in business management in universities and other institutions.

The living and working conditions of workers should be improved and their standard of efficiency raised. The maintenance of industrial peace is one of the prime requisites of industrial progress. In a socialist democracy labour is a partner in the common task of development and should participate in it with enthusiasm.

Some laws governing industrial relations have been enacted and a broad common approach has developed. With the growing recognition of the obligations of both management and labour there should be joint consultation and workers and technicians should, wherever possible, be associated progressively in management. Enterprises in the public sector have to set an example in this respect.

With the growing participation of the State in industry and trade, the manner in which these activities should be conducted and managed assumes considerable importance. Speedy decisions and a willingness to assume responsibility are essential if these enterprises are to succeed. For this, wherever possible, there should be decentralisation of authority and their management should be along business lines. It is to be expected that public enterprises will augment the revenues of the State and provide resources for further development in fresh fields. But such enterprises may sometimes incur losses. Public enterprises have to be judged by their total results and in their working they should have the largest possible measure of freedom.

SCHEDULE A

The future development of the following industries will be the exclusive responsibility of the State :

1. Arms and ammunition and allied items of defence equipment. 2. Atomic energy. 3. Iron and steel. 4. Heavy castings and forgings of iron and steel. 5. Heavy plant and machinery required for iron and steel production, for mining, for machine tool manufacture and for such other basic industries as may be specified by the Central Government. 6. Heavy electrical plant including large hydraulic and steam turbines. 7. Coal and lignite. 8. Mineral oils. 9. Mining of iron ore, manganese ore, chrome ore, gypsum, sulphur, gold and diamond. 10. Mining and processing of copper, lead, zinc, tin, molybdenum and wolfram. 11. Minerals specified in the schedule to the Atomic Energy (Control of Production and Use) Order, 1953. 12. Aircraft. 13. Air transport. 14. Railway transport. 15. Shipbuilding. 16. Telephones and telephone cables, telegraph and wireless apparatus (excluding radio receiving sets). 17. Generation and distribution of electricity.

SCHEDULE B

The following industries will be progressively State-owned. The State will generally take the initiative in establishing new undertakings but private enterprise will not be excluded.

1. All other minerals except "minor minerals" as defined in section 3 of the Minerals Concession Rules, 1949. 2. Aluminium and other non-ferrous metals not included in Schedule "A". 3. Machine tools. 4. Ferro alloys and tool steels. 5. Basic and intermediate products required by chemical industries such as the manufacture of drugs, dyestuffs and plastics. 6. Antibiotics and other essential drugs. 7. Fertilizers. 8. Synthetic rubber. 9. Carbonisation of coal. 10. Chemical pulp. 11. Road transport. 12. Sea transport.

It is from these schedules and the foregoing policy announcement that Government entered the industrial field and set on foot a large number of industrial undertakings.

A full list of these with notes on their progress is given in the chapter entitled, "Government Industrial Undertakings".

INDUSTRIES DEVELOPMENT & REGULATION ACT

Towards the end of 1951, Parliament passed the Industries (Development and Regulation) Bill. The Act applied to 37 industries listed in the First Schedule to the Act.

The Act was amended in 1956 when new industries were added to the list.

The most important provision is the establishment of Development Councils which deal with the problem of productivity and service to the community.

At the top is the Central Advisory Council for Industries which advises Government on rules, directions to industrial undertakings and taking over the management of industrial concerns.

The Act provides for the registration of existing industrial undertakings and licensing of new ones.

It also empowers Government to investigate into the causes of any possible fall in the production of any concern or any deterioration in the quality of the product, and to take action.

The Act contains provisions for direct control by the Central Government in certain cases.

The Central Advisory Council of Industries was established in 1952 consisting of 27 representatives of industry, labour, consumers and primary producers pertaining to the scheduled industries.

A Licensing Committee was also set up consisting of representatives of the Ministries of Commerce and Industry, Finance, Railways, Production and of the Planning Commission to examine application for licences.

During the period from 1952 to 1958 about 2,300 licences were issued under the Industries Act. Out of this, about 240 licences were cancelled, and out of the remaining licences about 2,060 applications were still valid.

Between 1st October 1958 and 30th September 1959, the Licensing Committee, considered 1,653 applications, of which 1,210 applications were approved, 331 rejected and consideration of 112 applications deferred pending a more detailed review of the position. Of the applications approved, 224 were for regularising the activities of industrial undertakings which were already in existence but had not obtained the necessary licences. The remaining cases related to the establishment of new industrial undertakings (412) to substantial expansion (351) and to the manufacture of new articles (200) and changes of location (23).

An *ad hoc* committee reviewed the procedure obtaining in the Ministry of Commerce and Industry for disposal of applications for licences under the Industries (Development and Regulation) Act and suggested several changes with a view to speeding up the disposal of these applications. It has been decided in consultation with the Licensing Committee that certain types of simple applications in which all the concerned officers had agreed to the sanction of a licence should be disposed of in the prescribed manner without prior reference to the Committee and reported to them later for information. Applications for additional capacity in regard to certain items where there is sufficient capacity in the country already are to be rejected for a specified period. Applications from undertakings for diversification of production which involve no foreign exchange implications are to be approved subject to certain conditions. In regard to certain lines of manufacture where further expansion is clearly desirable, the applications are to be placed before the Capital Goods Committee straightway for examining the question of import of plant and machinery.

There are now Development Councils for (1) Automobile, automobile ancillary industries and Transport vehicle industries, (2) Bicycles, sewing machines and instruments, (3) Heavy electrical industries, (4) Light electrical industries, (5) Internal combustion engines, power driven pumps, air compressors and blowers, (6) Non-ferrous metals, (7) Machine tools, (8) Acids and fertilizers, (9) Alkalis and allied industries, (10) Alcohol and other fermentation industries, (11) Art silk industry, (12) Drugs, dyes and Intermediates, (13) Food processing industries, (14) Oil based and plastics industries, (15) Sugar industry and (16) Woollen Industry.

Where an industry was not sufficiently developed, a number of Panels or Expert Committees for inquiring into and studying the problems were set up. The following is the list of the Panels and Committees thus set up :

(1) Panel for paper and pulp, (2) X-ray equipment, (3) Surgical instruments and appliances, (4) Electronics and wireless equipment, (5) Refractories, (6) Agricultural tractors (7) Aluminium, (8) Power alcohol, (9) Earth moving and allied equipment, (10) Milk powder industry, (11) Scooters, motor-cycles : moped and three wheeler industry, (12) Cotton-seed oil industry, (13) Textile machinery manufacturing, (14) Salt and (15) Cement.

REGULATED INDUSTRIES

All undertakings pertaining to the industries below, employing 50 or more workers with the aid of power, or 100 or more workers without the aid of power, fall within the purview of the Industries (Development and Regulation) Act, 1951, as amended.

1. METALLURGICAL INDUSTRIES : *Ferrous :* Iron and steel (metal) ; Ferro-alloys ; Iron and Steel castings and forgings ; Iron and Steel structurals ; Iron and Steel pipes ; Special steels ; Other products of iron and steel. *Non-ferrous :* Non-ferrous metals and alloys ; Semi-manufactures and manufactures.

2. FUELS : Coal, lignite, coke and their derivatives ; Mineral oil (crude oil), motor and aviation spirit, diesel oil, kerosene oil, fuel oil,

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

diverse hydrocarbon oils and their blends including synthetic fuels, lubricating oils and the like; Fuel gases—(coal gas, natural gas and the like).

3. BOILERS AND STEAM GENERATING PLANTS.

4. PRIME MOVERS (OTHER THAN ELECTRICAL GENERATORS): Steam engines and turbines; Internal combustion engines.

5. ELECTRICAL EQUIPMENT: Equipment for generation, transmission and distribution of electricity including transformers; Electrical motors; Electrical fans; Electrical lamps; Electrical furnaces; Electrical cables and wires; X-ray equipment; Electronic equipment; Household appliances such as electric irons, heaters and the like; Storage batteries; Dry cells.

6. TELECOMMUNICATIONS: Telephones; Telegraph equipment; Wireless communication apparatus; Radio receivers, including amplifying and public address equipment; Television sets; Teleprinters.

7. TRANSPORTATION: Aircraft; Ships and other vessels drawn by power; Railway locomotives; Railway rolling stock; Automobiles (motor cars, buses, trucks, motor cycles, scooters and the like); Bicycles; Others, such as fork lift trucks and the like.

8. INDUSTRIAL MACHINERY: *Major items of specialised equipment used in specific industries*:—Textile machinery (such as spinning frames, carding machines, powerlooms and the like) including textile accessories; Jute machinery; Rayon machinery; Sugar machinery; Tea machinery; Mining machinery; Metallurgical machinery; Cement machinery; Chemical machinery; Pharmaceuticals machinery; Paper machinery.

General items of machinery used in several industries, such as the equipment required for various 'unit processes': Size reduction equipment—crushers, ball mills and the like; Conveying equipment—bucket elevators, skip hoists, cranes, derricks and the like; Size separation units—screens, classifiers and the like; Mixers and reactors—kneading mills, turbo mixers and the like; Filtration equipment—filter presses, rotary filters and the like; Centrifugal machines; Evaporators; Distillation equipment; Crystallisers; Driers; Power driven pumps—reciprocating, centrifugal and the like; Air and gas compressors and vacuum pipes (excluding electrical furnaces); Refrigeration plants for industrial use; Fire fighting equipment and appliances including Fire engines.

Other items of Industrial Machinery: Ball, roller and tapered bearings; Speed reduction units; Grinding wheels and abrasives.

9. MACHINE TOOLS.

10. AGRICULTURAL MACHINERY: Tractors, Harvesters and the like; Agricultural implements.

11. EARTH-MOVING MACHINERY: Bulldozers, dumpers, scrapers, loaders, shovels, drag lines, bucket wheel excavators, road rollers and the like.

12. MISCELLANEOUS MECHANICAL AND ENGINEERING INDUSTRIES: Plastic moulded goods; Hand tools, small tools and the like; Razor blades.

13. COMMERCIAL, OFFICE AND HOUSEHOLD EQUIPMENT: Typewriters; Calculating machines; Air conditioners and refrigerators; Vacuum cleaners; Sewing and knitting machines; Hurricane lanterns.

14. MEDICAL AND SURGICAL APPLIANCES: Surgical instruments—sterilisers, incubators and the like.

15. INDUSTRIAL INSTRUMENTS: Water meters, steam meters, electricity meters and the like; Indicating, recording and regulating devices for pressure, temperature, rate of flow, weights, levels and the like; Weighing machines.

16. SCIENTIFIC INSTRUMENTS.

17. MATHEMATICAL, SURVEYING AND DRAWING INSTRUMENTS.

18. FERTILISERS: Inorganic, Organic and Mixed.

19. CHEMICALS (OTHER THAN FERTILISERS): Inorganic heavy chemicals; Organic heavy chemicals; Fine chemicals including photographic chemicals; Synthetic resins and plastics; Paints, varnishes and enamels; Synthetic rubbers; Man-made fibres including regenerated cellulose-rayon, nylon and the like; Coke oven by-products; Coal tar distillation products like naphthalene, anthracene and the like; Explosives including gun powder and safety fuses; Insecticides, fungicides, weedicides and the like; Textile auxiliaries; Sizing materials including starch; Miscellaneous chemicals.

20. PHOTOGRAPHIC RAW FILM AND PAPER: Cinema film; Photographic amateur film; Photographic printing paper.

21. DYE-STUFFS.

22. DRUGS AND PHARMACEUTICALS.

23. TEXTILES (INCLUDING THOSE DYED, PRINTED OR OTHERWISE PROCESSED): made wholly or in part of cotton, including cotton yarn, hosiery and rope; made wholly or in part of jute, including jute, twine and rope; made wholly or in part of wool, including wool tops, woollen yarn, hosiery, carpets and druggets; made wholly or in part of silk including silk yarn and hosiery; made wholly or in part of synthetic, artificial (man-made) fibres, including yarn and hosiery of such fibres.

24. PAPER AND PULP INCLUDING PAPER PRODUCTS: Paper—writing, printing and wrapping; Newsprint; Paper board and straw board; Paper for packaging (corrugated paper, kraft paper, paper bags, paper containers and the like); Pulp—wood pulp, mechanical, chemical, including dissolving pulp.

25. SUGAR.

26. FERMENTATION INDUSTRIES: Alcohol; Other products of fermentation industries.

27. FOOD PROCESSING INDUSTRIES: Canned fruits and fruit products; Milk foods; Malted foods; Flour; Other processed foods.

28. VEGETABLE OILS AND VANASPATHI: Vegetable oils, including solvent extracted oils; Vanaspathi.

29. SOAPS, COSMETICS AND TOILET PREPARATIONS: Soaps; Glycerine; Cosmetics; Perfumery; Toilet preparations.

30. RUBBER GOODS: Tyres and tubes; Surgical and medicinal products including prophylactics; Footwear; Other rubber goods.

31. LEATHER, LEATHER GOODS AND PICKERS.

32. GLUE AND GELATIN.

33. GLASS: Hollow ware; Sheet and plate glass; Optical glass; Glass wool; Laboratory ware; Miscellaneous ware.

34. CERAMICS: Fire bricks; Refractories; Furnace lining bricks—acidic, basic and neutral; China ware and pottery; Sanitary ware; Insulators; Tiles.

35. CEMENT AND GYPSUM PRODUCTS: Portland cement; Asbestos cement; Insulating boards; Gypsum boards, wall boards and the like.

36. TIMBER PRODUCTS: Plywood; Hardboard, including fibre-board, chip-board and the like; Matches; Miscellaneous (furniture components, bobbins, shuttles and the like).

37. DEFENCE INDUSTRIES: Arms and ammunition.

38. MISCELLANEOUS INDUSTRIES: Cigarettes.

The Government of India have decided (Jan. 1959) to bring within the scope of the registration and licensing provisions of the Industries (Development and Regulation) Act the following industrial gases:—

Hydrogen gas of all varieties; nitrogen gases of all varieties; carbon dioxide gas of all varieties; refrigerant gases of dichlorodifluoro methane and allied groups; rare gases like helium, argon, neonkrypton, neon, etc.; fire extinguishing gases of chlorobromo methane and allied groups; nitrous oxide; propane; cyclopropane and ethylene.

Explanation 1.—The articles specified under each of the headings Nos. 3, 4, 5, 6, 7, 8, 10, 11 and 13 shall include their component parts and accessories.

Explanation 2.—The articles specified under each of the headings Nos. 18, 19, 21 and 22 shall include the intermediates required for their manufacture.

STATE AID

State aid is given in a number of ways. The various financial corporations give financial assistance.

The National Industrial Development Corporation grants loans for the modernization of plant, especially in the textile, jute and also the machine tool industry.

The Industrial Finance Corporation affords financial assistance in the form of advances and long-term loans to industrial concerns.

The State Financial Corporations assist medium and small-scale industries that fall outside the scope of the all-India Corporations.

The Refinance Corporation finances medium-scale industries.

(There are factual notes on the National Industrial Development Corporation, the Refinance Corporation, the State Financial Corporations and the Industrial Finance Corporation in the Chapter on 'Corporations'.)

Technical assistance is arranged through the Point Four Programme, the Colombo Plan and the U.N. Technical Assistance schemes.

Tariff is regulated to foster indigenous industry. Tax concessions are made (see below under 'Foreign Capital'). Foreign exchange is granted under a system of priorities, especially to facilitate the import of essential raw material and basic intermediates.

In the current policy governing the budgeting of foreign exchange, maintenance requirements in the economy have a high priority. In relation to the Plan, it has been laid down that foreign exchange allotments should be limited in the main to commitments which arise in relation to the 'core' projects, *i.e.*, steel plants, coal mining, railways, and certain power projects.

Outside the 'core', new commitments in foreign exchange are permitted only in respect of those projects whose entire foreign exchange cost is covered by foreign credits or investment and, in certain circumstances, by appropriate deferred payment arrangements.

NATIONAL PRODUCTIVITY COUNCIL

The National Productivity Council works to help increase general productivity. It is an autonomous organisation established by the Government of India in 1958. Representatives of Government, employers, labour and various other interests participate in its work.

The objectives of the Council are to stimulate productivity consciousness in the country, to maximise the utilisation of available resources of men, machines, materials, power and finance; to wage war against waste; to help secure for the people of the country a better and higher standard of living. To these ends, it collects and disseminates information about techniques and procedures of productivity. It organises and conducts training courses, seminars, conferences, study groups, lectures at various levels of industries; provides a technical enquiry service and advisory service. Through the media of publications including pamphlets, leaflets, productivity journal and reports of productivity teams, the Council seeks to create an appropriate climate for increasing productivity in various spheres of the nation's economy, particularly in the industries.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

The Council operates from its headquarters at 38, Golf Links, New Delhi, and its Regional Directorates at Bombay (Khetan Bhavan, Churchgate Reclamation); Calcutta (9, Sayed Amir Ali Avenue, Calcutta 17); Kanpur (7/155, Swaroop Nagar); Bangalore (15/1, Lalbaug Road); Madras (23/35, Agurchand Mansions, Mount Road).

Local Productivity Councils (LPCs) which are autonomous bodies have been established through the instrumentality of NPC on a state and local basis in 40 industrial centres of India (Nov. 1960). More are in the process of formation.

The Councils consist of representatives of Government, employers' associations and labour organisations of the State or area.

The programmes of the Council is generated and projected through LPCs.

MANAGING AGENCY SYSTEM

Government attitude may be summed up briefly as follows: The system has filled an important role in the country's economic development. There is therefore nothing inherently objectionable in it. But it is chiefly responsible for the slow growth of institutional financing of industry, as it has itself provided the necessary funds.

Before a managing agency is abolished much formality has to be gone through. There has to be an investigation, a reference of the findings to the Company Law Advisory Commission, scrutiny of the latter's recommendations by Government. And if there is a decision to abolish the system in the industry, a resolution has to be placed before Parliament. Then there is a notice period of three years before the decision becomes effective.

Abolition or continuance of any particular managing agency will be decided on the manner in which it has discharged its duties. There is no desire to make use of the power for compulsory renewal for the purpose of abolishing the system. The ten-year term for a managing agency on its first appointment is usually extended to fifteen years in the case of certain industries like steel, for instance.

Government does not approve of overseas firms trying to come in on the managing agency system. Nor does it approve of cases in which a firm of managing agents expands its scope from a single enterprise to a number of new manufacturing plants.

The Government of India have decided that the remuneration of Managing Agents and Secretaries and Treasurers should ordinarily be fixed according to a sliding scale of commission on the net profits of managed companies. Under the Companies Act, 1956, the Government have to satisfy that the conditions of the agreement to be entered into between the managed company and the Managing Agents or Secretaries and Treasurers are fair and reasonable. While considering applications in this behalf, therefore, the Government have to determine what would be a fair and reasonable remuneration and tenure within the maxima permissible under the Act, in the circumstances of each case. This matter was given very careful consideration and the Government fixed the remuneration and tenure for Managing Agents or Secretaries and Treasurers. The scale of commission fixed is as follows:—

Managing Agents: 10 per cent on the first Rs. 10 lakhs or fraction thereof, 9 per cent on the next Rs. 10 lakhs or fraction thereof, 8 per cent on the next Rs. 10 lakhs or fraction thereof, 7 per cent on the next Rs. 10 lakhs or fraction thereof, 6 per cent on the next Rs. 10 lakhs or fraction thereof, 5½ per cent on the next Rs. 25 lakhs or fraction thereof, 5 per cent on the next Rs. 25 lakhs or fraction thereof and 4 per cent on any sum over one crore of rupees.

Secretaries and Treasurers: 7½ per cent on the first Rs. 10 lakhs or fraction thereof, 6¾ per cent on the next Rs. 10 lakhs or fraction thereof, 6 per cent on the next Rs. 10 lakhs or fraction thereof, 5¼ per cent on the next Rs. 10 lakhs or fraction thereof, 4½ per cent on the next Rs. 10 lakhs or fraction thereof, 4½ per cent on the next Rs. 25 lakhs or fraction thereof, 3¾ per cent on the next Rs. 25 lakhs or fraction thereof and 3 per cent on any sum over one crore of rupees.

The Government have also decided that the term of office should ordinarily be 10 years when a company appoints Managing Agents or Secretaries and Treasurers for the first time, and five years on reappointment or successive appointments.

These decisions are now in force and the Department of Company Law Administration decided as many as 70 applications on this basis by 23rd October 1959.

ALL-INDIA INVESTMENT CENTRE

The first step in the Government of India's plans to establish an All-India Investment Centre to increase the flow of foreign private capital investment to India was taken on 5th October 1959 when an initial grant from the U.S. Technical Co-operation Mission was announced.

Under the Project Agreement signed between Government of India and the U.S.A. on 20th June, 1960, the U.S. Technical Co-operation Mission will make available $713,000 during the U.S. Fiscal year 1960 to cover the Centre's initial foreign exchange expenditures and Rs. 25,00,000 from PL 480 Rupee funds to meet the local expenses of the Centre during the first two years of its operations.

The scope of the U.S. assistance to the Indian Investment Centre is threefold, and the T.C.M. will—

(a) provide advisors and technicians;

(b) provide funds to procure from abroad such items as vehicles, office equipment, and books and periodicals for the reference library, which are not readily available in India; and

(c) provide training facilities for staff members of the Centre and for such persons as the Centre may deem desirable to receive specialized training in the U.S. and Europe in order to further more effectively the objectives of the Centre.

The Centre is governed by a council whose members are the members of the Board of Directors of the Industrial Credit and Investment Corporation of India, Bombay.

For further details see under Delhi.

FOREIGN CAPITAL

The following figures are available in respect of foreign investments in India as at the end of 1958:

(Itemwise)

(Rs. crores)

	Direct Investment	Portfolio Investment	Total
Petroleum	117·86	Negligible	118·17
Manufacturing	123·28	96·81	220·09
Trading	26·31	3·19	29·50
Utilities & transport	35·27	12·07	47·34
Mining	10·81	1·66	12·47
Plantations	90·27	5·53	95·80
Miscellaneous	18·66	5·75	24·41
Grand Total	435·70	134·94	570·64

The figures relate to non-banking foreign business investments only.

Net of capital repatriation, foreign business investments during 1958 amounted to Rs. 27·0 crores. The book value of outstanding investments at the end of 1958 aggregated Rs. 570·64 crores.

The investment of Rs. 27·0 crores included Rs. 25·3 crores IBRD loan, and the remaining Rs. 1·7 crores foreign private capital investments. The net inflow of private foreign capital during 1958 was about Rs. 1·7 crores. Further, IBRD loans amounting to Rs. 25·3 crores were utilised by the private sector during 1958. Thus altogether the private sector seems to have received Rs. 27·0 crores of foreign capital during 1958 as against Rs. 48·8 crores in 1957. (See article on foreign investments in India.)

The Government of India have been fully aware of the contribution that foreign investment can make to the country's progress and in computing the resources for the Second Five Year Plan. They have taken a sum of Rs. 100 crores as fresh foreign investment likely to materialise during that period.

The Government of India's policy in regard to foreign capital was explained by the Prime Minister in a statement made on 9th April 1949.

The salient features of this statement are as follows:

1. All undertakings, Indian or foreign, will conform to the general requirements of Government's industrial policy.

2. As regards existing foreign interests no restrictions or conditions will be imposed which are not applicable to similar Indian undertakings.

3. Facilities for the remittance of profits or even withdrawal of foreign capital investment would continue subject only to foreign exchange considerations.

4. If and when foreign enterprises are compulsorily acquired, compensation will be paid on a fair and equitable basis.

5. There are guarantees about nationalization. India and U.S.A. have signed an agreement (Dec. 7, 1959) that American investors, for a premium will be able to receive insurance for reimbursement in dollars by U.S. Government of losses which may be incurred because of nationalization.

6. In the matter of the participation of foreign capital and enterprise major interest in ownership and effective control should save in exceptional cases be in Indian hands. But in all cases however the training of suitable Indian personnel for the eventual replacement of foreign experts will be insisted on.

Other points may be set out as follows:

Government have followed a policy of encouraging capital participation with Indian collaborants by foreign companies. In principle, the cost of capital equipment to be imported is allowed, at a minimum, to be financed from abroad. This is permitted as equity participation itself or as equity and loans combined. Over and above this minimum, while Government are of the view that to the extent possible, majority control must be in Indian hands, in suitable cases, foreign investment as bulk of the capital structure is allowed.

Where both Indian and foreign interests agree that foreign participation must be by loans rather than by equity capital a suitable rate of interest is allowed.

Under the recent amendments to the Income Tax Act, such loans—on specific application—can be free of income tax.

The Government of India have entered into a convertibility arrangement with the U.S.A. Under this, the U.S. Government will guarantee

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

to the American investor in India the reconvertibility into dollars of his investments in projects approved by the Government of India and of his income from them.

An accord was signed with the U.S.A. in Nov. 1959 which seeks to avoid double taxation. It contains a unique provision: a credit for Indian tax would be allowed against U.S. tax, even though it is exempted from tax and not tax actually paid.

Indian companies are welcome to obtain the services of foreign experts or consultants who are necessary.

Government approval is given to payments by Indian companies to foreign collaborants towards research fees, technical services, etc. In giving such approval, the amounts to be paid once settled by the parties themselves are generally not interfered with.

So far as royalty is concerned, a distinction is made between the element of royalty as such, and the element of services rendered abroad by the foreign collaborant. The latter is exempt from tax. About royalty itself, Government are not committed to any particular rate though 5 per cent is, in practice, found to be generally the maximum rate. But in specific cases Government have permitted royalties in excess of this percentage.

TAXATION

The Government of India have provided substantial tax concessions by way of incentives for the industrial development of the country. The more important of these tax concessions are, to mention briefly:

(*a*) Exemption from income-tax of the profits made by industrial undertakings newly established upto 6 per cent of the capital employed during the first five years from the commencement of manufacturing operations.

(*b*) Exemption from income-tax to a shareholder in a newly established industrial company, of the dividends he receives from the company out of the profits exempt from tax in the hands of the company.

(*c*) Exemption from super-tax to a company for an indefinite period on the dividends it receives from an Indian company established after March 31, 1952, and engaged wholly or mainly in certain specified important industries.

(*d*) For all business enterprises, an outright allowance, known as "development rebate" of 25 per cent of the cost of new plant and machinery (40 per cent in the case of ships) in the first year of installation of the asset, thereby enabling the enterprises not only to write off the full cost over a period of years by way of depreciation allowances but also to get further tax relief on 25 per cent of the cost.

(*e*) Outright deduction or amortization over a period of five years of expenditure incurred by business undertakings on scientific, statistical or social research relating to the class of business carried on.

(*f*) Application of a concessional rate of super-tax to the income of Public Companies with total income not exceeding Rs. 25,000.

(*g*) Application of a concessional rate of super-tax in respect of dividend incomes received by a company from an Indian subsidiary company.

(*h*) Exemption of wealth tax for companies.

In addition there are certain other incentives which are of value particularly to the foreigners:

(1) Exemption from income-tax is conferred on interest payable—

(*i*) by an industrial undertaking in India on moneys borrowed by it under a loan agreement with a financial institution of a foreign country, if the institution is approved by the Government of India;

(*ii*) by an industrial undertaking in India on moneys borrowed or debt incurred by it abroad in respect of purchases of plant and machinery from abroad, if the transaction is approved by the Government of India.

(2) Exemption from income taxation to a technician of foreign nationality employed by an undertaking in India in respect of the remuneration received by him for services rendered as such technician during a period of 365 days from the date of his arrival in India. Further, if the contract of service is approved by the Government of India before commencement of the technician's service in India, the exemption is continued for a further period so that he does not have to pay tax on his Indian remuneration during the financial year of his arrival in India and the two succeeding financial years.

(3) Exemption is also available to a non-resident not being a citizen of India from income taxation for services rendered in connection with his employment on a foreign ship, provided his total stay in the taxable territories does not exceed in the aggregate a period of ninety days in the previous year.

One problem of practical importance which has also been a source of great misgiving to investors abroad has been the absence of any agreements between India and the foreign countries for avoidance of double taxation, and the uncertainty of their getting adequate relief in their own country. One serious difficulty faced by the Indian Government in the conclusion of agreements for the purpose was the unwillingness of the industrially and economically advanced countries to depart from the pattern of the agreements they had already concluded with countries of equal industrial and economic status, and the inability of India, with her poor and underdeveloped economy, to subscribe to that pattern.

A delegation consisting of some officers of the Department of Revenue, Ministry of Finance, Government of India, visited West Germany and other European countries in May 1958 for the purpose of discussing the question of concluding agreements for avoidance of double taxation with the representatives of other Governments. Another delegation visited Canada and the United States in December 1958 to have similar talks with the Governments of these countries. Agreements have been signed at official level with the Governments of the Federal Republic of Germany, Denmark, the U.S. and Sweden. The agreement with Germany was signed at Government level at the end of the financial year 1958-59 and the agreement with Denmark became effective on 31st March 1959. The agreement signed with Sweden has been notified in the Gazette of India Extraordinary on 23rd January 1959. The agreement with the U.S. was signed in November 1959. Agreements with France, Greece and other countries are in various stages of progress. The other countries with whom India has agreements at official level are Pakistan, Ceylon, Norway and Switzerland (for air transport only). An agreement with Japan was signed on January 5, 1960.

COMPANY LAW

Foreign companies, *i.e.*, companies incorporated in countries outside India and having places of business in this country are governed by Sections 591 to 608 of the Companies Act. In form as in substance, the provisions of the new Act on this subject are similar to those of the English Companies Act, 1948 as contained in Sections 406 to 423 of that Act. These provisions are not very different from the corresponding provisions in the 1913 Indian Act either, except in regard to those relating to the submission of accounts.

There is no discrimination in any of these provisions against the foreign companies. On the contrary, the accounts provisions are decidedly in favour of them as compared with the corresponding provisions applicable to companies registered in India.

A new feature of the present law is that the foreign companies are now required to file their accounts and related documents with the Registrar of Companies, Delhi, in addition to filing such documents with the Registrars of Companies of the States in which they may have their principal places of business. The new arrangement facilitates the centralisation of documents and records relating to foreign companies at one place in the country.

The Government has decided that the requirements of the clause (*a*) of sub-section (1) of Section 594 should apply to foreign companies with a share capital subject to the following exceptions and modifications:

(*i*) A foreign company should, in respect of its Indian business, submit to the appropriate Registrar in triplicate its balance sheet and profit and loss account in such form, containing such particulars and including or having annexed or attached thereto such documents as under the provisions of the Act it would, if it had been a company within the meaning of the Act, have been required to make out and lay before the company in general meeting.

(*ii*) The working capital earmarked for its branch, if any, should be shown in the balance sheet.

(*iii*) The profit and loss account in respect of its Indian business should disclose the net profit or loss for the year transferred to its principal office in the country of incorporation.

(*iv*) The balance sheet and profit and loss account of the Indian business of the foreign company, in terms of clause (*i*) should be audited by such person or persons and in such manner as laid down in the Act. In regard to the balance sheet and profit and loss account relating to a period ending on or before 31st day of March 1958, it would be deemed sufficient compliance with the law if such documents were audited by auditors of the foreign company in the country of its incorporation.

(*v*) A foreign company which, if incorporated under the Act would have been deemed to be a private company within the meaning of clause (*iii*) of sub-section (1) of section 3 of the Act, should not be required to submit the profit and loss account of its Indian business.

(*vi*) A foreign company should also submit to the appropriate registrar three copies of the authenticated balance sheet and profit and loss account (including documents relating to every subsidiary of the foreign company) as submitted by it to the prescribed authority in the country of its incorporation under the provisions of the law in that country.

(*vii*) If there is any difficulty in reconciling the balance sheet and profit and loss account of a foreign company submitted in accordance with clause (*i*) with the balance sheet and profit and loss account filed by that Company in the country of its incorporation, the Central Government would have the right to seek clarification or demand the preparation of the balance sheet and profit and loss account filed in that country, as far as practicable, in such form as it would have been required to make out and lay before the company in a general meeting, if it had been a company within the meaning of the Act. A foreign company should be bound to furnish such clarification or comply with such demand as the Central Government might make.

(*viii*) In regard to foreign shipping or airlines companies, it should be deemed to be sufficient compliance with the provisions of Part II of Schedule VI to the Act, if the profit and loss accounts of such companies prepared in terms of clause (*i*) disclosed, under broad heads, the items of indirect expenditure (relating to an entire voyage or flight which could not be directly charged against the Indian business of such companies) allocated on a reasonable basis.

(*ix*) It should be deemed sufficient compliance with the provision of section 594 of the Act if the balance sheets in respect of the period ending on or before the 31st day of December 1956, were filed in the manner laid down in sub-section (3) of section 277 of the Indian Companies Act, 1913.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

ALCOHOL INDUSTRY

INDUSTRIAL alcohol is a very valuable material in the manufacture of chemicals like acetone, acetic acid, ether, chloroform, ethyl acetate, etc. It is also necessary as a solvent in the manufacture of fine chemicals, medical preparations, toilets, etc. Since the last war, its importance has increased. It is now essential in the manufacture of ammunition and of artificial rubber.

In 1959 there were as many as 51 distilleries capable of producing over 17·71 million gallons of rectified spirit alcohol. The trend of production has been as follows:

Year	Rectified spirit (000 gals.)	Denatured spirit (000 gals.)
1951	5,019	1,967
1952	4,668	2,178
1953	4,376	2,493
1954	4,630·8	2,835·6
1955	5,156·4	2,989·2
1956	4,209·6	3,382·8
1957	5,095·2	3,470·4
1958	6,000·0	3,700·0
1959	6,750·0	4,400·0
Jan-Aug. 1960*	23·64	17·18

* Figures are in million litres.
1 litre = 0·22 gallon.

The undivided Government of India's Panel on Fine Chemicals, Drugs and Pharmaceuticals estimated that the medical requirements of the sub-continent were a million gallons annually and industrial requirements 10 millions, a target which they said ought to be reached in 15 years time.

Consumption of industrial alcohol is estimated to have gone up from 3·4 million gallons in 1950 to 5·2 million gallons by 1955. In addition about a million gallons of alcohol are at present used in the manufacture of acetate rayon and are met from the production of power alcohol grade spirits.

POWER ALCOHOL

The importance of the power alcohol industry lies in its supplying a product which can replace an equivalent quantity of imported petrol. The rapid development of the sugar industry since 1931 has rendered large quantities of molasses available for its production.

Consumption of power alcohol in 1955-56 was estimated to be only about 10 million gallons, as against 18 million gallons envisaged because of difficulties in providing facilities for mixed petrol with alcohol and of comparatively high cost of production of alcohol in certain areas.

The number of units engaged in the manufacture of power alcohol in 1959 was 17 with an aggregate capacity of 16·68 million gallons.

The installed capacity and actual production in thousand bulk gallons are given below:

Year	Capacity	Production
1952	10,920	7,742
1953	13,020	8,120
1954	13,020	8,007·6
1955	13,812	10,432·8
1956	14,352	10,270·8
1957	15,500	10,100
1958	16,680	10,200
1959	16,680	8,030
Jan.-Aug. 1960 *	75·81	36·26

* Figures are in million litres.

According to the Census of Manufacturing Industries, 1958, the fixed capital investment in the 41 out of the 49 registered distilleries and breweries (including power alochol manufacturers) in the country was of the order of Rs. 363·49 lakhs in 1958. The number of persons employed in the industry was estimated at about 4,608.

The total quantity of molasses consumed was 218,522 tons valued at Rs. 40·65 lakhs. Production amounted to 4,700,404 gallons of country spirit worth Rs. 128·37 lakhs, 463,689 gallons of Indian made foreign spirit worth Rs. 111·11 lakhs, 960,027 gallons of rectified and re-rectified spirit worth Rs. 13·20 lakhs, and other kinds of alcohol worth Rs. 220·16 lakhs.

Imports of alcohol are banned, but small quantities are imported along with drugs and perfumed spirits or in the form of liquors. Exports of alcohol are confined to despatches of denatured spirit to Burma and Ceylon and small quantities of rum.

The principal raw material required is molasses. Out of a total production of 7·25 million tons of molasses in 1958-59 (estimated), Uttar Pradesh and Bihar accounted for about 70 per cent. Other raw materials required in small quantities are sulphuric acid, ammonium sulphate and entertaining agents.

Difficulties in the supply of molasses and offtake and the unremunerative price of power alcohol have kept production at a low level compared to the installed capacity. With a view to overcoming these difficulties and ensuring a steady growth of the industry, a Committee was set up by the Ministry of Commerce and Industry in October 1955.

The Committee submitted its report in December 1956. Its main recommendations have been given in the 1959-60 edition of the Directory.

The report of the Committee, together with the Government of India's decisions, was released to the public in March 1958.

In April 1959, the Government of India announced their decisions on the remaining recommendations of the Committee.

(*See* 1960-61 *edition of the Directory*).

Three notable suggestions of the Committee have been accepted by the Government of India, first, the minimum annual capacity for a distillery (power alcohol or industrial alcohol) should be one million gallons, although units of smaller capacities can be permitted in certain circumstances. Secondly, an adequate number of tank wagons for transport of both alcohol and molasses must be made available. Thirdly, a standing advisory committee on denaturants should be constituted and entrusted with the task of enlarging or altering the list of special denaturants for alcohol intended for different industrial uses. On the question of freight rates on alcohol the Government have agreed to extend uniformly reduced freight only to ethyl alcohol meant for large-scale industrial uses. In its opinion, such a concession need not be given to pure forms of ethyl alcohol meant primarily for potable purposes.

Based on the anticipated requirements during the Second Plan period, a combined production of 45 million gallons of power and industrial alcohol had been fixed as a target to be achieved by 1960-61. It is estimated that a sum of about Rs. 1 crore was invested during the Second Plan to achieve this capacity. This was exclusive of the outlay on the modernisation and improvement of existing units. About 2,000 additional persons are estimated to have been employed in the industry during the Second Plan.

In view of the prospects of plentiful supply of molasses in the Third Plan period and considering the almost unlimited number of industrial uses of alcohol, the draft outline of the Third Plan has accorded a notable role to the development of the alcohol industry. The production target to be reached in 1965-66 is fixed at 50 million gallons (power and industrial alcohol) which is double the estimated output of 25 million gallons in 1960-61 (last year of the second Plan). In order to secure this additional quantity, the draft outline envisages an expansion in the installed capacity from 45 million gallons (estimated) in 1960-61 to 60 million gallons in 1965-66.

ARECANUT INDUSTRY

ARECANUT is one of the most important commercial crops of India. It has an important place in the religious, social an cultural life of our people irrespective of caste, creed or social status. Arecanut chewing with betel leaves and title lime (Thambulam, Pansupari) has become a habit with some people and a luxury of many in the country.

Before partition India had about 5·25 lakh acres under arecanut. She has now 2,61,500 acres under arecanut. The production is about 22 lakh maunds and our requirement is about 33 lakh maunds, India has now to depend on foreign countries such as Malaya, Singapore and Ceylon to make up the deficit of 11 lakh manuds.

Acreage and Production of arecanut:

States.	Area in acres.	Production in lakh maunds.	Percentage.
Kerala	1,49,400	10·6	46·23
Mysore	73,100	7·79	35·80
Assam	25,500	2·60	11·95
West Bengal	5,500	0·50	2·30
Bombay (Bilingual)	5,000	0·56	2·57
Madras	3,000	0·25	1·15
Total	2,61,500	21·76	100

Arecanut Research: To step up the production with a view to making the country self sufficient and saving foreign exchange, a Central Arecanut Research Station at Vittal, South Kanara and a series of regional arecanut research stations at Mysore, Kerala, Assam and West Bengal, have been established by the Indian Central Arecanut Committee and the State Governments. The Regional Arecanut Research Station at Thirthahalli, Shimoga District, Mysore is the pioneer research station sponsored by the Indian Central Arecanut Committee and the Mysore Government.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

AUTOMOBILE INDUSTRY

IT would appear that the first motor car was imported into India in 1898. The practice up to the end of the first world war was to purchase complete motor vehicles directly from abroad or through agents or dealers in India.

It was in 1920 that two automobile manufacturers, one from the U.S.A. and the other from Canada, set up local companies to do business in motor cars and trucks.

General Motors India Ltd. commenced assembling trucks and cars from components and parts imported from the U.S.A. in c.k.d. condition in their factory at Bombay in 1928, while Ford Motor Company of India Ltd. commenced c.k.d. assembly of automobiles at Madras in 1930, and at Bombay and Calcutta in 1931.

Addison and Co., Ltd., commenced c.k.d. assembly of cars and trucks at Madras in 1936.

In addition to the above, other firms in the field were: Standard Motor Products of India Ltd., Madras; Automobile Products of India Ltd., Bombay; Ashok Motors Ltd., Madras; Dewar's Garage and Engineering Works, Calcutta; Peninsular Motor Corporation Ltd., Calcutta; French Motor Car Co., Ltd., Bombay; and Mahindra and Mahindra Ltd.

The total annual assembling capacity of the firms mentioned above was estimated around 84,014 cars and commercial vehicles.

In 1944, two companies, Hindustan Motors Ltd., Calcutta, and Premier Automobiles Ltd., Bombay, with an authorised capital of Rs. 20 crores and Rs. 10 crores respectively, were established with a programme for progressive manufacture of complete automobiles.

Premier Automobiles Ltd., established their factory at Kurla, Bombay in March 1947. Hindustan Motors Ltd. commenced operations at Uttarpara near Calcutta in 1948.

In 1953 Government accepted the recommendations of the Tariff Commission that out of the 12 manufacturers and/or assemblers in the country only 5 who had manufacturing programmes should be allowed to assemble and progressively manufacture vehicles in the country except in the case of Jeep type vehicles. The remaining units which were pure assemblers curtailed their operations by stages and eventually closed down their assembly shops. Of the five approved manufacturers, one could not proceed with their programme of manufacture and consequently the approval was withdrawn.

Ashok Motors Ltd., one of the approved manufacturers subsequently entered into an agreement with Leyland Motors Ltd., England and converted themselves into a new company known as Ashok-Leyland Ltd. for the manufacture of commercial vehicles of G. V. W. of about 10 tons and above. Mahindra & Mahindra Ltd., submitted a programme for the manufacture of jeeps which was approved by Government. Approval was also granted to a new unit, *viz.* Tata Engineering & Locomotive Co., Ltd., for the manufacture of diesel commercial vehicles in collaboration with Daimler-Benz A.G. of West Germany. For automobile diesel engines, Government recognised Simpson & Co., Ltd., Madras, and the Automobile Products of India Ltd., Bombay, as approved manufacturers, these two makes of engines being the power units for diesel chassis (less engines) manufactured by Hindustan Motors Ltd., and Premier Automobiles.

MANUFACTURERS

With the additions mentioned above, the country had thus eight approved manufacturers of automobiles and/or engines by the end of 1955:

1. Hindustan Motors Ltd., Calcutta:—Hindustan Cars and Studebaker trucks now replaced by Bedford trucks.
2. Premier Automobiles Ltd., Bombay:—Fiat Cars and Dodge and/or Fargo trucks.
3. Standard Motor Products of India Ltd., Madras:—Standard Cars.
4. Ashok-Leyland Ltd., Madras:—Leyland Trucks.
5. Mahindra & Mahindra Ltd., Bombay:—Willy's jeeps.
6. Tata Locomotive & Eng. Co. Ltd., Bombay:—Tata-Mercedes-Benz Trucks.
7. Simpson & Co., Ltd., Madras:—Perkins Engines.
8. Automobile Products of India Ltd., Bombay:—Meadows Engines.

Though the Government had originally accepted the recommendations of the Tariff Commission (1953) for the manufacture of (*a*) Baby and Big cars as well by Hindustan Motors Ltd., (*b*) Big cars as well by Premier Automobiles Ltd., and (*c*) medium cars as well by Standard Motor Products of India Ltd. certain policy changes were later made by the Government. The difficult foreign exchange situation that developed by the end of 1956 and in the beginning of 1957 necessitated these changes with the result that the types and makes of vehicles to be developed were rationalised to only 3 passenger cars, 3 medium type trucks, one heavy truck, one jeep and one light truck:

Cars: Three manufacturers of cars:

1. Standard Ten, 2. Fiat 1100, 3. Hindustan Amassador/Land Master.

Trucks: One manufacturer of

(a) *Trucks: Light—1 ton:* Dodge (Petrol & Diesel).

Three manufacturers of:

(b) *Trucks: Medium—3/5 tons:* 1. Dodge (with petrol engine), 2. Mercedes-Benz (with diesel engine), 3. Bedford.

One manufacturer of: (c) *Trucks: Heavy:* Leyland Comet. Tiger/Titan.

Three manufacturers of:

Diesel Engines (for medium trucks): 1. Perkins—P6, 2. Meadows. Both suitablle as original fitment for Dodge and Bedford Trucks. And 3. Tata Mercedes Benz.

One manufacturer of:

Jeeps: Willy's Jeeps.

Thus the country had 3 models and 3 manufacturers for cars and medium trucks and one model and one manufacturer for light trucks, heavy trucks and jeeps in 1957.

The Ministry of Defence also entered the field of manufacture through an agreement with the M.A.N. of West Germany for the manufacture of multi-fuel trucks in ordnance factories. This was in Sept. 1958. The rate of output is reckoned at 2,000 per annum. It is understood that considerable saving would accrue to the Ministry.

According to Government there would be a saving of Rs. 7,500 per truck in the beginning, the saving is expected to increase as the percentage of indigenous manufacture goes up. The 'Shaktiman' truck, as the truck has been called, has additional advantages over other trucks which the Army have been getting like increased payload by 30 per cent, multi-fuel engine and other special features which will make it a sturdy cross-country vehicle more suitable than other kinds for military purpose.

The agreement provides for assistance in establishing complete indigenous manufacture. The production programme envisages progressive manufacture of trucks in India, so that by June 1964, the entire truck will be made in India. According to the original schedule the percentage of the indigenous manufacture of truck components to be progressively achieved are as under:—

First year—30 per cent; second year—50 per cent; third year—70 per cent; fourth year—80 per cent and fifth year—90 per cent. This schedule was later improved upon and an earlier total truck production was anticipated.

The authorised capital of the automobile and transport vehicles manufacturing firms is (Feb. 1960) about Rs. 65 crores and the paid-up capital about Rs. 35 crores. The investment in plant and machinery and buildings is over Rs. 30 crores. Of the total capital the investment in the ancillary industry is about Rs. six crores.

The total employed directly in the automobiles and connected industries is in the neighbourhood of 25,000. This figure, however, does not include the indirect employment this industry affords in various distribution, operation and maintenance centres connected with it. It would not be an exaggeration to say that the indirect employment figure would be about 6 times the figures of labour directly employed by the Industry.

PRODUCTION

The automobile industry has progressed rapidly as a result of the efforts made both by the Government and the Industry. The production of vehicles went up steadily till 1957. This increase however was not maintained in 1958 mainly because of the lack of adequate provision of foreign exchange. The production figures were:

	1956	1957	1958	1959	1960
Passenger cars and station wagons	13,666	12,211	8,126	11,993	19,096
Jeeps	4,139	4,599	4,118	4,568	5,501
Commercial vehicles ..	14,333	16,248	14,579	20,342	27,512
TOTAL	32,138	33,058	26,823	36,903	52,115

N.B. Production of diesel engines in 1959 & 1960 respectively: 8,707; 10,566. Value of ancillary industries in 1959: Rs. 750 lakhs; 1960: Rs. 900 lakhs. Total value of automobiles in 1959: Rs. 78 crores; 1960: Rs. 106 crores.

The progress of an industry could be judged by the extent of indigenous content achieved by it in a period of four to five years. In 1953 there was no manufacture, only assembly from imported components, the only indigenous material used being tyres, tube, battery and upholstery materials. There was, however, one exception to this the Hindustan. The rate of increase is dependent upon the installation of additional machine tools which in turn is dependent upon the foreign exchange and foreign exchange has not been very favourable.

By the end of 1960, the position had completely changed.

The indigenous content achieved by the end of 1960 are:— Standard Ten 50·7%; Fiat 1100 64%; Hindustan Ambassador 76·4%; Jeeps 73·6%; Dodge—3 ton 165″ W.B. 80%; Mercedes-Benz 165″ W.B. 76·8%; Leyland Comet 163″ W.B. 65·7%.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Percentage of indigenous content as at the end of 1960 : Commercial vehicles 75 ; passenger cars 65 ; Jeeps 73·6 ; Motor Cycles 62 ; Scooters and 3 wheelers 35 to 50.

The figures were arrived at by comparing the *c.i.f.* price of the imported components (finished and semi-finished) with the ex-factory cost of the vehicle in India). Even here in respect of certain vehicles, the progress would have been much more but for the fact that after 1957 the necessary machinery and equipment required to increase further the indigenous content were not made available because of a shortage of foreign exchange for the purchase of capital goods and machinery.

Besides the two truck manufacturers who have a programme for the manufacture of their own diesel engines, two firms exclusively for the manufacture of diesel engines for supply as original equipment to the other truck manufacturers were established. Their production since 1956 has been :

	1956	1957	1958	1959	1960
Perkins	3,236	3,011	3,819	7,814	9,249
Meadows	144	322	436	893	1,317
TOTAL	3,380	3,333	4,255	8,707	10,566

The average indigenous achievement as at July 1959 is of the order of 67 per cent.

Compared with the position of the industry in 1953, there is thus little doubt about the great progress made both in the quantity of production and the indigenous content. Also, it is now supposed that Government will be able to approve and sanction the release of the necessary foreign exchange for machinery, equipment tools, jigs and dies to all the manufacturers. It is hoped therefore that by the end of the Second Five Year Plan, the indigenous content of the cars and vehicles would be raised to 75 to 85 per cent on an average.

The number of persons employed by the main manufacturers has increased from 5,000 in 1954 to 35,000 in 1960.

MOTOR CYCLES, SCOOTERS, TRAILERS

The manufacture of motor cycles, scooters and three-wheelers was established only in the year 1955. There are at present three firms manufacturing these items. The types of vehicles under development and their production year-wise have been :—

(in Nos.)

	1956	1957	1958	1959	1960
Motor cycles :					
150 cc, 350 cc	1,022	1,827	2,653	3,239	3,998
Scooters : 150 cc, *Scooterette :* 48 cc	4,735	6,528	4,391	3,940	12,880
3-Wheelers : 150 cc, 350 cc, 400 cc	529	852	683	1,482	
TOTAL	6,286	9,207	7,727	8,661	16,878

Production of the following by A.P.I. Ltd., during 1959 & 1960 respectively: Scooters (2,656 ; 9,908) ; 48 c.c. (1,176 ; 876) ; 3-Wheelers (876 ; 449).

This shows the considerable progress achieved so far in these branches of the industry.

On an average the indigenous content achieved is about 40 per cent. It is estimated that this would rise to about 70 to 75 per cent by the end of the Second Plan Period. These vehicles are popular, but because of the foreign exchange restriction, it has not been possible to manufacture a larger number and utilise the full installed capacity. The fixed investment in the two industries Motor Cycle and scooter roughly amounted to Rs. 2·34 crores. (Nov. 1960).

Two more units which will manufacture scooters and motor cycles have been licensed. One Escorts (Polish) with a production capacity of 600 scooters a month, was expected to go into production in May or June 1960. The second one Ideal Jawa (India) Prvt. Ltd. would be set up in Mysore with Czech. collaboration with a production capacity of 6,000 per annum. The present output of scooters has already exceeded the 2nd Plan target.

Transport capacity could be augmented by using truck-trailer combination. With this end in view, the manufacture of trailers has been strongly encouraged. There are at present 12 units manufacturing trailers of 2, 4 and 8 wheel types having a carrying capacity of upto 10 tons. The production of trailers since 1956 has been as under :—

(in Nos.)

1956	1957	1958	1959	1960
1,899	1,862	1,920	1,536	—

By 1960–61 these vehicles will have reached 85 per cent indigenous content.

ANCILLARIES

Items like tyres, tubes, battery, rubber parts, upholstery material and paints are all obtained from indigenous sources for all the vehicles in the manufacturing programme.

At present (Feb. 1960) there are about 50 recognised units engaged in the manufacture of various ancillary items besides the original equipment manufacturers.

The following manufacturing industries are more or less well established : pistons and piston rings, cylinder liners (dry), fan felts, radiators, propeller shafts, bodies for automobiles, seat bench assembly, upholstery material, batteries, electric lamps and bulbs, ball bearings, tyres and tubes and paints. To the list are added gudgeon pins, electric horns and new ranges of piston.

Manufactures started later are : sparking plugs, fuel injection equipment, electric horns, shock absorbers, wheels and rims, spanners, and brake lining, clutch facings, piston rings, cylinder liners, oil seals, metal gaskets, scammel semi-trailers, brake lining, clutch discs and friction materials.

The production of automobile components, which was valued at Rs. 42·31 lakhs in 1951, had increased to about Rs. 7·5 crores in 1959. In 1959 production included items like piston assembly, cylinder liners, thin-walled bearings, valves, fuel linings, clutch facings, clutch-assembly, hydraulic brake assembly, leaf springs, spark plugs, dynamos, gaskets, etc. Several schemes to promote the development of ancillary industry for the manufacture of automobile components, licensed during the last few years were expected to go into production during 1961.

The production was valued at over Rs. 9 crores in 1960. This is a big advance. Moreover these figures are exclusive of the production of numerous small firms which are producing many automobile components, and whose activities do not come under the provisions of the Industries (Development & Regulation) Act, and whose production statistics are therefore not available.

The year 1959 saw the approval of a number of fresh proposals for the manufacture of new ancillary items and for effecting a substantial expansion of the existing undertakings. The items covered were starter motors, dynamos, cut-outs, distributors, wheels and rims, dash board instruments, steering assembly, pistons, thin-wall bearings, fuel injection equipment, brake linings, radiators, ignition coils, electric horns, etc.

Capacities remain to be established for items such as tapered and parallel roller bearings, precision die castings, and garage equipment.

It is expected that most of the raw material required by the automobile ancillary industry would be available within the country by the end of the Third Five-Year Plan.

FUTURE

In estimates made in 1956 the Tariff Commission put the total annual production capacity of the industry at 49,800 vehicles on single shift basis and that of engines at 10,000. The annual demand by 1960–61 was estimated at 40,000 commercial vehicles, 20,000 passenger cars and 5,000 jeeps making a total of 65,000 vehicles. The Commission also recorded that there has been a gradual improvement in the quality of automobiles produced in India since 1954.

On the basis of the Commission's report the Government decided that the nett dealer prices (*i.e.* ex-factory prices charged to the dealers) should not exceed the ex-works cost by more than 10 per cent. The Government also came to the conclusion that the dealer's commission should be fixed at 10 per cent of the ex-factory prices for passenger cars and jeeps and 7½ per cent of the ex-factory prices for trucks, buses and other commercial vehicles. The Government finally accepted the Tariff Commission's recommendations that the industry should be given protection for a period of 10 years.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Details of estimated demands in 1961 and 1966 are shown in the table below :—

Type	Probable demand in	
	1961	1966
	Nos.	*Nos.*
Cars	20,000 to 24,000	40,000 to 45,000*
Trucks & Buses ..	30,000	60,000 to 75,000
Jeeps	6,000	9,000 to 10,000
Motor Cycles and Scooters	20,000 to 24,000	40,000 to 50,000
Three-Wheelers ..	4,000 to 5,000	8,000 to 10,000

*If a small car is introduced into the automobile industry's manufacturing programmes, or any other development results in some appreciable price reduction, the demand would probably increase to 60,000.

If these demands materialise, the annual turnover of the automobiles and the ancillary industries taking into account spare parts and replacements will be nearly Rs. 250 crores against the present turnover of about Rs. 65 crores.

The Government constituted a Development Council for the scheduled industries engaged in the manufacture or production of automobiles, automobile ancillary industries and transport vehicles industries in April 1959. The first meeting of the Development Council was held in New Delhi on 13th July 1959.

The Jha Committee, which was appointed by the Government to review the progress of the Indian automobile industry and explore the possibilities of manufacturing a small car in the country, submitted its report to the Government on Feb. 6, 1960.

The committee is understood to have recommended a number of measures to manufacture practically all the components of a vehicle in the country in the next two years. At present, more than 70 per cent of the components of certain types of vehicles are manufactured in India.

The committee is stated to have come to the conclusion that there is scope for the manufacture of a small car. It has not recommended any particular model but has stated that the small car should be roomy, sturdy and capable of carrying an average Indian family.

The Government, it is reliably learnt, is anxious to give a small car to suit the pocket of an average middle class man at a cost of Rs. 6,000 inclusive of taxes. And it has been announced that the small car would be manufactured in the public sector. An expert committee headed by Mr. G. Pande is now studying the various models of cars with a view to arriving at a decision as to the most suitable model and other aspects of the manufacture.

CEMENT INDUSTRY

THE first venture in the manufacture of Portland Cement in India took place in 1904, in a small factory just outside Madras, but it quickly went out of business.

At the beginning of the First Plan, there were 21 cement factories and at the end of the Plan, 27 units engaged in the production of cement.

In March 1957, the number of factories rose to 28, of which one was owned by the U.P. Government and one by the Mysore Government. Of the rest, all privately owned, seven were in Bihar, four in Bombay,* three in Madras, two each in Mysore, Andhra, Madhya Pradesh, Rajasthan and the Punjab, and one each in Orissa and Kerala. The total capacity was about 6 million tons a year and the total production about 5 million tons. The number of factories in existence in 1958 was 29, in 1959 it was 32. Nine new factories were expected to be set up during the remaining period of the Second Plan—two each in Bombay* and Madras, one each in Mysore, Andhra Pradesh, Assam, Kashmir and Pondicherry. The number of factories as on March 1961 was 34.

The installed capacity which was 8·35 million tons (8·48 million tonnes) at the beginning of 1960-61 increased to 8·93 million tons (9·07 million tonnes) at the end of 1960-61. A total quantity of 7·17 million tons (7·28 million tonnes) was produced during 1959-60. The production in 1960-61 upto Jan. 31, 1961 was about 6·47 million tons (6·57 million tonnes). The production was expected to be 7·10 lakh tons each in Feb. and March 1961.

A sum of about Rs. 29 crores had been invested in the industry up to 1950-51, of which the A.C.C. accounted for Rs. 15·5 crores and the Dalmia Group Rs. 7 crores. Some 33,000 persons were employed by the industry in 1950-51. Excluding Rs. 2·92 crores spent on the 2 lakh tons cement factory of the U.P. Government at Churk, about Rs. 15 crores are estimated to have been invested in new units and expansions in the cement industry during 1951-56. The investment incurred by the Associated Cement Companies on their projects is estimated to amount to Rs. 11·76 crores during this period.

For the expansion of capacity in the private sector to 12·5 million tons by 1960-61 from 4·6 million tons in March 1956 (the capacity in the public sector in the two plan periods was to be 3 lakh tons and 5 lakh tons respectively), an investment of about Rs. 80 crores was expected to be required. The development programme of the ACC envisaged an investment of Rs. 35 crores for stepping up the capacity of their factories from 2·782 million tons in March 1956 to 5·288 million tons by the end of the Second Plan.

Altogether the capacity of the industry was envisaged to be stepped up to 10·25 million tons per annum by the end of the Second Plan.

By 1960-61, the consumption of cement is estimated to have reached 12·5 million tons at the end of the Second Plan period.

To meet this increased demand, the Government approved various expansion schemes.

PRICE

The recommendations of the Tariff Commission regarding price are given in the 1960-61 edition of the Directory. The revised prices were to remain in force until the end of June 1961. While in almost all cases the producers have been allowed an increase in price, the *f.o.r.* destination price of cement, i.e., the price at which cement packed in new gunny bags is sold to consumers at all railheads throughout the country, will continue to be the same as at present, namely Rs. 117·50 per ton.

The S.T.C. has been handling the entire production of cement in India for the last three years.

The prices of indigenous and imported cement are pooled and its distribution has been taken over by the State Trading Corporation in order to provide for substantial import of cement in the interests of consumers and to rationalise properly and regulate the use of cement when its demand has gone up so high.

The excise duty on cement was raised from Rs. 20 to Rs. 24 per ton with effect from 1st March 1958.

EXPANSION

The cement industry recorded steady progress during 1959. With the coming into operation of one new unit and completion of six expansion schemes, the installed capacity of the industry has increased from 7·05 million tons in 1958 to 8·35 million tons in 1959. The capacity at the end of August 1960 stood at 8·57 million tons. The actual production was 5·10 million tons in August 1960, as against 6·82 million tons in 1959, 6·07 million tons in 1958 and 5 million tons in 1957. Besides the 32 units already in operation in the country, 54 schemes, comprising 25 new units and 29 projects for the expansion of existing units involving a total additional capacity of 7·686 million tons a year had been approved by the Government of India upto the end of 1959. The schemes are in various stages of progress. Of these, fifteen schemes (four new units and eleven schemes for expansion of existing units) with a total capacity of 1·8 million tons were completed by the end of 1958, while another eleven schemes were expected to be completed by the end of 1959 giving a total capacity of 10·4 million tons by that date. The remaining schemes were scheduled to be completed progressively by 1960-61. In meeting the requirements of foreign exchange for the procurement of capital goods for implementing these schemes, assistance was received from the Technical Cooperation Mission and the Development Loan Fund.

The Third Plan Draft Outline contains large-scale programmes for these projects, which means that the demand for cement will rise markedly in the coming years. The aggregate requirements in the last year of the Third Plan, that is, 1965-66, are expected to be of the order of 13·50 million tons, whereas the capacity at the end of the current Plan is put at 9·50 million tons on the basis of three shifts working 300 days in a year; the existing capacity is a little over 8·32 million tons. The capacity target to be achieved by 1965-66 is 15·00 million tons. By the end of the Third Plan six to seven cement plants with a daily production capacity of 500 tons will be manufactured annually. The total value of the plants is estimated at Rs. 4—5 crores, with indigenous content of 90 per cent.

Owing to the modernisation of some of the units for making asbestos cement products, the capacity of the industry has reached 240,000 tons (against 210,000 tons in 1957) and production has increased from 119,828 tons in 1956 to 157,577 tons in 1957, and to 185,563 tons in 1958 but declined to 179,321 tons in 1959. The industry has to depend largely on the import of raw asbestos from abroad, and owing to the present difficult foreign exchange position, no new schemes for the manufacture of asbestos products are being licensed.

* Bilingual.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Six firms have been registered or licensed for the manufacture of cement machinery. Much of this will be manufactured in India by the end of the Plan.

The imports and exports respectively (in tons) of cement by land and sea during the period of the First Plan were as follows: 1951-52 (10,312; 67,758); 1952-53 (3,652; 57,441); 1953-54 (6,694; 86,116); 1954-55 (6,000; 101,429); 1955-56 (10,717; 51,351).

During the year 1957, India imported 351,000 tons of cement and a small quantity was exported.

Import of cement had been completely stopped in 1958, while about 40,602 tons were exported. The export figure for 1959 stands at 176,902 tons and for 1960 (April to September), at 52,412 tons.

The export quota for 1960 was four lakh tons.

WAGE BOARD

The recommendations of Central Wage Board for the Cement Industry are given in the 1960-61 edition of the Directory.

Government has accepted the recommendations. The recommendations of the Wage Board are in the process of implementation. The study in regard to workloads, suggested by the Wage Board, is in progress in a few selected cement factories by the Chief Adviser of Factories (March 1961).

CHEMICAL INDUSTRY

FOR purposes of industrial production, chemicals fall easily into one of two major groups: (*a*) Heavy Chemicals; and (*b*) Fine Chemicals.

According to the latest data, there are over 250 factories with a capital investment of nearly Rs. 33 crores and providing employment for about 35,000 workers.

At present, there are two Development Councils, one for the scheduled industries engaged in the manufacture and production of alkalies and allied chemicals under the chairmanship of Mr. C. R. Rao of Tata Chemicals Ltd., and another for the scheduled industries engaged in the manufacture and production of acids and fertilisers under the chairmanship of Dr. M. D. Parekh of National Rayon Corporation Ltd.

SULPHURIC ACID

The production of sulphuric acid has increased by about 20 per cent over that of 1959. Actual production was 2,92,169 tons in 1959 as against 3,50,000 for 1960.

The trend of production in tons is as follows:

1950, 102,480; 1951, 106,932; 1952, 96,084; 1953, 109,091; 1954, 150,876; 1955, 156,000; 1956, 165,216; 1957, 196,068; 1958, 226,588; 1959, 2,92,169; 1960, 3,50,000.

Licences have been issued for additional installed capacity of 244,735 tons per annum (total for 17 manufacturing units). Two other new units have gone into production with a total capacity of 24,750 tons per annum during 1959-60.

A company was formed in March 1960 for the manufacture of sulphur and sulphuric acid from the pyrites deposits in the Amjor area of Bihar in the public sector. The estimated cost was beween Rs. 6 and 7 crores.

The Government fixed a ceiling price for sulphuric acid at Rs. 175 per ton ex-works, linking it to a price of Rs. 275 per ton for sulphur delivered to the works. Variations in the price of sulphuric acid have been provided for to allow for fluctuations in the price of sulphur.

The reduction in the price of sulphuric acid led to the closure of three chamber plants with capacities less than seven tons of acid per day. However, the capacity of 10 contact plants have been raised. The number of units on production during 1959 was 35 with a total installed capacity of 374,084 tons per annum.

The annual consumption of sulphuric acid in different industries in 1955-56 was estimated at 160,000 tons and was estimated to rise to 470,000 tons by 1960-61. The following picture shows the programme of development for sulphuric acid during the five year plans.

(In '000 tons)

1950-51 Production	1955-56 Production	1960-61 Estimated		Targets for 1965-66	
		Capacity	Production	Capacity	Production
99	164	521	400	1,500	1,250

ALKALI INDUSTRY

The alkali industry comprises the manufacture of soda ash and caustic soda, sodium bicarbonate, bleaching powder, benzene hexachloride, liquid chlorine and zinc chloride.

The rated capacity of the soda ash industry has more than doubled in the past nine years. In August 1960, it stood at 216,996 metric tons as against 54,000 tons in 1950 per annum. Two units were engaged in its production during 1959. The trend of production of soda ash in tons is as under:—

1953, 56,868; 1954, 48,288; 1955, 77,268; 1956, 84,240; 1957, 91,925; 1958, 90,862; 1959, 96,128 metric tons; Jan.-Aug. 1960, 91,667 metric tons.

Three new licences for the production of soda ash were issued during 1955 and expansion of one of the existing plants was approved. With the implementation of the new schemes, the installed capacity was expected to rise to 253,000 tons a year in 1960-61.

On the basis of the Tariff Board's report in 1951 the estimated consumption of soda ash was placed at 115,000 tons. This was expected to rise to 155,000 tons by 1955–56 and to 230,000 tons by 1960–61.

The import policy and the high prices since 1951 gave an impetus to this nascent industry though the heavy imports allowed in the first two years of the First Plan caused some temporary difficulties to indigenous producers owing to accumulation of stocks. Actual imports in tons were: 1951: 52,101; 1952: 112,147; 1953: 35,506; 1954: 94,544; 1955: 65,996; 1956: 90,966; 1957: 84,711; 1958: 50,856; 1959: 126,559; April-Sep. 1960: 40,952.

The tariff protection to this industry has been extended up to the end of 1961.

The following table summarises the programme of development of the soda ash industry:—

('000 tons)

1950-51 Production	1955-56 Production	1960-61		Targets for 1965-66	
		Estimated Capacity	Estimated Production	Capacity	Production
45	81	304	240	530	450

In 1959 the production in tons of hydrogen peroxide was 1,000, of bleaching earth 2,200, of hydrochloric acid 11,000, of sodium bicarbonate 5,700.

Caustic Soda.—There were at the end of 1959, 17 units manufacturing caustic soda with an annual capacity of 98,945 metric tons. There were 18 factories at the end of 1960 and 12 more units might come into existence in the 3rd Plan.

Actual indigenous production of caustic soda and the associated chemicals has been as under:—

Year	Caustic soda in Tons	Liquid chlorine in Tons	Bleaching powder in Tons
1955 ..	34,248	11,580	2,700
1956 ..	39,420	15,072	4,656
1957 ..	42,708	15,696	5,340
1958 ..	57,187	19,823	6,509
1959 ..	69,876	24,780	5,184
Jan.-Aug. 1960 ..	66,356	20,847	3,922

The production was expected to reach 100,000 tons in 1960 and it is expected to reach 300,000 tons during the 3rd Plan.

Imports of caustic soda in tons were: 1955: 54,881; 1956: 93,594; 1957: 66,042; 1958: 61,734; 1959: 147,162; April-Sep. 1960: 37,671.

During the Second Five-Year Plan the installed capacity of the industry has risen from 44,300 tons in 1955-56 to 150,400 tons in 1960-61 and actual production from 36,000 tons to 135,400 tons.

Three new units would be set up. The demand for caustic soda in 1959 was 124,000 tons and is expected to rise to 169,000 tons in 1961.

A new factory of Dhrangadhra Chemical Works went into production in 1959 with an initial capacity of 30,000 tons per annum which is to be increased to 55,000 tons. The expansion scheme of Tata Chemicals is being implemented.

In the case of bleaching powder the demand is 8,000 tons per year and it is believed to have risen to 12,000 tons by 1961.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

MISCELLANEOUS CHEMICALS

The present position of some of the important products is as follows :—

—	No. of units.	Annual rated capacity in tons.	Actual production in tons.	
			1959	Jan.-Aug. 1960
Alum	14	9,930*	4,932	2,694
Aluminium sulphate	25	60,567	43,000	N.A.
Ferrous sulphate	10	3,973	2,400	N.A.
Copper sulphate	11	6,135*	3,000	2,248
Sodium thiosulphate	5	2,153	1,000	N.A.
Sodium sulphate	4	828	550	N.A.
Sodium bisulphate	5	1,218	1,000	N.A.
Bichromates	7	6,852	4,332	3,168
Sodium bicarbonate	2	6,276	5,760	4,842
Potassium chlorate	2	3,660	2,724	2,150
Zinc chloride	4	1,546	900	N.A.
Calcium chloride	3	2,861	500	N.A.
Magnesium chloride	4	39,600	7,000	N.A.

N.A. = Not available. * As in June 1959.

Protection for bichromates has been withdrawn with effect from 1st January 1959, while that for calcium carbide has been extended up to the end of December 1961.

The production of calcium carbide by the two units one each in West Bengal and Madras, stood at 3,803 tonnes in 1958. Their rated capacity as on Jan. 30, 1961 aggregated to 16,939 tonnes as against 4,116 tonnes in 1958. Another unit in Maharashtra with a capacity of 14,228 tonnes was expected to start production in February 1961. Two more units, one each in Delhi and Kerala, have been licensed. The capacity of all the five units is expected to reach 56,537 tonnes in 1964. Production of calcium carbide in 1960 was about 8,964 tonnes as against 4,129 tonnes in 1959.

The production of hydro-sulphite of soda, an important chemical for the textile industry, which has now to be imported at the cost of Rs. 1 crore per year, began for the first time in 1958. Two units which will go into production will have a capacity of 3,000 tons by 1961. This would meet about 60 per cent of the total requirements by the end of the Plan.

FERTILISERS

So far in India the inorganic nitrogenous fertiliser almost universally employed has been ammonium sulphate. There are at present eight units in West Bengal and Bihar with a rated capacity of about 425,900 tons of ammonium sulphate per annum. The Sindri factory went into production in November 1951.

The output of ammonium sulphate progressively rose from 45,395 tons in 1949 to 319,620 tons in 1953, to 340,222 tons in 1954 to 393,095 tons in 1955 and 389,017 tons in 1956. In 1957, however, there was a slight setback, the total output amounting to 379,656 tons. The production during 1958 amounted to 384,228 tons, in 1959 to 378,504 tons and in the first seven months of 1960 to 216,698 tons.

Assuming country-wide application of nitrogenous fertilisers the annual needs would be about 12 million tons of ammonium sulphate. The actual capacity in July 1960 was 450,168 tons.

In spite of the full utilisation of the capacity of the Sindri Factory, it has been necessary to import large quantities of nitrogenous fertilizers because of increasing demand. India imported 138,423 tons of fertilisers worth Rs. 1·42 crores in 1958, 646,142 tons worth Rs. 17·06 crores in 1959, and 223,955 tons worth Rs. 4·13 crores during April-Sep. 1960.

Production of ammonium sulphate at the Sindri Factory went up from 321,000 tons in 1955 to 331,000 tons in 1956 and to 332,031 in 1957. A record production of 32,891 tons was reached during December 1957 giving a record daily average of 1,061 tons. This was exceeded in March 1959. Production in 1958-59 was slightly lower at 330,122 tons and during April-November 1959 it was 188,905 tons.

The Fertilizer Production Committee submitted its report in 1955 and suggested suitable location for the establishment of new plants.

As a part of the plans made by the Government of India for increasing fertiliser supply to 370,000 tons per annum by 1960-61, progress is being made rapidly in the expansion of the Sindri factory for the production of ammonium sulphatenitrate and Urea. A new unit with a capacity of 100 tons per day of superphosphate went into production during 1957. It has been decided to set up a second factory at Neyveli in South India. After the implementation of the schemes both in the public and private sectors, it was expected that the annual installed capacity will be 382,000 tons of fixed nitrogen and the production 290,000 tons by 1960-61.

On 15th May 1957, the Government of India brought into force the Fertilizers (Control) Order 1957, with a view to regulating supply of chemical fertilisers of the prescribed standard to cultivators at fair prices. The order empowers the Central Government to fix the maximum price at which any fertiliser may be sold by a manufacturer or a dealer in a particular area and for a specific class of consumer with due regard to local conditions and other circumstances prevalent in that area.

The production and consumption of superphosphates which received a setback in 1955 due to the fall in agricultural prices and rail transport difficulties recovered markedly during the years 1956 and 1957. Production was: 105,060 tons in 1954, 74,160 tons in 1955, 81,168 tons in 1956 and 141,684 tons in 1957. The production during 1958 was 166,848 tons and in 1959, it was 274,626 tons. During Jan.-July 1960 it was 204,786 tons. The aggregate installed capacity in August 1960 was 343,668 tons per annum. Production during 1960-61: 325,000 (estimated).

But in view of the importance of this fertilizer and that of ammonium phosphate the target of consumption was put at about 120,000 tons by 1960-61.

1960-61 capacity of superphosphate: 6 lakh tons.

The Government is planning to provide one fertiliser factory for each State, though the new plants would be smaller than that at Sindri or Nangal, the cost being about Rs. 5 crores, as against Rs. 25 crores for the existing factories and those already approved.

The estimated needs of potassic fertilisers is roughly 30,000 tons by 1960-61 and it may be possible to recover about 52,700 tons from all the salt works in the country. In 1955, the Indian Potash Supply Agency was formed with the approval of Government, which is expected to assist the development of the production of potassic salts from the bitterns of salt works.

Fifteen more fertilizer factories—all in the private sector—are expected to go into production before the end of 1962, bringing the total number of factories producing single superphosphates in India to 31.

FINE CHEMICALS

The term "fine chemicals" is applied usually to substances such as photographic materials, drugs and pharmaceutical products, paints, pigments and varnishes, and dyestuffs. All the figures given below are in tons per annum except where otherwise stated.

The average annual demand has been estimated at 60 tons for calcium lactate, 80 tons for iron-ammonium citrate, 200 tons for potassium citrate and 50 tons for sodium citrate. Government has, on the Board's recommendation, converted the 36 per cent. standard and 26 per cent. preferential revenue duty on calcium lactate into a protective duty.

Production of bromine and bromides at one of the alkali works has been attempted and an annual output of 75 tons bromine, 36 tons potassium bromide and 14 tons sodium bromide has been recorded. The total installed capacity of bromides in 1959 was 204 tons and actual production was 138 tons. In the first eight months of 1960 it was 56 tons.

Coal, tar and wood distillation products are not sufficiently exploited to manufacture fine chemicals and even the war-time production of methanol and formaldehyde has been recently curtailed. Synthetic fine chemicals are yet to be turned out in India on a commercial scale.

Photographic Materials.—The basic chemical required for the photographic industry are: (*i*) gelatin, silver halides and sensitizers in the coating of film, plate and paper base, and (*ii*) hypo-sodium sulphite metal, hydroquinone and chrome alum in the processing stages.

Borax, boric acid, acetic acid and metal and photographic-grade sodium sulphite are still imported. The capacity of sodium sulphate in 1959 was 828 tons and output 550 tons which meets the full demand. Production capacity of 30 tons for potash chrome alum has been established. Hydroquinone is being manufactured in India since 1950. The actual production in 1959 was 17,543 Kilogrammes. There are two manufacturers with a total installed capacity of 34,000 Kilogrammes per annum. X-ray developing and fixing salts have been placed on the market since 1949.

Pre-war imports of raw film base into India were enormous, the film industry alone consuming some 80 million ft. per annum. The Celluloid Industries Panel has recommended the installation of a factory for manufacturing 50 million sq. ft. of all types of raw film, and this should synchronize with the manufacture of gelatin, silver halides, sensitizers and other photographic materials in adequate quantities.

Chemical.	Production.			Main uses.
	1957	1958	1959	
Acetic acid (tons)	2,762	3,200	2,976	Rayon, white lead, lead acetate, dyeing, rubber
Acetone (tons)	694	700	640	Solvent, explosives
Benzene (gals.)	5,16,368	7,89,084	1,064,013	Solvent
Creosote oil light (gals.) ..	5,29,927	8,85,517	1,049,000	Insecticide
Naphthalene (tons)	816	700	640	Disinfectant, etc.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Paints and Varnishes

There are at least 200 factories manufacturing paints and varnishes, but nearly 150 of them are very small in size. The bigger ones are concentrated in Bombay and Calcutta. Eighteen units with a capacity of 66,360 tons are in Calcutta, and 16 with an annual capacity of 18,360 tons are in Bombay.

The aggregate annual installed capacity of the paints and varnishes industry in August 1960 was 71,160 tons. Actual production during 1958 was 48,000 tons, as against 38,276 tons in 1957. The production in 1959 was 54,240 tons as against 31,889 tons in the first eight months of 1960.

An excise duty was imposed on paints and varnishes at 10 per cent. *ad valorem* with effect from March 1, 1955.

The consumption of paints, varnishes and enamels went up from about 40,000 tons in 1955-56 to 60,000 tons in 1960-61. The demand for nitrocellulose lacquers was expected to rise from about 3,00,000 gallons to 5,00,000 gallons. The existing capacity for ready-mixed paints and varnishes, *i.e.*, 71,160 tons, was considered sufficient to meet the demand during the Second Plan; so also the present capacity of 8,00,000 gallons for nitrocellulose lacquers. The actual output in 1958 was 290,000 gallons.

The following table summarises the development programme of the industry during the Second Plan:

	1955-56	1960-61
(*a*) Ready-mixed paints, varnishes, etc.:		
Capacity (tons) ..	65,000	65,000
Production (tons) .. (esti.)	39,000	60,000
(*b*) Nitrocellulose lacquers:		
Capacity (gals.) ..	800,000	800,000
Production (gals.) .. (esti.)	300,000	500,000

PROTECTION

Protection has been extended for the following upto the end of the year mentioned against each: Calcium lactate 1960; Deprotected from December 1960; Titanium oxide 1961; Caustic soda 1961; Stearic acid 1962; Oleic acid 1962; Dyestuffs 1964.

Protection for hydroquinone has been withdrawn from 1st January 1960.

DRUGS AND PHARMACEUTICALS

Drugs and pharmaceuticals cover a large variety of products from simple extracts of vegetable drugs and glandular preparations to highly complex synthetic drugs and antibiotics.

The drugs and pharmaceutical industry has made great strides since independence. Production has gone up from Rs. 10 crores to more than Rs. 65 crores in the last 12 years. The six drug plants proposed to be established with Soviet collaboration are expected to produce drugs to the tune of Rs. 35 to Rs. 40 crores. The Third Plan Target is of the order of Rs. 150 crores, the aim being to make the country independent of imports except for small quantities of the latest pharmaceuticals. Standards of quality are strictly enforced. There is a State control laboratory for the purpose, whose decisions can be referred to an appellate laboratory at Calcutta. In addition, the Government has been contemplating for some time the establishment of a central control institution to test the products of the various State drug enterprises during the process of manufacture itself. Due attention is being paid to the question of research and each major licence requires the party to undertake some fundamental or applied research. Similarly, the question of reduction in price is constantly before the Government. One example is penicillin. The price of penicillin has been brought down from Re. 1·68 to just 62 nP.

In the field of antibiotics, a penicillin factory was established in the public sector. The Hindustan Antibiotics, located at Pimpri near Poona went into production in August 1955 with a capacity to produce 3·6 million to 9 million mega units of penicillin per annum. (For details see under Government Industrial undertakings). Chloromycetin is being produced by Parke Davis & Co. from the penultimate levobase which is imported. Their plant has a capacity of 3,600 kgs. Actual output was 1,526 kgs. in 1957 and 1,890 kgs. in 1958. Aureomycin is produced by the Atul Products from imported crude chlortetracyclin. The quantity actually produced was 1,383·50 kgs. in 1957 and 1,870 kgs. in 1958 and 1,574 kgs. in 1959. They have also taken up the manufacture of teracyclin.

The manufacture of sulpha drugs has made substantial progress in the country. The installed capacity and actual production respectively in kgs. of different drugs in 1959 are given below within brackets: Sulphadiazine (107,400; 43,425); Sulpha pyridine (18,200; 8,604); Sulphasomidine (24,000; 27,916); Sulphathiazole (182,300; 57,931).

Among the new drugs recently developed for the treatment of tuberculosis are para-amino salicylic-acid (PAS) and Isonicotinichydrazide (INH). Actual output of the two drugs in 1959 was 107,596 kgs. and 29,372 kgs. respectively as against 66,093 kgs. and 20,051 kgs. in 1958. The installed capacity in 1959 was 31,032 kgs. and 126,000 kgs. respectively.

Three manufacturers produce at present anti-leprosy drugs such as DDS and its derivatives. They have a total capacity for 8,160 kgs. of DDS. Actual output in 1959 was 39,28 kgs.

Quinine, the most extensively used anti-malarial drug, has been produced in the country in the factories established by the West Bengal and Madras Governments. During the First Plan period the Madras Government established a new factory at Annamalai with a capacity of 80,000 to 100,000 lb. of quinine salt. Besides, some synthetic anti-malarials such as chloroquin and its salts are produced in India. There are three units engaged in their manufacture, with an estimated capacity of 1,890 kgs. per annum.

There are three manufacturers of anaesthetics with a total capacity of 720,000 kgs. of ether, 89,500 kgs. of chloral-hydrate and 72,000 kgs. of ethylchloride. Actual production in 1959 was 423,188 kgs., 42,295 kgs. and 69,150 kgs. respectively.

Among insecticides, D.D.T. is produced on a commercial scale. The factory of the Hindustan Insecticides in Delhi went into production in March 1955. Production in 1956 was 500 tons. The capacity of the factory has been doubled. Another D.D.T. factory erected by the Government of India at Alwaye in Kerala with an annual capacity of 1,400 tons commenced production in 1958. The total production of D.D.T. in 1959 was 2,441 tons (50 per cent formulation). Two factories manufacture benzene hexachloride with an annual capacity of 3,900 tons. Actual output in 1959 was 2,635 tons.

Shark liver oil is produced in factories set up by the Governments of Bombay,* Madras and Kerala. The existing factories have an estimated capacity of 70,000 gallons per annum of 6,000 i.u.g. of vitamin 'A'. Actual output in 1959 was 11,548 gallons.

Exports

A number of measures have been taken by the Government of India for stimulating exports of Indian medicinal and pharmaceutical products. An Export Promotion Council for chemicals and allied products has been set up for the purpose and grants in aid are given to the Council for pushing up exports.

A special licensing scheme has been evolved for export promotion. Under this, prospective exporters, who accept a definite target of exports, are granted licences for importing necessary raw materials and accessories. Import duties collected on the imported raw materials and excise duties levied on materials used in the manufacture of exported pharmaceuticals are refunded to exporters. With the co-operation of the Indian manufacturers, certain items of indigenously produced raw materials are being made available to exporters at concessional prices.

Provision is made in Trade Agreements with foreign countries for exports of Indian pharmaceuticals.

Exports: India exported medicinal and pharmaceutical products worth Rs. 88·95 lakhs in 1958 as against Rs. 1·01 crores in 1957. Exports during 1959 were Rs. 82·84 lakhs as against Rs. 49·35 lakhs during April-Sept. 1960. The principal importing countries were Pakistan, Nepal and countries in South-East Asia and West Asia.

Imports: India imported drugs and medicinal products worth Rs. 10·21 crores in 1958, Rs. 8·83 crores in 1959 and Rs. 5·89 crores during April-Sept. 1960.

FUTURE DEVELOPMENT

The Ministry of Commerce and Industry appointed a Committee in February 1953 and the Committee submitted its report in June 1954, making a number of recommendations to improve the existing conditions in the pharmaceutical industry. In 1955, the Government set up a Developmental Council for the industry.

The requirements of drugs and pharmaceuticals are very large in India. Hence, schemes were included in the Second Plan for the expansion of the production of various drugs and medicines.

Some of the important schemes are listed below:

The factory at Pimpri proposes to expand its capacity for penicillin manufacture to 40 million units. In the private sector, the Alembic Chemicals, Baroda, have a scheme for the establishment of a penicillin factory with a capacity of 4·8 million mega units per annum and the Standard Pharmaceutical Works, Calcutta, for the production of 1·8 million mega units of penicillin and 180 kg. of streptomycin. Besides, the Rambaxy & Co., Faridabad, have also been given a licence to set up a plant for the manufacture of 3,000 kgs. of chloromphenicol as also the Mac Laboratories, Bombay for the manufacture of 500 kgs. per annum.

Two firms, Fedco, Bombay and Sarabhai Chemicals, Baroda, have been granted licences for the manufacture of procaine hydrochloride with an annual capacity of 60,650 kgs.

Three new schemes were licensed during 1956-57 for the manufacture of chloramphenicol. The production of isonicotinic acid hydrazide has commenced. About 200 lbs. were being produced a month.

A scheme for the manufacture of streptomycin at Hindustan Antibiotics Ltd. in collaboration with an American firm is under implementation.

A proposal for the manufacture of Vitamin A, Cortisone and its derivatives, Vitamin B_6 and B_{12}, etc. with foreign collaboration, has been licensed for establishment in the private sector. Licences had been granted for the establishment of four new undertakings during 1959-60. One of them will manufacture plaster of paris, bandages adhesive tapes and other surgeon's requisites. Another will produce anti-histamines, heclosine, Buclizine and Tranquiliser Atarax.

Soviet Aid

The following projects have been proposed by the Soviet team of drug experts:

1. An antibiotics plant to produce not only a large quantity of penicillin but also streptomycin, tetracyclin and new antibiotics.
2. A synthetic drugs plant to produce a large number of sulpha drugs, anti-tubercular drugs, analgesics and anti-pyretics and a number of vitamins, and equipped also to produce special intermediates required for their manufacture.

* Bilingual.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

3. A medical plants laboratory and factory to produce a large number of important drugs from medicinal plants.
4. A unit for the manufacture of glandular products, such as insulin, A.C.T.H., pituitrin.
5. A workshop for the manufacture of most of the important types of surgical instruments required in large numbers.

A start was made with the group of these projects in 1959. The setting up of an intermediate and basic organic chemicals plant—one of the N.I.D.C. projects—will synchronise with the development.

The total capital investment, excluding the investment on land, township and working capital, on the five drug units indicated above is placed at about Rs. 28·7 crores.

The Government have decided to locate the antibiotics plant at Rishikesh (U.P.), synthetic drugs plant at Sanatnagar (Hyderabad, Andhra Pradesh); surgical instruments plant in Madras City; phyto-chemicals plant at a suitable site in Kerala ;glandular projects plant (two units), one at the modernised slaughter house, Bombay, and the other at the modernised slaughter house at Calcutta; and basic chemicals and intermediate plant at Kharpada, near Panvel, in Maharashtra. The final selection of the actual sites would be determined in consultation with Soviet technical experts in the case of first five projects and technical experts from the West German firm of Bayers in the case of basic chemicals and intermediate projects. The Government of India have further provisionally decided to establish drug farms in the following regions for growing specific medicinal plants in each region: Jammu and Kashmir; Darjeeling area in West Bengal; Kerala; Nilgiris in Madras; Chakrata Hills in Uttar Pradesh; Monga Hills area in Assam.

According to a statement by the Minister of Industry, Govt. of India, the country was expected to be self-sufficient in respect of penicillin requirements by the end of 1960. In the case of streptomycin and tetracycline, the present requirements of which were fifty tons and five tons per annum respectively, self-sufficiency was likely to be achieved by the end of 1961. For chloramphenicol, the present requirement of the country was eight tons per annum, and the indigenous production was likely to meet the requirement by the end of 1960.

Dyestuffs : The production of dyes had increased from Rs. 2·63 crores in 1956 to Rs. 10·6 crores by 1959. Imports during this period had declined from Rs. 12 crores to Rs. 7 crores.

The following are the third plan targets for the important chemical and pharmaceutical industries :

(In tons)

	Capacity	Production
Nitrogenous Fertilisers	1,000,000	1,000,000
Phosphatic fertilisers ..	500,000	400,000
Sulphuric acid ..	1,500,000	1,250,000
Soda ash	530,000	450,000
Caustic soda	400,000	340,000
Calcium carbide ..	67,000	60,000
Sodium hydrosulphite	12,000	10,000
Hydrogen peroxide ..	9,500	8,000
Dyestuffs	22,400,000	18,000,000
Sulpha drugs	1,000	1,000
Streptomycin	150	150
P. A. S.	400	400
I. N. H.	100	100
Organic intermediates	24,000	24,000
Phyto-Chemicals ..	7,640	7,640
Insecticides, D.D.T. ..	2,800	2,800
Anti-dysentery drugs..	75	75
Penicillin (million mega units)..	205	120

COFFEE INDUSTRY

COFFEE cultivation is mainly confined to the hilly tracts of south India, from one thousand to six thousand feet above the mean sea level, and is centred in the Malnad area of Mysore, Madras and Kerala. In the lower elevations, which have a higher rainfall, the more delicate but better quality Arabica coffee has given place to the harder but coarser Robusta coffee.

No estimate of the capital invested in this industry has been made with complete coverage. The Plantation Enquiry Commission have estimated in their Report on Coffee submitted in 1956 that the capital invested in the coffee plantation industry by estates of 100 acres and above in extent is Rs. 14·57 crores. The value realised into the coffee pool by the sale of 1958-59 crop was over Rs. 15·72 crores.

Over 190,000 people drawn chiefly from Kerala, parts of Mysore and Madras are employed in the industry. Many of the coffee estates are inter-planted with orange trees, cardamom and pepper vines. There are only two types of coffee grown on commercial scale in India, the one most extensively cultivated being Coffee Arabica and the best in quality, with Robusta coming next in importance. About 50 species and sub-species of coffee are being grown in the Coffee Board's research stations.

The area from 1952 and production from 1953, of the two varieties of coffee are as under :

AREA IN THOUSAND ACRES

Year	Arabica	Robusta	Total
1952-53 ..	168	72	240
1953-54 ..	169	77	246
1954-55 ..	167	85	252
1955-56 ..	162	92	254
1956-57 ..	160	100	260
1957-58 ..	164	104	268

PRODUCTION IN TONS/M. TONNES

Year	Arabica	Robusta	Total
1953-54 ..	22,740	6,815	29,555[1]
1954-55 ..	16,165	8,860	25,025[2]
1955-56 ..	22,605	11,870	34,475[3]
1956-57 ..	29,400	12,500	41,900[4]
1957-58 (E)	29,220	14,480	43,700[5]
1958-59 ,,	25,080	20,790	45,870[6]
1959-60 upto Oct. 1960	31,848†	17,312	49,160

E: Estimates. The equivalents in metric tonnes for 1 to 6 are: [1].30,029; [2].25,427; [3].35,028; [4].42,572; [5].44,400; [6].46,605.

† Comprises 25,181 metric tons of plantation and 6,667 metric tons of Arabica Cherry.

The estimates for 1960-61 are placed at 52,100 tonnes.

Increase in production has been followed by a rise in exports and internal consumption.

The following table gives the trend of exports :

Year	Exports in Metric Tonnes*
1953-54	9,767
1954-55	3,592
1955-56	8,082
1956-57	15,472
1957-58	14,281
1958-59	16,400
1959-60 (E)	20,600

* Out of the season's crop.

The Board has sold for export 12,682 tonnes out of the 1959-60 crop upto the end of October 1960.

There is no export duty on coffee at the moment.

The possibilities of further expansion of the coffee cultivation in Andhra and Assam States and in the Andamans are being explored at present.

The annual average prices realised in the pool sales for each type of coffee from the year 1953 (in Rs. per 50 kg.).

Year	Plantation 'A'	Arabica cherry Flats	Robusta cherry Flats
	Rs. nP.	Rs. nP.	Rs. nP.
1953	215·79	185·89	147·69
1954	201·95	161·53	144·00
1955	213·88	177·84	156·36
1956	210·07	179·74	154·77
1957	219·18	183·03	159·55
1958	214·86	182·79	157·21
1959	237·79	190·26	127·84

COFFEE BOARD

To stimulate internal consumption and to regulate exports a statutory body, now known as the Coffee Board, was set up under the Coffee Market Expansion Board. In December 1952 a Bill was introduced in Parliament to amend the Act of 1942 for the purpose of ensuring better co-ordination between the Board and the Central Government and of providing adequate representation of consumer interests on the Board.

During the year 1960 a new and difficult situation developed in the marketing of Indian coffee consequent on the fall in the prices of coffee sold for exports. The Board was faced with the problem of disposing of the exportable surplus without bringing the final return to the grower below the economic level.

AVERAGE INDEX NUMBERS OF WHOLESALE PRICES OF COFFEE

(Price for week ended August 1939 = 100).

Year	Index
1952	675·4*
1953	619·4*
1954	546·8*
1955	616·0*
1956	635·24*
1957	628·80*
1958	646·80*

* Geometric mean of monthly averages.

Expert Committee

The Expert Committee on coffee marketing set up by the Govt. of India, to go into the question of coffee marketing has submitted its report to the Government. Their recommendations are under consideration.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

COIR INDUSTRY

COIR is the trade name given to the fibre obtained from the husk of the coconut fruit. This golden coloured fibre is also known in Europe as "Cocos Fibre".

India and Ceylon have a virtual monopoly in the production of this by-product of the coconut industry.

India produces about 4,370 million coconuts a year. The area under coconut cultivation is over 16 lakh acres.

In India the coir industry is practically confined to the coastal strip of Kerala State. It accounts for over one million acres of the coconut growing areas out of a total of 1·601 million acres in India. The distribution of the area under cultivation and production of coconuts (latest available) is as follows :—

States	Area in thousand acres.	Production of nuts in thousands.
Kerala	1,107	30,99,000
Mysore	218	4,99,345
Madras	127	4,17,453
Andhra Pradesh ..	88	2,33,007
Bombay*	20	40,071
West Bengal ..	17	22,205
Orissa	11	32,576
Laccadive and Amindive Islands	7	9,625
Andamans	4	2,500
Assam	2	12,757
Total ..	1,601	43,68,569

The coir industry is organised partly on cottage basis and partly in factories. The production of coir fibre, yarn and ropes is essentially a cottage industry, while coir mats, mattings, rugs, carpets, mourzouks, speciality articles, etc. are manufactured in factories.

It is estimated that in the spinning sector the industry provides employment to about five lakhs of people. The spinning sector is spread along the entire coastal region of Kerala State. In the manufacturing sector about 15,000 people are engaged. The manufacturing sector is mainly concentrated in and around Alleppey and Shertallai. The Kerala Government have fixed minimum wages under the Minimum Wages Act in respect of the spinning sector of the industry.

Quality fibre used for the manufacture of mats, mattings, carpets, rugs, mourzouks, etc. is extracted from retted husk. Coarse fibre is extracted from soaked husk or raw husk. The bulk of the output consists of fibre extracted from retted husk. The yarn spun by hand is soft and even twist, while that spun on wheels is hard twist and not so even as hand spun. Wheel Spinning is gradually displacing hand spinning. The spinning is mainly done by women, boys and girls. The Coir Board has introduced a new type of treadle spinning machine.

Coir yarn has certain well-known trade descriptions. They are: (1) Angengo—Superior and Ordinary; (2) Mangadan; (3) Carruva; (4) Alapat—Real and Imitation (Ashtamudy); (5) Vycome or Weaving; (6) Beach; (7) Roping; (8) Quilandy; (9) Beypore; and (10) Unsoaked—fine soaked and unsoaked.

The yarn produced in the spinning districts is marketed chiefly in Alleppey where there are a large number of factories for the manufacture of mats, mattings, rugs, carpets, mourzouks, etc. and also exporters of yarn.

Over 130,000 tons of fibre are estimated to be produced annually.

The annual production of coir yarn is estimated at 120,000 tons, of which wheel-spun yarn accounts for about 70 per cent.

On an average, 23,000 tons of coir yarn are utilised in the manufacture of coir floor coverings such as mats and mattings; 55,000 tons are exported as coir yarn; and about 42,000 tons are consumed in India itself for various purposes including manufacture of ropes and cordages.

According to a census conducted by the Coir Board in 1955, there are 29,941 working spindles and 717 non-working or idle spindles in Kerala State. 797 industrial establishments manufacture coir products in Kerala State. Out of the 797 establishments there are only 98 establishments with 20 looms or more. There are 124 coir factories registered under the Factories Act. These include coir yarn baling and rehanking factories also.

Exports of coir products earn about Rs. 9 crores of foreign exchange every year.

The coir industry in India is subject to violent fluctuations in prices and exports, causing often hardship to a large section of the population. This induced the Government of India to set up a Coir Board by special legislation called the Coir Industry Act, 1953.

The Act also provides for the control of the industry by the Union Government and for the levy of a customs duty on coir fibre, coir yarn and coir products.

At present, the duty is levied on coir fibre and coir yarn only at the rate of 50 nP. per cwt. The annual revenue on this account comes to about Rs. 5 lakhs.

The Coir Board† was established on July 6, 1954. Its chief function is the improvement of markets at home and abroad, thereby establishing a balance between internal consumption and exports so as to give the industry the required economic stability. The Board discharges its functions in accordance with the rules framed by the Central Government.

The Second Five-Year Plan Schemes of the Coir Board relate to the establishment of Research Institutes, sending out foreign delegations for market survey and study the uses of yarn in importing countries, opening of showrooms and sales-depots, and propaganda.

According to the above scheme a Central Coir Research Institute has been established at Kalavoor, near Alleppey. It is proposed to instal a Pilot Plant in the Institute, for the manufacture of mats and mattings on powerlooms, to study the effect of mechanisation on the manufacturing side of the industry. A Branch Research Institute with a model factory attached to it is also proposed to be instituted in Calcutta. Construction work in this connection is nearing completion.

A Trade Promotion Delegation of the Government of India which included a member of the Coir Board visited the U.S.S.R. and the East European countries in 1958. A delegation of the Coir Board visited in 1959 the West European countries, the U.K., U.S.A. and Canada in order to have a close study into the end uses of coir fibre and coir yarn and of the conditions of the trade, to explore the possibilities of expansion of existing markets and to find out new markets for coir goods.

In view of the importance of the coir industry as a foreign exchange earner, the Government of India had sanctioned an amount of Rs. 1·48 crores for the State Governments' schemes under the Second Five Year Plan.

The Coir Board has submitted schemes to the Central Government, estimated to cost Rs. 5,76,64,200 for inclusion in the Third Five Year Plan. Out of this, a sum of Rs. 2,87,79,200 will be allotted for the States' schemes and Rs. 2,78,85,000 will be for the Central Schemes to be implemented by the Board direct. An amount of Rs. 10,00,000 will be provided for schemes for Centrally administered areas.

The Central Scheme consists of two parts, viz. continuation schemes and new schemes.

Continuation schemes include scientific research on chemical, biological and other basic properties of coir fibre and coir yarn, applied research on the various methods of extraction of fibre, studies on the improved type of pedal-operated spinning machine, work on utilisation of coconut pith and coir waste, studies in the dyeing of coir fibre and yarn, working of the Branch Research Institute in West Bengal statistical and economical research, maintenance of showrooms, etc.

New schemes include installation of rope-making machines in the Central Coir Research Institute, Pilot Plant for the manufacture of mattings on powerlooms, manufacture of curled fibre and rubberised articles, establishment of design centre and dye house, etc. It is estimated that the New schemes will cost Rs. 1,62,00,000 and the continuation schemes Rs. 1,16,85,000.

* Bilingual.

† Reconstituted in 1960-61 for three years from July 1960.

EXPORTS

Exporters are now registered; the number registered was 470 (March 1960). The offices for licensing exports are located in Cochin, Alleppey and Kozhikode.

Exports of coir fibre, coir yarn, mats and mattings, and rugs and carpets are detailed below :—

	1955-56		1956-57		1957-58		1958-59		1959-60.	
	Q.	V.	Q.	V.	Q.	V.	Q.	V.	Q.	V.
Coir Fibre	13,320	563	11,572	558	16,871	773	19,667	786	21,225	910

COTTAGE INDUSTRIES AND HANDICRAFTS

THIRD Plan : Rs. 250 crores (tentative).

It is customary to refer to industries which are not required to be registered under the Factory Act as cottage and small-scale industries. There is no accepted line of distinction between cottage and small-scale industries. The term Small-scale industries might be interpreted to include industries which are run with comparatively low capital outlay. However for the purpose of providing governmental assistance the official definition of small-scale industries as revised and simplified recently is as follows:

Small-scale industries will include all industrial units with a capital investment of not more than Rs. 5 lakhs irrespective of the number of persons employed.

The data about employment are extremely meagre. It is, however, very roughly estimated that at least 24 million persons are gainfully employed in these industries classified as under:—

Name of Industry	Persons employed in lakhs.
Textiles	75
Leather	24
Wood	21
Metals	42
Pottery, Ceramics, Tiles, Bricks, etc.	20
Vegetable Oils, Chemical Products, etc.	10
Food including Hand-pounding ..	20
Dress and Toilet	11
Miscellaneous including jewellery and toy making	17
TOTAL ..	240 (Estimated)

Towards the end of 1952 the Government also constituted an All-India Handloom Board, to deal specifically with problems affecting the handloom industry.

In the Government of India the Development Wing of the Ministry of Commerce and Industry is responsible for all small-scale industries.

The main objectives of the development of small scale and village industries laid down in the Second Five Year Plan were (*i*) the avoidance as far as possible of further technological unemployment during the period of the Second Plan, (*ii*) provision of as large a measure of increased employment as possible through different village and small scale industries, and (*iii*) a pattern of development capable of laying the foundation of an essentially decentralised society and also for progressive economic development at a fairly rapid rate. Wherever a large-scale industry competes with a cottage industry, a common production programme should be evolved.

The programme may cover (*a*) reservation of spheres of production, (*b*) non-expansion of the capacity of a large-scale industry, (*c*) imposition of a cess on products of a large-scale industry, (*d*) arrangements for the supply of raw materials and (*e*) co-ordination for research, training, etc.

To carry out research an institution called the Jamnalal Bajaj Central Research Institute was set up in 1954 at Maganwadi, Wardha.

Under the Second Plan there is a fund called the Village Industries Fund.

In February 1955, a Small Industries Corporation, designed to assist small industries, was registered as a private limited company under the auspices of the Government of India. The Corporation will accept contracts for supplying orders to Government and issue sub-contracts for these goods to small-scale industries. The Corporation also undertakes and guarantees loans to such units from banks and has an authorised capital of Rs. 10 lakhs subscribed entirely by the Government of India.

THE KHADI AND VILLAGE INDUSTRIES COMMISSION

In order to encourage more effectively the development of cottage and small-scale industries, the All-India Cottage Industries Board, constituted in 1948, was replaced by two Boards, viz., the All-India Handicrafts Board and the All-India Khadi and Village Industries Board. The former was constituted in November 1952 and the latter in February 1953. In November 1956 the Parliament passed the Khadi and Village Industries Commission Act (Act 61 of 1956) and the Commission was constituted on April 1, 1957.

Members of the Commission: Vaikunth L. Mehta (*Chairman*); Dhwaja Prasad Sahu; A. W. Sahasrabudhe; K. Arunachalam; Pranlal S. Kapadia (*Secretary*).

The functions of the Commission cover

(*a*) planning and implementing the development programme for Khadi and Village Industries under its purview; (*b*) arrangements for the supply of funds, raw-materials, technical guidance, improved implements and marketing facilities; (*c*) organisation of co-operative societies and registered institutions; (*d*) organisation of training; and (*e*) promotion of technical research.

The following industries, as provided in the schedule of Industries included in the Act, come under the purview of the Commission: Khadi (traditional and Ambar), Processing of Cereals and Pulses, Village Oil, Village Leather, Cottage Match, Cane-gur and Khandsari, Palm-Gur, Non-Edible Oils and Soap Manufacture, Handmade Paper, Bee-keeping, Village Pottery, Fibre, Carpentry and Blacksmithy, Methane gas from cow-dung, and Lime manufacture.

TRADITIONAL KHADI

The Commission disbursed Rs. 10·44 crores for the development of traditional Khadi Industry during 1959-60 as against Rs. 6·77 crores and Rs. 8·53 crores in 1957-58 and 1958-59 respectively. Disbursements during the first seven months from April 1960 were Rs. 362·44 lakhs.

Production: Production in 1958-59 was 48·29 million sq. yds. valued at Rs. 9·55 crores while in 1959-60 figures were 45·93 million sq. yds. and Rs. 9·65 crores repectively. Productions during April to Sept. 1960 was 9·20 million sq. yds. valued at Rs. 21 million.

Sales: Sales of Khadi also increased from Rs. 8·61 crores in 1958-59 to Rs. 9·97 crores in 1959-60. During the year the Central Government purchases accounted for Rs. 1·04 crores and the State Governments' purchases for Rs. 1·08 crores as against their purchases of worth Rs. 95·90 lakhs and 90·66 lakhs respectively, previous year.

Employment: In 1959-60, the industry provided work to 11·50 lakh spinners, 74,500 weavers and 50,000 dyers, printers, carpenters, etc.

AMBAR CHARKHA PROGRAMME

During 1956-57, the Commission introduced the Ambar Charkha to produce better quality yarn. Since then the two schemes have been in operation side by side. Expenditure on the Ambar Charkha Programme, during the year 1959-60 was Rs. 439·44 lakhs of which Rs. 174·87 lakhs were grants and Rs. 264·7 lakhs were loans, thus bringing the total expenditure to Rs. 17·53 crores of which Rs. 6·23 crores constitute grant and Rs. 11·30 crores loans.

Production: During the year 1959-60, production of Ambar cloth was 256·49 lakh sq. yds. as against 240·38 lakh sq. yds. in 1958-59, the total production for the four year period being 627·11 lakh sq. yds. as shown below:

1956-57..	18·79 lakh sq. yds.
1957-58..	111·45 lakh sq. yds.
1958-59..	240·38 lakh sq. yds.
1959-60..	256·49 lakh sq. yds.
Total	627·11 lakh sq. yds.

The number of Ambar Vidyalayas for training instructors and carpenters was as follows: Andhra 7, Assam 1, Bihar 3, Bombay (Bilingual) 19, Delhi 3, Kerala 4, Madhya Pradesh 3, Madras 5, Mysore 6, Orissa 1, Punjab 9, Rajasthan 6, Uttar Pradesh 10, West Bengal 2, Total 79.

The number of instructors, carpenters, spinners and weavers trained during the year 1959-60 was 88,349 thus bringing their total for the four year period (1956-60) to 3,96,793.

The employment position under the programme also improved from year to year. Upto the end of 1959-60, 3,66,977 spinners were trained and 3,28,675 Ambar Charkhas were manufactured of which 3,21,612 were introduced. During the period ending Sept. 1960, 4,639 charkhas were manufactured and 14,289 charkhas were distributed, raising the number of charkhas so far distributed to 3,34,804. As against 18,800 handloom weavers and 20 other types of artisans like carpenters, smiths etc. brought under the programme, 27,300 and 24,000 respectively were employed at the end of 1958-59 and 1959-60. The total employment created, therefore, was about 3·73 lakh persons.

HANDLOOMS

The handloom industry is the largest cottage industry next only to agriculture providing livelihood to about 20 millions in the countryside. The extra employment created during the first three years of the Second Plan is reckoned at 3·72 lakh persons. The industry meets about a third (28 per cent) of the country's cloth requirement and plays a vital part in contributing to the rural economy of the nation. There were 27·53 lakh registered looms upto March 1960.

Early in 1953, the Government decided to rehabilitate the handloom industry by creating a 'Cess Fund' but it was not till 1954 that the necessary machinery to implement schemes under the Cess Fund could be set up and started functioning.

For putting the industry speedily on sound economic footing, the All India Handloom Board, through the agency of State Governments, has made concerted efforts in many directions.

The Central and State Governments, directed their efforts towards bringing as large a number of weavers as possible into co-operatives to enable them to get raw materials at competitive rates, sell their products at remunerative prices and get technical guidance and other help. Loans were given from the Cess Fund to the share capital of co-operative societies to start with.

Over 40 per cent of the weavers have already been brought under the co-operative fold — 12 lakhs in 1959.

Production*

Production of handloom cloth in the country during 1958-59 was estimated at 1,865 million yards. Production in 1959 was 1,880 million yards. In 1960 (upto August) it totalled about 1,200 million yards.

The 1958–59 production was higher by more than 25 per cent when compared to the handloom cloth production of 1,471 million yards at the end of the First Plan, 1955–56.

Production in the calendar year 1959 is estimated at 1,919 million yards.

During the first three years of the Second Plan, the Government of India incurred a total expenditure of about Rs. 16·7 crores on various development schemes for handloom industry

* The draft outline of the IIIrd Plan has proposed a target of 2,800 mln. yds. of annual production handloom cloth.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

in the States (excluding expenditure on items spent by the Centre) — 1956–57 : Rs. 6·3 crores; 1957–58 : Rs. 5·5 crores; 1958–59 : Rs. 4·9 crores. Of this total about Rs. eleven crores were given in the form of grants and the balance in the shape of loans. The grants were utilised for the supply of improved equipment, organising training facilities for weavers, opening of dye houses, sales depots, etc. and for rebates on sales of handloom cloth. The loans were for financing the share capital and working capital of the weavers' co-operative societies, industrial co-operatives and apex societies and for common service facilities. From April 1957 loans have been made available not only from the Cess Fund but also from the Reserve Bank through the Apex and central co-operative banks. Till the end of 1958-59 the amount given from the Cess Fund towards the working capital was Rs. 9·26 crores and from the Reserve Bank Rs. 4·16 crores for 1957–59.

Handloom Co-operatives

There are over 10,000 weavers' co-operatives in the country.

The number of handlooms in the co-operative sector has also been progressively rising. Out of the 28 lakh looms in the country, 12·99 lakhs were in the co-operative fold in April 1960 as against nine lakhs in April 1956 at the beginning of the Second Plan. In September 1953, when the Handloom Board initiated the programme for financing development schemes, the number of looms in the co-operatives was less than seven lakhs. There were over 10,414 weavers' co-operative societies with a total membership of about 11·97 lakh weavers at the end of March 1960.

Exports

More than 35 million yards of handloom cloth valued at about Rs. 5·23 crores were exported in 1958. Ceylon was the most important customer and imported about 14 million yards of Indian handloom piecegoods. Other major importers were Malaya, Nigeria, Singapore and Aden. The United Kingdom, Sudan, Ethiopia and Saudi Arabia also imported sizeable quantities of Indian handloom cloth.

During Jan.-July 1960, exports were of the order of Rs. 3 crores. During 1959 handloom fabrics worth nearly Rs. 6·6 crores were exported. The U.S.A. took 6·02 million yards during 1959 as against 0·63 million yards during the whole of 1958.

A Scheme for inspection and quality marking for handloom fabrics for export has been introduced. Incentives are given to exporters of handloom cloth in the form of licences for the import of coal-tar dyes, textile chemicals and cotton yarn on the basis of the exports effected by them. Exporters desirous of taking advantage of the incentive scheme have to get their fabrics inspected and quality marked in case these goods are considered for non-traditional markets.

Marketing

Marketing is a vital problem for the dispersed cottage sector of an industry facing competition from its organised and mechanised counterpart. The problem is rendered more complex in the case of the handloom industry because it depends on the organised mill industry for its chief raw material namely, yarn. Assistance for marketing is, therefore, being given from the Cess Fund and is intended for the introduction of sales promotion activities, the establishment of selling units and payment of subsidy on sales. Under the first category, schemes for publicity and propaganda, participation in exhibitions, quality control, award of prizes are being implemented.

Sales depots, inter-State sales depots, central depots and mobile vans have been established under the second category. By the end of March 1960, as many as 1,587 sales depots, 34 inter-State sales depots, 48 central depots and 38 mobile vans had been established to assist in the sales of handloom cloth.

As regards the subsidy, at present the rebate allowed is 5 nP. in the rupee on retail sales and 3 nP. in the rupee on wholesale sales. Under these schemes, a total expenditure of Rs. 11·79 crores had been incurred during the six years ending 1958–59.

From the Cess Fund, financial assistance is being provided for carrying out technical improvements in the handlcom industry and supplying improved looms and appliances to the weavers. Assistance is also given to weaver' co-operative societies for setting up their own dye-houses so that they may not have to depend on outside agencies for getting dyed yarn. Over 420 dye-houses have so far (Feb. 1960) been set up in the various States. In order to give an attractive finish to handloom cloth and increase the marketability, 9 calendering and finishing plants have also been set up.

Cotton yarn is the chief raw material for the handloom industry and the industry depends on the spinning and composite mills in the country for its supply of yarn. Under the Cess Fund schemes, assistance is given to the State Governments for their participation in the share capital structure of co-operative spinning mills. The bye-laws of the mills provide for all the yarn produced to be made available to weavers' co-operative societies. So far (Feb. 1960), assistance for the starting of 9 co-operative spinning mills to be located in the States of Andhra Pradesh, Bombay,* Bihar, Kerala, Madras, Mysore and Uttar Pradesh, has been given. Of these, three mills, one each in the States of Andhra Pradesh, Bombay* and Madras, have already started functioning (Feb. 1960).

The All India Handloom Board runs four Weavers' Service Centres, one each at Bombay, Madras, Banaras and Calcutta and a Sub-Unit at Kancheepuram. The functions of these centres are, broadly, two: preparing designs out of old designs in terms of tradition of a particular centre, and preparing new designs out of existing designs for which no tradition exists. A well planned dyeing and printing laboratory forms an essential part of each Designs Centre. Standardised methods of dyeing and printing are worked out and distributed to the industry. A reference library of books. Photographs, slides, yarn and textiles exists at the centres.

VILLAGE OIL

India is the second largest producer of oilseeds in the world and leads all other countries in respect of acreage under oilseeds.

Mills and ghanis are the two sectors in the oil industry in the country. According to one estimate included in the Report of the Oilseeds Crushing Industry Inquiry Committee (1956), the percentage of major oilseeds crushed in ghanis and those crushed in power mills is as follows :

Seed	Ghanis (per cent)	Mills (per cent)
Groundnut	20	80
Sesamum	83	17
Rape and Mustard ..	37	63
Linseed	30	70
Castor-seed	*	100

* (a small quantity is also crushed in ghanis)

According to the Report of the Indian Central Oilseeds Committee, there are over 7,500 oil mills in the country. The number of ghanis in the country was 446,000 in 1951 according to the Livestock Census (1951).

Although accurate information on employment in the organised sector is not available, it is estimated at 103,000 persons.

Ghanis, on the other hand, provide employment to a considerably larger number. On the assumption of one teli to a ghani, the number of persons engaged in the village oil industry would be 4·46 lakhs.

During 1959-60, the expenditure incurred by the Commission for the development of the industry amounted to Rs. 114·47 lakhs, thus bringing the total to Rs. 419·33 lakhs of which Rs. 132·53 lakhs constitute grants and Rs. 286·80 lakhs loans. Of this total expenditure, Rs. 31·00 lakhs only were expended during the First Five Year Plan period while the balance of Rs. 388·33 lakhs were disbursed during the Second Plan period (1956-60).

There were 3,778 agencies operating various schemes under the Commission's purview of which 3,391 were co-operative organisations including 7 district co-operative federations and 3 apex bodies at the State level. With a view to distributing the improved ghanis and train telis the Commission set up 62 Ghani Manufacturing Workshops and 132 Model Ghani Centres throughout the country. During the year the Commission was able to introduce 3,531 improved ghanis, thus bringing their total number to 12,031.

In the field of production there was considerable activity as the production of oil rose sharply from 3·85 lakh B. Mds. valued at Rs. 2·69 crores in 1957-58 and 8·71 lakh B. Mds. valued at Rs. 6·33 crores in 1958-59 to 13·06 lakh B. Mds. valued at Rs. 9·74 crores in 1959-60. As a result of this, oil-cake production has also gone up from 13·26 lakh B. Mds. valued at Rs. 1·56 crores in 1958-59 to 20·41 lakh B. Mds. valued at Rs. 2·37 crores in 1959-60.

As against 17,296 full-timers and 11,699 part-timers employed during 1958-59, 28,344 and 13,567 respectively were employed during 1959-60. During the year, 1,549 casual workers also found employment. Under its training programme the Commission trained 1,186 telis and 50 carpenters during 1959-60, thus bringing the total personnel trained so far to 3,086 and 339 respectively. Upto 1959-60, 293 instructors were also trained.

PROCESSING OF CEREALS AND PULSES

The Rice Milling Committee (1954) and the Village and Small-Scale Industries (Second Five-Year Plan) Committee (1956) have made recommendations regarding the development programme for this industry. In pursuance of the recommendations of the Rice Milling Committee, Government of India decided, in the year 1957, that licensing of all power driven rice mills should be introduced and a census of all such mills should be taken. They have further decided that no new mill should be allowed to be set up and no expansion of the existing capacity of the mills be permitted unless the State Government concerned is satisfied that it is necessary to do so for the purpose of ensuring adequate supplies and that, in such cases, the hand pounding industry is not affected. To ensure this, an Act was passed in May 1958 — The Rice Milling (Regulation) Act.

The Karve Committee recommended the imposition of an excise duty on the output of mills and the payment of a subsidy to hand-pounders to reduce the price differential between hand-processed and mill-processed rice. A subsidy of 37 nP. per B. Maund is paid on production through co-operative societies and registered, recognized institutions.

During 1959-60 the Commission laid emphasis more on stocking of paddy to enable the artisans obtain continuous employment for a longer period. Thus the disbursement during the year was considerably more, *i.e.* Rs. 77·28 lakhs, than that of previous year, *i.e.* Rs. 58·26 lakhs. The total expenditure incurred by the end of 1959-60 was Rs. 205·20 lakhs of which Rs. 44·24 lakhs formed grants and Rs. 160·96 lakhs loans. Of the total expenditure only Rs. 21·01 lakhs were spent during the First Paln period.

Each year more and more areas are covered and organisations formed to implement the development programme. Within the period of 2 years such institutions have more than doubled as there were 1,010 co-operatives and 258 registered societies at the end of 1959-60

* Bilingual.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

as against only 365 co-operatives and 202 registered societies in 1957-58. To enable the artisans obtain higher production of better rice the Commission has introduced 5,904 chakkis, 794 dhenkis and 554 winnowing fans. Under the Atta Chakki scheme the Commission introduced 71,074 ball-bearings and 19,676 chakkis of which 2,756 were emery stone chakkis.

Under the production activity the achievement was 13·94 lakh B. Mds. in 1959-60 as compared with 11·17 lakh B. Mds. in 1958-59. The number of persons employed also increased from 6,468 as full-timers and 7,362 part-timers in 1958-59 to 9,925 full-timers and 12,044 part-timers in 1959-60. During the year Central Training Centre at Nadiad trained 35 persons as compared to 28 only, in the previous year. In addition to this 58 persons were trained in various States.

BEE-KEEPING INDUSTRY

With a view to organising and developing collection of honey on scientific lines the Commission distributes bee-hives on a subsidised basis, finances rearing and distribution of bee-colonies, collection and marketing of honey, organises co-operative societies and trains apiarists, fieldmen, farmers and others in the art of bee-keeping.

Rs. 12·28 lakhs were disbursed in 1959-60, thus bringing the total expenditure to Rs. 53·33 lakhs of which Rs. 47·60 formed grants, the remaining being loans. Of the total, Rs. 9·35 lakhs were spent in the First Plan period. During the year 1959-60, 3 more Area Offices, 50 Sub-stations, and 10 Plantation apiaries were allotted. Therefore, at the end of the year total allotment was 45 Area Offices, 650 Sub-stations and 75 Plantation apiaries. In addition to this, 40 Model Apiaries, 65 Commercial apiaries and 137 Bee-clubs also were allotted. 125 schools were also financed to introduce bee-keeping for the benefit of school-pupils. There were 61 institutions in the country responsible for the implementation of the programme.

Upto the end of 1959-60, 98,747 Bee-hives were distributed. Under the programme 5·94 lakh lbs. of honey was collected in 1959-60 as against 5·31 lakh lbs. collected in 1958-59 and the whole of it was marketed. During the year 1959-60, 37,327 farmers were benefited as against 32,527 only in the previous year. During the year 38 fieldmen were trained; thus, over the period, 1,048 fieldmen and 38 apiarists received training.

HAND-MADE PAPER INDUSTRY

The per capita consumption of paper has been rapidly increasing with the spread of literacy. The expansion of the mill-made paper industry is limited due to several factors, viz., non-availability of raw materials in large quantities at one place, difficulties of importing heavy intricate machinery, pulp and chemicals, transport difficulties etc. The hand-made paper industry, as being developed by the Commission, aims at utilising easily available raw materials like fibres, old gunny bags, rags, straws, grasses, waste paper etc. The programme of development consists of assisting in the setting up of big, medium, small and school units.

During 1959-60, the Commission disbursed Rs. 23·48 lakhs for the development of hand-made paper industry, thus bringing the total disbursement to Rs. 83·51 lakhs of which Rs. 38·04 lakhs were grants and the remaining Rs. 45·47 lakhs loans. The expenditure during the First Plan period amounted to Rs. 12·34 lakhs only while the operation of the programme during the four year period (1956-60) of the Second Plan consumed Rs. 71·17 lakhs.

The financial disbursement to various types of units depends upon the capacity to produce paper. Upto the end of 1959-60, the Commission had allotted 13 Big, 68 Medium, and 116 Small units. In addition to this, 10 Home Units also have been allotted. In some States manufacture of hand-made paper has been recognised as one of the examination subjects. The Commission has been, therefore, allotting school production units, the total number of such units allotted upto the end of 1959-60 being 258.

The production of paper rose from Rs. 21·16 lakhs in 1958-59 to Rs. 23·58 lakhs in 1959-60. This was mainly due to the considerable progress registered by the units producing high grade papers which reached the highest level of Rs. 9·24 lakhs in 1959-60 from Rs. 6·35 lakhs in the previous year. The sales also have kept pace with production. In 1959-60, sales totalled Rs. 22·40 lakhs as against Rs. 20·72 lakhs in 1958-59. Although the employment figure has not shown any rise, as only 3,646 persons found employment in 1959-60 which is almost the same as in 1958-59, the earnings of artisans were higher, *i.e.* Rs. 12·45 lakhs in 1959-60 as aginst only Rs. 11·01 lakhs during 1958-59. In 1959-60, 172 persons were trained thus bringing the total number of persons trained so far to 576.

NON-EDIBLE OILS AND SOAP

India possesses large quantities of a wide variety of non-edible oilseeds, *e.g.*, neem, karanja, maroti, dupa, castor, undi, etc. The oils extracted from these seeds are highly valued as industrial oils. These resources in vegetable are largely wasted through non-utilisation. The Commission, therefore, formulated a scheme to exploit these resources for the creation of wealth.

During the year the Commission financed the programme to the tune of Rs. 23·49 lakhs, thus bringing the total expenditure to Rs. 180·43 lakhs of which Rs. 64·24 lakhs were grants and Rs. 116·19 lakhs loans. During the first Five Year Paln period Rs. 45·22 lakhs only were disbursed. As against this the development activities during the period of 4 years (1956-60) of the Second Plan consumed Rs. 48·85 lakhs as grants and Rs. 86·36 lakhs as loans.

The financial assistance extended to three types of NEO and SOAP production units *i.e.* "A", "B", and "C" units, depend upon their production capacity. With a view to informing and educating school children in the method of production of soap on cottage basis the Commission introduced "D" units and attached them to schools.

Since 1958-59 the Commission has been emphasising on the possibility of improving production of non-edible oils. To intensify efforts in this direction Oil Producing Units have been organised. At the end of 1959-60, the Commission had allotted 682 soap production units in addition to 43 oil crushing centres and 231 school units.

During the year efforts to collect non-edible oilseeds resulted in the collection of 41·47 lakh lbs. of seeds as against only 24·63 lakh lbs. during 1958-59. The activity in the production of soap also registered a considerable expansion; the value of soap produced in 1959-60 was Rs. 31·93 lakhs as against Rs. 20·19 lakhs in 1958-59, the quantities being 50·06 lakh lbs. and 34·29 lakh lbs. respectively. The Industry provided employment to 921 full-time workers and 5,969 part-time workers in 1959-60.

To ensure efficient working of the production units the Commission trained chemists and supervisors in its 9 training centres. By the end of 1959-60 there were 121 trained chemists and 1,058 other types of personnel.

PALM-GUR

In India, there are four varieties of sugar-yielding Palms—Date, Palmyra, Coconut and Sago. While the total number of tappable palms in the country, mostly Date and Palmyra, is estimated at over five crores, only about 60 lakh palms are being tapped for the manufacture of palm-gur.

The significance of the Palm-Gur Industry in India lies in the manufacture of gur and sugar from the sweet juice of palms, popularly known as *neera*; in providing seasonal employment on a large scale, and in its effects on subsidiary occupation as in the manufacture of products from palm leaf.

The Commission has established a Central Research-cum-Training Centre at Dahanu (Maharashtra). Research in the preservation of *neera*, better processing methods and improved implements is being carried on. A monthly journal "Tad-Gur Samachar" gives information about the industry and the results of research experiments.

For the development of the industry the Commission provided more funds during the year 1959-60, as against funds disbursed in the previous year, the figures being Rs. 38·10 lakhs and Rs. 21·21 lakhs respectively. The expenditure of Rs. 38·10 lakhs in 1959-60 included loans of Rs. 7·43 lakhs given by the Commission for the formation of the co-operative societies. The total expenditure for the period ending with 1959-60, therefore, works out to Rs. 130·37 lakhs of which Rs. 91·22 lakhs formed grants and Rs. 39·15 lakhs loans. This includes Rs. 14·10 lakhs expended during the First Plan period.

The emphasis being on the organisation of co-operatives their number has been showing steady progress from year to year. As against 2,626 primary co-operatives in 1957-58 and 2,716 in 1958-59 there were 2,843 co-operatives at the end of 1959-60. The membership has also shown improvement as there were 2,93,518 members at the end of 1959-60 as against 2,83,427 and 2,46,793 in 1958-59 and 1957-58 respectively. The co-operative societies of 11 States have formed their State level federations also.

During the year 1959-60, the Bharatiya Tad Gur Shilpa Bhavan trained 141 persons while in the States 1,638 persons received training. The scheme of training persons on large scale registered a progressive improvement in production activity. As against 18·92 lakh B. Mds. of Palm-gur manufactured in 1957-58 and 19·70 lakh B. Mds. in 1958-59, 21·07 lakh B. Mds. of Palm gur was produced in 1959-60. The employment position has shown marginal improvement as 3,06,120 persons were employed at the end of 1959-60 as against 2,98,234 in 1958-59.

CANE-GUR AND KHANDSARI

With a view to improving the quality of Gur, production of Khandsari and the efficiency of the farmers, the Commission has schemes to introduce improved equipment like crushers, centrifugals, pans, furnaces etc. The Commission also undertakes to train honorary workers and farmers in better methods of production with the help of improved equipment. The programme aims also at the organisation of co-operative societies to take up production and marketing of Gur and Khandsari and stocking and supplying of improved implements.

During 1959-60 the Commission financed the programme to the tune of Rs. 38·30 lakhs as against Rs. 26·45 lakhs in the previous year, bringing the total expenditure upto 1959-60 to Rs. 95·14 lakhs of which Rs. 45·14 lakhs were grants and Rs. 50 lakhs loans. Almost the whole of the expenditure on the industry was incurred during the Second Plan period (1959-60) as during the First Plan period the expenditure was negligible *i.e.* Rs. 90,000 only as against Rs. 94·24 lakhs during the Second Plan period.

At the end of 1959-60 there were 450 institutions implementing the schemes as against 271 only, the previous year. During the year 168 new co-operative societies were set up, thus bringing their total to 437. At the end of 1959-60 the Commission had distributed 4,466 cane crushers of which 319 were power-driven, the remaining being bullock-driven. 563 centrifugals, 5,361 pans and 7,083 other types of equipment were also introduced during the period ending 1959-60. To train the farmers to undertake manufacture of Gur and Khandsari on improved lines, 462 honorary workers were trained during the year, thus bringing the total of such persons trained to 2,417.

This effort to implement the development programme of Gur and Khandsari industry has resulted not only in improvement in quantity of Gur and Khandsari production and employment opportunities but has enabled the farmers to market their Gur at a rate higher by about Rs. 2 to Rs. 3 per B. maund.

The implementation of the development programme for Gur and Khandsari industry resulted in providing seasonal full-time employment to 1,07,952 persons and part-time employment to 30,780 persons in 1958-59.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

VILLAGE LEATHER INDUSTRY

The processing of hides and skins and the manufacture of leather goods are traditional village industries.

The cottage sector of the leather industry is responsible for the bulk of its production in the country and employed as many as 6·5 lakh persons.

The object of the development programme of the Commission for the industry is the planned recovery and full utilisation of the various by-products of carcasses of dead animals so as to minimise waste and provide large-scale employment. There is a vast livestock population consisting of over 21·2 crores big animals and 9·52 crores sheep and goats.

The programme consists of the establishment of flaying centres, village model tanneries, glue manufacturing centres, and bone crushing units. Besides, small and big marketing depots are also aided to enable the leather workers market their products as well as to supply them with raw materials including hides and skins. With a view to training the artisans in improved methods of production, the Commission assists financially the organisation of production-cum-training centres for both tanners as well as flayers.

To assist the Commission there is an Advisory Committee consisting of representatives of this industry and trade.

During 1959-60, Rs. 44·65 lakhs were disbursed for the development of the industry thus bringing the total disbursement during the four year period (1956-60) of the Second Plan to Rs. 133·75 lakhs of which Rs. 68·99 lakhs were grants and Rs. 64·76 lakhs loans. In addition to this, Rs. 31·79 lakhs were also disbursed during the First Plan period.

Upto the end of 1959-60, 663 flaying centres, 298 village model tanneries, 154 bone crushing units and 77 marketing depots were allotted. The Commission has also financed 16 training-cum-production centres for imparting practical and theoretical training of which 12 are for tanning and 4 for flaying and carcass recovery. The village chamars have no proper tanning facilities. The Commission, therefore, finances the construction of new and repairs of old pits. Financial assistance for the construction of 5,755 new pits and repairing of 6,187 old pits was given upto the end of 1959-60.

During the year 105 and 201 personnel were trained in the art of tanning and flaying respectively. So far the Commission has trained 199 personnel in the improved methods of tanning and 339 in flaying. The implementation of the development programme has resulted in a considerable activity in production. As against the production of goods valued at Rs. 10·38 lakhs in 1957-58 and Rs. 14·47 lakhs in 1958-59, the production in 1959-60 was valued at Rs. 26·62 lakhs. As a result of this, employment position also improved considerably. During 1959-60, 1,374 full-timers and 864 part-timers were employed as against 796 full-timers and 515 part-timers in the previous year.

COTTAGE MATCH INDUSTRY

The match industry in India is classified into A, B, C and D classes according to the size and production capacity of the manufacturing units.

The programme of the Commission consists in the promotion of the 'D' class, licensed to produce a maximum of 25 gross boxes per day and capable of employing about 40 persons each.

The development programme aims at the utilisation of the bamboo resources of the country for the manufacture of matches and the elimination of the use of matchwood and timber which are becoming scarcer and also denude the country of its forest wealth to the detriment of the nation.

The programme also provides for training, research and marketing schemes.

During the year 1959-60 the Commission wanted to concentrate mainly on consolidation work. As such no more production units were added to the original number of 416 'D' class units. It however expended Rs. 2·17 lakhs during the year on training, publicity and propaganda. Thus the total expenditure for the development of the industry was Rs. 55·71 lakhs of which Rs. 35·89 were expended during the Second Plan period (1959-60).

As a result of the Commission's intensified effort, the production of cottage match boxes rose from 9,691 gross boxes in 1958-59 to 24,284 gross boxes in 1959-60. During the year, 68 persons were trained bringing the total to 855 over the period ending with 1959-60.

VILLAGE POTTERY INDUSTRY

The Development programme for the industry is made up of schemes for the promotion of production of pottery goods of various types, marketing, research, central and regional training, organisation and promotion of co-operative societies, supply of improved equipment and improved furnaces.

During the year 1959-60 the Commission expended Rs. 34·20 lakhs as against Rs. 13·45 lakhs in 1958-59, thus bringing the total expenditure to Rs. 66·57 lakhs of which Rs. 26·03 lakhs form grants and Rs. 40·54 lakhs loans. At the end of 1959-60 the Commission had allotted 248 units under various schemes, the figure at the end of 1958-59 being 111 only.

The production activity for the pottery industry in 1959-60 registered a considerable rise, the value of goods produced being Rs. 17·57 lakhs as against Rs. 11·13 lakhs in 1958-59 and only Rs. 3·19 lakhs in 1957-58. Under the training programme the Central Institute trained 32 personnel while 5 regional training centres trained 224 personnel during 1959-60 thus bringing the total at the end of 1959-60 to 211 and 530 respectively.

INTENSIVE AREAS SCHEME AND MARKETING SCHEME

The Commission's Intensive Area Scheme was introduced by the former Board in 1954-55 in selected rural areas having a population of about 20,000 each. The Scheme is an experiment in village planning with a view to integrated development of the rural economy. It aims at planned production for local consumption, thereby creating conditions favourable for full employment.

For the implementation of the schemes in the areas, the Commission spent Rs. 54·05 lakhs during 1959-60, which was more by Rs. 4·80 lakhs than that of 1958-59. The expenditure during the four year period of the Second Plan (1956-60) was Rs. 177·32 lakhs as against Rs. 24·47 lakhs during the First Plan period; thus the total expenditure upto the end of 1959-60 amounted to Rs. 201·79 lakhs which includes Rs. 88·69 lakhs for Khadi and Rs. 42·76 lakhs for various village industries.

FIBRE INDUSTRY

With a view to utilizing various kinds of fibres like sisal, hemp, san-hemp, etc., which grow in abundance in villages, but remain mostly unprocessed, the Commission implements a development programme under which improved Charkhas are distributed, artisans are trained and model production centres are organised.

In 1959-60, Rs. 4·63 lakhs were disbursed thus bringing the total assistance under this scheme to Rs. 16·90 lakhs. At the end of 1959-60, 52 institutions throughout the country were operating various types of 421 centres of which 32 were model centres, 338 training-cum-production and 51 hessian fibre spinning centres. Upto the end of 1959-60, 1,644 charkhas were distributed and 164 instructors trained.

CARPENTRY AND BLACKSMITHY

The Commission has also been implementing development programme for the village carpentry and blacksmithy industry since 1957-58 and has disbursed so far Rs. 8·36 lakhs of which Rs. 7·48 lakhs account for the organization of training-cum-production centres.

NAYA MORH

Beginning with the Third Five-Year Plan the Khadi Commission has proposed to organize Khadi and village industries activities on new lines, popularly known as *Naya Morh*. The object of this 'New Line' is to bring about a balanced development of rural economy leading to the growth of agro-industrialism. During the Third Five-Year Plan period, the Commission has proposed to organize 3,000 new intensive areas, called *Gram Ekais*, each *Ekai* covering a population of 5,000. The programme will be worked out in co-ordination with the other agencies like the Community Development Blocks, Gram Panchayats, Panchayat Samitis and Zila Parishads. The programme is in addition to the continuation programme on lines hitherto followed.

The Third Plan Outline has allocated a sum of Rs. 89 crores for the development of Khadi and Village Industries.

HANDICRAFTS

(Also see articles on Cottage Industries and Small-Scale Industries).

The All-India Handicrafts Board* is the authority entrusted with the development of the handicrafts in India.

It was first constituted in November 1952. It was reconstituted in December 1954 then in August 1957 and again in August 1960.

It advises the Central Government, plans and executes development schemes through the State Governments, formulates and executes schemes of its own, helps in the promotion of sales, sees to technological improvement, quality control, research and training. It secures raw material, organizes co-operatives, arranges credit, and sees to housing of craftsmen and general welfare.

There is a Standing Committee of the Board and where necessary panels of experts are appointed.

The Board has set up a Central Handicrafts Marketing Committee with representatives of State Govts. and Managers of emporia. The Committee functions as an All-India promotional and coordinating agency.

The Board has been emphasising the need for voluntary introduction of quality control in important handicrafts of each State. The Board has set up a Technical Committee on Quality Control. It also keeps a liaison with the Indian Standards Institution and laboratories of the country.

Most of the State Govts. have undertaken schemes for quality marking of their handicrafts and also for conducting surveys of handicrafts in order to formulate specific programmes of development.

Under the Second Plan a sum of Rs. 9 crores was allotted for the promotion and development of handicraft industries (Rs. 6 crores States, Rs. 3 crores Central).

A sum of Rs. 8 crores has been provisionally provided for the development of handicrafts during the 3rd Five Year Plan.

An Indian Handicrafts Development Corporation† has been set up. This body organizes the production of handicrafts on a commercial basis specially to cater for orders from foreign markets. Surveys of foreign markets will be conducted and sales depots and selling agencies established.

The principal foreign markets are: Aden, Ceylon, British West Africa, Malaya, Saudi Arabia, the Sudan, Iraq. The U.S.A. is regarded as an important potential market.

* Headquarters in Bombay.

† Headquarters in New Delhi.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Handicrafts worth about Rs. 3·6 crores were exported during the first half of 1959. A sizeable increase in exports during the second half of the year was expected on account of Christmas and other seasonal demands. During the whole of 1958, export earnings on account of handicrafts had amounted to Rs. 6·67 crores.

The Indian Handicrafts Development Corporation is helping manufacturers in procuring raw materials at reasonable prices. Information about the market trends and changing tastes in foreign countires is communicated to manufacturers.

The Corporation has made a beginning in developing the Far Eastern markets, in collaboration with the Handloom Fabrics Marketing Co-operative Society which has sales depots in several Asian and African countries. The trade centres set up by Government in foreign countries are also being made use of for export promotion of handicrafts. A choice variety of Indian handicrafts, of particular interest to Germany and Scandinavian countries, was exhibited at the trade centre in Frankfurt in 1959.

Handicraft Centres : The Corporation proposes to set up four regional centres in India and two abroad. These centres will be equipped with a complete range of representative samples of Indian handicrafts and will provide a ready guide for intending buyers.

A sample room has already been set up at the head office of the Corporation at Delhi.

A list of the major handicrafts is given below :

Textiles : Hand-printing and traditional dyeing of textiles, brocades, himroo, carpets and druggets, rugs, gabbas and namdas, embroidery (cotton, silk, wool and zari), lace and lace work including nakki and gota making, shawls.

Metalware : Silver and gold ware, bidri, filigree, brass and copper ware, bronze work.

Ceramics : Pottery and earthenware.

Ivory : Ivory carving.

Papier-mache : Papier-mache articles.

Woodwork : Wood-carving and inlay, lacquer work including *nirmal* work, decorative furniture.

Stone-work : Stone-carving including marble work and alabaster.

Toys : Dolls and toys other than mechanical toys.

Leather : Leather goods (artistic work).

Horn : Artistic articles.

Bone : Artistic articles.

Cane, Bamboo, etc. : Articles made of cane, bamboo, willow, straw and grass including mats and pithcraft.

Incense & Perfumery : Incense and perfumery of various types.

Flax and Fibre : Handicraft articles made of flax and fibre.

Bangles & Beads : Bangles and beads.

Musical Instruments : Musical instruments. The Sangita Vidyalaya in Madras gives training in music and the making of musical instruments.

Conch-shell and semi-precious stones : Articles made of conch-shell and semi-precious stones.

Miscellaneous : Miscellaneous traditional art objects such as Orissa, Mysore and Tanjore paintings, and handicraft products specially made for ceremonies, articles of worship and theatrical requisites such as costumes, masks, puppets, etc.

DEVELOPMENT

Steps taken to develop handicrafts include the establishment of design centres to revive ancient designs and create new ones and training centres to teach better techniques. Some of these are also production centres.

Mobile exhibitions are taken round the country and handicrafts weeks are held. There will be a handicrafts museum in New Delhi.

In the financial year 1958–59 the Government of India approved schemes to set up 58 centres for training in handicrafts. Grants totalling Rs. 7·52 lakhs were sanctioned for implementing 41 of these schemes.

Some of these centres are training-cum-production centres. A monthly stipend of Rs. 25 to Rs. 30 is provided. On completion of the training the trainees are encouraged to form co-operative societies with financial assistance from Government.

Design Centres

The Handicrafts Board has at its headquarters a design section which is primarily concerned with providing advisory service and practical assistance to the State centres. And there are design centres at Bombay, Calcutta, Delhi, Bangalore, Kothakola in Mahbubnagar District in Andhra Pradesh, Junagadh, Madras, Kancheepuram, Nizamabad in U.P., Banaras, Faridabad, Madurai, Kalahasti and so on.

The design movement has also received a marked impetus as a result of the National Design Competition organised by the Board. In the first year this was confined to three crafts : textiles, pottery, and toys of all types. In the second competition conducted in 1960 the crafts taken up were carpets, wood work and metalware. Cash prizes of Rs. 7,500 were awarded to the best entries. The Board also publishes a design album which includes the latest designs evolved in different handicrafts.

Craftsmen are also helped by the Board through Pilot and Development Centres which impart a training in economical and improved production methods, use of new raw materials, the production of new designs.

Over 1,000 new designs were evolved during 1960 of which almost 700 designs were supplied to the market.

Development of Co-operatives

The Board encourages formation of handicraft co-operatives and provides financial, technical and marketing facilities to them. Under financial assistance, the Board provides 75 per cent of the share capital and also 75 per cent of the working capital as loans at 2½ per cent interest payable in two years and ten years respectively. Besides, subsidy for supervisory staff for co-operatives is provided on 50 per cent basis. Rapid surveys of the working of co-operatives have been completed in Delhi, Jammu & Kashmir, Orissa, Madras, Andhra, Assam and Manipur. Survey studies in U.P., Bihar, Bombay** and Kerala have been entrusted to co-operative organisations there. Reports from Kerala and Bihar have been received.

In order to review and advise the Board on their programme for the development of handicraft co-operatives, the Board set up a Central Handicrafts Advisory Committee. State-level Co-operative Advisory Committees have also been set up in the States.

The Board is also starting a training programme for the co-operative organisers for which trainees from Government Departments and co-operative organisations are selected for training.

Survey of associations of artisans, dealers and exports has been completed by the Indian Co-operative Union on behalf of the Board. The recommendations on the survey have been circulated among the States for necessary action.

Credit Facilities

One of the main functions of the Board is to see that adequate credit facilities are made available to the handicrafts industries and trade at different stages of its production, storage, distribution and sales.

Apart from the financing of emporia, handicrafts co-operatives and State schemes in different States by the Board, the Reserve Bank of India has agreed to cover handicraft industries under their guarantee scheme of Small-Scale Industries against loans granted by commercial banks.

The Board is also contemplating a new scheme called Supervised Credit Scheme under which loans will be given to poor artisans along with technical advice and guidance without any security or little security and to recover the loans slowly from the sale proceeds of their products.

Considerable amount of Block Loans are also being placed at the disposal of State Governments for financing the handicrafts industries. The total disbursement of Block Loans during the three years from 1955–56 to 1957–58 from different States excepting Bombay**, West Bengal, Himachal Pradesh and Orissa amounted to over Rs. 32 lakhs.

State financial corporations have also financed the handicrafts industries to the tune of Rs. 4,90,000. The State Bank of India also finances some well organized handicraft industries under their Liberalised Loan Scheme.

The Handicrafts Development Corporation also finances the exporters, to a considerable extent in addition to other types of assistance offered. The total loan sanctioned upto 1959-60 amounted to about Rs. 8 lakhs.

State Schemes

The Govt. of India have made a provision of Rs. 45 lakhs as grant and Rs. 17 lakhs as loan for central assistance to State Govts. for the development of handicrafts for 1960-61.

Besides sponsoring schemes of its own the Board has helped State Governments to promote the following schemes.

Assam : Training in and production of fancy mats, sitalpati toys and dolls. *Andhra :* A training-cum-production centre at Hyderabad, the setting up of a co-operative society in Hyderabad by Bidri craftsmen, providing a common facility centre for nirmalware and himroo, a co-operative society for the manufacture of ivory and tortoise-shell articles and to another society for kalamkari work. Kondapalli Toy Makers Co-operative Purchases and Sales Society. *Bihar :* Setting up of a common facility production centre for bamboo products, a production centre for the manufacture of sikhi goods and mats, calico printing, training-cum-production centres for papier-mache goods, glass bangles and basket making. Training-cum-production centres for carpets, cloth dolls, decorative pottery and wood carving have also been sanctioned by the Board. *Bombay**:* A training-cum-production centre was started for the development of printing on cloth at Amreli and Surat. Financial assistance has also been given for the development of papier-mache industry and for the expansion of the existing handicrafts emporia in Bombay. *Kashmir :* Establishment of a design centre at Srinagar, export trade centres, for publicity and for the development of the shawl industry. *Kerala :* Training schemes for bamboo articles, mat and basket-making, dyeing and printing and lace and embroidery. *Madhya Pradesh :* A design-cum-production centre has been set up in Bhopal. *Madras :* Several training schemes for vegetable fibres, glass bangle making, lace and embroidery, dyeing and printing, art metalware, sculpture, papier-mache, carpets and druggets, etc.

Grants have also been given to develop artistic pottery and wool processing and for marketing of handicraft articles.

Mysore : Development of sandalwood carving, wood carving, mat and basket-making, soapstone industry and marketing of the numerous crafts of Mysore. *Orissa :* Establishment of an arts and crafts design centre at Cuttack. *Punjab :* A central organisation and design demonstration unit. A design and production centre located in Phulkari. Training schemes covering pashmina rugs, carpet weaving, chain stitch embroidery, ivory inlaying. *U.P. :* Ivory industry, chikan embroidery, pottery, brocades, brassware and marble inlay. *West Bengal :* Training schemes for the development of toy making and artistic pottery, the horn industry, durree making and stone and wood carving, and revival of the well-known craft of Jamdani sarees.

Assistance has been given to the States for setting up emporia for sale of handicrafts. At present (Dec. 1960) there are 125 emporia which sell handicrafts throughout the country. The total sale of these emporia has exceeded Rs. 2 crores.

** Bilingual.

FILM INDUSTRY

THE shortage of raw film was the main difficulty during the year. In this connection the representatives of the film industry had a meeting with the Prime Minister.

Meanwhile negotiations for the manufacture of raw film within the country were complete and it is expected that sometime in 1962 Indian made films would be available for exposing and printing.

This unit would be put up in the public sector in Ooty in Madras State through collaboration with the French firm of Messrs. Ets Banchet. The cost of the equipment is estimated at Rs. 3·3 crores.

The limited stock that is available is being distributed by the industry itself.

Another source of difficulty was the excise duty ranging from 10 nP. to 50 nP. per metre levied on exposed films in the 1960-61 budget.

There were a large number of film festivals during the period under review—of imported films, Indian documentaries and children's films.

Exclusive shows of documentaries and newsreels have now become a regular feature in some of the large cities where special theatres for the purpose are available. A nominal entrance fee (from 25 to 50 nP. per head) is charged and Bombay, Calcutta and Delhi, have been arranging these shows throughout the year now. Similar arrangements are likely to be extended to other towns and cities.

Here are some of the institutions in the film industry:

Indian Motion Picture Producers' Association, Indian Motion Picture Distributors' Association, Indian Documentary Producers' Association, Film Federation of India, all with headquarters in Bombay.

There are now in the film industry associations of workers as well.

Among these are:

Film Journalists' Association, Cine-Costume and Make-up Artists' Association, Cine Musicians' Association, Character Artistes' Association, Western India Cinematographers' (Cameramen) Association, Cine Labs.' Association.

The Indian Motion Picture Producers' Association, Film Producers' Guild, Cine-Lab Association and others have formed a supreme Council of Film Producers. Steps are being taken to organise the industry and its various arms.

UNESCO has sponsored a study of Indian film heroes and Institute of Social Sciences, Agra, has undertaken in co-operation with a group of International scientists, the study for which $ 20,000 have been sanctioned in the first instance.

U.N. Asian Film Projects: ECAFE and 17 U.N. countries (13 of them Asian) are participating in a co-operative project to produce three films in Asia: *Malaya:* Work of ECAFE; *India:* Community Development Projects (Ezra Mir; Jagat Murari: Romesh Thapar); *Ceylon:* Agriculture.

UNIVERSITIES Film Council (with Mr. R. R. Diwakar as Chairman) has been established with the idea of making university students take intelligent interest in the films. It is proposed to have a society for each University which would arrange to show at least 16 films every year of outstanding and classical importance through the university societies.

The Raw Film Factory at Ootacamund with French collaboration is likely to go into production by the beginning of 1962. It will produce X-Ray films and photo papers also. Out of Rs. 7·7 crores as capital needed to start with, the National Industrial Development Corporation has agreed to advance Rs. 3·3 crores which is equivalent to the foreign exchange component of the project.

There are some institutions which were expected to start functioning in 1960. These are:

The Film Institute, has been set up at Poona for providing training in the technical aspects of film-making such as cinematography, sound engineering, editing, direction, art direction, make-up and costumes. The institute is located in the former Prabhat studios which have been acquired by the Government for the purpose. (*For a fuller note see under "Poona District"*).

The Department of Technical Education, Madras, has started a film institute in Madras for training technicians.

Production Code Bureau, "White House," 91, Walkeshwar Road, Bombay 6: This will frame a self-imposed code of what is legitimate and what is not legitimate for use in films.

Film Finance Corporation, This will have an initial capital of between Rs. 20 and Rs. 25 lakhs.

Children's Film Society: This was started in 1955. Its object is to undertake, aid, sponsor, films of special interest to children. It has its headquarters in Delhi and has branches in some States. It has set up a National Centre of Entertainment Films for Children and Adolescents which is affiliated to the International Centre set up by UNESCO in Brussels.

In 1960 the Society made two feature films "Meera Ka Chitra" and "Dilli Ki Kahani" and three short films "Idd Mubarak" (originally called "Idgah"), "Hero" and "Chetak". The Society has also made various versions of its films "Guru Bhakti", "Panchtantra Ki Ek Kahani", "Ekta" and "Saral Biswas" in 12 languages. It has taken in hand two feature films "Savitri" and "Bapu Ne Kaha Tha".

Besides the private producers, the Films Division of the Government of India produces newsreels and documentaries.

A very important body is the Central Board of Film Censors which is located in Bombay.

Among the annual features of the film world are the various festivals of Indian or foreign films and the awards for outstanding achievement in various departments of film production. There are two main awards one by the Government of India and the other by the *Times of India* (called Claire award).

FILMS DIVISION

The Films Division produces documentaries and newsreels. About 110 documentaries are produced every year. Documentaries are also produced by private agencies and some of the foreign missions in India.

The Films Division's documentaries are produced in 13 languages: English, Hindi, Bengali, Tamil, Telugu, Gujarati, Punjabi, Assamese, Kannada, Kashmiri, Oriya, Marathi and Malayalam.

The newsreels are produced in five languages: English, Hindi, Bengali, Tamil and Telugu.

The documentaries and newsreels are made both in 35 mm and 16 mm. The former are usually 1,000 feet long and the latter 400.

The Films Division also buys documentaries from private producers and State Governments.

Every cinema is required under the terms of its licence to exhibit at each show not more than 2,000 feet of film approved by the authorities specified in the licence. One newsreel or alternatively one documentary is released every week to all the cinema houses.

To non-profit making and charitable institutions such as schools, hospitals films are supplied free.

Films that are suitable for foreign exhibition are supplied to Indian missions abroad. A monthly overseas edition of newsreels is also sent out to certain places. They are also marketed abroad on a commercial basis. Besides, there are arrangements for televising them with certain foreign countries—England, Canada and Japan. The films also help to promote tourism as they are regularly exhibited through the Tourist Division of the Ministry of Transport.

Indian documentaries and newsreels are now regularly shown in Nepalese cinemas. They are supplied free of cost.

The Films Division produced in 1960 72 films and released on commercial circuit 55 documentaries.

In March 1960, 108 films were under production and 33 with approved producers on contract.

Films produced by private producers for the Films Division was 15 in 1960. Three documentaries were acquired from State Governments or others for exhibition through the Films Division Circuit.

Number of prints of films sold for non-commercial exhibition was 2,010.

During 1959-60 the Films Division participated in 32 international film festivals and won seven awards. During April-Dec. 1960 the Films Division participated in 14 international film festivals held in various parts of the world and 28 films were entered. Five awards were won: "Taj Mahal" (Golden Eagle as the best documentary in the Afro-Asian Festival, Cairo); "Holiday in South India" and "Periyar" (Diploma of Honour, International Film Festival, Locarno, Switzerland); "Spring Comes to Kashmir" (Diploma by Jury of the International Competition for Sports Motion Pictures, Cortino D'Ampezzo, Italy, and Certificate of Merit, International Festival of Short Films, Buenos Aires (Argentina); "Radha and Krishna" (Second award in the Creative Art Class, 6th Biennial International Documentary Film Festival, Yorkton (Canada). The documentaries "Kathakali", Mayurakshi Dam" and "Banyan Deer" won Certificates of Merit in the State Awards. "Heera Moti" and "Veerapandiya Kattabomman", feature films from the private sector won awards at Karlovy Vary and Cairo respectively. "Apur Sansar" was adjudged as the best foreign film of the year 1960 by the National Board of Review of Motion Pictures, U.S.A.

Documentaries

Among the films released by the Films Division in 1959 were two biographical documentaries: one on Dr. D. K. Karve and the other on the late Sir J. C. Bose. Four reels were devoted to steel industry in the public sector, Rourkela and Bhilai plants while Bhakra-Nangal and Koyna projects were covered in two more reels each. Twelve documentary films were in fact produced on power projects and 15 were under production (Nov. 1959). The geography of India is sought to be conveyed in films. As a beginning, six reels on the Indo-Gangetic plain, covering vegetation and wild life, agriculture and city life, two reels for each topic, were prepared but they were not released. In the same way three reels describing the climate of India are also awaiting release (Feb. 1960).

Konarak and Ujjain are two historical and archaeological subjects treated early in 1960 while 16 mm (colour) films—three reels each, on Jaipur and Sanchi, were kept ready.

Taj Mahal and the People of Naga Hills are other documentaries in colour which were released.

For record, only eight reels in colour, depicting the tour of the King of Nepal, and nine reels in black and white on similar topical subjects were prepared.

The *Call of the Mountains* is a two-reeler documentary on the school of mountaineering in Darjeeling.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

The Films Section of the Gandhi Memorial Fund has delegated all its work to the Films Division, for better results and more efficient distribution.

A full length documentary film on the biography of Mahatma Gandhi is under compilation as the repository of the Fund contains copies and originals of many shots relating to Gandhiji's activities, collected from all over the world. Shorter documentaries of individual aspects of Gandhiji's activites are also planned from the material available. The Fund had secured the services of a British expert; but ultimately it was decided to get the work done through the Films Division. The Ministry of Information is already committed to the publication of the complete works of Mahatma Gandhi and work on the films would also logically belong to the same Ministry.

New Production

Three biographical documentaries "Vinoba Bhawe", "Gurudev Tagore" and "Acharya P. C. Ray" have been produced and released. Six films are to be produced on the removal of untouchability while one for family planning propaganda is nearly completed. More and more colour, now being processed in the country, is being used for films by the Films Division. Full length documentary on the land and the people of India, Festivals of India, Himalayas, and Khedda operations, are all planned to be in colour.

Documentaries for record made during 1960 (Jan.-Dec.) were 72 (122 reels). From Jan.-March 1961, the Films Division was expected to complete about 48 films.

The revenue and expenditure are as follows:

Year	'000 Rs.	
	Revenue	Expenditure
1951–52	25,00	31,00
1952–53	33,00*	37,77
1953–54	34,00*	43,00
1954–55	33,00*	47,40
1955–56	37,00*	67,87
1956–57	40,00*	81,02
1957–58	43,90	71,00
1958–59	33,72	75,00
1959–60	49,98	91,00
1960–61	50,82	89,06

* The figure includes other revenue by sale of prints and surplus material and rentals.

The figures down to 1956-57 are revised estimates, and the figure for 1957-58 is the budget estimate.

News-reels

For obtaining a country-wide coverage, Films Division has stationed 15 cameramen in all the state capitals and for international coverage it has exchange arrangements with 22 news-reel producers from abroad. A wide distribution of Indian news items is thus secured on television also. State-governments who have their own "news-reel" units for their own distribution arrangement occasionally supply material to the Union news-reels.

Like documentaries, news-reels also are being dubbed in 12 Indian languages as from the beginning of 1960, for obtaining more intensive penetration.

Except for 153 cinemas in Andhra Pradesh and one in Rajasthan which have obtained stay orders from the High Courts against statutory direction for the exhibition of approved films, all cinemas in the country use either the documentaries or the newsreels for their shows.

For the compulsory showing of approved films, the Films Division levies rental on cinemas at the following rate:

(*i*) From cinemas where the gross weekly collections are less than Rs. 500 @ Rs. 2½ per film per week;

(*ii*) From cinemas where the weekly gross collections excluding entertainment tax are Rs. 500 or more, 1 per cent of the collections per film per week.

Regular shows of documentaries and news-reels are arranged at the small theatre auditorium of the Films Division, Janapath, New Delhi, and Tarabai Hall, Marine Drive, Bombay, at the nominal charge of 25 nP. per head per show.

Similar shows are being introduced in other cities as well as they will help make audiences documentary-minded.

Films dealing with Plan activities, are supplied to State Governments, social education units, railways, exhibition directorate, information centres and so on.

AWARDS

(See also under 'Prizes and Awards' under 'Late Particulars')

There were 59 feature films, 27 documentaries and 11 children's films in the competition for awards during 1959, an all time record so far in all categories. Language distribution: Bengali 15, Hindi 10, Tamil 8, Telugu 8. Six educational films applied for being considered.

The President's Gold Medal carries with it a cash award of Rs. 25,000 (Rs. 20,000 for the producer and Rs. 5,000 for the director) has a cash prize of Rs. 12,500 (Rs. 10,000 for the producer and Rs. 2,500 for the director). For the All-India Certificate of Merit for documentary, there is a cash prize of Rs. 2,500 (Rs. 2,000 to the producer and Rs. 500 to the director). The cash awards are mostly in National Plan Savings Certificates and Treasury Savings Deposit Certificates.

The President's awards for the films of 1959 are given in the 1960-61 edition of the Directory in the article "Awards and Prizes".

There are regional committees in Madras, Bombay and Calcutta which make a preliminary selection in the matter of feature films. These committees consist of persons who are qualified to judge. The final selection is made by the Government. In the matter of documentaries educational films and children's films the selection is made solely by the Government.

The Chairman of the Central Committee which makes the final selection in the matter of feature films is Dr. K. B. Barucha. The Chairman of the Bombay, Calcutta and Madras Regional Committees are Mr. C. B. Nagarkar, Prof. N. K. Sidhanta and Mr. M. Satyanarayana, M.P. respectively. The Chairman of the Documentary and Educational Committees is Mr. Krishna Kriplani and that of the Children's Films Committee is Smt. Lakshmi Majumdar.

The Claire awards are given on the basis of a readers' poll. The awards for 1959 are given in the 1960-61 edition of the Directory in the article "Awards and Prizes".

CENTRAL BOARD OF FILM CENSORS

The Board was constituted in 1951 for certification of films. Most of the censoring of important films is now concentrated in Bombay where the Board is located. This was done to secure uniformity. New censorship rules were introduced in 1958, replacing the ones that had been put in force in 1953. The period of validity of a certificate is now 10 years as against five years under the old rules.

The Board has seven members including the Chairman, all of whom are appointed by the Government of India. There are regional offices in Bombay, Calcutta and Madras. The Regional Officers are assisted by Advisory Panels appointed by the Government. The Panels consist of educationists, doctors, social workers, lawyers.

Every film is scrutinized by the Examining Committee. And a certificate is given or refused, or given with cuts or modifications. There is an appeal to a Revising Committee presided over by the Chairman. There is also a final appeal from the decision of the Board to the Government of India.

Certificates could be for unrestricted exhibition in which case they are marked U (Universal). Or they could be restricted to persons above the age of 18 in which case they are marked A (Adults).

Broadly speaking, the Censors see that there is no encouragement to vice, crime or that there is no offence against decency or morality, or that they do not promote disrespect for law and order or to a foreign country or people.

The Board examined during 1960, 2,876 films (including features, shorts and trailers) of which 959 were Indian.

In all 1,529 imported films and 946 Indian films were given U certificates, meaning that these were suited for universal exhibition. The other class of certificate *viz.*, A (for Adults only) was given to 7 Indian and 93 foreign films.

Forty-three feature films were refused certificates: 6 Indian and 37 imported.

Of 64 films considered for re-certifying two were given 'A' certificate.

The total footage cut during the year was 78,001.

Feature films in India have shown an increasing tendency to turn to crime for their themes. It was found, for example, that in 1954 only four crime films were produced out of a total of 273, in 1959 the number had risen to 29. From 11 in 1956 the number rose to 20 in 1957 and 28 in 1958.

Next in importance is fantasy which has shown high and low figures—alternately, from 49 in 1956 to 23, 45 and 36 during the succeeding years respectively. Mythologicals have suffered a slight set back, from 37 in 1956 to 32 in 1959, with 39 and 37 for the intervening years. Stunt and adventure as themes have cropped up during 1959, contributing as many as 16 films together under this category.

A thematic classification is as follows: The figures given are for the four years 1956, 1957 1958 and 1959:

Social: 160, 170, 150, 175, Crime: 11, 20, 28, 29; Fantasy; 49, 23, 45, 36; Historical: 4, 7, 5, 8; Mythological: 37, 39, 37, 32; Stunt and adventure: —, —, —, 16.

16 MM. FILMS

The use of the 16 mm. film for propaganda and publicity is realised by Governments, municipalities, and trade and industry.

The Union Government maintains for the Five Year Plan publicity 62 units (61 vans; one boat), which are equipped with 16 mm. projectors.

These gave 19,566 film shows during 1960.

The Community Development Projects and the National Extension Service Blocks seem to be using the films as a regular part of their work. Obviously there is a considerable number of projectors in use throughout the country.

Many industrial houses maintain a regular stock of films for non-commercial use.

There are in addition 16 mm. libraries and small theatres for films suitable for non-theatrical audiences maintained by the British Information Services, the British Council and the U.S. Information Services through their regional offices.

In the Defence Forces, 16 mm. films have been extensively used for training and entertainment. There are Inspectors of Visual Education under Directors of Education in the States who do valuable service by using 16 mm. projectors and film strips.

One of the biggest single 16 mm. libraries of films in States is maintained by the Inspector of Visual Education in Bombay who makes the films available regularly to schools under him.

The Ministry of Education in Delhi has an extensive library of 16 mm. educational films.

Most of the diplomatic missions and embassies in the Capital and Consulates in Bombay, Madras and Calcutta maintain a film section and arrange shows of special films.

The U.K. and U.S.A. representatives and the British Council maintain a special library of educational and informative films. These are available for exhibition free of charge.

Many international friendship societies too have libraries of 16 mm films. Notable among these are the Indo-Soviet Cultural Society and the Indo-Czech Cultural Society.

In fact 16 mm films on a variety of subjects are available from many countries in the world.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

EXPORT, IMPORT

The Film industry earns about Rs. two crores through export of films outside India. Excluding those in Pakistan, there are about 2,500 theatres available for the showing of Indian films in about 60 foreign countries where Indians live in some concentration and where Indian films are welcomed by the residents of the region.

The main export market for Indian films at present is Pakistan; but Indian exporters are put to considerable difficulty.

The Government of India have taken a number of steps for the promotion of export of Indian films abroad.

Our missions abroad have been addressed for information about the marketability of Indian films; selected Indian films are exhibited by our missions abroad on a non-commercial basis; instructions have been issued to these missions to look for honorary correspondents to report on the reception of Indian films in their respective territories; agreements have been concluded with some Indian and foreign concerns for the commercial distribution of Films Division's documentaries abroad.

India participates in important international film festivals from time to time by entering films and sending delegations where necessary.

Festivals of Indian films are organised in foreign countries when practicable. Selected films are also screened at exhibitions and trade fairs organised or participated in by India abroad. A souvenir on the film industry is under preparation (Dec. 1960). It will be distributed through our missions and at international film festivals.

Arrangements are being made for the supply of articles through the trade missions for publication in foreign journals dealing with different aspects of our film industry. There is an exchange of films which is made in accordance with trade and cultural agreements concluded with foreign countries.

Import licences have been given to the film industry for putting up machinery for subtitling of films. Licence is given to the exporters for the import or release of raw film for export prints under the Export Promotion Scheme. Exporters are allowed to import raw films equal to 2 per cent of the F.O.B. value of export of feature films.

The foreign exchange earned by export of Indian films in 1959 amounted to Rs. 153,79,000 and for the first nine months of 1960 to Rs. 107·80 lakhs.

Export earnings from Indian films: 1954 *to* 1959: 1954: Rs. 97,13,000; 1955: Rs. 111,39,000; 1956: Rs. 129,22,000; 1957: Rs. 128,17,000; 1958: Rs. 113,09,000; 1959: Rs. 153,79,000.

Single large importers—1959: Ceylon Rs. 29 lakhs; Malaya Rs. 28 lakhs; British East Africa Rs. 17 lakhs; Burma Rs. 15 lakhs; Persian Gulf Ports Rs. 11 lakhs.

While imports of foreign films are mostly on rental basis, exports of Indian films are both on rental and outright sale basis. The actual amount of remittance on rentals made on such films from April 1959 to December 1960 amounted to Rs. 51·7 lakhs.

Apart from traditional importers of Indian films like Ceylon and Singapore, other countries importing films from India now include U.K., U.S.S.R., France, U.S.A. and Canada.

Imports of exposed cinematograph films have been fairly heavy. Until 1936-37 imports remained below 10·8 million feet, touched the peak at 26 million feet in 1938-39 and dropped to 6·9 million feet in 1942-43 owing to wartime conditions. In the post-war period imports recovered to 16·2 million in 1945-46 and thereafter have fluctuated between 17 million feet and 12 million feet.

Under the import control regulations, import of foreign films is subject to a monetary ceiling and distributors are authorised to remit up to 70 per cent. of the gross revenue.

CINEMATOGRAPH ACT

The regulations of films for exhibition and of the cinemas take place under the Indian Cinematograph Act. The power of certifying films was until the amendment of the Act in 1949 vested in the State Governments. Since production was concentrated in the three States of Bombay (Bilingual), Bengal and Madras and imports also mainly took place through the three ports in those States, the first examination of films for certification was done mainly by the Boards at Bombay, Calcutta and Madras. The Act as amended in 1949 made a distinction between films considered suitable for exhibition to adults only and those suitable for general exhibition.

A Bill was passed in 1952 to amend the Act with a view to removing certain defects noticed in the course of actual administration. Under the original Act responsibility for deciding whether a film is or is not suitable for public exhibition was entrusted to the Central Board of Film Censors; but powers are vested in the Central Government to declare that any film already certified as uncertified and notice has to be given to the person who has been granted certificate to show cause why the film should not be uncertified. This delay is sought to be avoided by the amendment. Provision is also made in the amended Act making it obligatory on persons delivering a certified film to a distributor or exhibitor to transmit information and documents relating to the certificate which would enable punishment of the exhibitor if he shows the film with portions cut out by the Board before certification. The difficulties encountered in proceedings against persons for interpolation and exhibition of unauthorised scenes in certified films are sought to be countered. Enhancement of the penalty has also been suggested.

The Censorship Rules as amended provide for a deposit of a 35 mm. or 16 mm. version of the certified film or its shooting script as a condition precedent to the issue of a certificate. Such a certificate is valid for ten years from the date of issue and old films once censored have to be recensored if the previous certificate has been in effect for five years or more.

PRODUCTION OF FEATURE FILMS

Year	1957	1958	1959	1960
Hindi ..	115	116	121	121
Bengali ..	54	45	38	38
Tamil ..	44	61	78	63
Telugu ..	36	36	46	54
Marathi ..	14	16	10	15
Kanarese ..	14	11	5	12
Malayalam..	7	4	3	6
Others ..	8	6	9	15
Total ..	292	295	310	324

PRODUCTION OF FILMS

The total number of Indian feature films produced from 1931 to 1956 was 4,909. A language-wise break-up is as follows:

Hindi 2,712; Tamil 666; Bengali 656; Telug 302; Marathi 265; Gujarati 92; Kannada 72 Malayalam 2; Punjabi 44; Assamese 13 English 12; Oriya 8; Persian 6; Arabic 2 Others 7.

The total number of Indian film producers from 1931 to 1956 was 2,244. Of these 1,580 were single picture producers. The language break-up is as follows:

Hindi 1,040 (708); Tamil 334 (228); Bengali 322 (230); Telugu 187 (139); Marathi 143 (99); Gujarati 60 (49); Kannada 50 (40); Malayalam 35 (27); Others 73 (60).

Below we give figures to show the production and release of documentaries:

Year	Production		
	Films Div.	Others	Released
1953–54 ..	35	8	43
1954–55 ..	33	6	39
1955–56 ..	55* (125 reels)	14 (20 reels)	67 (142)
1956–57 ..	48* (94 reels)	13 (32 reels) 7 (9 reels)†	69 (136)
1957-58 ..	50(102) 3(4)	11(20) 6(7)†	70(133)
1958-59 ..	83 (157 reels)	20 (50 reels)	52
1960 ..	72 (122 reels)	15 (24 reels)	55 (68)

* Most of these films have more than one reel per title.

† These were obtained from the State Governments for release through the Films Division circuit.

Note: Not all the documentaries produced are released in the same year. The number of releases therefore is not a total of the first two figures.

Films production 1956, '57, '58, '59: (By centres): Bombay: 135, 128, 127, 122; Calcutta: 59, 57, 48, 45; Madras: 102 108, 118, 136.

CINEMAS IN INDIA AND THE "CIRCUITS" (1951)*

Circuit	Places	Permanent Cinemas
1. Bombay ..	301	619
2. Central ..	272	501
3. North ..	162	385
4. Bengal ..	259	504
5. South ..	493	924
Total ..	1,487	2,933

* In 1960, there were 4,315 cinemas in the circuit of the Films Division, and in the country 4,360.

IMPORT OF FILMS

GLASS INDUSTRY

THE glass industry is regarded as a key industry.

The more commonly used raw materials are: sand, borax, soda ash and salt cake, dolomite, lime or limestone, salt petre and sulphur, manganese dioxide and colouring materials. Though supplies of sand are in plenty, its quality is not uniform. Nearly all the glass factories of northern India and West Bengal obtain their requirements of sand from the Allahabad district. Subsequent to the Tariff Board's inquiry in 1932, little progress has been made in the installation of grading and washing equipment for sand. Borax is mostly obtained from abroad, while soda ash is received from indigenous manufacturers and importers. Sufficient quantities of lime or limestone are available. Coal is the commonest fuel. The bulk of refractories is obtained from indigenous sources. The demand for refractories by the glass industry is estimated at about 10,000 tons per year.

The industry comprises the manufacture of sheet glass, blown and pressedware and bangles.

Government protection to the sheet glass section granted in 1950 has been further extended for two years upto the end of 1962. The rate of protective duty fixed at 45 per cent *ad valorem* in 1950, but raised to 70 per cent in January 1955, will continue to prevail till the end of December 1962.

The number of registered glass factories in 1959 was 123 with an aggregate capacity of 392,284 tons per year; the capacity excludes an annual output of 35,000 tons, for the bangle industry which is mainly centred at Faridabad. The total capital invested in these 121 units is about Rs. 12 crores with a labour strength of 25,000 (excluding those engaged in the cottage industry) and an annual turn-over of nearly Rs. 16 to 18 crores.

Two factories for the manufacture of sheet glass are being set up, one at Tiruvottiyur and the other at Sembium in Madras State with an initial investment of about Rs. 50 lakhs each, with Belgian collaboration. For the first time in India, the factory at Sembium would adopt the "Pittsburg process" for the manufacture of sheet glass, which, according to the technologists, produces better quality glass.

A scheme was approved by the Central Government to set up one unit at Bombay and another was given approval to expand its producing capacity at West Bengal for the production of laboratory ware and scientific glassware during the year. The total capacity approved was 16,800 tons per month.

Messrs. Technoexport of the U.S.S.R. submitted their project report for the optical and ophthalmic glass project to be located at Durgapur in West Bengal, to the Ministry of Commerce and Industry in July 1959.

(*For more details see article on Government Industrial Undertakings.*)

The manufacture of bangles was undertaken by about 100 units, mostly established on a cottage industry basis and localised in the Ferozabad district in Uttar Pradesh and Belgaum district in Mysore. The rated capacity of these factories is placed at 35,000 tons.

The manufacture of quality glass tablewares, bulbs, 'reshami' and 'nylon' bangles and other brilliantly coloured glass products will receive a big fillip in the country with the proposed full scale supplies from Uttar Pradesh of iron-free silica sand, the basic raw material for glass. Seven more sand washing plants are being set up by the U.P. Government to cope with the heavy demand for the refined silica. Five of these new plants will be set up in the public sector at Shankargarh in district Allahabad to increase the capacity of the existing Government sand-washing centre from 20 tons to 200 tons per day—one plant to be kept as a standby. The other two, in the private sector, will be located at Loghra (Allahabad) and Bargarh in district Banda. The last unit was scheduled to start functioning by the end of 1960-61.

Besides, penicillin vials, sheet glass of sizes less than 16 oz. and over 32 oz., glass tubing by automatic drawing, narrow-mouth thermos flasks and decorated aerated water bottles are some of the items newly manufactured in the country during the First Plan.

The new items produced during 1960 are coloured sheet glass, safety glass for automobiles, aeroplanes, etc., glass wool and fibre, glass syringes, synthetic stores and glass chatons.

OUTPUT

Actual output and consumption of glass and glassware is shown by the following table:

	1959	Jan.-July 1960	Installed Capacity 1959	Domestic consumption end of 2nd Plan
Bottles and Phials (tons)	93,002	—	210,918	90,000
Sheet Glass (million sq. ft.)	88·00	43·49	106·60	64
Laboratory Glass (tons)	5,120	2,693	6,744	..
Glass Shells for electric lamps (lakh pieces)	370	242	274	..
Table & Pressedware (tons)	36,000	—	64,626	35,000
Lampware (tons)	20,000	—	34,700	18,000
Thermos Flasks (dozens)	121,000	67,500	297,300	100,000
Miscellaneous glassware (tons)	5,850	99,461	21,386	12,000
Scientific glassware (tons)	—	—	—	6,000
Sheets for lamps (million pieces) ..	—	—	—	55
Safety glass (million sq. ft.)	—	—	—	1·25
Optical glass including ophthalmic glass (tons)	—	—	—	250

The annual demand for glass and glassware was about 200,000 tons in 1960-61. By that period, the installed capacity of the industry had been raised to 423,421 tons per annum. It is estimated that the capital requirements of the glass industry inclusive of replacements and modernisation amounted to about Rs. 3 crores during the Second Plan period. The industry in the organised sector is said to have employed over 30,000 persons in 1960-61, as against 18,500 persons in 1955-56.

It was expected that at the end of the Second Plan, exports and imports would balance each other at about Rs. 50 lakhs per annum. The Government have during the past few years been helping the industry in a number of ways; they have granted rebate of duty on heavy soda ash, provided technical help, set up a Central Glass and Ceramic Research Institute and the National Instruments Factory. The Central Glass and Ceramics Research Institute produces optical glass of quality comparable with the imported product by utilizing indigenous raw materials.

Imports and exports are as follows:

(Rupees in lakhs)

—	1956	1957	1958	1959	April-Sept. 1960
Imports	148·82	167·75	58·29	74·05	65·69
Exports	25·76	22·65	20·30	24·73	11·99

The table below summarises the development programme of the glass industry (excluding bangles) in the Second and Third Five Year Plans:

(In '000 tons)

	1950-51 Production	1955-56 Production	1960-61		Targets for 1965-66	
			Estimated Capacity	Estimated Production	Capacity	Production
Glass and glassware (includes ophthalmic glass)	92·0	125	457	240	615	440

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

HIDES, SKINS AND LEATHER

INDIA possesses abundant resources of raw hides and skins, fully adequate to meet the requirements of the domestic tanning industry leaving a sizable surplus which is exported abroad. On an average, India exports every year about Rs. 20 crores worth of raw skins, tanned or dressed hides and skins, and unwrought leather. It is estimated that normally it produces 16·2 million cow hides, 5·5 million buffalo hides, 23·2 million goat and 15·1 million sheep skins a year. Only a portion of the cattle and buffalo hides is obtained from slaughtered animals and the bulk, about 75 to 80 per cent. is derived from animals that die a natural death.

The bulk of the production is carried on in small towns and villages.

The tanning industry comprises four sections, *viz.*, 1. organised tanneries producing finished vegetable tanned buffalo leather and chrome tanned upper leather; 2. tanneries producing vegetable tanned leather known to the trade as E. I. kips and E. I. tanned skins; 3. small-scale chrome tanneries producing chrome tanned upper leather; and 4. village tanneries producing vegetable tanned cow and buffalo leather and vegetable tanned leather from goat and sheep skins.

The number of factories and annual rated capacity in 1959 of each of these sections was as follows :—

—	Number of factories.	Capacity in million.
1.	45 (13 produce chrome)	4·44 (hides for vegetable tanning) 1·58 (hides for chrome tanning)
2.	500	16–17 (tanned hides) 24 (goat and sheep skins for vegetable tanning)
3.	250	3 (hides)
4.	..	8 to 9 (raw hides) 3 to 4 (raw goat and sheep skins)

The few big tanneries are in Madras, Kanpur, Calcutta and Bombay.

Only about 75 tanneries employ more than 50 workers each.

PRODUCTION

The following is the trend of production :—

Year.	Chrome and tanned hides.	Vegetable tanned buffalo and cow hides (in terms of cow hides).	Leather cloth
	(thousands)	(thousands)	(000 yards)
1955	668·4	1,635·6	2,623·2
1956	741·6	1,683·1	2,640·0
1957	630·5	1,791·8	3,500·0
1958	678·0	2,067·6	4,243·2
1959	650·4	2,467·2	5,420·4
Jan.-Aug. 1960 ..	534·2	1,526·2	3,800·1

According to the information supplied by the manufacturers registered under the Industries (Development and Regulation) Act, the total capital invested in the large-scale units manufacturing leather and leather goods in 1956 was about Rs. 9·37 crores and the number of persons employed was about 9,400.

A large quantity of raw hides and skins is imported, mostly overland from Pakistan. In addition, a small quantity of tanned hides and skins and of unwrought leather is also imported.

The following table gives the position:

(In lakhs of Rs.)

Year	Raw hides	Raw skins	Hides, skins, tanned or dressed	Unwrought leather
Imports :				
1955–56	66·5	23·3	..	6·7
April-Dec. 1956 ..	78·32	30·15	1·84	6·62
1957	69·76	37·25	9·37	N.A.
Exports :				
1955–56	..	6,52·7	22,52·3	20·6
April-Dec. 1956 ..	..	4,16·0	15,67·80	11·45
1957	..	6,61·71	21,56·98	N.A.

The trend of exports and imports of hides and skins and leather during 1959 and in the first six months of 1960-61 is indicated below :

(Value in lakhs of rupees)

Year	Hides and skins (undressed)	Leather (undressed)	Leather (manufactures)
Exports :			
1959..	10,67·32	28,65·18	14·79
April-Sept. 1960 ..	4,58·73	12,39·04	8·70
Imports :			
1959..	1,72·19	4·74	36·13
April-Sept. 1960 ..	1,39·31	1·89	12·46

The main problems about raw material relate to the supply of hides and skins and wattle bark. Supplies of hides have to be arranged from Pakistan. The indigenously available *Karada* bark is stated to be a potential substitute for wattle bark.

For the development of indigenous tanning industry and for increasing exports of tanned skins, the Government of India decided from June 15, 1959, to regulate export of raw goat skins on quota basis through established shippers.

India imports about 15,000 tons of wattle extract and bark per year. By the end of the Second Plan the total area under wattle cultivation was proposed to be 27,000 acres.

It was estimated that the demand in 1960–61 would be 23 million tanned hides and 26 million tanned skins. The quantities of the principal raw materials required for this target were : Raw hides 23·5 million pieces; raw skins 26·5 million pieces; lime 28,000 to 33,000 tons; wattle bark and extract, 33,000 tons; other barks 330,000 tons; myrobalans 28,000 to 33,000 tons.

A number of schemes had been launched by the Centre and States for the development of the tanning and leather industries during the Second Five-Year Plan. Some of these provided for setting up production-cum-training centres, re-tanning and finishing centres, organization of co-operative societies of tanners and leather workers.

FOOTWEAR INDUSTRY

The larger units manufacturing leather and leather goods employ about 9,950 persons and the total investment is about Rs. 10 crores. The small-scale industry employs about 7,63,000 persons.

The principal use of leather is for the production of footwear.

The following table gives the regional distribution of the capacity for Western type footwear early in 1957 :

State	Unit No.	Annual Capacity (Pairs)
Uttar Pradesh ..	7	2,277,000
West Bengal ..	1	3,442,000
Bihar	1	174,200
Madras	1	75,000
Punjab	1	4,800
Mysore	1	1,200
Total	12	5,974,800

The principal towns concerned are Agra, Kanpur, Bombay and Calcutta.

During 1959, there were 12 units engaged in the manufacture of western type of leather footwear with a total capacity of 6·688 million pairs and 12 units engaged in the manufacture of Indian type with production amounting to 4·103 million pairs. In addition, there were quite a large number of cottage and small-scale factories producing in all 12-13 million pairs of western type leather footwear and 65-70 million indigenous footwear.

The output of the large-scale factories since 1955 is given below :—

Year	Western type (million pairs).	Indian type (million pairs).
1955 ..	3·243	2·303
1956 ..	3·620	2·911
1957 ..	4·369	3·038
1958 ..	4·280	3·290
1959 .	4·140	4·103
Jan.-Aug. 1960	3·581	2·467

Imports of leather footwear during the First Plan period were very small while exports were much higher. The following table gives the trend in exports and imports from 1955–56 :

Year	Imports (in pairs)	Exports (in pairs)
1955–56	1,816	1,577,754
April-Dec. 1956 ..	14,173	1,437,235
1957	14,540	2,550,367
1958	684	1,613,100
1959	1,980	2,665,771
April–Sept. 1960 ..	Nil	1,123,627

An excise duty of 10 per cent *ad valorem* has been imposed on footwear since March 1, 1954. Only power-operated factories employing 50 or more workers and using more than two H.P. come under this levy.

It was estimated that the total requirements of leather footwear in 1960–61 would be 100 million pairs for domestic consumption and 2 million pairs for export purposes. This would be an increase of 12·6 million pairs over the 1957 level. This additional demand was proposed to be met by a fuller utilisation of the existing capacity in the organised sector and by developments in the cottage and small-scale sector and no expansion of capacity was envisaged during the Second Plan period in the large-scale sector of the industry.

For achieving the target of 100 million pairs in 1960–61, the following quantities of raw materials would be required : 12·25 million tanned hides and 4·75 million tanned skins; 5·4 million reels of thread for uppers and 360 tons for others; and 285 million pieces of eyelets.

JUTE INDUSTRY

As one of the principal earners of foreign exchange, the jute industry plays a vital role in India's economy. Out of the aggregate value of all goods and commodities exported every year, the share of jute manufactures is 18–19 per cent. The value is exports of jute yarn and manufactures during 1959 was Rs. 110·75 crores and Rs. 103·91 crores in 1958. The jute industry also provides direct employment to as many as 260,000. The annual value of output is of the order of Rs. 130 to Rs. 140 crores.

There are 59 jute mills with a loomage of 35,435 under Indian managing agency houses and 37 mills with 33,518 looms under non-Indian managing agency houses. In 1957–58, 22 Indian-managed mills made a profit and eight incurred a loss, while eight non-Indian managed mills made a profit and 19 incurred a loss. Out of the 112 jute mills, 68 have been modernised so far (up to end of August 1959), four out of their resources and 21 with loans advanced from the National Industrial Development Corporation. It is proposed to complete the modernisation by the end of the Third Plan.

The Corporation has so far granted loans amounting to Rs. 4·6 crores to 22 jute mills for modernising their machinery. Of this, a sum of Rs. 2·64 crores had been drawn by 15 mills by November 1959. The Corporation has also introduced a scheme to provide short-term loans to jute mills to facilitate the purchase of indigenous machinery. Loans up to Rs. 5 lakhs will be granted under this scheme.

According to a statement issued to the Press on September 12, 1959 by the Indian Jute Mills Association, its member mills had unsealed a total of 4 per cent of their looms during the previous three months. The industry then had only 10 per cent of its looms idle.† About 5,000 tons of jute goods had been added to the average monthly production. Prices had been stabilised and there was a fall of 11,700 tons in jute goods stocks during August 1959. The unsealing process was done in two stages creating in all over 5,000 temporary jobs besides making a commitment for the consumption of at least an additional 28,500 bales of jute a month.

Details of the production trends of raw jute in the Indian Union :—

Year	Lakh acres	000 bales
Average		
1950–51	14·5	3,301
1951–52	19·5	4,678
1952–53	18·2	4,605
1953–54	11·96	3,129
1954–55	12·43	2,928
1955–56	17·39	4,197
1956–57	19·08	4,288
1957–58 (Revised) ..	17·42	4,052

1959–60	17·07	4,548

N.B.—The jute season is from July to June.

The all-India yield per acre was 1,066 lbs. in 1959–60, as against 1,139 lbs. in 1958–59.

Supply of jute and mesta during 1959-60 was about 88 lakh bales.

Supply and distribution of jute during the seasons 1958–59 and 1959–60 :

	1958-59 (lakh bales)	1959-60 (lakh bales)
Supply :		
Opening stocks—		
With mills ..	13·86	19·96
With other stockists	4·23	4·50
TOTAL ..	18·09	24·46
Crop : Total ..	69·92	57·00
Import from Pakistan	3·40	6·14
Total supply ..	91·41	87·60
Distribution :—		
Mill consumption	64·60	67·60
Exports	0·43	1·63
Domestic consumption ..	2·32	2·00
Total Distribution ..	67·35	71·23

The following table gives the trend of I.J.M.A. mill consumption of raw jute :—

Year ended June	Lakh bales
1952-53	52·53
1953-54	50·24
1954-55	58·63
1955-56	64·28
1956-57	60·72
1957-58	61·34
1958-59	60·14
1959-60	62·91

JUTE MILLS

In 1959, there were 112 jute mills in India with a total loomage of 72,125. This is about 56 per cent of the total loomage capacity of the world.

Of the 112 mills, 101 were in W. Bengal, four in Andhra, three in Bihar, three in U.P. and one in M.P. The mills in W. Bengal are concentrated in Calcutta. The number of companies managing the 112 mills was 81. There is a 15 to 18 per cent increase in jute acreage in 1961 over 1960 acreage of 800,000. The output in 1960 was between 1,900,000 and 2,000,000 bales.

The total capacity is about 1,000,000 tons of jute goods a year. The average production during the last five years is 1,094,000 tons. The total value of the goods produced in a year is about Rs. 130–140 crores.

According to the census of manufactures 1957, 102 mills had a fixed capital of Rs. 42·46 crores and a working capital of Rs. 42·87 crores. In the same year, 245,309 persons were employed in the 102 mills.

The progress of the industry during the past few years is summed up in the following table :—

(in thousand tons).

Year (July–June)	Production*				Exports from India	Stocks*
	Hessian	Sacking	Others	Total		
1952–53	348	511	33	892	676	134
1953–54	390	445	31	866	811	87
1954–55	399	558	38	995	862	88

There has been no Government control on production or distribution of jute goods. The only control in vogue is that exercised by the Indian Jute Mills' Association, in the light of their Working Time Agreement, the main object of which is to ensure that production and supply are aligned to world demand.

Mills have lately been paying greater attention to the need for diversification of their products. Some of the specialities which are manufactured now are cotton bagging (a loose fabric meant for packing of cotton in U.S.A.), wide hessian used as carpet backing in U.S.A., jute tarpaulins, paper-lined hessian, jute carpets and jute webbing.

Out of 88 jute mills which had to implement the Jute Wage Board's recommendations for cash interim relief for workmen, 82 had implemented the recommendations. (April 1961).

† In April 1960 the Jute Mills' Association decided to permit its members to unseal an additional one per cent of their sealed looms with effect from May 1.

With effect from 2nd May 1960, one per cent. of the looms was unsealed and further 1½ per cent. from 1st June. The decision to unseal 1½ per cent looms was soon withdrawn and, with effect from 6th June, the jute mills were allowed to seal a part of their looms on a voluntary basis according to the availability of raw jute supplies to them on the understanding that the working hours lost could be made up after the end of October 1960. Thereafter, the working loomage was 91 per cent which continued till October 1960 when the Indian Jute Mills Association decided to seal voluntarily 5 per cent of the looms with effect from 17th October and another 5 per cent. from 24th October, bringing the total sealed complement to 19 per cent.

The announcement also said the Government of India had advised the Association that, so far as it lay within their power, they would ensure that during the coming jute season, adequate supplies of raw jute would be made available to the industry from local sources and by way of imports.

In the event of climatic conditions adversely affecting the size of next season's jute crops prompt action would be taken by the Association to review the level of production.

LAC INDUSTRY

LAC is a resin which finds extensive application in industries. It is a resinous protective secretion of an insect which lives by sucking the sap of certain trees and shrubs called lac hosts.

There are four crops of sticklac, named after the Hindu months in which the collection of each crop commences. These are 'Baisakhi' and 'Katki' from one strain of the insect (Rangeeni) and 'Jethwi' and 'Aghani' from another strain (Kusumi). The first processed product, after the crushing and washing of sticklac is known as 'seedlac'. From this shellac is manufactured either by melting it (seedlac) manually in cloth bags held near a fire place called 'bhattas' or by the mechanised process of extraction with suitable solvents.

India is the chief source of supply of sticklac and till 1950 accounted for nearly 85 per cent of the world production. But since then production in Thailand has rapidly increased and now accounts for about 30 per cent of the world production. The average production of sticklac in different States based on the annual production during the years 1949-59 is as follows :—

State	Average Crop (in maunds)
Bihar	4,42,500
Madhya Pradesh..	3,42,000
West Bengal	1,92,000
Bombay*	71,500
Uttar Pradesh	15,000
Orissa	15,000
Assam	14,500
Other States	15,000
Total ..	11,08,000

The actual production in 1959-60 was 11,59,000 maunds as against 10,13,500 maunds in 1958-59.

The average annual production of shellac including button lac is 15,300 tons.

There are no regulated markets for trading in sticklac. The manufacture of shellac is a cottage industry and the number of shellac factories varies from season to season. According to the latest information there are about 300 factories in the country; only two of these which are located in Calcutta are fully mechanised.

Yield from sticklac varies from year to year and locality to locality.

Roughly the yield of seedlac and shellac is 65 per cent and 55 per cent of sticklac.

The cost of manufacturing one maund of shellac from seedlac is about Rs. 16 and of converting sticklac into seedlac is Rs. 3. In 1939 these were roughly Rs. 3-8 and as. 8 respectively.

The falling tendency in prices observed during 1957-58 continued and by April 1958 prices of T.N. Shellac touched the lowest level of Rs. 57 in post-war years. This necessarily caused concern to Government and the trade alike. At the suggestion of the Government a voluntary association of exporters was formed for canalising exports at minimum export prices. With the formation of this association in June 1958 a stabilising influence was brought about in the market.

In spite of fixation of minimum prices at the export stages, benefit has not been passed on to the manufacturers and growers in full measure and internal price levels have been much lower than the export minimum price.

In the latter half of 1959, due to heavy demand from the U.S.A., China and Western Europe, prices increased substantially. As it was felt that this was an unhealthy situation from the point of view of overseas consumers, a schedule of maximum prices was also fixed by the Indian Lac Exporters Association with effect from 1st November 1960 for all grades of lac. These maxima were generally Rs. 15 to Rs. 20 per maund higher than the minimum prices.

EXPORTS

About 90 per cent of the total quantity of processed goods is exported.

The U.S. is the best customer, followed by the U.K. and Germany. Since 1953 the U.S.S.R. and China have also been buying sizable quantities.

Exports of all kinds of lac to foreign countries have averaged seven lakh maunds in the past five years; but there has been a drop in foreign exchange earnings to the tune of over Rs. 3 crores due to lower prices of lac during 1958 and 1959. The average value of exports which stood at Rs. 10 crores till 1956-57 has now declined to less than Rs. 6 crores.

The table below gives exports of lac to the important countries during 1958-59 and 1959-60.

(The figures are in maunds)

	1958-59	1959-60
SHELLAC AND BUTTONLAC		
U.K.	49,333	68,840
U.S.A.	56,665	70,231
China	26,567	48,115
U.S.S.R.	51,676	20,648
Other countries ..	1,35,276	1,71,966
Total quantity ..	3,19,517	3,79,800
Total value in rupees	3,00,61,562	3,83,23,942
SEEDLAC		
U.S.A.	2,76,245	2,36,887
West Germany ..	43,479	34,963

Total value in rupees	2,64,14,225	2,37,41,148
OTHER KINDS		
Total quantity ..	34,402	41,553
Total value in rupees	9,58,288	15,95,752
Total of all kinds :		
Quantity	7,13,661	7,30,267
Value in rupees ..	5,74,34,075	6,36,60,842

Lac has made significant contributions to the development of art and industry.

Shellac is consumed chiefly by five industries.

The gramophone industry consumes about 11 to 13 thousand tons.

The varnishes and paint industry absorbs something like 4 to 6 thousand tons.

The total demand from the electrical industry is estimated at 3,000 tons as against 6,000 tons in pre-war years.

Nearly 3,000 tons are used in the hat industry as a stiffening material.

The manufacture of sealing wax requires about 1,500 tons.

For the promotion of the improvement of methods of cultivation and manufacture of lac in India the Indian Lac Association for Research was formed by traders in Calcutta in 1921 and the Government found the funds by levying a cess on all exports of lac other than refuse lac at annas four per maund and for refuse lac annas two per maund. This association set up the Indian Lac Research Institute at Namkum (Ranchi).

At the suggestion of the Royal Commission of Agriculture in 1927 this association was succeeded by the Indian Lac Cess Committee which was established under the Lac Cess Act of 1930 "for the improvement and development of the cultivation, manufacture and marketing of Indian lac" under the control of the Central Ministry of Food and Agriculture. By this Act the cess was raised to annas seven and annas five respectively. With effect from April 1948 this cess was doubled. In order to associate the members of Parliament with the Committee and also to provide adequate representation to all the lac growing States the Indian Lac Cess Act has recently been amended.

On 19th September 1956, the Committee celebrated its Silver Jubilee and to mark the occasion brought out a Souvenir publication containing an exhaustive survey of research and statistics on lac and a detailed directory of lac trade. In 1959 the Committee brought out another publication entitled 'Atlas of Lac' which gives the story of lac in the form of maps and charts with explanatory notes and detailed statistics. These publications are available from the Secretary, Indian Lac Cess Committee, Circular Road, Ranchi.

An Export Promotion Council for shellac has also been formed under the Central Ministry of Commerce and Industry to promote exports of shellac.

At the suggestion of the Bihar Shellac Enquiry Committee and the Indian Lac Cess Committee the Government of India banned futures trading in shellac and seedlac.

Under the Second Five-Year Plan it was proposed to spend Rs. 50 lakhs for the development of the industry. The more important of the schemes were (*i*) 50 broodlac farms to increase the production of lac to 16 lakh maunds; (*ii*) Seven regional testing laboratories for testing shelear and (*iii*) A number of storage godowns including an air-conditioned godown at Calcutta in order to provide better marketing and credit facilities.

All the broodlac farms have been established in the various States. Proposals for inclusion in the Third Five-Year Plan have been finalised. Schemes on research and development at an estimated cost of Rs. 75 lakhs have been proposed.

* Bilingual.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

MISCELLANEOUS INDUSTRIES

Agricultural Implements: There were 49 factories in 1959 as against 38 in 1958, manufacturing the implements, with a productive capacity of 23,788 tons in 1959 as against 19,696 tons in 1958 in terms of steel. The Tata (Agrico) Jamshedpur is the largest unit with an annual capacity of 12,000 tons. They also include two units in the public sector, *viz.*,the Nahan Foundry and the Mysore Implements Factory. In the Nahan Foundry, the production in 1958 (April–Dec.) was 1,955 tons as against 2,456 tons in 1957-58. The production during 1959 (April-September) was 1,442 tons as against 2,465 tons in 1958-59. Actual production by the organised sector was 14,000 tons in 1958 and 15,886 tons in 1959. In addition there were 350 small units registered with State Governments.

Agricultural Machinery: In 1950 there were eight organised units manufacturing power-driven pumps with a capacity of 33,460 pumps per annum. At the end of 1959, the number was 37 with an annual installed capacity of 84,116 pumps, as against 29 with an installed capacity of 68,716 pumps in 1958.

During the calendar year 1959, 81,612 pumps were manufactured, as against 75,656 in the preceding year. During Jan.-July 1960, 52,800 pumps were manufactured. The total value of agricultural machinery produced in 1958 was Rs. 67·50 lakhs as against Rs. 52·90 lakhs in 1957.

Imports of centrifugal pumps including turbine pumps were worth in 1950-51 Rs. 57 lakhs; 1951-52 Rs. 95·6 lakhs; 1952-53 Rs. 80·6 lakhs; 1953-54 Rs. 66·4 lakhs; 1954-55 Rs. 59·3 lakhs; 1955-56 Rs. 51·6 lakhs; April-Dec. 1956: Rs. 59·16 lakhs. Calendar year 1957: 123·68 lakhs; 1958: 123·59 lakhs; 1959: 140·51 lakhs and April-Sept. 1960: 92·10 lakhs.

Total demand in 1955-56 was about 40,000 pumps, and it is expected to rise from 85,000 to 86,000 pumps by 1960-61. To meet this increased demand, some schemes have been recommended under the Second Five-Year Plan. With their implementation, the capacity will increase to 74,700 pumps per annum.

Diesel Engines: At the beginning of the First Plan there were five units engaged in the manufacture of diesel engines with a combined annual rated capacity of 6,320 engines. By the end of the Plan, the number increased to 16 with a capacity of 19,759 engines per annum. This number rose to 17 at the end of 1956 with a total annual installed capacity of 22,169 engines. Actual production during 1957 aggregated 19,997 engines. In addition, three more firms with a capacity of 10,000 engines for the manufacture of road vehicular type of diesel engines were established to meet the automobile requirements.

The position of the diesel engine manufacturing industry in 1959 and Jan.–August 1960 was as follows:

	No. of units	Capacity		Actual production
Diesel engines (Stationary)	19	23,225	30,217	26,029
Diesel engines (Vehicular type)	2	6,000	8,296	6,691

The total demand by 1960-61 is estimated at between 20,000 and 21,000 engines upto 50 H.P. Capacity and production targets envisaged in the Second Five-Year Plan were 220,000 H.P. and 205,000 H.P. respectively.

The value of diesel engine exports was Rs. 4·28 lakhs in 1956, Rs. 10 lakhs in 1957, Rs. 10·21 lakhs in 1958, Rs. 13·78 lakhs in 1959 and Rs. 13·59 lakhs during April-Sept. 1960. Indian diesel engines were exported to 25 different countries, the principal buyers being Bahrein, Oman, Cyprus and Thailand.

The production of diesel engines to drive agricultural pumps rose to 27,165 in 1958, substantially higher than the target of 20,500 engines per year scheduled to be achieved by the end of the Second Plan. The value of the production in 1958 was about Rs. 5·43 crores.

The industry has now grown to a level where there are 19 units manufacturing diesel engines in different parts of the country with a capacity of over 23,225 engines per year.

There are now units manufacturing ancillary items. Their total output in 1958 stood at Rs. 4·8 crores.

Agricultural Tractors: At the beginning of the Second Plan, there was no regular tractor manufacturing plant. The requirements are met by imports. The imports were: 1950-51, 4,930; 1951-52, 7,148; 1952-53, 1,227; 1953-54, 3,195; 1954–55, 2,939. Calendar year 1957: 4,792; 1958: 5,640; 1959: 3,949 and April-Sept. 1960: 2,477.

It is estimated that more than 20,000 tractors are in use at present in the country as against 10,000 in 1949-50. And the total requirements for all types of tractors by 1960-61 have been estimated by the Committee on Tractors and Tractor drawn Agricultural Implements at 5,000 per annum.

A contract between the Government of India and Messrs. Komatsu Manufacturing Co., Japan, has been concluded, under which Ordnance factories will produce tractors, earth-moving equipment, etc. The actual production is expected to start during 1959-62.

Two units each with a capacity of 1,250 tractors a year were to go into production in the middle of 1960. One will manufacture British tractors under licence, and the second would collaborate with a German firm.

In 1957, there were two units engaged in the production of tractors. The aggregate capacity was 3,000, while actual output was 2,269. The output of tractors in 1958 was 771 as against 189 in 1959 because of import restrictions.

A scheme for the manufacture of bulldozers and scraper attachment was licensed at the end of 1958. The factory would be located in Bombay.

Licence was also expected to be given for the manufacture of spare parts of the caterpillar units. This would be set up in Calcutta.

Machine Tools: At present, there are 23 units, two owned by the Government and 21 by private enterprise, manufacturing graded machine tools. The capital investment (private) is about Rs. 90 lakhs and the total number of persons employed exceeds 2,000.

The position in respect of actual production during 1959 and Jan.–July 1960 is shown below:

Article	1959		Jan.–July 1960	
	No.	Value Rs.	No.	Value Rs.
Complete tools	5,655	4,02,73,247	N.A.	30,171,200
Accessories	16,653	23,93,625	N.A.	7,63,300

As a part of the overall programme an expansion of the Hindustan Machine Tools was envisaged during the Second Plan. The production of lathes at the Jalahalli Works of this concern was worth Rs. 1·5 crores in 1960-61. The production in the private sector is currently worth about Rs. 75 lakhs per annum. A provisional target of Rs. 3 crores worth of machine tools was proposed for 1960-61 for the public and private sectors pending submission of the report of the Expert Committee.

The capacity of the machine tool industry in terms of value was Rs. 4·36 crores in 1959, as against Rs. 4·02 crores in 1958. Production of machine tools which was expected to be about Rs. 10 crores in 1960 is to be stepped up to over Rs. 38 crores by 1965—Rs. 23 crores for machine tools and Rs. 15 crores for small tools.

It is estimated that there are now 80,000 machine tools in operation and, by 1960–61, it was estimated, 170,000 would be required.

Cotton Textile Machinery: The principal items are carding engines, spinning ring frames and looms. The target capacity and production in the First Plan for carding engines was 600 and in the Second Plan 1,692. The total installed capacity in 1959 was 3,000 per annum. Actual production was 1951: 158; 1952: 108; 1953: 192; 1954: 436; 1955: 600; 1956: 732; 1957: 1,020; 1958: 1,148; 1959: 768; Jan.-Aug. 1960: 638.

The total value of the textile machinery produced in 1957-58 was Rs. 9 crores. It is expected that by 1961 self-sufficiency would be achieved in most items.

It was estimated that the annual demand under the Second Plan was 1,400 for new units and 600 for replacement, totalling 2,000 units. To meet this demand, the Government has approved the proposal of the private sector for 600 carding engines by the National Machinery Manufacturers and 300 by Texmaco for implementation.

At present the annual demand is estimated at 2,810 ring frames, 7·8 lakh spindles, 23·4 lakh spinning rings, 312,300 fluted rollers and 14,625 looms.

About spinning ring frames, there were 2 units with a rated capacity of 396 pieces per annum. Two more units started production early in 1955 bringing the total capacity to 936 ring frames against the Plan target of 800. Actual production was 1951: 291; 1952: 255; 1953: 197; 1954: 314; 1955: 868; 1956: 1,116; 1957: 1,368; 1958: 877; 1959: 1,080; Jan.-Aug. 1960: 724. The production target set in the Second Plan was 1,896. The total capacity in 1958 was 2,784 and in 1959 it was the same as in 1958.

About looms, there were three units with a capacity for producing 4,980 looms per annum; the target capacity in the First Plan was 4,980. The actual production was 1951: 2,166; 1952: 1,527; 1953: 1,340; 1954: 1970; 1955: 2,346; 1956: 2,868. The target production set in the Second Plan was 6,000 looms. The number of looms actually manufactured was 2,868 in 1957, 3,187 (of which 36 were automatic) in 1958, 4,224 in 1959 and 3,413 during Jan.-Aug. 1960. The installed capacity in 1958 was 4,980 In 1959, it was 5,700 looms and in Aug. 1960 it was increased to 10,560.

The number of drawing frames rose from 24 during the first eleven months of 1956 to 30 during the same period in 1957; but declined to 9 in 1958. It was higher at 29 during Jan.–Sept. 1959. Automatic looms rose from 161 to 282 in 1957 and in 1958 it was only 36. During 1959, 356 were produced and in Jan-Sept. 1960 it was 260. Reeling machines rose from 1,158 to 1,841 in 1957 and in 1958 it was at 804. During Jan.-Sept. 1959 it was at 339.

The production of spindles rose from 5·72 lakhs in 1954 to 10·5 lakhs in 1956, of fluted rollers from 2·26 lakhs to 3·84 lakhs.

Protection to the industry has been extended upto the end of 1963 at the protective duty of 10 per cent *ad valorem* for complete ring frames, spindles, spinning rings, fluted rollers and automatic looms. Protection for plain looms was discontinued with effect from 1st January 1958.

The value of textile machinery exported rose to Rs. 2·2 lakhs in 1957 from Rs. 1·5 lakhs in 1956.

In 1958 the value of export was Rs. 12·96 lakhs, in 1959 it was Rs. 19·91 lakhs and during April-Sept. 1960 it was Rs. 7·37 lakhs.

Ball Bearings: There is one unit with an annual rated capacity of 900,000 ball bearings

N.A. Not available.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

on a single shift basis. In 1958, the one unit worked on a three shift basis. The total demand by 1960–61 was estimated at 2·4 million bearings which the existing firm was expected to be able to meet with its expanded capacity and by working on a multiple shift system. The production of 21 different sizes of roller bearings was undertaken for the first time.

The number of ball bearings actually produced during the calendar year 1958 was higher at 2,400,000, the figures for 1957 being 1,595,044. In 1959 it was higher at 1,699,200 and during Jan.-July 1960 it was 1,612,200.

The number of units in the small-scale sector is 14 in the Punjab and one in Maharashtra.

Protection has been extended upto the end of 1962, at the protective duty of 95 per cent *ad valorem*.

Bicycles : As on September 26, 1960 there were 21 units manufacturing complete bicycles as against 18 units in 1957. The aggregate annual capacity was 725,000 in 1957, 925,500 in 1958 and 1,050,500 in 1959. The actual production in the calendar year 1957 was higher at 790,579 ; in 1956 it was estimated at about 664,000 and in 1955 at 491,000. Of these big units, Uttar Pradesh has six, West Bengal three, Punjab five, Delhi three and Madras, Maharashtra, Assam and Bihar have one each.

Number of persons employed in 1957 was about 8,000.

The output for 1958 is placed at 10 lakhs. During 1959 the actual output was placed at 10·68 lakhs and during Jan.-July 1960 it was 5·96 lakhs. Production in the large and small-scale sectors during 1959 (estimate): 13 lakhs as against the Plan target of 12·5 lakhs. Production was expected to go up to 15 lakhs by the end of the 2nd Plan.

But the internal demand has shown a steady rise. From 4·03 lakh cycles in 1951-52 it moved up to about 6·8 lakhs in 1955-56. It was expected that the offtake would go up to 11 lakhs at the end of the Second Plan. Besides, an export of 1·5 lakh cycles was also envisaged.

This is to be achieved through the organised sector as well as the decentralised sector of the industry. In view of the considerable employment potentialities of the small-scale sector, it was considered that it would be enabled to produce 2·5 lakhs cycles per annum by 1960-61. The balance of 10 lakhs was expected to be produced by the organised sector which includes 20 units.

The production of bicycles in the small sector, which started only towards the end of March 1956, was about 109,000 bicycles in 1957 as against about 22,000 in 1956.

There are 78 units in the small sector ; of these 22 are in the Punjab, 14 in Delhi, 10 in West Bengal, nine in Uttar Pradesh, eight in Bombay*, four in Madhya Pradesh and two in Madras. Five units in Rajasthan, two in Mysore and one each in Andhra Pradesh and Orissa are to go into production soon.

A Development Council was constituted for this industry in December 1953.

The output of bicycle tyres in India in 1958 was higher at 8·57 million, against 7·15 million tyres manufactured in 1957 and 3·94 million tyres manufactured in 1951. In 1959 the production was 9·5 million and during Jan.-Aug. 1960, 7·3 million.

During the same period, the number of bicycle tubes made in India went up from about 4·9 million to over 8·02 million in 1958 as against 7·03 million in 1957. During 1959, 9·95 million tubes were produced and 8·4 million during Jan.-Aug. 1960.

The target for the production of bicycle tyres and tubes under the Second Plan was twenty million tyres and tubes each per year.

The current domestic demand for bicycle tyres and tubes is estimated at nine million each per year. This was expected to rise to 16 million tyres and tubes each by the end of the Second Plan, keeping pace with the steady increase in the number of bicycles on Indian roads.

The industry can practically meet all internal requirements.

Indian capital invested in the bicycle industry in India was Rs. 3·39 crores while the amount of foreign investment in the industry was about Rs. 39·81 lakhs. (September 1958.)

A Standing Liaison Committee has been formed by the Development Council for the bicycle industry to assist the Export Promotion Council.

Provision has been made to enable manufacturers of bicycles to obtain a 133 per cent replacement quota of iron and steel used in producing the bicycles exported.

Indian cycles have been successfully introduced, on a commercial scale, in six foreign countries.

During 1959, as many as 7,573 complete bicycles valued at about Rs. 10·21 lakhs were exported. During April-Sept. 1960, 1,904 complete bicycles valued at about Rs. 2·29 lakhs were also exported. During 1958 exports had amounted to just five bicycles.

The importing countries were Burma, Ceylon, Malaya, Afghanistan, Mozambique and Nigeria.

Bicycle accessories worth about Rs. 1·64 lakhs were also exported in 1959 and accessories worth Rs. 1·72 lakhs were exported in April-Sept. 1960.

Apart from bicycles, an overseas market on a small scale for Indian tricycles has also been built up.

In the bicycle industry the use of imported component has been steadily declining. In Feb. 1960, the value of imported components accounted for Rs. 2 to 5 per cycle. At the end of the Plan period the country's requirements were fully met from indigenous production.

An "Export Pool Scheme" has been introduced to facilitate sales abroad at a price lower than the domestic price. The scheme is being operated by the Cycle Manufacturers Association of India.

Protection has been extended upto the end of 1963.

Sewing Machines : At the end of the First Plan there were three organised units engaged in the manufacture of complete domestic sewing machines with a total capacity of 46,500 machines per annum. This has since gone up to seven units with a total annual capacity of 81,200 machines. During 1959 the installed capacity was 91,700 per annum and in August 1960 it stood at 133,704. Actual production in 1958 was 210,900 as against 167,478 in 1957 and 130,388 in 1956. It was estimated that the demand for the domestic and industrial types of machines of 130,000 to 160,000 machines per year might go up to 300,000 by 1960-61. This can be met by the production from the small-scale sector as well as from the organised sector with its expanded capacity. Of these about 30,000 machines were earmarked for export. Production—32,965 in 1950–51 ; 48,116 in 1951-52 ; 52,206 in 1952–53 ; 68,417 in 1953–54 ; 80,776 in 1954–55 ; 110,000 (estimate) in 1955–56 ; 130,388 in 1956 ; 167,478 in 1957 ; 210,900 in 1958 and 300,000 in 1959. The target envisaged under the Plan by 1960-61 was 300,000. During Jan.-July 1960 it was 170,247.

There are 35 manufacturers of sewing machines in the small-scale sector besides seven firms in the large-scale sector. Of the 35 small units, 14 are in the Punjab, nine in Delhi, four in Rajasthan, three in Uttar Pradesh, two in Jammu and Kashmir and one each in Bombay*, Madhya Pradesh and Andhra Pradesh. Of the seven big manufacturing firms, West Bengal and Punjab have three each and the seventh is in Delhi.

Special steps are being taken by Government to increase the output, particularly in the small-scale sector.

Imported components account for only Rs. 8 to 10 per machine.

Exports of Indian sewing machines fetched foreign exchange worth Rs. 20·40 lakhs in 1958 as against Rs. 5·51 lakhs for the whole of 1957.

In 1959 the value of export was as much as Rs. 23·96 lakhs and during April-Sept. 1960 it was Rs. 8·94 lakhs.

The number of sewing machines exported in 1958 was 11,708 as against 4,465 during 1957. During 1959 the number was 22,702 and during April-Sept. 1960 it was 10,827.

The countries to which Indian sewing machines are exported include British Guiana, Afghanistan, Thailand, Ceylon, Malaya, Singapore, the U.S., Kenya, Jordan, Madagascar, Tanganyika, the Sudan, Pakistan, Uganda, Iraq, Sierra Leone, Rhodesia, Saudi Arabia, Zanzibar, Mauritius, Burma, Nepal and Vietnam.

The protection granted to the industry has been withdrawn since January 1, 1955.

Hurricane Lanterns : There are 10 units with a capacity of 4,015,153 lanterns a year. The Second Plan target was 6 million.

During the calendar year 1958, 3,483,900 lanterns as against 4,344,770 in 1957 and 5,179,719 in 1956, were produced. In 1959, 4,560,000 lanterns were produced and during Jan.-July 1960, 2,844,500 were produced.

Actual export was 1950 : 15,036 ; 1951 : 14,136 ; 1952 : 108,264 ; 1953 : 449,734 ; 1954-55 : 349,079 valued at Rs. 8·83 lakhs ; 1955-56 : 204,670 valued at Rs. 5·15 lakhs ; April-Dec. 1956 : valued at Rs. 88,726 ; Calendar year 1958 : 49,381 valued at Rs. 7·89 lakhs ; 1959 : 31,393 valued at Rs. 15·99 lakhs and in April-Sept. 1960 : 3,181 valued at Rs. 4·11 lakhs.

Protection has been withdrawn since January 1, 1955.

Grinding Wheels : There are four units with a rated capacity of 2,829 tons. It was expected that with the completion of the expansion schemes, it was considered to be adequate to meet the demand by 1960-61. Production—1950-51 : 231 tons ; 1951-52 : 352 tons ; 1952-53 : 390 tons ; 1953-54 : 395 tons ; 1954-55 : 525 tons ; calendar year 1955 : 681 tons ; 1956 : 1,112 ; 1957 : 1,452 tons ; 1958 : 1,186 tons ; 1959 : 1,198 tons ; Jan.-July 1960 : 988 tons. Imports : 1950–51 : 209 tons ; 1951–52 : 202 tons ; 1952–53 ; 93 tons ; 1953–54 : 112 tons ; 1954–55 : 158 tons ; 1955–56 : 60 tons.

During the calendar year 1957, 1,750 tons valued at Rs. 1·19 lakhs, in 1958, 165 tons valued at Rs. 10·31 lakhs and during Jan.-Aug. 1959, 271 tons valued at Rs. 12·50 lakhs and April-Sept. 1960, 87 tons valued at Rs. 7·28 lakhs were imported.

Protection has been discontinued with effect from 1st January 1960.

Electric Goods : The value of electrical consumer goods produced in 1957 (lamps, fans, radio sets, batteries) was estimated at Rs. 25 crores. The Second Plan target was Rs. 40 crores.

Dry Batteries : There are five units with a capacity for producing 224·5 million dry cells a year. The Second Plan target was 225 million. About 183·88 million cells were produced in 1959 as against 168·18 million cells in 1958, and 166·54 million cells in 1957. The exports were 1950 : 85,193 valued at Rs. 0·2 lakh ; 1951 : 1,445,673 valued at Rs. 2·58 lakhs ; 1952 : 1,114,966 valued at Rs. 2·92 lakhs ; in 1957 : Rs. 9·67 lakhs ; 1958 : Rs. 16·45 lakhs ; 1959 : Rs. 15·17 lakhs ; April-Sept. 1960 : Rs. 3·32 lakhs.

Attempts are being made to manufacture the raw material in this country—manganese dioxide, sealing compound, carbon electrodes.

There has been no protection since January 1954.

Storage Batteries : There are 12 units with an annual rated capacity of 379,300. The anticipated demand in 1960-61 was 420,000.

* Bilingual.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Production—1951-52 : 212,836 ; 1952-53 : 136,000 ; 1953-54 : 179,000 ; 1954-55 : 210,100 ; 1955-56 : 258,086 ; Calendar year 1956 : 314,199 ; 1957 : 324,513 ; 1958 : 343,400 ; 1959 : 454,008 ; Jan.-July 1960 : 300,600.

There is progress in the diversification of products and a greater degree of self-sufficiency about raw materials. Among the different products are aircraft batteries and railway requirements. Schemes for the manufacture of dry-charged batteries, iron-clad batteries, heavy duty and traction batteries have been approved. Raw material manufacture includes refined lead and microporous rubber separators.

Protection to the industry has been withdrawn since January 1, 1956.

Electric Cables and Wires : Actual production of 1. bare copper conductors, 2. winding wires, 3. rubber insulated cables and flexibles, 4. A.C.S.R. cables is as follows :

	in tons (1)	in tons (2)	in mil. yd. (3)	in tons (4)
1956	10,255	761	105·6	11,285
1957	8,554	1,016	103·9	15,388
1958	8,200	2,300	120·0	14,000
1959	6,570	4,669	165·0	17,000
Jan.-July 1960	5,441	2,408	114·51	12,156

The major schemes of the First Plan were the Hindustan Cable Factory in the public sector for producing different kinds of cables, (this started regular production on Sept. 1, 1954), the expansion of the Indian Cable Company at an estimated cost of Rs. 2·8 crores, the expansion of capacity for A.C.S.R. cables from 2,500 tons to 5,000 tons per annum, the creation of producing facilities for 500 tons of insulated aluminium conductors per annum.

Electric Fans : There are 23 units with an installed capacity of 780,900 fans per year. The Second Plan target capacity was raised from 600,000 fans to 900,000 fans per year in 1960-61.

Actual production was 1950 : 194,100 ; 1953 : 199,468 ; 1954 : 238,850 ; 1955 : 282,236 ; 1956 : 338,932 ; 1957 : 524,664 ; 1958 : 635,000 ; 1959 : 743,070 ; Jan.-July 1960 : 556,000.

Exports of electric fans were expected to reach about 40,000 per year by 1960-61. Exports were : 1952-53 : 3,655 valued at Rs. 4·9 lakhs ; 1954-55 : 10,869 valued at Rs. 13·6 lakhs ; 1955-56 : 16,456 valued at Rs. 19·51 lakhs ; Apr. to Dec. 1956 valued at Rs. 11·57 lakhs. In calendar year 1957 ; 15,471 valued at Rs. 17·40 lakhs ; 1958 : 21,379 valued at Rs. 22·31 lakhs ; 1959 : 39,446 valued at Rs. 39·70 lakhs and in April-Sept. 1960 : 37,876 valued at Rs. 35·54 lakhs.

Thirty different countries bought Indian fans, the main buyers being Ceylon, Burma, Malaya, Singapore, Kuwait and Thailand.

Electric Lamps : There are 11 units manufacturing general lighting service lamps with an installed capacity of 44·08 million lamps per year. The target was 50 million by 1960-61.

Production was, 1950 : 14 million ; 1953 : 19·8 million ; 1954 : 22·86 million ; 1955 : 23·51 million ; 1956 : 29·9 million ; 1957 : 32·13 million ; 1958 : 29·50 million ; 1959 : 34·04 million ; Jan.-July 1960 : 22·12 million.

There are two units with an installed capacity of 1,000,000 units to produce fluorescent lamps. Production in 1956 was 880,891 ; in 1957 : 1,018,964 ; in 1958 : 1,010,000 ; in 1959 : 1,114,991 and in Jan.-July 1960 : 866,000.

Electric Motors : There are at present 20 units in the large-scale sector with a total annual capacity of 602,520 H.P. Besides, there were 31 units in the small-scale sector in 1958 whose annual capacity was 130,000 H.P. In addition, there are several small units which are not registered but which assemble electric motors and manufacture parts. In 1959 there were 74 units in Small Scale Sector with a production capacity of 266,204 H.P.

Eleven out of the fifteen large units have schemes for expanding their capacities and 16 new units have also been licensed.

This will raise the total capacity in the large sector to 1,134,290 H.P.

Actual production was, 1950-51 : 99,000 H.P. ; 1951-52 : 153,000 H.P. ; 1952-53 : 160,000 H.P. ; 1953-54 : 161,000 H.P. ; 1954-55 : 201,000 H.P. ; 1955-56 : 271,000 H.P.

The total production by the large units in 1957 was 469,590 H.P. (74,400 motors), as compared with 630,000 (94,800 motors) H.P. in 1958. In 1959 production was 590,550 H.P. (92,251 motors). In Jan.-Oct. 1960 the production was 612,171 H.P. (66,300 motors). The production is confined mainly to the manufacture of electric motors of one to 30 H.P. ratings. A few units also manufacture motors of large ratings.

The current demand for electric motors is around 750,000 H.P. and this is expected to go up to about one million H.P. by 1960-61.

A.C. 3 phase induction motors upto 225 H.P. and motors of the slip-ring type of up to 125 H.P. are now being produced in the country.

The Government has accepted the Tariff Commission's recommendations that the existing protective duties of 15 per cent *ad valorem* on electric motors and 20 per cent *ad valorem* on component parts of electric motors, excluding control gear, should be continued for a further period of three years ending December 31, 1961. Protection was first granted to the electric motor industry in 1948.

Electric Transformers : There are 16 units with an annual rated capacity of 1,204,000 K.V.A. When the present schemes for development are implemented the capacity will go up to 1,310,000 K.V.A. per annum—against the the Second Plan target of 1·5 million KVA by 1960-61.

Production in the calendar year 1958 was 1,150,000 KVA as against 1,219,101 KVA in 1957 and 919,198 KVA in 1956. In 1959 the production was 1,108,400 KVA and in Jan.-July 1960 it was 631,000 KVA.

Imports were valued at Rs. 144·5 lakhs in 1951-52 ; Rs. 149·4 lakhs in 1952-53 ; Rs. 197·5 lakhs in 1953-54 ; Rs. 161·6 lakhs in 1954-55 ; Rs. 173·41 lakhs in 1955-56 ; Rs. 146·98 lakhs during April-December 1956 ; Rs. 354·39 lakhs in 1957 ; Rs. 157·35 lakhs in 1958 ; Rs. 280·53 lakhs in 1959 and Rs. 92·05 lakhs in April-Sept. 1960.

Soap : The organised sector contains some 90 units with an installed capacity of 253,270 tons per annum, though not all of these are actually in production, while the cottage sector contains over 3,000 units, scattered throughout the length and breadth of India. Naturally there is a concentration of these small factories in those areas where oil-seeds are most plentiful. For example, the Punjab, U.P., and Gujarat each has an annual production of over 40,000 tons of soap, while Andhra, another large State, produces just 8,000 to 10,000 tons per year. The production in 1957 and 1958 was as follows (In tons): 1957 : Organised sector : 110,000, Cottage sector : 220,000 and total 330,000 ; 1958 : Organised sector : 123,000, Cottage sector : 267,000 and total 390,000. 1959 : organised sector only : 130,000 tons and in Jan.-July 1960, 78,238 tons (organised sector).

The official capacity of all the factories in the organised sector is just over 250,000 tons, whereas their total production in 1958 was only 123,000 tons. But the figure 250,000 tons includes a number of factories which have never been in operation, or factories, the plants of which are unworkable or highly uneconomic ; the real figure of worthwhile capacity is probably less than 200,000 tons.

With total soap production in 1958 at about 390,000 tons, the amount of oil consumed was about 190,000 tons. The oils are of various kinds, of which groundnut oil, coconut oil and palm oil are the most important. All the groundnut oil is produced in India, but it is necessary to import the palm oil and some of the coconut oil (which is, of course, used for many other products besides soap). It is estimated that the tonnage of oil required for soap alone will grow by 40 per cent every five years and that, twenty years from now, the total annual requirement of oils and fats for all products will have increased from about 1·8 million tons to 6·3 million tons.

The total demand for soap is likely to be 450,000 tons in 1961, 629,000 tons in 1966, 870,000 tons in 1971 and 1,220,000 tons in 1976.

Exports were 1952-53 : 1,300 tons valued at Rs. 32·56 lakhs ; 1953-54 : 571 tons valued at Rs. 13·57 lakhs ; 1954-55 : 542·6 tons valued at Rs. 14·57 lakhs ; 1955-56 : 413·8 tons valued at Rs. 9·67 lakhs ; Apr. to Dec. 1956 : 209 tons valued at Rs. 5·88 lakhs ; 1957 : 359·2 tons valued at Rs. 9·83 lakhs ; 1958 : 358 tons valued at Rs. 10·52 lakhs ; 1959 : 498 tons valued at Rs. 16·29 lakhs and April to Sept. 1960 : 227 tons valued at Rs. 5·98 lakhs.

Matches : There are 242 units with a rated capacity of 44.04 million gross boxes. The Second Plan target was 35·3 million gross boxes.

Actual production was in millions of gross boxes, 1953 : 29·3 ; 1954 : 26·5 ; 1955 : 31·18 ; 1956 : 30·78 ; 1957 : 28·92 ; 1958 : 31·32 ; 1959 : 31·86 and Jan.-Aug. 1960 : 21·96.

Both imports and exports are negligible.

Plywood : The number of units on the approved list of DWCI is 70 with an annual installed capacity of over 250 million sq. ft. on three shift basis. Besides, there are a large number of unapproved factories with an estimated capacity of about nine million sq. ft. Actual production of tea-chest plywood in million sq. ft. was 1953 : 50 ; 1954 : 62 ; 1955 : 91·13 ; 1956 : 98·33 ; 1957 : 95·02 ; 1958 : 87·64 ; 1959 : 100·96 ; Jan.-July 1960 : 6·08 million sq. metres.

Protection has been withdrawn from 1st January 1961.

Razor Blades : The actual production of razor blades in 1957 was about 336·48 million. The total installed capacity of the five Indian factories was about 614·6 million in 1957, 629·0 million in 1958 and 650·4 million in 1959. Permission has been granted to open new factories. The production in 1958 was 356·2 million. In 1959 it was 392·7 million and during Jan.-July 1960, it was 320·2 million. By the end of the 2nd Plan it was expected to go up to 650 million blades.

Average monthly production in 1958 by the three factories in Bombay and Calcutta : 25 million blades.

Thermos Flasks : The production of thermos flasks in India, which was just a little over 6,900 dozens in 1951, increased to 53,368 dozens in 1957, 65,000 dozens in 1958, 121,500 dozens in 1959 and 67,500 dozens in Jan.-July 1960.

The production in 1956 was 48,336 dozens and in 1955 about 44,000 dozens.

The present demand in the country is estimated at between 60,000 and 70,000 dozens of flasks per year. This was expected to increase to 1,00,000 dozens by the end of the Second Plan period.

There are now six units in the country manufacturing thermos flasks with a total installed capacity of 297,300 dozens per year.

Three units are engaged in the manufacture of ampules by automatic machines. The total capacity of these three units is over 35 lakh ampules per month. Besides these there are a number of small-scale units manufacturing ampules by the table-blowing process.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Printing Machines : A firm in Coimbatore in Madras State has made a prototype stereo rotary printing machine. The machine is under test. Another firm in Titaghur has been permitted by Government to manufacture flat bed machines. The first batch of machines was expected to be completed by April 1960. As against an annual production of Rs. 5 lakhs in the country the 3rd Plan target is Rs. 3·5 crores. Three more firms have been licensed. Domestic demand during the 3rd Plan is estimated to be Rs. 5 crores.

Typewriters : Production of typewriters, a development of the Second Plan period, has been about 70 per cent higher in 1959 than in 1956. It has been estimated that by 1960-61, production would be of the order of 35,000 typewriters of standard and portable size.

Production 1959 : 21,437. Capacity : 33,000. During Jan.-July 1960, 10,494 typewriters were produced. These are standard typewriters. There are three units. For portables one unit has been licensed. Typewriters are in seven languages : English, Hindi, Bengali, Marathi, Gujarati, Assamese, Tamil.

Watches : A number of new schemes has been sanctioned and is under implementation for the production of time-pieces, clocks and watches. Two units are already producing electric clocks. Two schemes for manufacture of lever clocks are now under implementation. For time-pieces, two schemes with a total capacity of 1·8 lakhs have already been sanctioned and more proposals are under consideration. As regards watches, a scheme in the private sector in collaboration with a group of French firms has been finalised. The collaborators are the consortium of watch manufacturers known as S.E.D.I.M. The venture will be known as Indo-French Pione Industries Private Ltd. (Managing Director : Mr. J. H. Parikh) and will be situated at Goregaon, a suburb of Bombay. It will have an initial capacity to produce 90,000 watches annually, on a single shift basis. This Capacity will progressively be stepped up to 310,000 by the fifth year of production. The price range of the watches is given as Rs. 50 to Rs. 100. The unit will go into production by the end of 1961. A second scheme for setting up a factory in the public sector with the assistance of a Japanese firm is now being finalised. The public sector factory is situated in the vicinity of Hindustan Machine Tools at Bangalore. The foundation stone was laid on Jan. 28, 1961. This factory, which is in collaboration with Messrs. Citizen Watch Co., Ltd., Japan, will produce 240,000 watches on a single shift basis. The plan will cost Rs. 2·5 crores. The selling price is expected to be below Rs. 100 a piece. The capacity of these two schemes would be seven lakh watches every year.

The public sector factory will begin production in 1962.

New Lines of Production : Production of a number of new items like sewing machine needles, band-sewing needles, hypodermic needles, heaving industrial sewing machines, hand-model addressing machines, staples and pressure cookers has already started in the country. Schemes have also been sanctioned to manufacture, for the first time in the country, items like self-lubricating porous borings, electric addressing machines, bicycle tube walls and metallic safety razors, besides timepieces and watches.

It may be added that the exports of engineering goods in general of 1959 recorded an increase of 60 per cent during the first seven months of 1959 as compared with the corresponding period in 1958. The actual value of exports was about Rs. 3·70 crores, as against Rs. 2·29 crores. Exports to South-East Asian countries increased by nearly 100 per cent and amounted to Rs. 1·26 crores, about one third of the total exports. Exports to the U.S.A. recorded an impressive rise, from about Rs. 32 lakhs to about Rs. 78 lakhs. Exports to West Asia, Africa and Europe were also higher. Some of the items where exports increased substantially were sewing machines, electric fans, steel furniture, textile machinery, aluminium ware and diesel engines.

A Rs. 35 lakh Indo-Polish organisation the Electro-Equipment Corporation for the manufacture of metering units, set up in Bombay in the private sector without involving foreign exchange, was expected to go into production in Dec. 1960. The factory was to be located at Mulund on the Bombay-Agra road. On the one-shift basis, the factory would be able to turn out 60,000 pieces a year.

Refractories : There are 42 refractory factories in the private sector with a total capacity of about 7·1 lakh tons per annum. About 20 of these have expansion programmes involving a total additional capacity of 3·44 lakh tons annually. Twenty-two new factories with a total capacity of 11·93 lakh tons per annum have also been licensed. The target fixed under second Plan for refractories was Rs. 12·5 lakh tons as compared with a demand of 10 lakh tons. Production : 1958 : 434,446 tons ; 1959 : 492,994 tons ; and Jan.-July 1960 : 308,600 tons.

The development programme for refractories during the Plan periods is given below.

(In million tons)

1955-56 Production	1960-61 Estimated		Targets for 1965-66	
	Capacity	Production	Capacity	Production
0·28	0·87	0·6	2·0	1·6

Clinical Thermometers : The chief production centre will be the National Instruments Factory (see separate note in 'Government Industrial Undertakings') which in collaboration with Japan will produce 6,00,000 thermometers in 1962-63. At present there is one firm in Amritsar. This has a capacity of 2,16,000 per annum. Its production in 1958 and upto Oct. 1959 was 1·37 lakhs and 1·83 lakhs respectively.

Fountain Pens : The number of pens manufactured during 1959 was 11 to 12 million in the large-scale sector. The small-scale sector, it is estimated, manufactured over 10 million pieces. The value of pens exported during Jan.-Nov. 1959 was Rs. 1,57,000.

Paper Making Machinery : As many as 15 schemes have been approved by the Government. It is expected that within the next three years or so, nearly Rs. 10 crores worth of paper making machinery both of large scale type or small-scale type, would be manufactured.

Tea Machinery : The country is almost self-sufficient. The proposed annual capacity by 1965 is Rs. 1·75 crores.

Jute Mill Machinery : The production target for 3rd Plan is Rs. 2·3 crores as against Rs. 1·75 crores expected in 1960.

NON-FERROUS INDUSTRY

(See also under 'Mines and Minerals'.)

THE position regarding these metals is briefly described below :

(*a*) **Aluminium Ores :**—India is rich in deposits of Bauxite which are estimated at 250 million tons, of which perhaps a tenth is of high grade suitable for the manufacture of Aluminium. These are generally located in the Jabalpur and Balaghat Districts of Madhya Pradesh ; Belgaum District in Mysore ; Kolhapur and Thana Districts in Maharashtra ; Kaira District in Gujarat ; Ranchi Plateau in Bihar ; and Shevaroy Hills in Salem, Madras.

(*b*) **Copper Ores :**—Copper pyrites is the principal ore of copper. The deposits of copper pyrites in India are in Singbhum and Baragunda in Bihar ; Khetri Daribo in Rajasthan ; Sikkim State, Mysore State and in the Salem District of Madras State. Although only the Singbhum deposits are worked at present, the copper belts of Sikkim and Khetri Daribo are very promising and work has commenced for the exploitation of this as well.

(*c*) **Lead Ores :**—Lead ores are known to occur at a number of places in India. The only large deposits now being worked are those of Udaipur State in Rajasthan where lead is found in association with zinc.

(*d*) **Antimony Ores :**—Antimony ore deposits have been found at the Shigree Glacier in Lahaul, Kangra District, Punjab and in the region of Nagpur in Maharashtra State.

(*e*) **Zinc Ores :**—At present zinc deposits are known to occur at only two places in India : Zawar mines in Udaipur and in the Riasin District in Kashmir State. The deposits in Udaipur are being worked.

(*f*) **Tin Ores :**—Hazaribagh, Bihar.

The requirements of non-ferrous metals by the end of the 3rd Five Year Plan are estimated at Rs. 105 crores as against Rs. 43 crores at the end of the 2nd Plan.

PRODUCTION

There is one smelter working in Singbhum deposits in Bihar with a capacity around 8,000 tons. The production of refined copper in tons is as follows : 1951—7,084 ; 1952—6,079 ; 1953—4,920 ; 1954—7,162 ; 1955—7,282 ; 1956—7,628 ; 1957—7,848 ; 1958—7,841 ; 1959—7,642. The installed capacity of the industry was 7,000 tons in 1947 ; expanded to 7,200 in 1952, since when it has stood at this figure.

An Electrolytic Copper Refinery is being set up by the existing firm with a capacity of 8,400 tons at Ghatsila and a refinery with a capacity of 20,000 tons is proposed in the Public Sector based on Khetri, Daribo deposits in Rajasthan.

For antimony there is only one smelter at Bombay working on imported ores with a capacity of 1,000 tons. The production has been as follows : 328 in 1951, 181 in 1952, 130 in 1953, 539 in 1954, 504 in 1955, 589 in 1956, 502 in 1957, 545 in 1958 and 663 in 1959. The rise in production is due to adjusted demand.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

There is a lead smelter at Katrasgarh in Bihar with a capacity of about 6,000 tons per annum. The Company has set up an ore dressing plant at the Udaipur mines which will reduce the weight of the ore to be transported. The capacity of this plant is reported to be 9,000 to 10,000 tons of lead concentrates of 60 to 65 per cent. lead and 7,000 to 8,000 tons of zinc concentrates averaging 55 per cent. zinc. There are also lead refineries in Bombay and Calcutta, which started working in 1955. The production of lead in tons is as follows: 1951—859; 1952—1,132; 1953—1,694; 1954—1,788; 1955—2,234; 1956—2,497; 1957—3,174; 1958—3,335; 1959—3,896, rise being due to the immense availability of ore. There are two units refining lead from battery lead scrap to the extent of 600 to 800 tons annually. Zinc metal is not produced in India though zinc concentrates are produced and exported on a toll basis to Japan for refining.

A zinc smelter is proposed to be set up with a capacity of 15,000 tons in Udaipur during the 3rd plan period. Lead production will be simultaneously increased to 9,000 tons. Two additional smelters for lead and zinc based on imported ores are also under the consideration of the Government.

Tin is not produced in India though there is a de-tinning industry.

SEMI-MANUFACTURES

The greatest progress in the non-ferrous industry made since 1939 is in regard to the semi-manufactures.

Aluminium Sheets, Strips, Circles: There are eight units registered with the Development Wing for a total capacity of 17,000/18,000 tons. Production: 1957—11,030 tons; 1958—13,580 tons; 1959—15,946 tons.

Brass/Copper Sheets, Strips, Circles: There are 17 units mainly in Bombay,* registered with the Development Wing for a total capacity of 45,000/46,000 tons. Production: 1957—20,735 tons; 1958—19,547 tons; 1959—22,456 tons.

Lead Sheets: There is only one unit registered with the Development Wing. Total capacity 1,092 tons. Production: 1957—43 tons; 1958—85 tons; 1959—55 tons.

Zinc Sheets: There are four units registered with the Development Wing for a total capacity of 5,700 tons. Production: 1957—1,799 tons; 1958—2,072 tons; 1959—2,498 tons.

Brass/Copper Rods including Arsenical Copper Rods, Sections, Brass, etc.: There are three units registered with the Development Wing with a total capacity of 5,240 tons. Production: 1957—1,775 tons; 1958—2,069 tons; 1959—2,105 tons. Two more units have recently commenced production.

Brass/Copper Pipes: There is only one unit registered with the Development Wing with a capacity of 360 tons. Production: 1957—63 tons; 1958—60 tons; 1959—51 tons.

Lead pipes and tubes: There are altogether three units with a capacity of 4,800 tons. Production: 1957—335 tons; 1958—339 tons; 1959—606 tons.

Aluminium Extrusions: There is only one unit registered with the Development Wing, with a capacity of 960 tons. Production: 1957—738 tons; 1958—1,093 tons; 1959—1,233 tons. One more unit has commenced production of seamless aluminium tubes.

Aluminium Foils: There is only one unit registered with the Development Wing with a capacity of 3,000 tons. Production: 1957—1,354 tons; 1958—1,581 tons; 1959—1,925 tons. Aluminium and lead foils for tea-chests are also manufactured in the Calcutta area.

Alloys: Fifteen units have been registered with the Development Wing for manufacturing different kinds of non-ferrous alloys such as anti-friction bearing metal, bell metal, bronze, gun metal, solders, type metal, antimonial lead, zinc, base die casting alloys etc., with a total capacity of 68,000/69,000 tons. Production: 1957—16,697 tons; 1958—15,404 tons; 1959—16,561 tons.

Cables and Conductors: (*a*) Aluminium conductors: There are five units with a capacity of 23,470 tons. Production: 1957—15,388 tons; 1958—14,387 tons; 1959—14,121 tons.

(*b*) Bare copper conductors: There are five units registered with the Development Wing with a capacity of 17,800 tons. Production: 1957—8,554 tons; 1958—7,482 tons; 1959—6,581 tons.

(*c*) Rubber and plastic insulated cables and flexibles: There are ten units with a capacity of 279·30 million yards. Production: 1957—103·85 million yds.; 1958—128·75 million yds.; 1959—166·05 million yds.

(*d*) Winding wires: There are eight units with a capacity of 4,669 tons. Production: 1957—1,016 tons; 1958—2,078 tons; 1959—2,835 tons.

Protection has been withdrawn for copper and brass sheets (commercial and industrial), lead sheets for tea-chests and lead strips with effect from 1st January 1960. Protection has, however, been extended for a further period of three years from 1st January 1960 for lead sheets other than sheets for tea-chests, zinc sheets not otherwise specified, zinc strips, copper rods other than electrolytic copper rods, brass rods, copper pipes and tubes, and brass pipes and tubes.

The protective duty on Antimony Industry has been extended till 31st December 1963 subject to a review by the Commission in 1961 and has been reduced to 45 per cent. or Rs. 45 per cwt. whichever is higher. The existing protective duty of 25 per cent. *ad valorem* on crude antimony is to be maintained. Protection to H.D.B.C. has been withdrawn and protection of A.C.S.R. and A.A.C. is being continued at 35 per cent *ad valorem* for a further period of 3 years up to 31st December, 1963.

ALUMINIUM

Aluminium is the only non-ferrous metal which India can produce in large quantities because of extensive deposits of bauxite and adequate supplies of bulk power. There are two units: The Indian Aluminium Co. Ltd., and the Aluminium Corporation of India Ltd. The principal activities of these companies are: (1) the mining of bauxite in the Lohardaga region of Bihar; (2) the processing of bauxite ore to alumina at Muri, Bihar; (3) the electrolytic reduction of alumina to aluminium metal at Alwaye, Kerala and Hirakud, Orissa; (4) the rolling of aluminium metals to sheets and circles at Belur, W. Bengal; (5) the manufacture of aluminium powder and paste at Kalwa, Maharashtra and (6) the manufacture of extrusions at Alwaye, Kerala. The Aluminium Corporation has an integrated plant near Asansol.

There are two companies operating three smelters with a total capacity of 18,100 tons.

The production of aluminium in tons since 1951 is as follows: 1951—3,848; 1952—3,566; 1953—3,758; 1954—4,886; 1955—7,225; 1956—6,501; 1957—7,784; 1958—8,044; 1959—17,248.

Except bauxite and coal, most of the other raw materials are available only partly or not at all from indigenous sources. Caustic soda and soda are not produced in enough quantities, cryolite, aluminium fluoride, carbon blocks and filter cloth have to be imported, and the possibilities of producing cryolite in this country are yet to be investigated.

The demand for aluminium has been estimated at 1,00,000 tons by 1965-66. The handicaps of the industry are the small capacity of the units, the inherent refractory nature of Indian bauxite which costs more to mine, the low alumina content of Indian bauxite, the high cost of electric power, the cost of railway freight and expensive raw materials such as petroleum coke.

To meet the increased demand, there are different schemes for the expansion of the industry under the Third Plan. The Indian Aluminium Co., Ltd., Calcutta has set up an aluminium smelter at Hirakud. The factory has an installed capacity of 10,000 tons of aluminium ingots per year.

The company has now undertaken to increase the production capacity of the Hirakud Smelter to 20,000 tons.

Production at the Company's Alupuram Smelter in Kerala State is about 5,600 tons of ingots per annum. The Aluminium Corporation of India has also programme to raise the capacity of Asansol Plant to 7,500 tons per annum.

Besides, three additional smelters are proposed to be set up at Rihand in U.P., Koyna in Maharashtra and Salem in Madras by Messrs. Hindustan Aluminium Corpn. Ltd. (a Birla-Kaiser undertaking), Messrs. Tendulkar Industries Ltd., (in collaboration with Alcoa) and Madras Aluminium Co. Ltd., (in collaboration with Montecatinni, Italy) with capacities of 20,000 tons, 20,000 tons and 10,000 tons respectively. With the completion of all these schemes the capacity in the country at the end of Third Plan period will be 83,100 tons.

Protection to the industry will continue till Dec. 31, 1964 and the existing rate of 35 per cent *ad valorem* would be maintained.

IMPORTS OF NON-FERROUS METALS

	1958	Jan.-Aug. 1959
Aluminium (Cwts.)	240,911	155,986
Aluminium, unwrought (Cwts.)	142,295	86,859
Brass, Bronze, etc. (Cwts.)	29,414	27,327
Copper (Cwts.)	29,548	13,244
Copper, unwrought (Cwts.)	957,739	499,929
Copper old for remanufacture (Cwts.)	N.A.	N.A.
Ferro Alloys (Tons)	1,081	1,380
Stainless steel (Tons)	1,981	2,013
Lead (Cwts.)	429,509	306,236
Tin (Cwts.)	101,882	53,555
Zinc (Cwts.)	1,190,654	708,957

Value of imports of non-ferrous metals during 1958, 1959 and 1960 respectively is as follows:

Ores of Non-ferrous base metals and concentrates: Rs. 67,09,934; Rs. 61,54,666; Rs. 28,75,538; Non-ferrous metal scraps: Rs. 99,09,039; Rs. 1,54,38,228; Rs. 1,94,52,253; Aluminium: Rs. 5,99,76,866; Rs. 5,93,72,201; Rs. 3,90,21,901; Copper: Rs. 13,52,62,002; Rs. 16,38,09,797; Rs. 19,20,04,560; Lead: Rs. 2,28,53,483; Rs. 2,40,76,588; Rs. 2,22,32,167; Nickel: Rs. 60,52,139; Rs. 79,41,868; Rs. 1,10,96,665; Tin: Rs. 4,79,00,881; Rs. 4,76,71,509; Rs. 3,39,55,033; Zinc: Rs. 6,11,58,633; Rs. 5,27,94,178; Rs. 7,47,99,525; Miscellaneous Non-ferrous base metals: Rs. 42,21,275; Rs. 53,78,907; Rs. 59,04,898.

OPIUM INDUSTRY

THE area under poppy cultivation for the production of opium and the quantities of opium produced during the opium years (1955-56 to 1958-59) are given below :—

	Opium year	Area Cultivated (Acres)	Produce at 70° Mds.
Uttar Pradesh	1955-56	12,531	2,324
	1956-57	19,331	3,763
	1957-58	18,592	4,165
	1958-59	18,894	4,725
Madhya Pradesh ..	1955-56	18,535	4,094
	1956-57	22,420	5,211
	1957-58	27,617	8,089
	1958-59	33,783	9,540
Rajasthan ..	1955-56	12,114	2,821
	1956-57	17,565	3,977
	1957-58	17,725	5,318
	1958-59	21,527	6,127

N.B. :—The opium year starts on 1st October and ends on 30th September.

During the year 1959-60 the total area under poppy cultivation in the country was 105,250 acres and the production was 24,491 maunds.

The purchase price of opium was fixed on a sliding scale ranging from Rs. 33·50 to Rs. 38·50 per seer. Payment made to the cultivators amounted to Rs. 3·4 crores during 1959-60 as against Rs. 2·7 crores in the previous year.

Only a small percentage of the opium is sold to the State Governments after processing, and the balance is exported for medicinal and scientific purposes. Some opium is also supplied to Pakistan for quasi-medical purposes.

Poppy is generally cultivated and does not grow in a wild state. In India, cultivation of poppy for the production of opium is carried on by growers licensed by the Government, on behalf of the Government of India, who undertake to sow the poppy, lance the capsules, collect the latex, and deliver the drug at the weighing centre at a price fixed by the Government of India.

The opium purchased from the cultivators is sent to the Government factories at Ghazipur or Neemuch, where it is chemically tested and prepared for export and internal consumption. The factories made a net profit of Rs. 109 lakhs during 1959-60.

In addition to being a narcotic, opium is used in many essential medicinal drugs. Because of its harmful effect as a dope, the Central and State Governments have adopted various measures to put an end to normal traffic ; at present only a very small fraction of the population makes habitual use of the drug.

Poppy cultivation for the purpose of production of opium is confined to the States of Uttar Pradesh, Madhya Pradesh and Rajasthan. The cultivation in the Territory of Himachal Pradesh was discontinued with effect from 1st October, 1954. The cultivation of poppy starts in November and the crop is harvested in April or May. Preparation of the land for the reception of the seed is a prolonged process, the field being given 10 to 15 ploughing.

The quantities of opium exported during the opium years 1956-57, 1957-58, 1958-59 and 1959-60 are given below :—

Opium Year	Exports (in tons)
1955-56	245-7/14
1956-57	331
1957-58	443
1958-59	519·5
1959-60	624

The value of export of opium in 1956-57 was more than Rs. 2 crores as against Rs. 1·6 crores in 1955-56. More than half of the export went to the United Kingdom. Export 1959 : Rs. 3·43 crores. Export 1959-60 : Rs. 4·59 crores.

At a Conference of the State Governments held in 1949 it was decided to reduce the supply of opium to the States at the progressive rate of 10 per cent every year so that the supply of opium to the public for oral consumption (for non-medical or quasi-medical purposes) might be completely stopped with effect from 1st April, 1959. This decision was reiterated by the All India Narcotics Conference held in September, 1956.

This decision was to become effective from the date mentioned above in pursuance of India's international obligations.

After 31st March, 1959, opium was, however, to be supplied to registered opium addicts through Government Depots on medical permits issued by the appropriate medical authorities.

The quantities of excise opium supplied to the State Governments during the financial years 1955-56 to 1958-59 are given below :—

Financial Year	Mds.	Srs.	Chts.
1955-56	1,734	34	8
1956-57	1,267	0	0
1957-58	722	0	0
1958-59	360	0	0

In 1944, the Central Government erected an Alkaloids Plant at the Ghazipur Opium Factory for extraction and manufacture of various alkaloids from opium.

The quantities of various alkaloids exported and sold in the internal market during the opium years 1955-56 to 1958-59 are given below :—

Opium Year	Quantity exported			Quantity sold in internal market		
	Lb.	oz.	dr.	Lb.	oz.	dr.
1955-56	760	8	0	2,556	13	8
1956-57	1,253	0	0	3,355	0	0
1957-58	316	0	0	3,355	0	0
1958-59	Nil			3,775	0	0
1959-60	—			4,553	0	0

Illicit traffic in narcotics : In order to make prevention and detection of illicit traffic in narcotics more effective, the States have been grouped into three zones and committees have been constituted in each zone to co-ordinate anti-smuggling activities, in accordance with the recommendations of the All India Narcotics Conference held in 1956.

On the eve of the introduction of the total prohibition of opium consumption, an All India Narcotics Conference, was convened (March, 1959) with a view to taking fresh stock of the situation. Important decisions were taken regarding the registration of opium addicts, the quantum and mode of supply of medicinal opium to registered addicts, the question of de-addiction of addicts, further strengthening of preventive measures to control illicit traffic in this drug.

With a view to further strengthening the hands of enforcement authorities in the struggle against the social evil of addiction, an Opium Laws (Amendment) Act was passed in 1957. This Act makes it obligatory on the part of the Magistrate trying offences under the Opium Act, 1878 and the Dangerous Drugs Act, 1930 not to let off an offender with a mere sentence of fine but to award a sentence of imprisonment. The offences were made cognizable and non-bailable also.

During the year 1959, 7,154 cases of violation of narcotics law involving a quantity of 174 mds 20 srs. of opium were detected by the various enforcement authorities in the country.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

PAPER INDUSTRY

THE bulk of the production comprises the more common types of paper, especially printing and writing paper. The manufacture of superior varieties is also undertaken but on a restricted scale.

The following table gives the trend of production :—

(In thousand tons)

	1955–56	1956–57	1957	1958	1959	Jan.-July. 1960
Printing & Writing	148·83	153·51	126·52	154·42	169·88	106·35
Wrapping	36·37	40·01	38·02	40·02	63·43	33·06
Special Varieties	7·15	7·50	7·20	6·30	6·35	4·20
Paper Boards	39·52	43·14	38·40	52·26	58·82	28·10
Total	231·87	244·26	210·14	253·02	298·48	171·71

Production of paper in 1959 reached the level of 2,98,481 tons. Production of paper and paper board during the first half of the year 1960 is put at 173,000 tons. By the end of the 2nd Plan it is expected to go up to 4·3 lakh tons.

The aggregate installed capacity of the paper industry in 1959 is 321,000 tons, as against 268,600 tons in 1958 and 211,896 tons in 1956.

Value of production of paper and paper products in 1959: Rs. 20·41 crores. Quantity: 298,480 tons.

The gross fixed investment in the industry during 1951-56 was estimated at about Rs. 11 crores and it found employment for about 88,000 persons. The productive capital employed during 1957 was Rs. 33·34 crores as compared with Rs. 29·28 crores in 1956. The workers employed during 1957 was 31,601 as against 29,919 in 1956.

In April 1956, the annual rated capacity of the paper and paper-board industry stood at about 210,000 tons. This capacity is exclusive of the capacity of the Travancore Rayons for transparent paper estimated at 1,800 tons per annum. Newsprint was not manufactured in the country at the beginning of the First Plan. Since then, the State-aided Nepa Paper Mills has been established. But the production target of 27,000 tons has not been reached and the production of newsprint in 1959 is put at 19,755 tons, as against 21,708 tons in 1958, and 14,515 tons in 1957. In regard to straw-boards, there are now 24 units with an annual capacity of 310,900 tons. If the scheduled expansions in paper industry materialise, its annual capacity will rise to 359,800 tons by the end of 1960 and to 417,700 tons in 1961 (inclusive of output by a new unit which is expected to go into production by then). The demand for paper will also go up every year. It was 350,000 tons in 1960 and is likely to be of the order of 400,000 tons in 1961 and 520,000 tons in 1962. Several new companies have been licensed for the establishment of capacity for the manufacture of paper. They will augment the capacity by 114,060 tons, but will go into production only after 1961.

The State-wise distribution of the paper and paper-board industry early in 1960 is given below :—

State.	No. of units.	Annual rated capacity (tons).
West Bengal	6	88,200
Bihar	1	48,000
Orissa	2	62,000
Uttar Pradesh	2	10,500
Punjab	2	19,200
Bombay*	6	30,000
Andhra	2	20,000
Mysore	2	26,000
Kerala	1	7,000
	24	310,900

The Bihar Government has sanctioned the establishment of a Rs. 4 crore paper mill at Darbhanga with a daily capacity of 100 tons. Ten more paper mills are proposed to be set up in North Bihar, each having a capacity of 10 tons per day.

The Government of India has granted licences to five parties for setting up paper mills in Darbhanga, Samastipur, Sakrigalighat, Barauni and Dinapur in Bihar. The total annual production of these mills is estimated at about 29,000 tons.

Imports of paper and paper-board in the recent years are as follows :—1956–57—26 lakh cwt. 1957 (calendar year)—20·85 lakh cwt. 1958—14·47 lakh cwt. 1959: 18·47 lakh cwt. 1960 (Six months ended Sept. 60) 10·58 lakh cwt.

Exports have not been appreciable in the past. During 1958, the export was 40,178 cwt. as against 37,926 cwt. in 1957 (calendar year). During 1959, the export was 32,400 cwt. and 1960 (Six months ended September 1960): 12,171 cwts.

Paper and paper pulp had protection from 1925 to April 1947.

The Tariff Commission in its report submitted to the Government in 1959, recommended a substantial reduction in the ex-works and selling price of paper and paper boards and fixed fair prices of paper and paper boards of 24 varieties.

The Commission's recommendations were accepted by the Government. The new prices came into force from January 1960.

The prices of white printing and cream laid papers have now been fixed at 68 nP. and 71 nP., respectively, excluding excise duties and local taxes, as against the previous existing ex-mill price of 73·5 and 74·5 nP. and their selling price at Re. 1 and Re. 1·25, respectively. These prices, which do not include selling expenses, freight or selling commission, are applicable in accordance with existing practice to Government purchases.

In order to meet the existing shortage of paper, the Government has authorised the State Trading Corporation to negotiate import of a large quantity of writing and printing paper. The Corporation was expected immediately to arrange for the import of 25,000 tons of paper of these varieties from countries having rupee payment arrangements with India.

The Tariff Commission recommended several measures for expanding paper production in the country and creating new capacity to meet the increasing demands. It also suggested steps to tighten up the distribution system to keep a check on the prices. The Tariff Commission recommended that the Government should take early steps to make technical assessment of the capacity of each unit in terms of several types of paper and paper boards and production should be planned in such a way as to rectify the imbalance in the pattern of production which had developed during the last few years.

The possibility of permitting long-term leases of forests to paper mills was suggested by the Commission. It recommended that establishment of pulp manufacturing units independently of paper mills and direct supply of waste paper in bulk quantities from the Government departments to mills, instead of through intermediate dealers, should be encouraged.

In its resolution on the Commission's report, the Government of India announced that it would take necessary steps to implement the recommendations.

DEVELOPMENT PROGRAMME

A new factory to manufacture high-grade printing and writing papers using sugarcane bagasse as the primary raw material is being set up near the Krishnarajasagar Dam in Mysore State by the Mandya National Paper Mills Ltd. in collaboration with Messrs. Parsons and Whittemore Lyddon Organisation, U.S.A. The initial production capacity of the factory will be about 35 tons per day.

The Union Government have also approved and granted licence for 11 new schemes for production of paper by small units. Foreign exchange requirements for these schemes will be about Rs. 22 lakhs and the annual total production capacity will be about 21,200 tons.

Distribution of these units: Three units in Bombay* with an annual capacity of 7,200 tons; three new mills in UP. with total annual capacity of 4,200 tons; two in Punjab with a total annual capacity of 2,700 tons; three in West Bengal with a capacity of 7,000 tons per year.

At the beginning of the 2nd Plan there were 23 units for producing straw and mill boards with a total capacity of 70,000 tons. Nine new units and six expansion schemes with additional capacity 45,000 to 50,000 tons had since been licensed. With the implementation of these Schemes, the indigenous capacity would increase to 1·2 lakh tons. There are two units producing tissue paper.

In the report submitted in December 1959, to the Government of India, the Tariff Commission has estimated the demand for paper and paper board (excluding newsprint and straw board)

* Bilingual.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

during 1960, 1961, 1962 and 1963 as of the order of 3,50,000 tons, 4,00,000 tons, 4,60,000 tons and 5,20,000 tons, respectively.

The demand for paper and paper board has developed at a rather faster rate than was visualised in the Plan. The Second Plan envisaged the establishment of three hard-board factories. Of these, one, namely, Anil Hardboard Ltd. in Bombay, went into production in November 1958. The annual capacity of this factory is 6,000 tons. The other two factories now being set-up are the 6,000 tons Madhya Pradesh Industries Ltd. and the 3,700-ton Western Indian Plywood Ltd. at Ballapatam.

The progress made by the paper industry during the First and Second Plan periods and the targets set for it in the Third Plan Draft Outlines are indicated below:

(In '000 tons)

	Paper and paper board	Newsprint	Security paper (In tons)
1950-51 production	114	..	..
1955-56 Capacity	210	30	..
1955-56 Production	187	4·2	..
Second Plan targets:			
1960-61 Capacity	450	60	..
1960-61 Production	350	60	..
1960-61 Capacity (anticipated)	363	30	..
1960-61 Production (anticipated)	320	28	..
1965-66 Target Capacity	820	120	1,500
1965-66 Target production	700	120	1,500

During the First Plan period, the consumption of paper and paper-board increased on an average by about 8 per cent. per annum. It showed a progressive increase of 10 per cent during the Second Plan. On this basis, the demand by 1960-61 might have been about 350,000 tons. The demand for newsprint went up to 120,000 tons, and that for strawboards and other boards to 40,000 tons by end of the Plan period. A sum of Rs. 44 crores over and above the investment of about 4·25 crores in public sector projects was invested in the paper and paper-board industry during the Plan period, to achieve the target capacity of 450,000 tons. The investment on newsprint factories was Rs. 6 crores for 60,000 tons. An increase in the production of paper to the extent of 700,000 tons is envisaged during the Third Plan period, *i.e.*, by 1965-66.

NEWSPRINT

The National Newsprint and Paper Mills Ltd. (NEPA) is India's first newsprint mill. (For details see under Government Industrial Undertakings.)

A scheme for another newsprint factory is under the consideration of the National Industrial Development Corporation. This is to be established at Shakarnagar in Andhra. It would have a capacity of 100 tons a day.

It is proposed to develop the indigenous capacity for manufacturing 1,20,000 to 1,50,000 tons of newsprint annually by the end of the Third Plan period.

This would meet 75 per cent of the country's requirements. It is estimated that Rs. 15 crores will be required for the implementation of this programme. Part of the expansion will be in the public sector project located at Nepanagar in Madhya Pradesh, where an additional production of 30,000 tons is envisaged. Two newsprint plants in the private sector are proposed to be located in Maharashtra State. The capacity of these two units will be 60,000 tons per annum.

The production of indigenous newsprint was 2,563 tons in 1955, 10,781 tons in 1956, 14,515 tons in 1957, 21,708 tons in 1958 and 19,755 tons in 1959. The fall in production was due to overhauling and paper shortage.

The demand for paper in 1959 is estimated at 80,000 tons a year and was expected to rise to 1,20,000 tons at the end of the Second Plan.

The import of newsprint was as follows: 1955: 73,600 tons, 1956: 71,450 tons, 1957: 63,750 tons, 1958: 57,470 tons, 1959: 74,538 tons.

The main supplying countries are Canada, Finland, Norway and Austria.

PLASTICS INDUSTRY

THE Indian plastics industry is a post-war development and, during the first 10 years of its existence, the industry developed in the processing sector with the help of imported raw materials, machinery and moulds. But, at present, the main raw materials such as P.F. moulding powder, U.F. moulding powder, polystyrene, polythylene, P.V.C. sheeting, nylon monofilament and laminated sheets are manufactured in the country. The plastics industry has now over 150 factories operating on modern lines, in addition to innumerable small ones working on small-scale or cottage industry basis. The capital invested by the industry is reckoned at nearly Rs. 22 crores and the industry provides employment to about 25,000 workers.

In terms of value, the production of plastic goods in 1960 was Rs. 20 crores, as against Rs. 1 crore in 1947. According to one estimate, the value of production of plastic goods will be of the order of Rs. 100 crores in 1965-66.

The machine capacity of the industry at present is estimated as under:—

Compression moulding: 35,000 tons; injection moulding 1,200 ounces; extrusion: 200 inches and surface coating: 10 units.

The protection for P.F. moulding powder has been continued at the existing level of duty of 35 per cent *ad valorem* upto 31st Dec. 1962, and the protection granted upto 31st Dec. 1959 for plastic buttons has been discontinued.

There are six units manufacturing polyvinyl chloride (PVC) plastic coated cables, wires and flexibles with an annual capacity of 11 million yards. Six units are manufacturing leather cloth with a capacity of 8·7 million yards per annum. There is one unit producing phenolic resin laminates, with a capacity of 450 tons per annum. There are six units manufacturing polythylene films, layflat tubings and have an aggregate capacity of 837 tons.

The trend of production of compression and injection moulded goods since 1955 is given below:—

Year	Production (million gross)
1955	2·48
1956	3·70
1957	3·80
1958	4·50
1959	5·24

The present position of the plastic goods is shown below. Figures relate to 1959.

Processes	No. of units	Installed capacity	Production
Compression moulding	48 (major units)	14,110 tons	5·24 million gross articles
Injection moulding	N.A.	1,200 oz.	N.A.
Extrusion:			
Polyethylene films and layflat tubings	6	837 tons	1,035 tons.
P.V.C. unsupported sheets	2	1,232 tons	718 tons
Lamination	1	450 tons	455 tons
Coating:			
Leather cloth P.V.C.	6	8·70 mil. yds.	5·19 mil. yds.
Leather cloth nitrocellulose	1	0·45 „ „	0·40 mil. yds.

The production of P.F. moulding powder has been steadily increasing. The relevant figures are given below:

Year	Production (lbs.)
1955	1,600,800
1956	1,980,000
1957	2,631,600
1958	2,837,700
1959	3,857,280
1960 Jan.-July	1,196,200 (Kgms).

The annual installed capacity of the P. F. moulding powder sector in 1959 was 3,360,000 lbs.

The articles now manufactured cover a wide range of household consumer and utility items, electrical accessories, telephone equipment, gramophone records, insulated wires, combs, toys, tooth brushes, spectacle-frames, hand-bags, leather cloth, packaging materials, films, industrial items and accessories for automobile engineering, radio and air-conditioning industries. Production of mechanised toys has been an important achievement in recent years.

The consuming capacity of the industry in respect of raw materials is about 3,000 tons of Thermosetting moulding powders and about 6,000 tons of Thermoplastic moulding powders. A large part of the raw material is imported. Phenol formaldehyde moulding powder, phenol and formaldehyde and alkyd resin are manufactured in the country out of imported basic materials. At present, three concerns, Industrial Plastics Corporation, Plastic Products of India, Satara and Indian Plastics, Kandivli, all in Maharashtra manufacture phenol formaldehyde moulding powder with a combined capacity of 1,182 tons per annum.

The machinery installed in the industry is almost wholly imported.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

THIRD PLAN PROGRAMME

The plan for plastics materials is to raise the capacity which was expected to be of the order of 21,000 tons at the end of the Second Plan (1961) to 85,000 tons in the Third Plan (1966) at an estimated investment cost of Rs. 35-40 crores. The production target is placed at 74,000 tons, of which at least 10,000 tons of material as such or converted will be for export. Roughly 12,000 tons of thermosets, principally phenolics ureas and polyesters and 62,000 tons of thermoplastics (of which 50,000 tons would be polyolefeins, polystyrene and P.V.C. and 12,000 tons mainly polymethylmethacrylate, Nylon 6, cellulose acetate and polyvinylacetate) are proposed by the end of the Third Plan.

Indigenous fabrication of processing equipment and tools will be tailored for a consumption of 60,000 tons of material. It has been estimated that 350 presses of different sizes for compression moulding and lamination can handle 11,000 tons of thermosets. 350 extruders would convert 22,000 tons of thermoplastics into extruded products, besides, compounding 16,000 tons for injection moulding by 800 machines of varying capacities. The value of 1,500 machines and presses inclusive of replacements required for the period of the Plan together with auxiliary equipment such as predryers, preformers, tumbling barrels, scrap grinders, haul off for extruders, mould temperature controllers and other miscellaneous equipment for vacuum forming, vacuum metallising, hot stamping, embossing and printing rollers, heat welding machines, automatic blow moulding equipment, lamination presses, rotational casting machines, etc. would be around Rs. 10 crores. The miscellaneous equipment will cater to foaming, blowing, coating, calendering, casting and fabrication of 11,000 tons of thermoplastic materials.

The requirements of moulds for compression and injection moulding will progressively increase from 800-1,000 in the beginning of the Plan to 3,500-4,000 by 1966—an average of 2,500 moulds per year. As many as 2,500-3,000 dies for extrusion will also be required in the period of the Plan—an average of 500 dies annually. The value of moulds and dies required over the whole period may be put at Rs. 7—8 crores. Alloy steel for the construction of moulds would also become available by the end of the Plan.

IMPORTS, EXPORTS

The imports of plastic raw materials, plastic manufactures and leather cloth are given below :

(Rs. lakhs)

	(Calendar year) 1956	1957	1958	1959	1960 April-Sept.
Synthetic Resins & Moulding Powder	307·74	285·02	342·30	452·71	283·17
Semi-fabricated Plastic materials	129·49	150·14	87·96	37·07	3·66
Finished Plastic goods	N. A.	N. A.	5·44	12·54	5·98
Leather Cloth	N. A.	N. A.	0·18	1·38	N. A.

N.A. Not available.

By 1961 the plastics processing industry was expected to obtain locally all the three important raw materials *viz.* polystyrene, polythene and P.V.C. to the extent of at least 16 million pounds.

The Government has licensed two schemes of total capacity of about 14 million pounds for the manufacture of polythene. One of the plants was commissioned in 1959 and the second in 1960. The scheme for the manufacture of P.V.C. from calcium carbide had been finalised and the plant was expected to commence operations before the end of the Second Plan period. Two thousand tons of urea for urea resin and moulding powder were available from Sindri by the end of 1958.

A Development Council for oil-based and plastics industries has been set up to advise the Government of India on various matters concerning development of soaps, paints and plastics industries.

The country is now an exporter of plastic goods. The following is the yearly exports of plastics from India :

Year	Rs. lakhs
1956-57	7·41
1957	12·47
1958	9·98
1959	17·13
1960 (April-Sept.) ..	3·01

In order to encourage exports, an Export Promotion Council was set up in 1955. The Government also allows rebate of import duty at specified rates on raw materials used in the manufacture of plastic goods intended for export. At present the concession is given on urea formaldehyde, cellulose acetate/cellulose acetate butyrate and polystyrene moulding powders.

Ceylon leads other countries in import of Indian plastic goods. The other importing countries include Burma, Kuwait, Kenya, Saudi Arabia, Tanganyika, Mauritius and Mozambique.

RAYON INDUSTRY

THE rayon industry is a post-war industry. The first three plants established are Travancore Rayons Ltd., Perumbavoor, the National Rayon Corporation Ltd., Kalyan, Bombay, with an annual production capacity of 4 million lbs. and 7·9 million lbs. respectively of filament yarn and the Sirsilk Ltd. in Andhra Pradesh with a production capacity of 4·0 million lbs. based on the cellulose acetate process. The first came into production in July 1950 and the second in February 1951. Both the factories have adopted the viscose process. The third started production in 1954.

During 1959, four units were engaged in the production of continuous filament viscose rayon yarn, with an aggregate installed capacity of 17,800 metric tons; actual output was 15,074 metric tons. In the same year, one firm with a capacity of 1,800 metric tons produced 1,615 metric tons of continuous filament acetate rayon yarn. One firm with a capacity of 21,600 metric tons produced 20,512 metric tons of viscose staple fibre and another with a capacity of 1,800 metric tons produced 1,670 metric tons of cellophone.

YARN

Rayon filament yarn is used for the manufacture of many types of fabrics and is also used in manufacturing hosiery and knitted goods, gas mantles, embroideries, automobile tyres. The internal demand for rayon yarn far exceeds the indigenous production capacity, the gap being filled by imports. In 1959, total consumption of rayon yarn was estimated at 72·24 million lbs. out of which 36·22 million lbs. were produced indigenously and 36·02 million lbs. imported at an estimated cost of about Rs. 9 crores. The following table indicates the gap between consumption and production and how it was bridged during the four years ended 1959 and in the first half of 1960 :

(Quantity in thousand lbs.)

	Total consumption	Indigenous production	Imports	
	Quantity	Quantity	Quantity	Value (Rs. in crores)
1956	79,717	19,848	59,869	17·40
1957	71,846	24,986	36,860	13·00
1958	67,278	33,598	33,680	10·91
1959	72,239	36,223	36,016	8·94
1960 (Jan.-June)	43,652	20,782	22,870	6·80

The consumption of viscose rayon yarn is estimated to have reached 80 million lbs. by 1960-61. The production target under the second Plan had been fixed at 60 million lbs. Thus there was a gap of 20 million lbs. to be covered by imports.

Three new rayon yarn producing companies are the Indian Rayon Corporation, the Baroda Rayon Corporation and the South Indian Viscose.

The Indian Rayon Corporation is putting up the plant at Veraval, about 200 miles west of Bombay at a total capital outlay of Rs. 3·32 crores. The Company has entered into agreements with Messrs. Von Kohorn International Corporation (who, jointly, with the Financial and Development Fund, Inc., of the U.S., have agreed to invest $825,000 or Rs. 40 lakhs in equity capital), Messrs. Von Kohorn International (London) Limited and Messrs. Von Kohorn Eastern Corporation Limited, under which the entire plant and machinery for the Company's factory have been designed and supplied from the U.S. and the U.K. The factory was expected to commence trial production in September 1960 and go into full production by the end of 1960. The initial capacity of the factory will be 5 tons of rayon yarn per day which will be expanded gradually to 10 tons. The bulk of the production, it is said, will consist of finer counts of yarns—100 deniers and below—which are not being manufactured in India at present and which are largely imported. The manufacture of staple fibre and other viscose

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

and synthetic fibre products may also be undertaken at a later stage. The factory will employ directly about 1,000 persons and produce goods worth approximately Rs. 3 crores annually.

The Baroda Rayon Corporation's plant is being set up at Udhana near Surat and the plant will have a capacity of 6¼ tons per day for the manufacture of continuous filament Rayon. Besides, the company will also manufacture 20 tons of sulphuric acid per day, five tons of carbon disulphide and ten tons of sodium sulphate. The plant is likely to go into production by the end of 1961. The cost of the project is Rs. 5·1 crores. The cost of machinery is Rs. 4 crores of which Rs. 3·3 crores c.i.f. Indian port is the foreign exchange component. The balance machinery will be made in India. The major portion of the Japanese machinery will be obtained under the Yen credit agreement.

The Rs. 5-crore rayon factory of the Century Spinning and Manufacturing Company, Ltd., has raised the production capacity from 13 tons of rayon yarn a day to 19 tons per day. The requisite machinery was obtained from Japan under the Yen credit facilities offered by that country. Government's sanction has also been obtained for the manufacture of tyre yarn and nylon yarn. A five-ton tyre yarn plant and a two-ton nylon yarn plant are proposed to be installed and they are expected to be commissioned in about two years' time. The capital expenditure on the expansion of rayon plant capacity, the tyre-yarn plant and the nylon-yarn plant is expected to be of the order of about Rs. 8 to 9 crores.

FIBRE

Before the First Five-Year Plan, there was no plant for staple fibre. The factory of the Gwalior Rayon Silk Manufacturing (Weaving) Co. went into production in February 1954 with a capacity of 15 tons per day (11·2 million lbs. per annum). The present annual capacity is, therefore, about 21,600 tons. The firm produced 5,712 tons of staple fibre in 1955, 7,908 tons in 1956, 8,004 tons in 1957 and 13,908 tons in 1958. Production amounted to 20,532 metric tons in 1959 and 16,241 metric tons in January-July 1960. The First Plan envisaged that consumption would be 14·2 million lbs. in 1955-56. But it averaged a little over 28 million lbs. per annum during the Plan period and it was expected to be about 30 million lbs. in 1955-56.

Another plant with an annual estimated capacity of 8 million lbs. of staple fibre is being set up by the South India Viscose Ltd., in collaboration with Italviscosa Eastern Trading S.P.A., Milan (Italy) at Mettupalayam in Coimbatore district, with a financial outlay of Rs. 8·4 crores.

The investment in rayon yarn industry during the Second Plan period is estimated at Rs. 7 crores. This was inclusive of investment in ancillary plants attached to the rayon units for the manufacture of sulphuric acid, carbon disulphide, etc.

The installed capacity and actual production of the yarn industry during the year 1959 and January-August 1960 are given below :

Article	1959			Production in Jan.-Aug. 1960 (thousand pounds)
	No. of units	Capacity (thousand pounds)	Production (thousand pounds)	
Continuous filament viscose rayon yarn	4	39,249	33,054	26,341
Continuous filament acetate rayon yarn	1	3,969	3,622	2,917
Viscose staple fibre	1	48,380	28,530	31,810
Staple fibre yarn	63	N.A.	27,069	27,506*

* Jan.-Oct. 1960.

FABRICS

Art Silk Weaving Industry : The Development Council for the art silk industry, set up in 1955, suggested a target of 350 million yards of art silk cloth to be achieved by 1960–61, representing an increase of about 20 per cent in the present *per capita* consumption of art silk fabrics.

The Development Council has recommended for inclusion in the Third Five-Year Plan, 880 million yards (inclusive of the quantity required to meet the export demand, as the target of production for art silk, staple fibre and art silk-staple fibre mixed fabrics. This target represents a rise of 480 million yards as compared with the actual output of 400 million yards in 1959.

The targets fixed by the Council for rayon-synthetic yarn and fibre to be achieved by the end of the Third Plan (1965-66) are as under :

		(In million lbs.)
Filament yarn :		
Viscose	(on 120 denier basis)	140
Acetate	,, ,, ,,	24
Cuprammonium	(60 D basis)	10
Synthetic	(30 D basis)	10
Total		184
Staple fibre :		
Viscose		130
Acetate		8
Synthetic		3
Total		141

According to the Council, though on technical basis the minimum economic size of a unit to manufacture viscose-acetate rayon yarn should be eight million lbs. per annum, initially the units may be licensed for four million lbs. capacity which can be expanded later to eight million lbs. Licensing of additional capacity for manufacturing acetate rayon yarn is to be made on the basis of allowing imports of cellulose acetate in the initial stage on the condition that, after a stipulated period, the production of acetate yarn would be based on indigenous cotton linters and alcohol.

The Tariff Commission estimated the number of powerlooms engaged in the production of art silk fabrics in 1958 at 44,500. The industry is big and largely concentrated in Bombay† with as many as 36,641 of the powerlooms. They provide employment to nearly a lakh of workers. The output of fabrics has registered a marked increase. A wide variety of fabrics such as velvet, velveteen, sharkskin, finishing fabrics, etc. are being produced. Licences have been issued for the installation of over 3,500 powerlooms. In addition, there are a number of handlooms producing art silk fabrics and mixed fabrics. Their exact number is not known, but the Tariff Commission estimates it at 17,600. The total capacity of the industry amounts to about 470 million yards on the basis of a single shift.

The production in 1954 was 181·21 million yards; in 1955, 231·16 million yards; in 1956 over 251·86 million yards. The production rose to 279 million yds. in 1957, 328·45 million yds. in 1958, 400·32 million yds. in 1959 and 260·39 million yds. in January-October 1960.

Rayon textiles have emerged as an important earner of foreign exchange for the last two years. The actual value of rayon fabrics exported was Rs. 10·87 crores in 1958-59 and Rs. 2·76 crores in 1959-60. The corresponding figures for exports in the two years were 3·87 million yards and 1·89 million yards, respectively.

The revised export promotion scheme which came into effect on 1st July 1959 provides for the grant of licences for import of art silk yarn upto 100 per cent. of the value of such fabrics and *saris* exported as assessed by the Office of the Textile Commissioner; compulsory pre-shipment examination of the goods meant for export by the Textile Commissioner's Office; and grant of import licences to exporters, including manufacturer-exporters of art silk fabrics and *saris*, as well as processors of art silk yarn, to import permissible types of coal-tar dyes and textile chemicals to the extent of 2 per cent. of the value of exports assessed.

IMPORTS

Imports consisting of rayon yarn, staple fibre yarn and rayon piece-goods were as follows :—

Year	Rayon yarn		Rayon piece-goods		Staple fibre yarn	
	Quantity (million lbs.)	Value (Rs. lakhs)	Quantity (million yds.)	Value (Rs. lakhs)	Quantity (million lbs.)	Value (Rs. lakhs)
1954–55	40·85	12·69	4·12	90·59	0·51	21·75
1955–56	50·78	15·44	9·84	185·12	—	—
1956 (Apr.-Dec.)	47·62	13·74	5·56	101·94	3·02	26·09
1957	46·86	1,299·88*	3·60	99·92	0·63	16·66
1958	33·64	813·77	1·94	33·40	2·71	311·15
1959	44·53	1,122·69	9·24	204·30	3·14	1,385·09
1960 (April-September)	23·88	605·40	1·30	36·10	1·71	145·37

* Includes viscose and other rayon yarns. † Bilingual.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

The programmes of development for the rayon and staple fibre industry envisaged for the Second and Third Plans are summarised below:

	1955–56		1960–61		1960-61 (Actual position estimated)		1965-66 (Targets)	
	Annual Capacity	Production	Annual Capacity	Production	Annual Capacity	Production	Annual Capacity	Production
Rayon Filament (Million lbs.)	22·3	15·9	68·3	68·0	52·3	47·0	140·0	140·0
Staple Fibre (Million lbs.)	16·0	13·2	32·0	32·0	48·0	42·0	75·0	75·0
Chemical Pulp (Tons)	..	..	30,000	30,000	Nil	Nil	100,000	90,000

RUBBER INDUSTRY

INDIA produced 24,173 tonnes of raw rubber during 1959-60 as against 24,169 tonnes in 1958-59 constituting a little over one per cent of the world output.

Of an area of about 305,400 acres under rubber cultivation at the end of 1959, nearly 94 per cent is located in the State of Kerala. Other rubber growing areas are the districts of Kanya Kumari, Coimbatore, Salem, Nilgiris, Madura in Madras State and Coorg in Mysore State.

The total number of rubber estates registered up to the end of 1959 was 55,207.

The following are other details :—

Year	Planted area in acres	Tappable Area (worked out on the basis of year of planting) in acres	Production (Tons)	Average yield per acre in lbs.
1952	172,800	159,500	19,863	279
1953	173,600	163,100	21,136	290
1954	176,600	165,200	21,493	291
1955	207,200	180,400	22,481	279
1956	234,400	178,500	23,444	294
1957	262,000	175,500	23,767	303
1958	286,600	173,600	24,328	314
1959	305,400	172,500	23,398	304

STATEWISE DISTRIBUTION OF THE PLANTED AREA AT THE END OF 1959

(Area in acres)

STATES	Holdings		Estates	
	No. of units	Area	No. of units	Area
Kerala	54,351	175,526	471	112,924
Madras	330	3,103	31	9,528
Mysore	13	232	10	3,717
Andamans	—	—	1	422
TOTAL	54,694	178,861	513	126,591

Areas upto and including 50 acres are classified as *Small Holdings* — (small growers).

Areas above 50 acres are classified as *Large Estates* — (large growers).

The price of rubber was raised to Rs. 155-12-0 per 100 lbs. in Sept. 1955. It remained at that level till March 31, 1961. The price was again revised on March 24, 1961, according to which the price per 50 kgms. of rubber is Rs. 164-80. This revision came into force from April 1, 1961.

With more factories coming into existence every year, the consumption of rubber is increasing.

The quantities actually consumed were:

1953 : 22,389 tons (raw 22,373 ; synthetic 6); 1954 : 25,506 tons (raw 25,487 ; synthetic 19); 1955 : 27,649 tons (raw 27,543 ; synthetic 106); 1956 : 31,405 tons (raw 28,996 ; synthetic 2,409); 1957 : 34,797 tons (raw 31,765 ; synthetic 3,032); 1958 : 38,008 tons (raw 34,756 ; synthetic 3,252); 1959 : 43,005 tons (raw 38,663 ; synthetic 4,342).

Imports of rubber were: 1954 : 3,388 tons (natural 3,371 ; synthetic 17); 1955 : 4,453 tons (natural 3,839 ; synthetic 614); 1956 : 9,269 tons (natural 6,463 ; synthetic 2,806); 1957 : 13,211 tons (natural 9,677 ; synthetic 3,534); 1958 : 15,401 tons (natural 11,878 ; synthetic 3,523); 1959 : 19,159 tons (raw 14,486 ; synthetic 4,673).

The demand for rubber in 1960-61 is estimated at 46,900 tons, and at the end of 1965-66 at 79,400 tons. At present about 7 per cent of the demand is met by synthetic rubber.

The total value of rubber plantation in the country is estimated at over Rs. 50 crores. The rubber plantation and manufacturing industries offer direct employment to over one lakh workers and means of livelihood for over four lakh people according to a modest estimate. (Nov. 1959).

SYNTHETIC RUBBER

A Rs. 15-crore synthetic rubber plant, the first of its kind in India, is being set up at Bareilly in Uttar Pradesh. Kilachand Devchand & Co. Private Ltd., which has sponsored the project, has secured the technical and financial collaboration of Firestone Tyre and Rubber Co., Ohio, U.S.A.

The foundation digging operations of the factory began on 28th November 1960. The factory will be run by the Synthetics and Chemicals, Ltd. The manufacture of synthetic rubber by this factory will be processed by utilising alcohol obtained from the U.P. sugar mills. The factory is expected to go into production in the middle of 1962.

The setting up of this important basic industry is being made possible through financial aid and know-how promised by the U.S. Government and American private business. The Firestone Tyre and Rubber Co. of the U.S. will contribute 25 per cent of the capital. The U.S. Government, acting through the Export-Import Bank, has given a loan of Rs. 3·92 crores to the Synthetics and Chemicals Ltd., from the sale proceeds of U.S. agricultural commodities supplied to India. Four private American banks will also contribute equal amounts to a loan of $6,000,000 to the Indian Company. Besides, the Firestone Tyre and Rubber Company will make available to the Indian Company $5,625,000 in cash in American and other currencies for the purchase of machinery, equipment and the initial stores. The Indian Company will also be assisted by its American associate—the Firestone Tyre and Rubber Company—with the necessary technical information, know-how expert advice and supervision in setting up the factory.

In India, especially in Uttar Pradesh, plenty of alcohol is available as a by-product of sugar factories which explains the location of the Indian synthetic rubber factory in the centre of an alcohol producing area. The new factory will need about 14 million gallons of alcohol a year. The Uttar Pradesh sugar factories, currently producing nearly 125 million gallons, are expected to be able to meet the synthetic rubber factory's alcohol requirements by the time it goes into production. Initially the new factory will produce 20,000 tons of synthetic rubber annually with a capacity to expand production to 30,000 tons.

RUBBER GOODS

India has a modern manufacturing industry.

In this, the manufacture of tyres and tubes accounts for about 70 per cent of the total consumption of rubber and bulk of capital investment, followed by foot-wear with 15 per cent annual consumption.

The total investment in the industry is estimated at about Rs. 13 crores and the number of persons employed is about 21,800.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

The progress of the manufacturing industry is given below:—

Product	1958	1959	Jan.-Aug. 1960
Footwear (Lakh pairs)	367·2	392·4	258·6
Toys, Balloons, etc. (Lakh Doz.)	242·4	289·2	220·0

Latex foam sponge (000 lb.)	2,226·0	2,391·8	1,584·7

The programme of development for the rubber goods industry envisaged under the Plans period is summarised below:—

(In million Nos.)

	1955-56 Production	1960-61		Targets for 1965-66	
		Estimated Capacity	Estimated Production	Capacity	Production
Automobile tyres	0·9	1·76	1·50	3·70	3·0
Bicycle tyres	5·78	16·9	14·00	38·6	31·0

The Draft Outline of the Third Five-Year Plan has fixed the following targets for automobile tyres and bicycle tyres:

	Capacity	(In millions) Production
Automobile Tyres	3·7	3·0
Bicycle Tyres	38·6	31·0

IMPORTS AND EXPORTS

Export of raw rubber has now been completely stopped; considerable quantities are being imported to meet the increased domestic demand of the manufacturing industry.

(In lakhs of Rs.)

	Imports		Exports	
	1959	April-Sept. 1960	1959	April-Sept. 1960
Raw Rubber	671·57	579·25	1·18	0.05

SERICULTURE AND SILK

SERICULTURE is carried on mainly as a subsidiary occupation to agriculture.

In 1959 the total production of raw silk was 15,15,078 kilos (Mulberry 11,40,611 kilos; non-mulberry 3,74,467 kilos). In 1958 the total production was 15,27,989 kilos.

The major portion of mulberry raw silk is produced in Mysore State. This State accounts for more than 74 per cent of the total output of mulberry raw silk in India. The other important States producing mulberry raw silk are West Bengal, Jammu and Kashmir and Punjab. Eri, Muga and Tassar are the three non-mulberry varieties of silk produced in India. The most important producers of non-mulberry silk are Assam, Madhya Pradesh, Orissa and Bihar. While Assam produces the entire quantity of Muga silk and major portions of Eri silk, Tassar silk is produced mainly in Bihar, Madhya Pradesh and Orissa.

While the average annual availability of raw silk was about 1·6 million kgms., the annual demand has been placed at 1·8 million kgms. by some of the producers' and consumers' associations.

21,960 kgms. of spun silk yarn and 29,317 kgms of noil yarn were produced in India during 1958. Mysore Spun Silk Mills Ltd., Channapatna which was the only spun silk mill in India, remained closed during 1959. Out of the total output of silk waste of the order of 7,38,217 kgms. including mulberry and non-mulberry, 3,68,898 kgms valued at Rs. 27,66,805 were exported to other countries. The export of silk waste was permitted freely to all destinations without any quantitative restrictions.

The demand for spun silk yarn has been estimated at 90,000 kgms. by the Tariff Commission in its enquiry held in 1958.

On the basis of figures of production and imports of spun silk yarn, it was found that on an average the annual consumption of spun silk yarn for the three years from 1956 to 1958, was 0·41 lakh kgms.

Import of raw silk and its value during 1955 to 1959: 1955: 2,08,505 kgms; Rs. 91,86,771; 1956: 49,462 kgms; Rs. 20,45,504; 1957: 1,50,333 kgms; Rs. 69,96,820; 1958: 55,821 kgms; Rs. 24,81,124; 1959: 1,49,801 kgms; Rs. 59,83,191.

Import of spun silk yarn and its value during 1955 to 1959: 1955: 14,597 kgms.; Rs. 4,25,184; 1956: 23,150 kgms.; Rs. 7,40,388; 1957; 18,036 kgms.; Rs. 4,43,675; 1958: 3,665 kgms.: Rs. 1,32,498; 1959: 8,227 kgms.; Rs. 2,54,690.

Spun silk yarn was allowed to be imported by the actual users subject to quantitative ceiling fixed by the Government of India on the recommendation of the Board. Since 1959 (licensing period April-Sept. 1959) import of spun silk yarn is canalised through the Central Silk Board. Import of raw silk has been canalised since 1955.

Exports of silk fabrics are freely allowed to all permissible destinations.

The total area under mulberry is about 76,492 hectare at present. Mulberry is cultivated both as rain-fed and irrigated crop. The yield of leaf per acre per year from rain-fed garden is about 1,530 kilos. Average yield per acre in irrigated mulberry gardens in 1957 was about 6,300 kilos. The yield per acre from mulberry graft garden was 9,000 kilos.

In Mysore there are about 10 lakh persons who are directly or indirectly engaged in sericulture industry. The total production of cocoons per year is about 150 lakh kilos and the raw silk produced may be put at 8·55 lakh kilos for Mysore. After reorganisation, Madras has lost its importance as a major sericultural area in the south.

Based on the area under mulberry, the total requirement of disease-free layings is estimated to be about 800 lakh layings per annum for Mysore. The sericulture industry has been under tariff protection since 1934.

During May 1958 a well known Japanese sericultural expert, Mr. Chuji Harada, came to India. His services were obtained by the Board under the Colombo Plan. During his stay for one year in the country, Mr. Harada made valuable recommendations for the improvement of the sericulture industry, particularly in West Bengal and Kashmir. Another Japanese expert, Mr. Kokichi Takahashi is at present working in India under the Colombo Plan.

SECOND FIVE-YEAR PLAN

The Board's programme for the Second Five-Year Plan is intended to achieve self-sufficiency in the silk industry by the end of the Plan period.

The capital outlay of the programme under the Second Five-Year Plan is estimated at Rs. 5·0 crores. The total estimated outlay of silk and sericulture was Rs. 6·5 crores, as against a negligible outlay of Rs. 1·3 crores in the First Five-Year Plan. The actual allocation has since been reduced to Rs. 4·08 crores.

Mulberry Silk: As regards mulberry silk, an important item in the development programme relates to the reduction in costs of cultivation of mulberry leaf through substitution of existing mulberry with high-yielding grafts in both rain-fed and irrigated areas, evolving of new varieties of mulberry of higher yield, and improvement in cultivation methods, manuring, etc. These and other measures for bringing about improvement in mulberry and cocoons will be supplemented by steps to modernise silk reeling, encourage substitution of improved basins for country *charkhas* and converting the improved basins for filatures into multi-end basins, and introducing central cooking system and drawing chambers. Utilisation of by-products in the spun silk industry is necessary for the service of the reeling industry and steps are proposed to be taken to rehabilitate and extend the spun silk industry. And as an experimental measure, co-operative societies for raising young worms of the first and second stages collectively are to be established.

Non-Mulberry Silk: As regards non-mulberry silk, the development programme provides for plantations, as well as improvement of basic seed cocoon production for *eri*, *muga* and *tassar*. The organisation of seed supply, improvement of spinning and reeling, marketing, and training and research will be undertaken more or less on lines similar to those for the mulberry silk industry.

In April 1959 the Government of India appointed a working group to evaluate the progress of sericulture industry during the Second Five Year Plan and suggest the targets for the Third Plan. The working group's report submitted in December 1959 embodies recommendations for development of the industry. The group has suggested a target of 18 lakh kgms. (40 lakh lbs.) for mulberry raw silk and 5·62 lakh kgms. (12·50 lakh lbs.) for non-mulberry raw silk by end of the Third Five Year Plan. The total outlay during the Plan is proposed at Rs. 10 crores.

STATES

The State-wise position of sericulture industry at the end of 1959 is briefly given below:—

Andhra Pradesh: During 1959, 125 hectares of land was brought under mulberry cultivation. Against an estimated requirement of 50 kgms. of disease-free mulberry silkworm seed, 40 kilos of silkworm seed was examined. The production of mulberry raw silk amounted to 158 kilos. Besides, 308 kilos of tassar silk was also reported to have been produced in the State. In all 34 sericultural schemes were taken up for implementation. Total grants of Rs. 7,63,982 and loans amounting to Rs. 1,82,000 were approved by the Board.

Assam: During 1959, 920 hectares of land was brought under mulberry cultivation. Against an estimated requirement of 135·8 kilos of disease-free mulberry silkworm seed 117·6 kilos were examined during the year. The production of mulberry silk was 13·860 kilos.

Besides, Assam produced 1,10,948 kgms. of eri yarn and 83,880 kilos of muga yarn during the year. During the Second Plan period besides 4 continuation schemes initiated during the First Plan, 23 additional schemes were sanctioned by the Board. Total grants amounted to Rs. 25,64,678 and loans to Rs. 3,75,000.

At the Titabar Sericultural Training Institute 36 students completed training. Seven officers of the sericultural department of the State were deputed for training in Mysore.

Bihar: During 1959, 100 hectares were brought under mulberry cultivation. The requirement of mulberry silkworm seed in the State was placed at 23·8 kgms. The production of mulberry raw silk was 1,125 kgms.

The production of tassar silk in the State was 70,200 kgms. during the year. Besides, 15·862 kgms. of eri yarn was also reported to have been produced during the year 1959.

In all 13 tassar developmental schemes and 3 eri developmental schemes were considered and approved by the Board during the Plan period. The Tassar Research Station at Chaibasa and Eri Research Station at Ranchi were reorganised. 16 graduates deputed for training at the All India Sericultural Training Institute at Mysore completed their training. Fifteen Tassar rearers' cooperative societies were also organised.

Jammu & Kashmir: During 1959, mulberry raw silk production in the State amounted to 62,403 kgms.

In all, nine schemes have been approved by the Board. Two silkworm seed centres at Banihal and Udhampur were under construction.

In Jammu Province, the possibilities of rearing tassar silkworms on oak trees, found in abundance in the areas have proved to be encouraging.

Madhya Pradesh: During 1959, 67,500 kgms. of tassar raw silk was produced in the State. In all 26 sericultural schemes were considered and approved by the Board, among which 6 schemes were relating to the development of tassar industry. The tassar grainage building in Raigarh District was completed. Training in reeling was imparted. Seven graduates, 14 matriculates and 40 operatives were trained in various aspects of sericultural work.

Madras: 1,024 hectares of land was brought under mulberry cultivation. Against an estimated requirement of 50·7 kgms. of disease free silkworm seed 36·04 kgms. were organised during the year. The production of mulberry raw silk was 1,125 kgms. In all, 24 sericultural schemes were sanctioned by the Board for implementation. Total grants amounted to Rs. 5,17,256 and loans to Rs. 2,85,500.

At the major nursery unit at Hosur, 1,75,700 mulberry grafts were prepared for distribution. Two chawki rearing centres were established one at Talavadi and the other at Hosur. In the Hill Rearing Station at Coonoor, a quantity of 86,069 disease free layings of foreign races was produced. It is proposed to strengthen the Hope Silk Farm at Hosur and the Hill Rearing Centre at Coonoor, for the preparation of better silkworm seed for meeting the requirements of other States.

Mysore: Mysore, the most important sericultural State in India, accounted for 8,39,240 kgms. of mulberry raw silk out of 11,40,611 kgms. of total production during the year 1959. 68,000 hectares of land was brought under mulberry cultivation. Against an estimated requirement of 22,400 kgms. of disease free silkworm seed, there was a production of 13,026 kgms. of examined seed.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

During the Second Five Year Plan, in all 54 schemes covering all aspects of sericultural development were approved by the Board.

Under the scheme relating to establishment of graft nurseries a total number of 22·47 lakh grafts were prepared of which 10·27 lakh grafts were distributed.

Two incubation chambers were installed one at Kamgerai and the other at Kunthur in Kollegal District. In the two hill rearing stations in B. R. Hills and K. R. Hills, 2·85 lakh cocoons were harvested.

As regards reeling, 180 multi-end basins were installed at the Filatures at Kanakapura and Mysore under the modernisation programme of reeling industry. In the Sericultural Training Institute of Mysore Government, 73 students were afforded training out of whom 58 were absorbed in the sericultural department.

Voluntary cocoon market at Ramnagaram initially aided through the central grants continued to function satisfactorily.

The Silk Marketing Cooperative Society Ltd. at Bangalore continued to discharge its sole distribution work in respect of filature raw silk produced in all the Government silk filatures in the State. Its sales turnover during the half-year ended December 1959 was worth Rs. 38·50 lakhs in respect of filature raw silk and Rs. 5·24 lakhs in respect of filature silkwaste.

Orissa: 16,200 kgms. of tassar silk and 157 kgms. of eri yarn was produced in the year 1959. During the Second Five Year Plan in all 13 sericultural schemes all in the non-mulberry sector were approved by the Board. The schemes related to the establishment of tassar and eri seed supply stations, organisation of tassar rearers cooperatives, etc. A sum of Rs. 3,37,927 as grant and Rs. 4,06,500 as loan was approved by the Board.

Four eri rearers' cooperatives and ten tassar rearers' cooperatives were organised.

One eri seed supply station and one tassar seed supply station was also established.

The central tassar depot transacted 10,636 kahans of tassar cocoons during the year 1959-60.

Punjab: During 1959, 55·6 hectares of mulberry were brought under cultivation. The estimated requirement of disease-free silkworm seed was 98 kilos against which 88·9 kgms. were actually examined in the Government grainages. The production of mulberry raw silk amounted to 7,084 kilos.

In all, 16 schemes were approved by the Board involving total grants of Rs. 6,02,998 during the plan period.

Plantation-cum-demonstration farms were established at Kangra and Rupar.

Under training schemes, 23 candidates were trained in the sericultural work.

Uttar Pradesh: Nearly 80 hectares of mulberry were under cultivation in the State. Against an estimated requirement of 56 kilos of disease-free mulberry silkworm seed, 27·9 kgms were actually examined. The production of filature silk in the only filature unit managed by the Doon Valley Sericultural Cooperative Society (Ltd.), Premnagar, Dehra Dun amounted to 822 kilos. Besides, a small quantity of eri yarn (69 kgms.) was also reported to have been produced in the State during the year.

During the Second Plan period, 15 schemes were considered and approved by the Board. As a result of the implementation of these schemes, the sericulture industry has now been extended to six districts viz., Dehra Dun, Nainital, Etawah, Gorakhpur, Pausi Garhwal and Saharanpur.

West Bengal: Nearly 6,000 hectares were under mulberry cultivation at the end of the year 1959. The estimated requirement of disease free mulberry silkworm seed was 5,040 kilos against which 1,876 kilos were actually examined during the year. The production of mulberry silk amounted to 2,14,396 lbs. Besides, the production of tassar and eri yarn was also reported as 5·581 kilos and 1·291 kilos respectively.

In all, 36 sericultural schemes were under implementation involving grants of Rs. 21,94,841 and loans Rs. 31,29,531.

One mulberry garden at Bhadrapur in Birbhum District and four mulberry graft nurseries at Amrity, Kristapur, Kumarpur and Sadullapur were established.

One Government grainage at Matigara in Darjeeling District was also established. The Foreign Race Seed Station at Kalimpong continued to function satisfactorily.

Nine State departmental officials visited Mysore and Madras for acquainting themselves with sericultural practices there under the scheme for Inter-State study tour.

SHIPPING INDUSTRY

INDIAN shipping is a potential and quick earner of foreign exchange. During the 2nd Five Year Plan period, India paid in terms of foreign exchange an average of Rs. 130 crores per annum to foreign shipping companies for obtaining their services.

In 1959 Indian shipping companies acquired 23 ships totalling 114,577 tons gross bringing the strength of the Indian merchant fleet to 164 vessels aggregating 744,577 gross tons, by the end of 1959.

The dead-weight tonnage of the Indian merchant fleet exceeded 1,000,000 tons. Six vessels totalling 15,000 tons were disposed of owing to overage etc. The net addition to the fleet during the year was thus 17 vessels and 96,000 gross tons.

Of the 164 Indian sh. 's, 68 totalling 465,000 gross tons, were operatin in the overseas trades of the country. Of these 27 vessels of 210,000 tons were in the India-U.K./Continent trade, six of 37,000 tons in the India-Black Sea ports trade, six of 30,000 tons in the India-West Africa/Mediterranean trade, four of 29,000 tons in the India-U.S.A. trade, two of 19,000 tons in the India-South America trade, four of 26,000 tons in the India-Far East trade and three of 17,000 tons in the India-Australia trade.

Two recent acquisitions have been placed in the India-Far East and India-Australia trades. One passenger-cum-cargo vessel operates between India and East Africa and another between India and Malaya. Three ships are licensed to ply in the India/Persian Gulf trades, while one small vessel, fully refrigerated, will shortly enter that trade as a banana carrier. In addition, there are four vessels which are operating on a tramp basis. The overseas fleet consists of a large number of new and near-new vessels, some of which have a high speed of 19 knots.

The coastal fleet consists of 96 vessels totalling 307,000 gross tons. Of these, 67 totalling 274,000 tons, are cargo vessels, three totalling 24,000 tons are tankers which have been chartered to the oil refineries for carrying refined oil along the coast, 7 of 19,000 tons cargo-cum-passenger vessels, 8 of 7,000 tons passenger vessels and 11 of a little over 5,000 tons small vessels engaged in short coastal range operations.

By the end of 1959, Indian shipping companies had eleven vessels totalling some 80,800 gross tons under construction or on order in Indian and foreign yards, for delivery before March, 1961. Negotiations for an additional 17,000 tons of secondhand tonnage were also in progress.

There are two Government-sponsored shipping corporations:

* The Eastern Shipping Corporation and the Western Shipping Corporation.

The Eastern Shipping Corporation was registered on March 30, 1950 with a capital of Rs. 5·5 crores. It became a full-fledged State enterprise on Aug. 15, 1956. It has a fleet of nine vessels (Dec. 31, 1959).

Towards the close of 1959, the Corporation had three vessels under construction at Vishakapatnam. During 1958-59 the Corporation made a profit of Rs. 15·32 lakhs after providing for depreciation amounting to Rs. 41 lakhs.

The Western Shipping Corporation was set up in 1956 with an authorized capital of Rs. 10 crores. It has two tankers at present. In 1959 it acquired two cargo vessels (one of 9,172 G.R.T. and the other of 6,679 G.R.T.) Towards the close of 1959, the Corporation had two vessels under construction abroad and one vessel at Vishakapatnam. It is intended that this Corporation should run the Indo-Polish Service and also function on the Persian Gulf Service. At a later stage it is to extend its operations to the Red Sea.

During 1958-59 the Corporation made a profit of Rs. 2·6 lakhs after providing for normal depreciation amounting to Rs. 6·43 lakhs. The total amount available from the Fund upto the end of March 1961 was Rs. 14·91 crores. Government announced in 1957 its decision to set up a non-lapsable Shipping Development Fund to provide an assured source of rupee finance for the expansion of Indian shipping. The Fund is composed of annual contributions from the Consolidated Fund of India, the quantum of which will be determined from year to year. Repayments against loans already granted to shipping companies are also to be credited to the Fund.

A sum of Rs. 1 crore was provided in the Budget for 1958–59 by way of contribution to this Fund. During 1959 two loans amounting to Rs. 52 lakhs were sanctioned by the Fund Committee to two Indian Shipping companies for acquiring two second-hand cargo vessels.

Another significant step taken in the field of shipping was the establishment of a Shipping Co-ordination Committee in the Department of Transport. The Committee is intended to bring about better liaison between various Ministries of the Government of India and other Government organisations which have cargoes requiring transport, on the one hand, and the Indian shipping companies, on the other, so as to ensure the maximum utilisation of the available Indian tonnage.

The Committee has been able to secure a considerable quantity of Government owned cargoes (to the extent of 500,000 tons upto the end of 1959) for Indian ships.

The Government of India has agreed to permit the acquisition of second-hand tonnage on deferred payment terms which involve not more than 20 per cent down payment, with the balance of the price spread over a period of 5 years. Despite the foreign exchange difficulty, not a single proposal for the acquisition of tonnage on deferred payment basis has been turned down by Government. The Government has also agreed to consider orders for new building, provided the payment of price is spread over a period of 7 years after delivery, with a small initial cash payment.

So far as rupee resources are concerned, a sum of over Rs. 9 crores was available from the Shipping Development Fund for being utilised before the end of the Plan period.

The idea of a foreign exchange pool under the aegis of the Shipping Development Fund mooted by the Chairman of the National Shipping Board is being considered.

SHIPPING ACT

The Merchant Shipping Act 1958 provides for the establishment of a National Shipping Board and a Shipping Development Fund. It also provides for the safety and the efficiency of the merchant marine and the welfare of seamen and passengers.

There is a Director-General of Shipping to administer the provisions of the Act. There will also be officers under the Act at all ports.

There is a National Welfare Board for Seafarers to advise Government on welfare problems.

An important provision is about the definition of an Indian ship.

Shipping Board

The National Shipping Board mentioned in the Act was set up on 1st March 1959. It consisted of 20 members with Mr. G. L. Mehta as Chairman and Mr. C. P. Srivastava as Member-Secretary. The Board was reconstituted with effect from May 1, 1961 with Mr. G. L. Mehta as Chairman and Mr. S. K. Venkatachalam as member-Secretary. The Board now has 22 members.

Immediately after the 1st Board was set up, it appointed a Committee under the chairmanship of Mr. A. Ramaswami Mudaliar to formulate the shipping target for the Third Five-Year Plan.

* It is reported (May 1961) that the Govt. of India has decided to merge the two corporations into one The Shipping Corporation of India Ltd. from June 1961. The strength of both corporations is 18 vessels with 1,32,375 G.R.T. tonnage (May 1961).

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

The progress of Indian shipping is given in the following table :—

Year.	No. of companies.	No. of ships.	Tonnage (G.R.T.).
1949 ..	20	84	332,490
1950 ..	23	90	364,632
1951 ..	23	92	366,646
1952 ..	26	100	383,911
1953 ..	25	111	422,452
1954 ..	30	124	435,300

1957 ..	25	131	576,500
1958 ..	25	141	630,000
1959 ..	25	164	744,577
1961 March.	25	N.A.	905,000

N.A. Not available.

MERCHANT NAVY TRAINING

Besides "Dufferin," there are six training establishments for the training of Merchant Navy personnel. Till the end of 1959 the Union Government spent more than Rs. 2·5 crores for the training of merchant navy personnel and about 17,000 candidates had been trained since 1947.

A Merchant Navy Training Board has been set up to advise the Government on all training problems and to supervise the training imparted in the merchant navy establishments.

FIVE-YEAR PLANS

Taking into account the financial resources available, a programme of development was formulated which aimed at raising the total gross registered tonnage to over 600,000 by the end of the period of the First Five-Year Plan. In order to assist the shipping companies in replacing obsolete tonnage operating on the coast and expand, Government had provided funds for constructing ships at Vishakapatnam : a total of 100,000 G.R.T. was expected to become available from this shipyard during the period of the First Plan.

At the beginning of the First Five-Year Plan, India had a tonnage of 390,707* G.R.T. On 31st March 1956, the actual tonnage stood at 491,000 tons, but taking into consideration the tonnage of 109,000 G.R.T. (17 ships) on order in Indian and foreign yards, the target had been exceeded.

In the Second Five-Year Plan it was proposed that about 301,000 tons should be added after allowing for obsolescence of 90,000 tons. Thus by the end of the Second Plan, the total tonnage is believed to have reached 905,000 G.R.T.

With the achievement of this target, Indian tonnage was expected to carry at least 15 per cent of the country's overseas trade, as against 7 to 8 per cent, in the beginning of the 2nd Plan, 50 per cent of the trade with adjacent countries as against 40 per cent, besides 100 per cent of coastal trade.

In the First Plan a sum of Rs. 19 crores was provided for shipping and this was subsequently raised to Rs. 26·3 crores. Actual expenditure over the First Plan period was about Rs. 18 crores.

In the Second Plan a provision of Rs. 45 crores including the carryover of Rs. 8 crores was made for shipping expansion. The full amount was utilised in placing the orders for ships in Indian and foreign yards by the shipping companies in the private and public sector.

The draft outline of the 3rd Plan fixed a target of 1,420,000 gross registered tons to be achieved by 1965-66 made up as follows :

	(Gross registered tons) 1960-61 (Anticipated)	1965-66 (Target)
Overseas trade ..	613,000	1,080,000
Coastal trade ..	292,000	340,000
Total	905,000	1,420,000

The 3rd Plan allocation of funds is Rs. 55 crores.

Sailing Vessels

According to the Sailing Vessels Committee's Report, it is estimated that 150,000 tons of shipping under sail consisting of about 2,000 vessels carry about a million to a million and a half tons of cargo every year. These vessels employ about 40,000 men, 2,500 masters, 2,500 mates and about 35,000 seamen. Taking the average cost of these vessels at Rs. 250 a ton, the capital outlay is computed at Rs. 4 crores.

The Sailing Vessels Committee emphasised that if the industry were to survive, the owners of sailing vessels should be encouraged to mechanise their vessels. Government have, therefore, approved a scheme for the grant of loans for this purpose. Under the scheme, loans are being granted for mechanisation of sailing vessels of 100 tons and over upto a maximum of 75 per cent of the cost of auxiliary machinery, provided the vessels in question are considered seaworthy and suitable for installation of machinery.

The effective rate of interest to be charged on these loans is 2½ per cent and the period of repayment ordinarily extends to 5 to 6 years, but may be extended by one or two years more if the circumstances of the loanee so justify. Until March 1960, 19 applications were received requesting loans for an aggregate amount of Rs. 9 lakhs. Other measures taken by the Govt. of India to develop the sailing vessels industry include the constitution of Central and Regional Advisory Committees, education of *tindals* in the traditions of the sea, training of seamen under sail, and issue of identity cards to the crew of sailing vessels proceeding to Ceylon.

SHIP-BUILDING

(See 'Hindustan Shipyard' under 'Government Industrial Undertakings').

* Allowing for obsolescence.

SMALL-SCALE INDUSTRIES *

Indian industry is made up primarily of small-scale rather than large-scale units. It is reckoned that there are about two crore persons engaged in small-scale and cottage industries.

The small-scale industry is primarily the responsibility of the State Government and not of the Centre. But the Centre supplements the efforts of the State Governments.

Small-scale industries will include all industrial units with a capital investment of not more than Rs. 5 lakhs irrespective of the number of persons employed.

The rate of interest on loans advanced under State Aid to Industries Act would be governed by the capital investment of small scale industries —it would be 3 per cent to industrial undertakings with capital investment up to Rs. 2 lakhs, 4½ per cent to undertakings with capital investment of Rs. 2 to 4 lakhs and 6 per cent to undertakings with capital investment of more than Rs. 4 lakhs. This does not, however, apply to industrial co-operatives in the small scale sector which will continue to receive loans at 2¼ per cent.

Preference would be given to small scale units in the light of their capital investment *i.e.* units with smaller capital investment would be given preference over others.

Small-scale industries are distinct from village industries and handicrafts. Generally speaking village industries are of traditional nature catering primarily to local markets.

Small-scale industries can and do produce a large variety of consumer goods :—bicycles, agricultural implements, sewing machines, domestic electrical appliances, builders' hardware, cutlery and domestic hardware, furniture, wood work, footwear and other leather products, ceramics, glassware, sports goods, hand tools, surgical and drawing and surveying instruments, mechanical toys, matches, chemicals, paints and varnishes, polishes.

Small-scale industries can really be classified into four main groups :—manufacturing industries, feeder industries to large industries, servicing industries, and ancillaries to large industries.

Manufacturing industries include complete articles or products manufactured for sale directly to consumers (consumer items) and in some cases used as spare parts.

Feeder industries are a kind of general engineering shops which specialise in certain types of products and services such as castings, forging tools and dies, electroplating and galvanizing, welding and other services for large scale industries. They do not have a regular line of work but take job orders from time to time depending upon the need of the large industry.

Servicing industries mostly cover light repair shops which are necessary to maintain mechanical equipment owned by the community. They cater to such works as auto repairs, repair of cycles and radios, photographic studios, repair of pumps, motors and other kinds of light machinery used in industry, agriculture, etc.

Ancillaries to large scale units include parts and components for several light engineering products such as cycles, sewing machines, electric motors, radios, clocks, automobiles, diesel engines, textile and other machinery and machine tools.

Several large scale units, especially in the light engineering field have made sustained efforts to obtain quite a number of small components from small scale units. In certain cases, like the manufacture of machine tools, even capital equipment have been loaned by the large units to their ex-employees to encourage the setting up of small scale units to act as ancillary industries. Sub-contracting of components has been practised to a large extent in the manufacture of cycles, sewing machines, machine tools and electric motors and to a smaller extent in the manufacture of diesel engines.

DEVELOPMENT AGENCIES

The nature of assistance available and the organisations responsible for rendering such assistance are given below :—

(*i*) Technical know-how, industrial information service, industrial potential surveys and market research : Organization of the Development Commissioner, Small-scale Industries; Small Industries Service Institutes and Extension Centres.

* Total outlay raised to Rs. 264 crores from Rs. 250 crores in final draft of IIIrd plan. Estimated expenditure in IInd plan Rs. 180 crores.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

(*ii*) Training: Both technical and managerial: Small Industries Service Institutes, State Governments, universities, technical institutes and colleges and institutes and colleges of economics, commerce and business.

(*iii*) Finance: (*a*) For cash loans: State Governments, State Bank of India, State Financial Corporations, Co-operative Banks, Scheduled Banks; (*b*) For machinery on Hire Purchase: National Small Industries Corporation Limited.

(*iv*) Marketing Service: National Small Industries Corporation Limited.

(*v*) Factory Accommodation in Industrial Estates: Central Small Industries Organization, State Governments, Industrial Estates, Industrial colonies and Co-operative Societies.

Technical bulletins and survey reports have been published.

The Office of the Development Commissioner, Small-Scale Industries, New Delhi now issues a monthly bulletin. The first number came out in March 1958.

The agencies mainly concerned with the development of small-scale industries in the country are thus the State Directors of Industries, Small Scale Industries Organisation under the Development Commissioner, Small Industries Service Institutes functioning in the States as well as in New Delhi and the National Small Industries Corporation, with four branches one each at Bombay, Calcutta Delhi and Madras.

FINANCES

Second Plan allocation: Rs. 55·57 crores.

This is made up of States schemes Rs. 33·18 crores, industrial estates Rs. 11·00 crores, and Central schemes Rs. 11·39 crores. The expenditure during Plan period is estimated to be Rs. 11·65 crores on Central schemes, Rs. 10·72 crores on industrial estates and Rs. 22·27 crores on other State Govt. schemes. Total Rs. 44·64 crores.

The provision for Central assistance for 1956-57, 1957-58, 1958-59 and 1959-60 were in Rs. lakhs: 360·54; 400·00; 453·90; 397·02 respectively. Total 1,611·46.

The States' provision in Rs. lakhs: 115·75; 257·05; 213·81; 293·50. Total 880·11.

The Union Territories' provision in Rs. lakhs: 37·69; 37·53, 37·21; 7·21. Total 119·54.

Thus the total provision for 1956-57, 1957-58, 1958-59 and 1959-60 in Rs. lakhs: 513·98; 694·58; 704·92; 697·73. Total 2,611·21.

The total expenditure incurred in 1956-57, 1957-58, 1958-59 and 1959-60 was in Rs. lakhs: 284·09; 515·47; 645·85; 745·27.

The percentage of the expenditure to the provision made during the four years was 52, 74, 92 and 106·8.

Third Plan allocation: Rs. 107 crores tentative).

State Provision

State-wise figures of provision and expenditure upto March 1959 in Rs. lakhs are as follows:—

Andhra 157·01 and 117·66 (75%), Assam 69·81 and 37·89 (54%), Bihar 150·32 and 128·95 (86%), Bombay* 175·76 and 71·95 (41%), Jammu & Kashmir 44·83 and 37·20 (83%), Kerala 86·37 and 60·63 (70%), M.P. 145·89 and 57·96 (40%), Madras 214·15 and 232·80 (109%), Mysore 81·57 and 65·01 (80%), Orissa 80·05 and 67·70 (85%), Punjab 161·86 and 135·14 (83%), Rajasthan 89·13 and 69·59 (78%), U.P. 208·52 and 191·92 (92%), W. Bengal 144·78 and 96·11(66%), Union Territories and Pondicherry 112·23 and 74·90 (67%).

Total provided Rs. 1,912·38 lakhs. Amount spent Rs. 1,445·41 lakhs. Percentage of spent to provided 76.

Central Assistance

Below we show Central assistance to States—the amounts released in Rs. lakhs for 1958-59, 1959-60 and 1960-61 (Provisional) respectively:—

Andhra Pradesh 33·05, 35·00, 45·00; Assam 10·26, 19·00, 22·00; Bihar 41·31, 40·00, 43·00; Bombay (Bilingual) 32·42, 40·00, 37·00; Kerala 24·36, 24·00, 27·00; Jammu & Kashmir 5·18, 8·61, 8·00; Madhya Pradesh 24·60, 35·00, 35·00; Madras 54·00, 47·00, 50·00; Mysore 16·89, 16·00, 16·00; Orissa 27·37, 26·00, 28·00; Punjab 37·96, 48·00, 50·00; Rajasthan 22·24, 24·00, 25·00; Uttar Pradesh 64·61, 56·00, 56·00; West Bengal 39·40, 51·00, 54·00.

Total 433·65, 469·61, 496·00.

Loans

Total loans granted by the States under State Aid to Industries Acts: During the first four years of the Second Plan Rs. 10·07 crores had been advanced to small scale industries by the various State Governments under these Acts.

Loans to the extent of Rs. 5,09,14,000 were sanctioned to 612 parties by 30th June 1960 from their own funds by the State Financial Corporations of Punjab, Kerala, Bombay*, Assam, Andhra Pradesh, West Bengal, Uttar Pradesh, Bihar, Rajasthan, Madhya Pradesh, Orissa and Madras. The Governments of U.P., Andhra Pradesh, Bombay (Bilingual), Punjab, Kerala and Rajasthan have also made arrangements to route a portion of the funds available under the State Aid to Industries Act through the State Financial Corporations.

Total loans sanctioned to 2,230 small industrial units by the State Bank of India till 30th Sept. 1960 were Rs. 6,86,43,000. Loans aggregating Rs. 4·66 crores were sanctioned to 558 small industrial units by the State Financial Corporations upto March 1960. By the end of 1960 the State Bank of India had sanctioned loans totalling Rs. 5·11 crores to 1,691 parties.

TARGETS

Under the manufacturing industries the targets which should be achieved by 1960-61 by the small scale sector were (Rs. lakhs):—Hand tools and small tools (hand tools, carpentry tools, mason tools, moulding tools for foundry etc.)—200; Sports Goods—250; Furniture—800; Building hardware—200; Domestic hardware—100; Cutlery 150; Agricultural implements—330; Scientific glasswares and instruments—100; Table glassware—100; Bicycles and bicycle parts—400; Sewing machines and sewing machine parts—100; Toys—50; Electric fans—100; Other electrical goods—300; Surgical instruments 150; Rubber parts—50; Pipe fittings and valves—200; Metal fittings for shoes and leather articles and wearing apparel—50; Fountain pens and stationery articles—250; Small machines like pumps, drills, presses, etc.—130; Miscellaneous chemical items—300; Other miscellaneous industries not mentioned above—350; Hosiery and knitted ware—1,600.

Production targets for some of the items covered under the feeder industries to large industries have been estimated as follows (Rs. lakhs):—Foundries—300; Forging shops—100; Tool and gauge making shops—100; Electroplating and galvanizing shops—100; Welding shops—100; Heat treatment shops—10.

The servicing industries will also have to grow with the rapid industrialisation of the country. There is ample scope for the development of servicing industries on a balanced basis. The targets which had been estimated to be achieved by 1960-61 for the servicing industries were (Rs. lakhs):—Automobile repair shops, filling stations etc.—150; Repair shops for cycles, radios etc.—100; Photographic shops, sound recording and public address systems—10; Motor repairs and maintenance including repair of tractors and agricultural equipment—50; Other machinery repairs and maintenance, such as textile, flour mills, cotton gins etc.—200.

The value of components and accessories that the small scale sector in ancillaries could cater to is as follows (Rs. lakhs): Cycle accessories 50; Cycle components 100; Parts of clocks 25; Parts of sewing machines 25; Attachments and accessories to sewing machines 10; Parts of electric motors (upto 10 H.P.) 50; Parts of electric fans 50; Parts of radios 25; Automobile and diesel engines 50; Total 385.

INDUSTRIES AND LOCATION

The Office of the Development Commissioner of Small-Scale Industries, New Delhi, carried out a survey in certain areas relating to location of industry and production. The findings of this survey which show what industries were located in the area surveyed and what the production was in that area are given in the 1959-60 edition of the *Directory*.

EXPORTS

The following items of small industries' products have been selected by the National Small Industries Corporation for promoting their sales in overseas markets:—Leather footwear and leather goods; Cotton and Woollen hosiery; Sports goods; Builders' hardware, locks and scissors; Tinned fruits, chutneys and pickles; Paints and varnishes; Glass beads. Nearly six lakh pairs of shoes supplied by small scale units have been exported to countries like Russia, Poland and German Democratic Republic through the agency of the Corporation.

National Small Industries Corporation and the State Trading Corporation also assist in import and distribution of some articles like copper, zinc, copper and brass scrap, cycle and sewing machine parts, knitting needles.

State Governments are establishing raw materials depot for the small industries. The National Small Industries Corporation, as an experiment, set up a depot at Ludhiana for supplying iron and steel to the small units there. This depot has supplied raw materials worth Rs. 23 lakhs till the end of Dec. 1959.

The following quantity of steel had been allocated to the States for small scale and cottage industries:— 1957-58—52,750 tons; 1958-59—1,07,950 tons; 1959-60— 2,11,000 tons.

The Directors of Industries have been asked to meet the requirements of small scale units situated within the Industrial Estates on a full 8 hour shift basis. The total allocation of steel made is generally less than 50 per cent of the demand placed by the State Directors of Industries.

STATE SCHEMES

The small scale industry schemes of the State Governments could be classified:—Block loan for disbursement under State Aid to Industries Act; Service Schemes; Commercial Schemes; Industrial Co-operatives; Common Facility Service Schemes; Service-cum-Commercial Schemes; Subsidy on Power Supply; Establishment of Emporia; and Training of Technicians.

The States get assistance from the Centre in respect of State Governments schemes the main features of which are that service schemes, in which the element of training predominates and profit is not envisaged, are aided to the extent of 50 per cent of the cost of land and buildings, 75 per cent of the cost of machinery and equipment and 50 per cent of the recurring expenditure for the first year as grant, and 100 per cent of the working capital as loan. As regards commercial schemes of the State Governments, the Central assistance is limited to 75 per cent of the total cost of the scheme as loan. In addition to the above, 50 per cent of the cost of additional staff appointed in the States Directorates of Industries in connection with the implementation of State Government schemes is given by the Central Government as grant.

* Bilingual.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

A Small Inventions Development Board has been established to assist inventors in the small scale sector by providing financial assistance and research facilities. To start with, every year 34 prizes of varied value ranging from Rs. 5,000 to Rs. 25,000 each are awarded. The Board will also help the inventors in getting their inventions patented and arrange for their commercial use. The Central Board will also constitute State Boards in each State.

Nearly 700 development schemes relating to small industries were sanctioned by the States during the first three years of the Second Plan. This includes 588 schemes relating to different industries; the rest relate to Service Schemes, that is schemes involving power supply, communication development, marketing facilities etc.

Industry-wise, the largest number of schemes—105—were in the field of tanning and leather industry, for wood-working and carpentry 90, for light engineering industries, 76, other schemes included ceramic, cutlery, tailoring, glass industry, match industry, toy-making, sports goods, blacksmithy.

The development programme about industrial co-operatives covered in all, 101 societies for the period ending 1959-60. Loans amounting to over Rs. 22 lakhs were disbursed to 55 societies by State Governments and co-operative banks. In addition, 23 societies received grants amounting to Rs. 3·3 lakhs. In eight States, committees were formed to co-ordinate the efforts of all the agencies. The Small Industries Service Institutes provided technical assistance to about 65 societies and active steps were being taken to cover the remaining societies rapidly. About 26 of these societies received marketing assistance including help in obtaining Government orders, while assistance in obtaining raw materials were rendered to ten societies.

Below we give the value in Rs. of contracts placed with small industries units by State Governments for 1958-59 and 1959-60 (upto 30th Jan. 1960) respectively :—

Delhi 40,04,986 ; 33,55,255 ; Uttar Pradesh 79,35,163, 11,89,904 ; West Bengal 55,51,507 ; 66,34,252 ; Bombay (Bilingual) 32,52,805 ; 52,66,101 ; Punjab 7,33,728 ; 31,13,794 ; Madras 2,65,203 ; 5,93,627 ; Andhra Pradesh 2,46,381 ; 1,60,336 ; Kerala 35,458 ; 4,23,287 ; Bihar 10,639 ; 18,807 ; Madhya Pradesh 3,13,337 ; 26,427 ; Rajasthan — ; 13,898 ; Mysore— ; 3,97,597.

Total 2,11,93,285 ; 5,31,39,939.

SMALL INDUSTRIES CORPORATION

The National Small Industries Corporation is a Government of India concern. Its main activities include assistance to small scale units in securing contracts from the D.G.S. & D. and Railways, development of small industrial units as ancillaries to large units, rendering of marketing assistance both in internal and overseas markets, distribution of certain raw materials, supply of machines on Hire Purchase basis etc.

Contracts valued at over Rs. 8 crores have been secured by the small scale units from the D.G.S. & D. alone since the year 1957. The orders secured by the small units during April to Aug. 1960 aggregated Rs. 1·10 crores as against Rs. 2·65 crores, Rs. 2·56 crores and Rs. 62 lakhs in the years 1959-60, 1958-59 & 1957-58 respectively. The scheme is thus gathering momentum and it is expected that during the year 1959-60, orders to the tune of over Rs. 3 crores would have been placed on the small scale units through the assistance of the Corporation. The number of small scale units considered capable of supplying various stores required by Government and enlisted with the Corporation was 6,877 at the end of November 1960.

The Corporation has also initiated negotiations with the other Central Government Purchasing Agencies and the Railways have already introduced the scheme of purchases from small scale units. The value of contracts placed by them on the small scale units upto November 1960 amounted to approximately Rs. 9 lakhs.

The Corporation has also taken certain positive steps to foster growth of ancillary units around large industrial units.

While a comprehensive marketing assistance programme of the Corporation to render assistance in the marketing of small scale industries products in the country is being finalised, a Pilot Centre has been set up at Delhi to try out new methods of creating a link between the manufacturers on the one hand and the retailers/distributors on the other. Orders worth approximately Rs. 70,000 have been booked by the Corporation's salesmen and passed on to the manufacturers for execution. Besides rendering marketing assistance in the internal markets, the Corporation has exported leather footwear manufactured by the small-scale fabricators valued over Rs. 176 lakhs since 1956.

The Corporation supplies machines on Hire Purchase basis either for starting a new industry or for augmenting the existing capacity as well as for replacing old and out-dated machines. 3,446 machines worth over Rs. 3 crores were supplied from the inception of the scheme in 1956 upto the end of March 1960 ; by the end of November 1960, machines worth over Rs. 4 crores had been delivered and the number of machines delivered was more than 4,000.

Recently D.L.F. Credit of $10 million has been made available to the Corporation for utilisation in the operation of the Hire Purchase scheme. Two new schemes, *viz.*, Bank Guarantee Scheme and Special Hire Purchase Scheme, have been introduced for the purpose. Under the Bank Guarantee Scheme, an applicant, after acceptance of his application for the supply of machine(s) on hire purchase, shall deposit 20 per cent of the CIF cost of machines as earnest money where the machinery is valued above Rs. 50,000 and 10 per cent where the value is less than Rs. 50,000 and shall also furnish a bank guarantee for the balance 80 per cent in the former and 90 per cent in the latter to the effect that the amount will be repaid to the Corporation in four equal annual instalments. In the former case, however, they will be given the choice to pay 5 per cent in cash and furnish bank guarantee for the remaining 15 per cent, encashable at the time of delivery of machines. According to Special Hire Purchase Scheme, the applicant will have to pay 20 per cent as earnest money and 20 per cent before the handing over of shipping documents. The balance 60 per cent will be recovered in five equal annual instalments. The rate of interest for both the Schemes is 6 per cent. Under the normal Hire Purchase Scheme, the applicants are required to deposit only 20 per cent of the value of machines as earnest money and the balance is repayable during the period of 7 years. The rate of interest chargeable is 4½ per cent if the value of machines is less than Rs. 15,000 ; for machines valued above Rs. 15,000, the rate of interest is 6 per cent. For industrial co-operatives, these rates are 3½ per cent and 5 per cent respectively.

Besides the above activities, the Corporation has set up Prototype Production & Training Centres at Rajkot and Okhla (Delhi) in collaboration with the Technical Co-operation Mission of the U.S.A. and the Federal Republic of Germany respectively. The training of the artisans at Rajkot has already commenced. Besides imparting training to artisans, these Centres would develop prototypes of machine tools for production on commercial scale by small scale units.

Main Corporation : National Small Industries Corporation, Ltd., Rani Jhansi Road, New Delhi.

Subsidiary Corporations : 1. National Small Industries Corporation, 116-A, Lower Circular Road, Calcutta-14. 2. National Small Industries Corporation, Janmabhoomi Chambers, 5th Floor, Fort St., Bombay 1. 3. National Small Industries Corporation, 15, Mowbrays Road, Madras-18. 4. National Small Industries Corporation, 61, Sunder Nagar, New Delhi.

(See also the note on NSIC in the article 'Corporations').

SERVICE INSTITUTES

Economic and commercial information useful to small industrialists, who want to start new industrial units, is provided by the Small Industries Service Institutes set up by the Government of India early in 1956.

The Institutes give broad outlines of the potentialities of different small-scale industries. They supply information on the number of existing units, their production and installed capacities as well as the present consumption, future demands and export possibilities for their products.

Information about the working capital required for a new unit, suppliers of machinery and raw materials, and markets for the sale of products, is also made available by the Institutes.

There are 19 Small Industries Service Institutes including four branch institutes in the country.

They are located in New Delhi, Bombay, Calcutta, Madras, Agra, Jaipur, Ludhiana, Bangalore, Indore, Rajkot, Patna, Cuttack, Gauhati, Srinagar, Kanpur, Allahabad, Hubli, Hyderabad, Trichur.

There are also 45 Extension Centres to provide specialized technical assistance to particular industries. By the end of the Second Plan it is expected that there would be about 50.

To sum up the whole position as on 31st October 1960 :—

No. of institutes 15 ; no. of branch institutes 4 ; no. of industrial extension centres sanctioned 66 ; no. functioning 45 ; no. of model demonstration workshops sanctioned 3 ; no. functioning 2 ; no. of production centres planned 4 ; no. functioning 2.

No. of parties given purely technical assistance 90,912 ; no. of parties given information to start new industries 41,089 ; no. of factory visits to render on-the-spot technical advice 1.34.307 ; no. of parties given other assistance 62,095.

No. of mobile workshops in operation 47 ; no. of centres visited by the workshops 4,308 ; no. of artisans trained in the operation of the machines installed in these workshops : 32,151.

No. of designs and drawings prepared 12,029 ; no. of model schemes prepared 1,041 ; technical bulletins prepared 368.

No. of industry outlook reports issued or approved for issue 136 ; community projects area reports issued 27 ; no. of market research reports completed 161.

No. of schemes of State Governments scrutinized 2,648 ; no. of schemes prepared and supplied 802.

There were 56 foreign consultants employed from time to time till 31st October 1960.

The position in regard to the total number trained as on 31st October 1960 and the total expected to be trained by 31st March 1961 respectively are given below :

Block level extension officers 2,063 and 2,367 ; in business management of entrepreneurs 1,175 and 1,662 (long-term) and 620 and 979 (short-term) ; in footwear training 178 and 269 ; Blueprint reading 1,737 and 1,836 in course of State; Govt. officers 46 and 277 ; in D.I.O. course 115 and 128 ; in Advance Pattern Making course 2 and 3 ; in Periputatic training 156 and 365 ; manufacture of potterywares 36 and 52 ; manufacture of thermometers and training in thermometre blowing 22 (provisional) ; Scientific glass-blowing 38 and 49 ; miscellaneous training imparted 163 and 233 respectively.

The location of the Small Industries Service Institutes is given below :—

Calcutta : 4, Camac Street.
New Delhi : 56, Sunder Nagar.
Madras : 20, Rutland Gate.
Kanpur : 113/80, Swaroop Nagar.
Agra : 416, Mandi Syed Khan.
Allahabad : 15, Colvin Road.
Ludhiana : B-XV-1679, Ferozepur Road.
Gauhati : I. C. Shed No. 4, Bamunimaidan.
Srinagar* : School of Designs Building, Karan Nagar.
Indore : 10, Industrial Estate, Polo-ground.
Bombay : 40-40A, Cowasji Patel Street, Fort.
Rajkot : Land Mortgage Bank, New Building.
Hubli : Bachi Lodge, Club Road.
Hyderabad : Iftikar Mansion, 79-Azambad.
Bangalore : 193, 6th Cross Road, Gandhi Nagar.

* Shifts to 746, Gandhi Nagar, Jammu during winter.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Cuttack : Darpan House.

Trichur : "Krishna Vihar", Kerala Varma College Road, Trichur 4.

Jaipur : M. Ismail Road.

Patna : Boring Road.

The Extension Centres which specialize in particular industries are located as follows :—

Ambala (Punjab): Shiv Nivas, Punjabi Mohalla (Scientific Glass Industry).

Batala (Punjab): 9, Guru Nanak Nagar (Agricultural Implements & Machine Tools).

Rewari (Punjab): (Footwear, Non-Ferrous Metal Industry).

Kaithal (Punjab): R.K.S.D. College Building (Blacksmithy and Carpentry).

Jullundur (Punjab): (Sports goods).

Jagadhari (Punjab): (Metal industry).

New Delhi: Balsahyog, Connaught Circus (Tailoring, Cane Working, Carpentry and Sheet Metal Work).

Faridabad: Near Railway Station (Blacksmithy and Carpentry).

Meerut (U.P.): 291, Garh Road (Sports Goods).

Ferozabad (U.P.): Park Building (Glass Bangles and Pressed Glassware).

Trichur (Kerala): West Fort (Footwear).

Shoranur (Kerala): (General Engineering and Cutlery).

Erode (Madras): B.P. Agraharam (Leather Finishing).

Coimbatore (Madras): (Foundry and Metalwork).

Madurai (Madras): (Machine shop and tool room, blacksmithy, heat treatment and electroplating).

Jamnagar (Gujarat): (Electroplating).

Kolhapur (Maharashtra): Udyam Nagar (Machine Shop).

Savarkundla (Gujarat): (Forging and Heat treatment).

Nadiad (Gujarat): Machine shop, carpentry, forging and heat treatment.

Amravati (Maharashtra): Sheet metal (No work is being carried out as technical officers are not in position).

Jabalpur (M.P.): C/o Simplex Engineering Works Compound (Machine shop, heat treatment and Electroplating).

Ujjain (Madhya Pradesh): Maleona-am (Machine shop).

Khanapur (Mysore): C/o Arun Potteries (Training-cum-production centre for pottery-ware.)

Thiruvalla (Kerala): Production centre for electric motors.

Ettumanur (Kera'a): Production centre for small tools and hand tools.

Poona (Maharashtra): (Electroplating).

Sanatnagar (Andhra Pradesh): (Heat treatment and electroplating).

Vijayawada (Andhra Pradesh): (General engineering and foundry).

Paranaidupet (Andhra Pradesh): (Glass beads).

Bhavnagar (Gujarat): (Machine shop, foundry and sand testing).

Surat (Gujarat): (Machine shop foundry, sand testing and mechanical testing).

Gwalior (Madhya Pradesh): (Machine shop, forging and heat treatment).

Indore (Madhya Pradesh): (Clocks).

Pondicherry (Heat treatment and electroplating).

Mysore: (Forging, heat treatment and machine shop).

Belgaum (Mysore): (Forging, heat treatment and machine shop).

Varud (Maharashtra): (Log cutting, carpentry, pump repair shop and oil engine).

Baruipur (West Bengal): (Carpentry workshop).

Habra (West Bengal): (Smithy workshop).

Manicktala (West Bengal): (Footwear and leather goods).

Kallai (Kera'a): (Wood seasoning and furniture design).

Attingal (Kerala): (Stainless steel utensils).

Muvattupuzha (Kera'a): (Tin printing).

Alleppey (Kera'a): (General engineering).

Vaniyamkulam (Kera'a): (Leather goods).

INDUSTRIAL ESTATES

Another feature of the industrial policy is the establishment of industrial estates. This was initiated in 1955.

The main object is decentralization. Government seeks to remove small industrial units from crowded urban areas and thus reduce the pressure on the latter, and secondly it seeks to provide small units with factory space and common facilities for efficient working.

The State Governments acquire and develop land, construct roads, put up factory buildings, arrange for supply of water and electricity and also set up common service workshops. The factory buildings in the States are then let out at concessional rents, outright sale or hire-purchase basis to small entrepreneurs.

The Government of India advance to the States the entire cost of the estates as loans. Grants are also given for specific purposes, such as planning and designing of these estates. The loans will carry interest at 4½ per cent.

These industrial estates provide better accommodation for small industries with facilities of power, water, etc. They bring industries together and facilitate the establishment of common servicing centres, introduction of modern techniques, collective purchase of raw materials and sale of finished products. They stimulate the co-operative spirit among them.

Industrial estates are of two kinds—large estates near big cities and urban areas and small ones in community development blocks.

The larger estates cost roughly from Rs. 20 to 30 lakhs, the smaller ones from Rs. 2 to 3 lakhs.

Only two—the one at Naini and the other at Okhla—are under the National Small Scale Industries Corporation. The rest are under the States.

The provision for Industrial Estates in the Second Five-Year Plan had been increased from Rs. 10 crores to Rs. 15 crores and subsequently reduced to Rs. 11·12 crores on a reappraisal of the Plan resources. The number of estates was also reduced to 90 from 100. These 90 together with the 10 sanctioned in the 1st Plan made a total of 100 estate to be set up by the end of the 2nd Plan.

From 1955-56 to the end of 1959-60, loans and grants to the extent of Rs. 819·18 lakhs had been sanctioned and Rs. 803·63 lakhs had been spent.

Upto the end of June 1960, 49 estates had been completed and 40 were functioning with 590 factories. More than 7,000 persons were working in these workshops. Total monthly production in them was about Rs. 49,10,436. As on 30th June 1960, 14 were nearing completion. When the whole programme is completed, it is estimated to provide employment for 50,000 persons in these estates.

The list of estates approved by the Commission, their estimated cost in Rs. lakhs and the Second Plan allotments in Rs. lakhs respectively are shown below.

Andhra Pradesh : Visakhapatnam (a) 20·00 ; Sanatnagar (a) 20·00 ; Vijayawada (a) 20·00 ; Samalkot (a) 7·00 ; Nandyal (b) 3·00. Total 70·00. Plan allotment 70·00.

Assam : Gauhati (a) 25·50 ; Dhekiajuli (b) 3·00 ; Total 28·50. Plan allotment 28·50.

Bihar : Patna (a) 38·99 ; Darbhanga (a) 12·11 ; Biharsharif (a) 6·91 ; Ranchi (a) 7·90 ; Total 64·91. Plan allotment 63·00.

Gujarat : Rajkot† (a) 38·13 ; Baroda (a) 12·46 ; Surat (Udhna) (a) 15·00 ; Gandhidham (b) 10·55 ; Ahmedabad (c) 15·00 ; Bhavnagar (d) 10·00. Total 101·14. Plan allotment 111·96 (Gujarat and Maharashtra).

Jammu & Kashmir : Jammu (a) 14·50 ; Srinagar (c) 16·00 ; Anantnag (c) 3·00 ; Total 33·50. Plan allotment 33·50.

Kerala : Quilon (†) (Kollakadavu) (a) 11·64; Palghat (†) (Olavcot) (a) 11·64 ; Ettumanoor (a) 11·64 ; Ollur (a) 11·64 ; Trivandrum (a) 11·64 ; Veli (d) 2·57 ; Total 60·77. Plan allotment 60·77.

Madhya Pradesh : Indore (a) 20·00 ; Gwalior (a) 12·00 ; Jabalpur (c) 22·00 ; Raipur (d) 12·00 ; Bhopal (c) 3·00 ; Satna (d) 2·50 ; Burhanpur (c) 2·50 ; Ujjain (d) 4·00 ; Katni (d) 2·50 ; Ratlam (d) 2·50 ; Sagar (d) 2·50 ; Bilaspur (d) 2·50 ; Durg (d) 2·50 ; Total 90·50. Plan allotment 77·50.

Madras : Guindy (a) 70·23 ; Virudhunagar (a) (†) 29·09 ; Erode (a) 9·10 ; Tirunelveli (b), Tiruchirapally (a), Tanjore (b), Madurai (a) 25·10 ; Marthandam (a) 2·92 ; Total 136·44. Plan allotment 82·50.

Maharashtra : Kolhapur (a) 7·00 ; Poona (Hadapsar) (a) 6·00 ; Kurla (c) 10·00 ; Nagpur (c) 6·28 ; Karad (c) 4·00 ; Nanded (c) 13·24 ; Amraoti (c) 10·50 ; Bapty Road (d) 12·54 ; Parli-Vaijnath (d) 3·00. Total 72·56. Plan allotment 111·96 (Maharashtra & Gujarat).

Mysore: Mysore (a) (†) 7·00 ; Bangalore (a) 23·00 ; Belgaum (c) 6·00 ; Harihar (c) 6·00 ; Gulbarga (c) 5·00 ; Ramanagaram (c) 3·00 ; Hubli (b) 8·00; Mangalore (c) 5·00 ; Total 63·00; Plan allotment 63·00.

Orissa : Cuttack (a) 24·20 ; Rourkela (b) 14·00 ; Jharsuguda (b) 12·00 ; Berhampur (d) 12·00 ; Kendrapara (c) 3·00 ; Total 65·20. Plan allotment 65·20.

Punjab : Batala (d) 12·00 ; Ludhiana (a) 25·10 ; Malerkotla (d) 8·50 ; Factory accommodation for SSI (d) 20·00 ; Sonepat (c) 3·00 ; Nilokheri (c) 3·00 ; Total 71·60. Plan allotment 71·50.

Rajasthan : Jaipur (a) 25·00 ; Bhilwara (a) 10·00 ; Makhupura (b) 3·00 ; Kotah (c) 5·00 ; Jodhpur (c) 4·00 ; Bharatpur (d) 8·41 ; Sriganganagar (c) 5·00 ; Udaipur (c) 3·00 ; Sumerpur (d) 3·00 ; Total 66·41. Plan allotment 66·41.

Uttar Pradesh : Kanpur† (a) 50·00 ; Agra (c) 50·00 ; Deoband (c) 10·00 ; Varanasi (c) 3·00 ; Luni (c) 3·00 ; Total 116·00. Plan allotment 104·00.

West Bengal : Kalyani† (a) 54·03 ; Baruipur (a) 5·62 ; Saktigarh (c) 4·28 ; Howrah (d) 30·65; Siliguri (d) 5·42 ; Total 100·00. Plan allotment 100·00.

Total for States : 1,140·03.

National Small Industries Corporation Private Ltd. :—

Uttar Pradesh : Naini (a) 26·00.

Delhi : Okhla (a) 100·00.

Total for NSIC 126·00. Plan allotment 126·00.

Union Territories :—

Tripura : Arundhutinagar (b) 3·00. Plan allotment 3·00.

Delhi : Badli (d) 3·00. Plan allotment 3·00.

Himachal Pradesh : Solan (c) 3·00. Plan allotment 3·00.

Pondicherry : Thattanchavadi (d) 5·41. Plan allotment 5·41.

Total for Union Territories : 14·41.

Grand Total : 100 : 1,280·44. Plan allotment 1,148·25.

There are nine estates in the pilot project areas, and 20 in community development block areas.

The nine are : Samalkot, Kolhapur, Pappanamcode, Bhopal, Erode, Pata'a, Malerkotla, Deoband, Baruipur.

The estates in community development areas are : Nandyal, Biharsharif, Karad, Anantnag, Veli, Satna, Marthandam, Ramanagaram, Kendrapara, Sonepat, Nilokheri, Makhupura, Varanasi, Luni, Saktigarh, Badli, Solan, Arundhutinagar.

a = started functioning. b = ready but not yet started functioning. c = under construction. d = construction has not been started. † Industrial estates sanctioned during the 1st Plan period. In case of Okhla however no loan was sanctioned during the 1st Plan.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

STEEL INDUSTRY*

THE first successful and the most outstanding attempt to manufacture steel in the country on a commercial basis was that of the Tata Iron & Steel Co. which started its Steel Works at Sakchi in the year 1908. Pig iron was made in 1911 and the first steel ingot a year later.

The Indian Iron & Steel Company was started in 1918 at Hirapur about 4 miles from Asansol junction on the Eastern Railway for producing pig iron. Eighteen years later it floated another company, the Steel Corporation of Bengal to manufacture steel. Towards the end of 1952 the two companies were merged.

An iron works was started at Bhadravati in Mysore State in 1921 to which a steel plant was added in 1934. During World War II, a 25-ton basic furnace and two small electric furnaces were installed.

The total capital investment in the private sector is about Rs. 191 crores and the number of workers employed about 60,000. Of the total investment, Tatas account for Rs. 135 crores and the Indian Iron and Steel Co. for Rs. 56 crores.

The three steel plants set up in the public sector during the second Plan period are Rourkela, Bhilai and Durgapur mills. Hindustan Steel (Private) Ltd. re-formed on April 1, 1957. The shares are owned wholly by the Central Government. The authorized share capital is Rs. 300 crores.

The revised overall cost of the three public sector steel projects are: Rourkela Rs. 170 crores (excluding Rs. 44 crores representing the cost of all other ancillaries including township, water supply system, iron ore mines, limestone quarries and railway sidings); Bhilai Rs. 131 crores; Durgapur Rs. 138 crores (excluding the township fees to consultants and other ancillaries estimated to cost Rs. 29 crores).

Each of these has a production capacity of about a million tons with scope for increase. All the three have already gone into production.

(For details see under 'Government Industrial Undertakings').

The Second Plan target of steel production was fixed at 6 million tons (or about 4·7 million tons of saleable steel), as against the then production level of less than 1·5 million tons. This was proposed to be achieved by raising the capacity of the Tata Iron and Steel Works at Jamshedpur from 900,000 tons to 2 million tons, of the Indian Iron and Steel Company's works at Burnpur from 500,000 tons to 900,000 tons and of the Mysore Iron and Steel Works from 30,000 tons to 100,000 tons. The remaining three million tons were to be produced by setting up three new works in the public sector at Rourkela, Bhilai and Durgapur.

PRODUCTION

The recent trend of production in India is given below :—

Year.	Pig iron.	Steel ingots.	Semi-finished steel.	(000 tons) Finished steel.
1955	1,757	1,704	1,457	1,260
1956	1,807	1,738	1,484	1,337
1957	1,789	1,715	1,440	1,346
1958	2,003	1,813	1,600	1,300
1959 †	2,994	2,434	2,542	1,832
Jan.-Aug. 1960 †	2,600	2,023	2,123	2,220‡
Installed Capacity (September 1960)	2,771	2,189	1,366	1,730

† In metric tons. ‡ During 1960.

A team of experts was sent to China and Japan in March-April 1959 to study the working of the industry there.

The steel delegation recommended in its report that there was scope for setting up some modern small-size blast furnaces and side-blown converters in areas in India where conditions were favourable for such units (as already reported). The delegation considered that construction of a few small plants entirely from Indian designs and with Indian material would give confidence to designers and construction engineers in this country though it was emphasised that it would only be an experimental measure. Adjustments would be necessary to allow for local conditions and further pilot plant tests would have to be carried out before assessing the suitability and economics of small blast furnaces and side-blown converters for the production of iron and steel on a commercial scale even in selected areas.

The Government of India has generally accepted the recommendations and sanctioned eight schemes totalling a capacity of 300,000 tons in the private sector for the production of pig iron. The blast furnaces that started production in 1959 produced 1·5 million tons of pig iron upto Oct. 1960. Two small blast furnaces with an annual capacity of 15,000 tons (one in Madras and the other in Orissa) went into production in 1959. Seven more were sanctioned in 1959 — two in Madras, three in Bombay,† one in West Bengal and one in Madhya Pradesh.

In 1958-59, 28 scrap-based furnaces with a capacity of about 187,000 tons per annum were licensed. The capacity of furnaces existing in 1959: 150,000 tons. Production: 58,782 tons of ingots, 38,928 tons castings. Availability of scrap: 600,000 tons a year.

In all, the steel expansion programme is estimated to cost around Rs. 439 crores.

The Tata expansion plans took place in two stages, first to 930,000 tons, and then to 2,000,000 tons of steel ingots to be rolled into 1,500,000 tons of finished steel. The Tata expansion, which had practically been completed by March 1959, cost Rs. 95 crores, including expenditure on ore mines, collieries and other ancillaries.

The Company obtained for this purpose two loans from the World Bank totalling 32·5 million dollars and one from the Government of India of Rs. 10 crores.

The expansion was undertaken through agreement with Henry J. Kaiser Co. of California, U.S.A.

The Indian Iron and Steel Co. obtained from the World Bank two loans totalling 50·02 million dollars to meet the foreign exchange cost of the expansion programme. The Central Government has given a loan of Rs. 7·9 crores and a special advance of Rs. 10 crores. The approximate production of saleable steel by the I.I.S.C. during Dec. 1960 was 61,395 m. tons. Pig iron production during the month was 111,516 against 106,490 m. tons in November. Steel ingots output was 86,424 m. tons against 76,169 m. tons in November.

The first of the two new blast furnaces went into operation in Feb. 1958 and the second went into production in 1959. The cost of the expansion was Rs. 50 crores (original estimate).

The production of steel during 1961-62 is expected to be 3·5 million tons in the public sector.

(For the Mysore Iron and Steel Works see under 'Government Industrial Undertakings').

PRICE AND DISTRIBUTION

Since the war in 1939 the price and distribution of steel have been controlled by the Government.

The prices of all controlled categories of steel were raised by Rs. 70 per ton uniformly in May 1957. The increase followed the enhancement of excise duty on steel from Rs. 4 per ton to Rs. 40 per ton with effect from 16th May 1957.

On 11th November 1959, the Government of India again raised the retention prices payable to the Tata Iron and Steel Company (T.I.S.C.O.) and the Indian Iron and Steel Company (I.I.S.C.O.) by Rs. 5 per ton to Rs. 424 per ton, excluding the excise duty of Rs. 45·75 per ton for the period 1955-56 to 1959-60 for all categories of steel taken together. The I.I.S.C.O. had represented to the Government in December 1958 that their costs had risen as a result of increases in wages, railway freight, prices of coal etc. A similar representation was made by the T.I.S.C.O. in January 1959. The two representations were considered by the Government and the matter was referred to the Cost Accounts Branch of the Ministry of Finance in April 1959 for examination, which made the following recommendations:

(*i*) The average retention price payable to the T.I.S.C.O. and the I.I.S.C.O. for the period 1955-56 to 1959-60 on all categories of steel taken together should be increased by Rs. 7 per ton, if negotiated labour settlements are to be accepted and Rs. 5 per ton if such settlements are not accepted.

(*ii*) The 1954-55 retention prices for the I.I.S.C.O. as adjusted from time to time, should be increased by the same amount as mentioned in (*i*) above and consequently, the average amount per ton to be credited by the Company to its development fund during the period 1955-56 to 1959-60 shall remain unchanged.

(*iii*) As the 1954-55 retention price for the T.I.S.C.O. has increased only by Rs. 4 per ton, as against the present increase of Rs. 7 per ton in the retention price if negotiated settlement is to be taken into account and Rs. 5 per ton, if negotiated settlements are to be ignored. The average amount to be credited by the T.I.S.C.O. to its development fund during the period 1955-56 to 1959-60, should be increased by Rs. 3 per ton, if negotiated settlements are admitted and Re. 1, if they are not accepted.

The Government of India stated in November 1959 that they were examining separately the question of admitting increases in labour costs due to negotiated settlements. The latest increase in the retention price, it was claimed, had enabled the T.I.S.C.O. to increase its contribution by Re. 1 to its development fund, i.e. to the level of Rs. 50 per ton and the I.I.S.C.O. to maintain its contribution of Rs. 7 per ton.

A year later, that is, in November 1960, the Government raised the average retention price payable to the two companies by Rs. 4·85 per ton for the period 1955-56 to 1959-60. This brought the total increase for the five years to Rs. 29·85 per ton. The latest price increase did not, however, involve any rise in the official selling prices of steel which average Rs. 598 per ton uniformly at all rail-heads.

Retention prices for tin plates were also revised during 1954 and on the recommendation of the Tariff Commission, they were fixed at Rs. 807 per ton for 1953 the same level as for 1952 and were reduced to Rs. 762·9 per ton for 1954-56.

The Tariff Commission had recommended a price increase of Rs. 10·64 per ton on a weighted average basis for the period from 1st August, 1954 to 31st March 1960 for pig iron produced by the I.I.S.C.O. The Government of India, while accepting the recommendations of the Tariff Commission in regard to the actual increases in costs, do not consider that the increases should be given a weighted average basis. An increase of Rs. 17·23 per ton has been granted from 8th July 1957. The previous retention price of T.I.S.C.O. pig iron was Rs. 141·5 per ton.

The pig iron production at Burnpur Works not being separately costed, the Government have decided that increase in prices recommended by the Tariff Commission and accepted by Government should be applied to the kulti pig iron till the kulti plant ceased to operate and to the corresponding grades of pig iron produced at

* See also under 'Government Industrial Undertakings'. † Bilingual.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

the Burnpur Works up to the end of March 1954 finally, and thereafter provisionally, with the intention that the prices of pig iron produced at Burnpur after 1st April 1958 should be examined separately and adjustments based on costings made later.

The increase of Rs. 12·92 per ton in the retention price of the pig iron produced by Tatas for the period 1958-60 was granted by the Government of India. The previous retention price of Tatas was Rs. 128 per ton.

The T.I.S.C.O. represented to the Government that they were incurring increases in costs in the manufacture of pig iron. The Tariff Commission recommended a price increase on a weighted average basis of Rs. 9·54 per ton for the period 1955-56 to 1959-60. The Government accepted the recommendation on the basis of actual increases instead of on a weighted average basis.

SUPPLY POSITION

The total output of saleable steel during the Second Plan period is estimated at about 11 million tons, as against the overall requirements over the five years assessed by the Planning Commission at about 17 million tons. Production was expected to be equal to the demand only in the last year of the Plan. The total demand of steel in 1960–61 was 5·06 million tons against 4·1 million tons in 1959–60. The total availability in 1960 was about 3·2 million tons against 2·6 million tons in 1959. To meet the increased demand it has been decided to set up an integrated steel plant at Bokharo in Bihar during the Third Plan with an initial capacity of one million tons of ingots.

To relieve shortage due to the wide gap that exists between the demand for steel and the supplies available from internal sources, there have been sizable imports of steel.

The aggregate imports of iron and steel during 1960 (upto Nov.) amounted to 10·3 lakh tons as against 8·39 lakh tons in 1959 and 11·73 lakh tons in 1958. Arrangements had been made with various countries, including the U.S.A., the U.S.S.R., W. Germany, Japan, the U.K., Poland, Czechoslovakia, Hungary, China, Belgium and Yugoslavia, for the supply of steel during the period 1956–59.

An agreement had been signed with the Soviet Union for the supply of one million tons of steel in the first three years of the Plan period.

The total supply of steel during 1959 was 25·87 lakh tons, including 17·68 lakh tons from indigenous sources.

The supply position in 1959 eased with the first saleable steel—billets and plates—from the public sector plants at Bhilai and Rourkela.

About 200,000 tons of steel were also brought from the U.S.S.R. Arrangements had been made to purchase about 200,000 tons with funds coming from the U.S. Government D.L.F. Loan. Substantial quantities of steel for Railways were purchased by them, again out of funds coming from the U.S. Development loan. A few contracts for the purchase of steel against the export of scrap, iron ore and manganese ore were also concluded.

During the First Plan, exports of steel were mainly restricted to obligations arising from bilateral trade agreements and other inevitable commitments. With the completion of the steel development programmes, Indian steel should be available for export, especially to the whole of South-East Asia. The Second Plan envisaged an export target of 2 lakh to 3 lakh tons of steel in 1960-61.

The total exports of ferrous scrap during 1959 amounted to 266,907 tons, as against 116,615 tons in 1958 and 92,944 tons in 1957. For the first time since 1953, pig iron was exported. Exports of about 258,900 tons were finalised in 1959.

RE-ROLLING MILLS

The steel re-rolling industry in India had its beginnings about the year 1928. The industry began as a salvaging and processing industry, making mostly wire rods and wire products from cast-away rails. It began to grow in the thirties.

During the war years, in conditions of extreme scarcity, the re-rolling industry grew quite rapidly to meet the demand for products which otherwise would have been produced by integrated iron and steel works.

At present (Feb. 1960) there are over 160 re-rolling mills in the country, of which three make distinctly special products, namely tin plates and tubes. Geographically the re-rolling units are well dispersed in almost all parts of the country. Largest concentration, however, is in Calcutta, Punjab, Kanpur and Bombay regions. In the south the mills are too few in number.

The Committee which reported on re-rolling mills (in April 1957) estimated the capacity of all the re-rollers in the country at about 700,000 tons on single shift. To meet this demand, about 700,000 tons of billets, it was said, had to be produced by the steel works in Jamshedpur, Burnpur, Bhilai and Durgapur. With these billets and with the increasing quantities of scrap which would be available, the industry should be able to run two shifts comfortably.

While in the country as a whole, there is an adequate number of re-rolling units, the Committee recommended the establishment of new re-rolling units in certain States where there are no units at present. One new re-rolling unit each has been sanctioned in Assam, Andhra Pradesh, Bihar (north of Ganges) and Kerala.

In addition, some plant and machinery have been licensed by the Iron and Steel Controller to be obtained from abroad or indigenously, mainly for replacement. The additional capacity has been assessed at 104,760 tons per annum.

Re-rollers use steel semis (Billets) and steel re-rollable scrap for rolling steel sections mostly lighter sizes of bars, rods, flats, hoops and strips, etc. The main sources of supply are the Main Producers, Messrs. Tata Iron & Steel Co., Ltd., Indian Iron & Steel Co., Ltd., Hindustan Steel Ltd. (Bhilai and Durgapur). Re-rollable scrap is also available from miscellaneous other sources such as, the Railways, Engineering Concerns, etc. Present availability both of billets and scrap is inadequate and so the full capacity is not being utilised.

The re-rollers at places like Amritsar, Jullundur, etc. situated at considerable distance from the ports had to incur heavy freight charges which inflated their production costs. Relief was given to them from May 1954 through the fixation of a maximum freight charge at Rs. 60 per ton. Similarly in 1955–56 the Government extended the port prices to Jamshedpur and Burnpur to encourage the growth of industries in the vicinity of steel plants.

A seamless tube plant belonging to the Indian Tube Company (1953) Ltd. was formally inaugurated in Jamshedpur in the last week of January 1960. Work on the tube project commenced in 1953 and the first plant, the Fretz-Moon tube mill, came into operation in November 1955. The second plant, the Rs. 2-crore electric resistance weld mill and the ancillary cold rolled strip plant, went into production in April 1957.

The seamless tube plant, which has now been added, represents the third and final phase of the project. The present capacity of the works is about 140,000 tons of steel tubes per year. The Company has also established capacity at Jamshedpur for the manufacture of 30,000 tons per year of cold rolled steel strip for use in tube making and for sale as strip. In addition, a plant has been installed for the fabrication of upto 150,000 tubular steel poles per year.

With the commissioning of the 140,000-ton Jamshedpur tube plant, the total installed capacity of the tube industry now works out at 175,000 tons a year.

The Kalinga Tubes (Cuttack) account for a capacity of 30,000 tons and the Tube Investments in Madras for 5,000 tons.

The great bulk of the total capacity—about 68 per cent—is in Fretz-Moon tubes used for conveyance of gas, water and steam.

The other category of electrically welded precision tubes, used mainly in railway locomotives, bicycles and steam boilers, accounts for another 14 per cent. Seamless tubes make up the balance of 18 per cent, the main applications being high-pressure conveyance of gas, manufacture of transmission poles and lighting columns for water-well casing, besides numerous other industrial applications.

Estimates of large-scale and small-scale units : Generally speaking, the industry is a small to medium scale one. The individual units are, however, of varying sizes and capacities. There has been some increase in the capacities of mills due to improvements effected. The potential capacity of the industry is of the order of 2 million tons per annum.

Production over last three or four years with dates : 1958 : 416,000 tons ; 1959 : 568,000 tons; 1960 : 823,052 tons.

Total investment in the industry is estimated to be of the order of Rs. 25 crores.

It is estimated that about 40,000 persons are employed by the industry in various parts of the country.

A project has, however, been approved for setting up a unit at Rourkela which will produce 100,000 tons of tubes a year in sizes varying from 8″ to 20″ in diameter. Thus, the third Plan will see India manufacturing substantial quantities of tubes in sizes ranging from ½″ to 20″. The foundations of self-sufficiency have thus been laid.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

SUGAR INDUSTRY

THE sugar industry is the second largest industry in India next only to the textile industry. According to the official Census of Manufacture for 1957, the total capital of the industry was Rs. 126·26 crores of which Rs. 46·10 crores were fixed capital and Rs. 80·16 crores were working capital. The annual value of the industry's products for 1959–60 is estimated at Rs. 263 crores.

There were in 1960, 168 units of which 20 were in the co-operative sector.

The labour employed in sugar industry is roughly 1,40,000 skilled and unskilled workers and about 3,600 University educated men. The total earnings of workers are Rs. 13·03 crores. The industry supports 20 million cultivators and their families and contributes about Rs. 68 crores in levies to the national exchequer.

On the basis of an average crushing season of 120 working days and assuming a recovery of 10 per cent sugar, the rated capacity of the existing factories in 1959-60 was 2·10 million tons of sugar per annum. This was expected to rise to 2·28 million tons in 1960–61, the last year of the second Five-Year Plan.

The growth of the industry is attributable to the protection given to it in 1932 which was continued till 1950. The industry has considerable influence on the agricultural economy in so far as it gives sustenance to millions of cultivators spread over most of the States in the country. The economy of U.P. and Bihar is particularly tied with the development of this industry since 65 per cent of the sugar produced is from these two States.

The industry also produces a variety of raw materials for other industries such as power alcohol, paper, paper board, and straw board.

The industry has mainly developed in the private sector.

Recently under the Second Five-Year Plan encouragement has been given to co-operative ventures and licences have been given to 38 co-operative factories.

Of the existing 168 factories which worked in 1959, 20 were co-operatives.

During the last two Five-Year Plans, the Government had issued licences for (a) 55 new units with an annual capacity of 6·4 lakh tons of sugar and (b) expansion of 68 existing units to realise an additional capacity of 4·24 lakh tons of sugar.

By the end of 1960–61 it was expected that 43 new factories would have come into being with an additional production capacity of 5·15 lakh tons and 69 existing factories would have expanded their capacity for an additional production of 3·34 lakh tons.

Twelve of the new units are expected to be installed only during the Third Plan after the plants are manufactured by the consortia of machinery manufacturers.

The Wage Board for Sugar Industry, appointed in 1957, submitted its report to the Government on November 28, 1960. Earlier the Board made an interim report which gave certain benefits to the workers. This had effect from January 1, 1959, and was largely carried out by the industry.

The Government of India announced on February 23, 1961 their acceptance of the recommendations of the Central Wage Board for Sugar Industry subject to certain considerations.

(*a*) *Workload studies :* Government has taken note of the Board's recommendations that workload studies be undertaken in the sugar industry and that such studies should be preceded by reasonably specific programme of implementation drawn up in consultation with the organisations of the interests concerned. Government propose to consider the matter further in consultation with the parties.

(*b*) *Bonus :* Government commends the bonus formula for the north and central regions recommended by the Wage Board. If, however, the parties concerned in any of the States included in these regions agree to adopt any other formula for determination of bonus payable in respect of a particular period, they may be allowed to do so.

PRODUCTION

The details of sugar production are given below :—

Year Ended October	Installed capacity (Lakh Tons)	Sugar output (Lakh Tons)
1952	15·40	14·97
1953	15·40	12·94
1954	15·40	10·01
1955	15·40	15·90
1956	16·60	18·62
1957	17·30	20·29
1958	18·70	19·75
1959	20·00	19·18
1960	21·00	24·18 (approximately)

Production in 1961 is estimated at 26 lakh tons.

The State-wise production in the two seasons 1958-59 and 1959-60 is given below :—

States	Sugarcane crushed (1,000 tons)		Sugar produced (1,000 tons)	
	1958-59	1959-60	1958-59	1959-60
Uttar Pradesh	9,244	12,592	888	1,223
Bihar	3,175	3,500	311	325
Maharashtra and Gujarat	2,799	3,492	320	398
Andhra	1,279	1,394	120	138
Punjab	805	1,101	69	101
Madhya Pradesh	223	290	21	28
Mysore	817	809	85	91
Madras	812	727	74	75
Rajasthan	77	139	7	12
Kerala	133	119	11	10
Orissa	30	30	3	3
West Bengal	70	98	7	10
Assam	23	58	2	4
All India	19,487	24,349	1,918	2,418

The size of factories operating in India varies, the largest group being within 800 to 1,000 tons capacity. About one-third of the factories are of 800 or less and another one-third are of 1,000 tons or more capacity.

The Sugar Industry did remarkably well in 1959-60 by achieving an all-time record production of 24·18 lakh tons. In the previous two seasons the industry could not maintain the upward trend it showed since 1953-54, due mainly to the increasing diversion of cane to khandsaris.

In 1959-60 the Government announced certain incentives and concessions both to the growers and the industry. The growers were given the incentive of higher cane price, as it was raised from Rs. 1·44 to 1·62 per md. for gate deliveries and from Rs. 1·31 to Rs. 1·50 per md. for deliveries at rail centres. To the industry a rebate of 50 per cent in the basic excise duty was granted on all sugar produced in excess of the average production of the previous two seasons. Further, the factories in U.P. and Bihar were given the concession of 31 nP. per md. of cane crushed by them before certain fixed dates.

As a consequence of the increase in cane price, Government decided to raise the ex-factory controlled price from Rs. 36 to Rs. 37·85 per md. in U.P. and North Bihar and from Rs. 36·50 to Rs. 38·35 per md. for the Punjab. The revised prices came into force from 25th October 1959 and applied to all stocks held by sugar factories on that date as also the sugar which was produced after that date. The fixed F.O.R. destination prices in respect of allotments made to Kanpur and Calcutta was Rs. 38·60 and Rs. 39·85 per md. respectively.

The policy of incentives has been continued for 1960-61 also. Besides the increased cane price, the factories have been given the incentive of 50 per cent rebate in excise duty on production achieved in excess of the average of the last two years. Further, the State Governments of U.P. and Bihar have announced a remission in cane cess at the rate of six naye paise per md. of cane crushed in excess of last season's crush provided the factories started their operations for the season on or before 4th November 1960 in the case of West U.P. and on or before 10th November 1960 in the case of East U.P. The Sugar output in 1960-61 is expected to be about 26 lakh tons. Production of white is valued at Rs. 200 crores per year and gur and khandsari account for Rs. 200 crores annually.

CANE PRODUCTION

The principal raw material is sugarcane. Tota cane consumption in 1959–60 was 24·34 million tons for a production of 2·41 million tons of sugar. Cane produces just one-tenth of its weight in sugar. Approximately 30 per cent of cane is consumed by sugar factories. Balance goes to production of gur and khandsari and for chewing and other purposes.

Although over 90 per cent of the cane acreage is now under improved cane varieties evolved by the Coimbatore Institute, the per acre yield and the sucrose content have not improved materially. This accounts for the high cost of sugar.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

The following table gives the details:—

Year	Acre under sugarcane (000 acres)	Total output of sugarcane* (000 Tons)
1951-52	4,792	60,680
1952-53	4,376	52,600
1953-54	3,498	43,673
1954-55	3,994	57,600
1955-56	4,565	59,820
1956-57	5,057	66,998
1957-58	5,080	68,019
1958-59	4,836	70,915
1959-60	5,178	75,038

The first estimate of acreage for 1960-61 is 51,57,000.

Generally the area at the first estimate stage forms roughly 95 per cent of the area under the crop finally reported. The first estimate for 1960–61 shows an increase of 3·71 per cent in acreage over the corresponding adjusted estimate of 4,975,000 acres in 1959–60.

The sugar position during the year 1959–60 was satisfactory. We started with a carry over of 1·74 lakh tons and with the 1959–60 production of 24·18 lakh tons the total availability was 25·92 lakh tons. As against this our consumption was expected to be around 20·50 lakh tons. The carry forward at the end of the year was expected to be more than 5·2 lakh tons.

In 1959–60, the sugarcane crop position was also satisfactory. Larger area was under sugarcane crop and this resulted in a higher output. But the per acre yield has not shown any improvement. It was only 14·49 tons as against the previous season's figure of 14·66 tons. The quality of cane has shown a slight improvement, as the factories could recover 9·89 tons of sugar per 100 tons of cane, as against 9·86 tons during the previous year.

The increase in production of sugarcane in 1959–60 was mainly in Andhra Pradesh, Bihar, Punjab, Mysore and West Bengal. There was some slight decrease in production in Bombay†, Madhya Pradesh, Madras and Rajasthan, while U.P. maintained its last season's production with slight increase.

According to the first estimate for 1960–61, the increase in acreage has been shared by almost all the States and it is particularly marked in U.P. and Punjab.

The draft outline for the Third Five-Year Plan envisages a target of 30 lakh tons of white sugar and six million tons of gur and khandsari to be achieved by 1965–66. It also envisages a target of 92·0 million tons of sugarcane, as against the Second Plan target of 78 million tons and the actual production of about 75 million tons in 1959–60. Intensive development schemes for cane are being stepped up, in order to fulfil the targeted yield.

CONSUMPTION

Consumption of sugar in the country is steadily increasing. It rose from 17·22 lakh tons in 1954–55 to 20·80 lakh tons in 1958–59. However the consumption in 1959–60 is expected to be slightly lower at 20·50 lakh tons due to limited releases of sugar by the Government in the beginning of the season, transport bottlenecks and freer availability of khandsari.

The per capita consumption which was about 6·6 lbs. before the Second World War and about 7 lbs. in 1950–51 has risen to 11·2 lbs. In addition, per capita consumption of gur and khandsari comes to 20·8 lbs. bringing the total per capita consumption of sweetening agents to 32·0 lbs. which is far behind the 60 to 120 lbs. per capita of the industrially developed countries in the West.

EXPORTS

The Government of India have announced an export quota of 50,000 tons of sugar out of 1959–60 production. In 1957–58, India exported more than 150,000 tons and in 1958–59 an export quota of 100,000 tons was announced, but only a small portion less than 20 per cent of the quota was actually exported.

The Government are also exploring the possibilities of exporting a substantial quantity to the United States of America, who pays an appreciable premium over the World sugar prices for sugar purchased by it.

SUGAR MACHINERY

Two consortia of manufacturers, the first consisting of Messrs. Walchandnagar Industries, TEXMACO and Indian Sugar and General Engineering Corporation, and the second consisting of K.C.P. Ltd., Binny & Co., and New India Development Corporation, have been formed to manufacture complete plants in India.

The consortia have been charged with the task of producing 7 complete plants to be delivered in 1960–61. Besides, 2 plants each will be delivered outside the consortia by Messrs. K.C.P. Ltd., Madras and the Walchandnagar Industries, Bombay. Foreign exchange to the tune of Rs. 70 lakhs have been released for equipping the workshops of these firms. The indigenous content of each plant will be 75 per cent. The machinery manufacturers will from 1963 onwards be able to manufacture 12 plants per annum which is expected to make the country self-sufficient.

The production of sugar machinery in the country has been gradually increasing and the value of such machinery was as follows: 1955: Rs. 19 lakhs, 1956: Rs. 32 lakhs, 1957: Rs. 162 lakhs, 1958: Rs. 200 lakhs, 1959: Rs. 320 lakhs, 1960: Rs. 350 lakhs (est.).

It is expected that after 1963, by which time the existing manufacturers are expected to achieve full production, the industry will be in a position to supply every year 12 complete sugar plants of the capacity of 1,000 to 1,250 tons and the equivalent of about nine complete plants by way of expansion and replacement requirements of the sugar industry. This will meet the needs of the country except in regard to turbo-alternators and mill engines.

TARIFF COMMISSION

The Tariff Commission submitted its report on sugar industry during 1959–60 to the Government. The Commission was required to report on (1) cost structure of sugar, (2) fair price of sugar payable to the industry and (3) claims of the sugar industry for rehabilitation charges and profit. It selected 48 factories in the principal manufacturing regions for examination and prepared four separate schedules of cost of production for (1) the Northern Region comprising the States of Uttar Pradesh, Bihar and Punjab, (2) Bombay State,† (3) Madhya Pradesh and (4) Southern Region comprising the States of Andhra Pradesh, Mysore and Madras.

The main recommendation in regard to the cost structure is that from year to year the price for each region should be determined according to duration and recovery with the help of the regional schedules prepared by the Commission, and thereafter a fair price for the industry should be fixed at a level which would cover the fair prices of the four regions. The Commission recommended a gross return to the industry of 12 per cent on capital employed. As regards the industry's claim for rehabilitation charges, the Commission did not agree to include it as an item of cost.

* In terms of the weight of the cane.

† Bilingual.

CO-OPERATIVE SECTOR

The total quantity of sugar produced by co-operative sugar factories during 1957–58, 1958–59 and 1959–60 crushing seasons was 1·50 lakh tons, 1·79 lakh tons and 2·85 lakh tons respectively.

Fifty-two sugar factories had been licensed upto Jan. 1961, of which 24 were in production in Nov. 1960 and seven scheduled to go into production by Feb.–March 1961.

In a co-operative unit the shareholders are the sugarcane growers whose production of cane the co-operative is expected to market after processing it into sugar. The only exceptions to this rule are the shares issued to co-operative societies within the area of operation of a sugar co-operative, and the shares issued to the State Government in question. The State Government's share capital contribution is in the nature of an initial assistance to make up the funds required for setting up the plant and particularly to enable the co-operative to borrow long-term loans for the same purpose from institutions like the Industrial Finance Corporation of India. The participation of the co-operative societies in the area of operation is in the nature of a sympathetic gesture. The shares issued to the State Government are redeemable over a period of time. Thus, essentially, the shareholders of a sugar co-operative are the producers of cane themselves.

To a private sector factory, sugarcane is a raw material which it has to purchase. In a sugar co-operative there is no purchase of sugarcane from members. The co-operative processes the cane. What is left over from the total realisations from its production after meeting all the external costs, is the amount available for distribution among the growers. From the same amount, other items such as contributions to reserves, dividend on share capital and bonus to staff have to be accommodated.

The co-operatives are run by boards of directors. The day to day affairs are conducted by a Managing Director who is a full-time employee and who carries on the business of the society in accordance with the society's bye-laws which lay down the matters in which the Managing Director is competent to act under his own powers and the matters in which he has to take the prior sanction of the board of directors or the executive committee or the other sub-committees, as the case may be.

A National Federation of Sugar Factories was set up in Dec. 1960 to co-ordinate the efforts and to assist in the promotion of sugar factories and to provide technical assistance and guidance to them.

TEA INDUSTRY

TEA ranks as the largest item in India's export trade. It earns every year a foreign exchange of about Rs. 120 crores and a revenue of about Rs. 19 crores from export duty and Rs. 4 crores from excise

During 1959 tea exports were valued at Rs. 126·39 crores forming over 20 per cent of the total value of exports. The actual revenues earned through customs and central excise duties on tea during 1958-59 were Rs. 16 crores and Rs. 5 crores, respectively. The budget estimates for 1959-60 are Rs. 13·50 crores and Rs. 7·65 crores.

The State Governments also derive considerable revenue from the agricultural income-tax on tea grown within their jurisdiction as well as from the sales tax, carriage tax, octroi, etc. on the commodity.

The industry as a whole gives employment to a labour force of almost one million. The daily average number of persons actually employed in 1957 was 997,421.

Unlike China, which consumes all its tea, India exports a substantial portion of tea produced in the country. Out of the total production of 719·68 million lbs. in 1959, as many as 472·48 million lbs. were sold abroad. India meets nearly 40 per cent of the world demand for tea.

The present trend of production indicates that the production during 1960 will be slightly lower than that in 1959.

There are about 8,071 registered gardens with a total area of nearly 810,000 acres under tea. Of these, 598,685 acres are in Assam and West Bengal, while Madras, Mysore and Kerala account for nearly 179,873 acres, and the rest are in Bihar, U.P., Tripura, Punjab and Himachal Pradesh.

There are over 700 joint stock companies engaged in the tea industry. The total paid-up capital in the industry as a whole is about Rs. 74 crores. The number of Indian companies is about 540 with a paid-up capital of about Rs. 25 crores. (Latest available.)

Profits and dividends accruing to non-residents 1958-59: Rs. 5·8 crores. Remittances of profits and dividends 1958-59: Rs. 7·3 crores. (Latest available.)

The production target of 700 million lbs. and the export target of 500 million lbs. for 1960-61 have already been exceeded.

The peak of the boom in tea was reached in 1954, but prices began to decline from 1955 and touched their lowest level in May-June 1955. Thereafter, prices slowly recovered and reached more satisfactory levels, though they never touched the 1954 peak. As a matter of fact, the decline in prices continued by a slow and gradual process, owing to the excess of world total supply of tea over actual requirements. Tea prices during the years 1956, 1957 and 1958 were more or less steady, despite several ups and downs, because of seasonal and other influences operating from time to time. Prices obtained at Calcutta and Cochin auctions during 1959 were generally higher than 1958 except for the quality grades produced in Darjeeling and Assam.

EXPORT

The tea export quota fixed for 1959-60 was 507·50 million lbs., representing 67 per cent of the crop basis for the year.

The tea actually exported in 1958 was 505·96 mln. lbs. valued at about Rs. 136·54 crores. The export during 1959 was 472·48 mln. lbs. valued at Rs. 126·39 crores.

From March 1955, export duty on tea was levied on a slab system according to which the duty was announced at the beginning of every month on the basis of the weighted average prices obtained by Indian teas at the London auctions during the previous month. This system was abolished and the Government decided, in September 1958, that the export duty on tea should be reduced to 26 nP. per lb.

Excise duty on tea is now levied at different rates for different zones. The rates fixed are 2 nP., 4 nP. and 10 nP. per lb. on tea produced in Zones I, II and III respectively. These zones have been demarcated on the basis of the average price which teas from those areas fetch at the internal and export auctions in Calcutta and Cochin. Thus, teas which fetch upto Rs. 1·75 per lb. pay the minimum excise duty at 2 nP. per lb. Those teas which are sold at a price not exceeding Rs. 2 per lb. pay excise duty at 4 nP. per lb. and the rest 10 nP. per lb.

Excise duty is not refunded at the point of export. The excise-cum-export duty structure, therefore, provides a method by which inferior teas produced in certain areas bear an incidence of taxation which is less than that of quality teas. At the same time the excise duty on packaged tea has been fixed at 21 nP. per lb. over and above the duty on loose tea cleared from the gardens. In the case of packaged tea exported, excise duty already paid is refunded.

This system has been in force from 28th September 1958. Prior to the introduction of this scheme, the Government gave interim relief from the 1st June by levying excise duty at 3 nP. per lb. and reducing the export cess on teas to Rs. 2 per 100 lbs. While the reduction in excise duty has been replaced by the differential excise duty now levied, the export cess still continues to be levied at Rs. 2 per 100 lbs.

The Government of India has announced the grant of tax relief to common teas. The relief, which came into effect immediately after the notifications were issued simultaneously with the introduction of a Bill in the Lok Sabha on 27th September 1958, takes the form of a reduction in the maximum rate of export duty from 75 nP. per lb. to 30 nP. the maximum rate of excise duty being 19 nP. for loose tea and 21 nP. *plus* the duty leviable on loose tea for package tea.

The effect of the aforesaid changes on teas exported is indicated below:

Zone	Total incidence	Relief granted as compared with the export duty applicable before
	nP.	nP.
I	28	10
II	30	8
III	36	2

It will be recalled that, on 1st June 1958, the Government of India reduced the cess on export of tea from Rs. 4 per 100 lbs. to Rs. 2 and cut the excise duty on tea not used in the manufacture of packaged tea from 6 nP. to 3 nP. per lb.

As a result of these changes, the revenue yield from tea was expected to be down by Rs. 1·2 crore per annum. The cut in export cess, it was stated, was only a temporary relief, effective till the Government was able to formulate a scheme of giving relief to the tea export trade on a permanent basis.

The anticipated loss in revenue as a result of the changes was estimated at Rs. 1·58 crore in a full year.

With effect from 1st March 1959, Zone III has been broken up into Zone IIIA and Zone III B paying excise duty of 8 nP and 12 nP per lb., respectively. The export duty has also been reduced to 24 nP. The relief actually obtained is as follows:

(In nP. per lb.)

	Total incidence	Relief
Zone IIIA	32	6
Zone IIIB	36	2
Zone I	26	12
Zone II	28	10

The additionall oss as a result of these changes is put at Rs. 35 lakhs in a full year.

An export promotion drive for tea has been launched by the Indian Tea Board through the establishment of Tea Councils and frequent participation in trade exhibitions. At present Tea Councils, set up in collaboration with local tea interests, are functioning in U.S.A., Canada, West Germany, Eire and Netherlands. During 1957-58, the Tea Board participated in as many as eight major international trade exhibitions.

The Tea Board has already opened Tea Promotion Councils at Cairo, Sydney, New York and London and has appointed Tea Advisers there. There is also a proposal to open two similar units at Frankfurt and Baghdad.

In August 1957, the Chairman of the Indian Tea Board paid visits to Cairo, Khartoum, Nairobi and Kericho to explore new markets for Indian tea in the countries of the Middle-East.

To ensure quality control over exported tea, the Government of India promulgated the Tea (Distribution and Export) Control Order vesting the Tea Board with powers to take appropriate action in such cases. The provisions of the Order have been brought into force with effect from the 1st of April, 1958.

The following table shows the growth of the industry from 1946 to 1959:—

Year	Area under tea in thousands of acres (*a*)	Production in millions of lb. (*b*)
1946	842	592

TEXTILE INDUSTRY

THE cotton textile industry, which is the largest single industry in the country, has made rapid strides during its existence of a century. India holds the third place among the countries of the world in its capacity for yarn and cloth based on mechanical equipment and stands second on the basis of cotton consumption.

In addition to providing means of livelihood for nearly 10 million handloom weavers, the mill industry provides direct employment to nearly 900,000 workers.

The total number of mills in the country in July 1960 was 483, the number of spindles installed 13·54 million, of looms 200,272. The monthly average number of workers, including *badlis*, on list in cotton mills during the January-July 1960 period was 892,108 and cotton consumption was at an annual rate of 5·09 million bales of 400 lbs. each.

The capital invested is estimated at Rs. 127 crores, and the annual value of the output amounts to Rs. 400 crores.

The various fiscal measures adopted by the Government and the constitution of an export promotion council are expected to assist the industry in stepping up exports. A scheme of voluntary inspection of cloth meant for export has also been instituted.

SECOND FIVE-YEAR PLAN

By the end of 1960-61, the *per capita* consumption of cloth in the country was expected to reach 18·5 yards, in addition to the export target of 1,000 million yards a year. This would involve a production of 8,400 million yards. But the production of all the three sectors was then about 6,700 million yards a year. Therefore, the country would require an additional quantity of 1,700 million yards of cloth.

This quantity was allocated thus: 700 million yards for handloom industry from mill yarn; 300 million yards for handloom industry from Ambar Charkha yarn; 200 million yards for powerlooms to be introduced in the handloom sector; 350 million yards for mill sector for export purposes, leaving a balance of 150 million yards.

THIRD FIVE-YEAR PLAN

The draft Third Five-Year Plan estimates the production of mill cloth at 5,000 million yards of Handloom cloth, 2,205 million yards of Khadi and 405 million yards of Powerloom cloth in 1960-61. The targets for 1965-66 proposed are 9,300 million yards of which 5,800 million yards will be mill cloth, 2,800, million yards handloom cloth and 700 million yds. cloth produced by khadi and powerlooms. The tentative

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

allocations in the Third Plan are: Handlooms and Powerlooms in the handloom sector Rs. 36 crores (as against 32·1 in the II Plan); Khadi, Ambar Khadi and Village Industries Rs. 89 crores (as against 80·5 in the II Plan).

For Handloom industry a production target of 2,800 million yards has been suggested by 1965-66 and for this purpose it is proposed to bring into active use about 200,000 looms which are at present idle, to raise production efficiency through technological improvements including gradual installation of semi-automatic looms and to strengthen the structure of co-operatives. As regards powerlooms in the handloom sector, it is proposed to concentrate on the installation of 13,000 powerlooms already approved during the II Plans.

Automatic Looms

The quantity of 850 million yards for export and allotted to the mill sector was required to be produced through the installation of 18,000 automatic looms.

Certain conditions were laid for the allocation.

It was laid down that all the cloth produced on these looms would be earmarked for export and the allocation of looms was being made on a guarantee being given by the mills that in addition to 50 per cent of their past exports all the cloth produced on these looms would be exported and that any cloth sold internally therefrom would be subject to penal excise duty as given below:

Certain features of the allocation are:

1. Normal number of looms allottable for a single unit will be minimum 48 and maximum 144; in exceptional cases 300 looms might be allowed with the agreement of the unions. 2. Reed space formula currently applicable for replacement of plain looms by plain looms will also be applicable for replacement by automatic looms; and 3. Allotment of these looms will be governed by the principles contained in the recommendations of the 15th session of the Indian Labour Conference in regard to modernisation and rationalisation.

In the selection of units a prime consideration will be the extent to which the Code of Discipline had been observed.

The proposal of the Government was that 2,500 looms should be installed annually during 1959, 1960 and 1961 in replacement of ordinary looms.

At the moment there are only 14,000 automatic looms out of a total of about 200,000.

The following table gives details about the distribution of mills in India as in December 1960.

State	No. of Mills in existence	Spindles installed	Looms installed	Average No. of workers employed daily in all shifts	Consumption of raw cotton (In bales of 400 lbs. gross = 392 lbs. nett.)
Andhra Pradesh	12	204,040	1,228	12,997	9,701
Bihar	2	33,584	803	1,158	415
Gujarat	99	2,920,044	56,320	192,210	84,017
(a) Ahmedabad City ..	64	2,083,904	41,569	140,781	60,980
(b) Rest of Gujarat ..	35	836,140	14,751	51,429	23,037
Kerala	11	208,268	1,397	8,798	4,770

PRODUCTION

The actual production of yarn and cloth by the mills sector is as follows:—

Year	Yarn in 000 lbs.	Cloth in 000 yards.				
		Coarse	Medium	Fine	Superfine	Total
1953	1,510,000	599,000	3,136,000	839,000	304,000	4,878,000
1954	1,565,000	989,110	3,565,000	461,280	350,100	5,011,000
1955	1,637,000	592,510	3,747,850	458,270	300,120	5,098,000
1956	1,671,204	719,000	3,796,156	444,033	347,295	5,306,584
1957	1,780,096	1,143,712	3,402,908	383,176	267,720	5,317,416
1958	1,685,380	969,960	3,395,808	303,062	258,135	4,926,965
1959	1,722,806	892,047	3,500,408	241,949	291,025	4,925,429
1960	1,737,123	704,564	3,813,226	229,025	301,531	5,048,346

* Bilingual.

The total production of cotton cloth by all the sectors in India during 1960 was over 7,183 million yards.

Of this the mill sector accounted for 4,925 million yards, powerlooms 351 million yards, and handlooms 1,907 million yards. The output of traditional Khadi was 41·17 million yards and Ambar Khadi 10·91 million yards.

The exports of cotton textiles produced by the mills, including the powerloom sector, in 1957 were higher than the exports in 1955 and 1956 but lower than those in 1954. The figure for 1957 was 844·92 million yards as against 744·23 million yards exported in 1956 and 815·49 million yards in 1955.

There was a decline in the exports of handloom cloth in 1958 when compared with the exports in the previous five years, the actual figure being approximately 35 million yards. In 1959 also it stood at 35 million yards.

In the production of mill-made cloth, Bombay* leads other States. Bombay* accounted for about 3,285 million yards in 1959 out of the total output of 4,925 million yards.

The production figures for the other States in the first six months of 1960 are as follows:

Madhya Pradesh 210 million yards, Uttar Pradesh 186 million yards, West Bengal 135 million yards, Delhi 66 million yards, Madras 81 million yards, Mysore 37 million yards, Punjab 31 million yards, Rajasthan 22 million yards, Orissa 19 million yards, Pondicherry 23 million yards, Andhra Pradesh 17 million yards, Kerala 8 million yards and Bihar 2 million yards.

The total production of mill-made cloth during the first ten months of 1960 was 4,177 million yards. The production during the corresponding period in 1959 was 4,100 million yards.

During 1959 the cotton consumption by mills was 50·96 lakh bales of which Indian cotton accounted for 46·39 lakh bales and foreign cotton for 4·57 lakh bales. By the end of October 1960, mill consumption of Indian cotton was 34·43 lakh bales against 38·47 lakh bales during the corresponding period in 1959.

The estimated production of yarn during the year 1960 was about 1,713 million lbs. of which 550 million lbs. was consumed by the handloom, powerloom and hosiery and other units.

The production of yarn and cloth by the mills during December 1960 was provisionally estimated at 159 million lbs. and 447 million yards respectively. The stock of cloth with the mills at the end of December 1960 stood at 4·11 lakh bales made up of 2·06 lakh bales of unsold cloth and 2·05 lakh bales sold but lying with the mills pending clearance by the buyers. The stocks as at the end of 1959 were 273,700 bales.

The cotton textile mills' production in February, 1961 is provisionally placed at 144 million lbs. of cotton yarn and 403 million yards of cotton cloth.

At the end of February, 1961, the composite mills of the cotton textile industry held an estimated stock of 3·06 lakh bales of unsold cloth and 1·58 lakh bales of coth sold but not lifted.

A target of 78 lakh bales of cotton production under the 3rd Five Year Plan was recommended by the Cotton Forecast Sub-Committee of the Indian Central Cotton Committee.

TEXTILE ENQUIRY COMMITTEE

The Report of the Committee was unanimous. It was signed on 15th July 1958 and submitted to the Government thereafter.

The composition of the Committee, the report as well as Government reaction are summarized in the 1959-60 edition of the Directory.

N.I.D.C.'s WORKING GROUP FOR THE COTTON TEXTILE INDUSTRY

Several important proposals of the National Industrial Development Corporation's Working Group for the cotton textile industry, including

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

including the one calling for a "minimum level of modernisation of the industry," have been accepted by the Government, according to a resolution presented to Parliament on March 29, 1961.

The other proposals accepted by the Government include the establishment of five new units for the production of quality cloth for export, the setting up of a suitable machinery to help resolve problems of rationalisation and compulsory scrapping of units where "rehabilitation is not worth-while."

Headed by the Textile Commissioner, Mr. D. S. Joshi, the Working Group, set up in August, 1959, by the N.I.D.C., comprised Mr. K. Thakersey, Mr. G. D. Somani, Mr. K. Sreenivasan, Mr. S. R. Vasavada, Mr. Ram Ratan Gupta, Mr. Trilokinath Sharma, Mr. N. Majumdar and Mr. K. R. Aravamuthan.

The cost of modernisation and rehabilitation of the textile industry in India is estimated to be about Rs. 180 crores according to the Working Group.

CENTRAL WAGE BOARD

The Central Wage Board for the cotton textile industry was set up in 1957 to evolve a wage structure based on the principles of fair wages as enunciated in the Fair Wages Committee Report.

The Board consisted of: *Chairman:* Feroze Jeejeebhoy; *Members:* Asoka Mehta, Prof. Mathur, Bharat Ram, Arvind Mafatlal, G. D. Ambekar, S. R. Vasavada.

Some of the main recommendations of the Wage Board are as follows:—

Certain desirable minium standards in workloads should be achieved throughout the industry.

No claim for further revision of minimum wages should be made by either employers or workers for 5 years from 1960.

The process of rationalisation should continue to progress everywhere in the industry; but there should be no retrenchment or loss of earnings of the existing employees as a result of rationalisation.

An increase at the average rate of Rs. 8 per month per worker shall be given to all workers in mills in Category I (*i.e.*, Bombay City and Island, Ahmedabad, Baroda, Billimora, Navsari, Nadiad, Surat, Phagwara, Hissar, Delhi, Modinagar, Calcutta, Bangalore and the whole of Madras State) and Rs. 6 to workers in mills in Category II (*i.e.*, other centres not mentioned in Category I) from 1st January 1960; a further flat increase of Rs. 2 per month shall be given to them from 1st January 1962.

The dearness allowance should be linked to the cost of living index in every centre or that in the nearest centre. 75 per cent of the average monthly dearness allowance of textile workers during January-June 1959, should be merged with basic wages and the rest of the 25 per cent should be paid as dearness allowance to neutralise fluctuations in the cost of living.

The scales of pay and the amount of dearness allowance of Junior and Semi-Clerks have also been revised.

The Central and State Governments should take steps to maintain correct cost of living indices of the several centres.

Financial burdens on the industry as a result of the Wage Board's recommendations may be summarised as under:—

The increase in the wages by Rs. 8 per worker covers two-thirds of the total cotton textile labour force, the remaining one-third receiving Rs. 6 per month, with a provision for a further flat rise of Rs. 2 per month from 1st January 1962. Taking into account the consequent increase in the employers' contribution to the workers' provident fund, health insurance, gratuity etc., which on an average amounts to about 22·5 per cent. of the total emoluments of workers, the actual increase with immediate effect will be Rs. 9·80 per worker per month in Category I area and Rs. 7·35 in Category II area. These amounts will grow to Rs. 12·25 and Rs. 9·80 respectively from 1st January 1962. Thus increases in emoluments of workers, clerks and other employees will add to the total annual wage bill about Rs. 9 crores immediately and Rs. 11·25 crores two years hence.

The recomendations have been implemented in 75 per cent units (March 1961).

COTTON

The statistical position of cotton in the Indian Union is summed up in the following table:—

(In lakhs of bales)*

	1956-57	1957-58	1958-59	1959-60
Opening Stock	21·56	20·10	21·1	20·1
Production	49·70	51·50	51·4	38·0
Imports	6·07	4·29	4·1	9·4
Total Supply	77·33	75·89	76·6	67·5
Mill Consumption	52·55	50·10	50·7	51·0
Exports	3·01	2·92	4·0	2·0
Extra Factory Consumption ..	3·20	3·31	2·9	0·5
Total Distribution ..	58·76	56·33	57·6	53·5

* Trade Estimate.

According to the information furnished by the trade, the total cotton supply, available in the 1959-60 season was estimated at 67·5 lakh bales, of which 56·5 lakh bales were Indian cotton, including 18·5 lakh bales of carryover with both the trade and the mills on August 31, 1959. The total mill consumption was estimated at 51·1 lakh bales (44·2 lakh bales of indigenous cotton and 6·9 lakh bales of foreign varieties). Exports amounted to 2 lakh bales and the extra factory consumption half lakh bales, thereby allowing a carryover for the 1960-61 season at 13·4 lakh bales.

The production of long, medium and short staple cotton was in the ratio of 34%, 49% and 17% (1958-59).

The latest trade estimates of the production of cotton in 1959-60 is 44 lakh bales.

The import of cotton for 1960-61 is fixed at 9·5 lakh bales.

The Government of India fixed the floor and ceiling prices of Indian cotton during the 1959-60 season. Both the floor and ceiling prices for Jarilla with stapling 25/32" are Rs. 820 per candy and those for Vijay with stapling 26/32" Rs. 945 per candy.

The Government of India have decided to allow for import the following further quantities of raw cotton: 55,000 bales of 13/16" and above and 140,000 bales of 1 1/16" and above. The Cottons may be imported from any country. Half of this quantity would be earmarked for allotment under the Export Incentive Scheme.

As regards export of raw cotton, it was expected that the entire quantity of five lakh bales of raw cotton released for export during the season beginning from September 1958, would be exported.

HANDLOOM CLOTH

(*See under "Cottage Industries"*).

AMBAR CHARKHA

(*See under "Cottage Industries"*).

IMPORTS AND EXPORTS

The following table gives the sea-borne export trend of all cloth:—

Year	Twist and Yarn		Cloth	
	Million lb.	Rs. in crores	Million yd.	Rs. in crores
1954-55	1·2	0·3	819·0	63·15
1955-56	23·1	4·21	740·0	56·60
1956 (April to Dec.)	6·92	1·50	557·08	42·71
1957 (Jan. to Dec.)	16·55	3·10	839·0	59·00
1958 (Do.)	31·61	5·80	581·0	40·00
1959 (Do.)	24·32	4·37	850·8	59·00
1960 (Jan. to Oct.)	11·40	2·86	55·00	43·00

Export of cotton piece goods to West Asian countries during the first eight months of 1959 amounted to 63·1 million yds. as against 58·9 million yds. during the same period in 1958. Exports during the year 1959 are estimated to be of the order of 750 million yds. which are about 170 million yds. more than during 1958. It is estimated that exports may easily be in the neighbourhood of 1,000 million yds. in 1960.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

EXCISE DUTIES

The Cotton mills were heavily burdened with the accumulations of large stocks of cloth during 1957.

As a result of representations made to the Govt. of India, reduction in excise duty was first made in December 1957 and secondly on March 18, 1958. (*For details see* 1960-61 *Directory.*)

Export of cotton yarn by mills was allowed freely for the licensing period July to December, 1958. The export policy for yarn had also been announced on a long term basis, *i.e.* till 1961.

The excise duty on piecegoods underwent further changes early in July 1958 when the Government of India announced, in pursuance of the recommendations made by the Textile Enquiry Committee modifications in the levy with a view to helping the mills to overcome the crisis facing it due to accumulation of heavy stock.

For the revised rates of excise duty per square yard (excluding the additional excise duty and the handloom cess) which were enforced with effect from July 1958. (*See* 1960-61 *Directory.*)

The stocks of cloth with the textile mills in the country at the end of October 1959 were 334,300 bales as against 601,800 bales in October 1958. The unsold stocks of yarn in October 1959 were 27,000 bales as against 63,900 bales in January 1959. The fall in production in 1958 was largely due to a shift in production from coarse varieties to medium and finer varieties of cloth. This shift in production had been necessitated by the consumers' preference for finer varieties.

As on 30th June 1959, 39 mills had gone out of production: Andhra 1, Bihar 1, Bombay† 15, Madhya Pradesh 1, Madras 5, Orissa 2, Mysore 3, Rajasthan 4, U.P. 5, West Bengal 1, and Delhi 1. Three mills which had remained closed at the beginning of 1959 reopened later. Eight mills closed down during the first six months.

At the time of presenting the Budget for 1961-62, the Minister for Finance announced some changes in the existing rate of excise duty as under:

(1) Excise duty payable on Medium 'A' Grey Cloth (Higher Medium) has been increased from 7·2 nP. per square meter to 9 nP. per sq. meter, an increase of 25 per cent. Apart from this, surcharges on processed fabrics of all the categories have been increased by 66 per cent in the following manner:

Category.	*Existing Duty.* (nP. per sq. meter)	*Enhanced Duty.*
Bleached and not otherwise processed ..	0·6	1·0
Shrink proofed or/and organdie processed	3·6	6·0
Other than bleached, shrink proofed or/and organdie processed, but dyed, printed, mercerised or/and otherwise chemically processed	1·8	3·0

(2) The Government have further imposed higher rates of excise duty on grey cloth produced on automatic looms. The following table shows the comparative rates of excise duty for grey cloth produced on automatic looms as against ordinary looms:

Category.	*Ordinary Looms.* (nP. per sq. meter)	*Automatic Looms.*
Superfine Grey ..	29·3	36·6
Fine Grey	22·1	27·6
Medium A Grey ..	9·0	11·2
Medium B Grey ..	6·0	7·5
Coarse Grey	4·8	6·0

Excise Duty on Yarn

It was first proposed to levy excise duty at 10 nP. per K.gm. on cotton yarn produced by mills of counts below 35s and at 15 nP per K.gm. on cotton yarn of 35s and over. The duty was to be applicable irrespective of whether the yarn is consumed in mills or sold to the market. However, yarn of 11s to 40s sold in hanks is exempt from the excise duty.

On these proposals representations were made to Government and finally, Government agreed that duty on yarn produced and consumed by mills be compounded into duty on cloth at the uniform rate of 1·2 nP. per sq. meter for all categories. Exported cloth will be exempt from this duty.

Regarding duty on cloth produced on automatic looms, the Government have made the following modifications: (1) Exemption for first 70 per cent of the production on automatic looms from the extra surcharge of 25 per cent. (2) The extra surcharge of 25 per cent collected on the remaining 30 per cent of production will be allowed for a draw-back to the extent of cloth made from automatic looms.

Export Promotion Council: The Council opened its first office in Baghdad in February 1956 and then other offices in Singapore, Lagos, Rangoon, Aden and Mombasa. Besides, it has taken part in many exhibitions—Industrial Exhibitions in New Delhi, the Leipzig Fair, the Pakistan Trade Fair and the Milan Samples Fair. It has undertaken the publication of a handbook known as *The Indian Textile Industry.* The Council has also brought out an overseas edition of its fortnightly *Bulletin.*

FIVE-YEAR PLANS

The following table summarises the programme of development of the whole industry as approved by the Planning Commission for the Five-Year Plans:—

	Unit	1952-53	1955-56	1960-61
Rated Capacity of Mill industry				
Spindles	No.	11,175,283	12,051,209	13,621,209
Yarn	m. lb.	1,704·2	1,840	2,080
Looms	No.	195,849	202,901	220,901*
Cloth	m. yd.	4,778·7	4,950	5,444
Actual Output—				
Yarn	m. lb.	1,510	1,630	1,650
Mill Cloth	m. yd.	4,600	5,094	5,444
Handloom Cloth	,,	1,300	1,753	3,000 to 3,500
Exports—				
Yarn	m. lb.	—	—	—
Cloth	m. yd.	1,000	873	1,000
Cotton Needed—	m. bales	4.5	4.9	6.1

*Including 18,000 automatic looms. †Bilingual.

TOBACCO INDUSTRY

INDIA is the third major producer of tobacco in the world, the other two being U.S.A. and China. Tobacco is also an important item in India's foreign trade.

The area under tobacco in 1959-60 was 934,000 acres and the production was 629 million lbs.

The more important tobacco growing States in India are Andhra Pradesh, Mysore, Madras, W. Bengal, U.P., Bihar, Gujarat and Maharashtra. Andhra Pradesh produces 260 mln. lbs. of tobacco, Gujarat 103 mln., Mysore 56 mln. and Madras 49 mln.

The tobacco plants are mainly of two varieties —nicotiana rustica and nicotiana tabacum. The first has a higher nicotine content and is mainly used in hookah. The second has a smaller nicotine content and is used in the manufacture of cigarettes, cigars, cheroots and bidis and in the preparation of chewing and snuff tobaccos.

There are six main tobacco producing areas in India—the Guntur area in Andhra Pradesh, the Charotar area in Gujarat, the Nipani area in Mysore and Maharashtra, the southern Madras area, north Bihar and Bengal area and Uttar Pradesh and Punjab area.

The Guntur area comprises the districts of Guntur, Krishna, East and West Godavari, and the adjoining portions of Telangana. The variety grown is nicotiana tabacum.

The Charotar in Gujarat covers Anand, Borsad, Petlad and Nadiad talukas of the Kaira District. Here also the chief variety is nicotiana tabacum.

The Nipani area is made up chiefly of the District of Belgaum in Mysore State and certain areas in Satara and Sangli and Kolhapur district

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

in Maharashtra State. Here both the varieties are grown though nicotiana tabacum predominates.

In Madras State the chief tobacco growing districts are Coimbatore and Madurai.

The north Bihar area covers the districts of Purnea, Muzzafarpur and Darbhanga, and in the north Bengal area the districts of Cooch Behar, Jalpaiguri, Malda, Berhampore and Dinajpur. Here both the varieties are grown.

Uttar Pradesh comprises the districts of Farukhabad, Etah and Sitapur and the Punjab area comprises the districts of Jullundur and Ferozepur. Both the varieties are grown in these areas.

The development of tobacco cultivation, marketing and research are looked after by the Indian Central Tobacco Committee with headquarters in Madras. The Committee has a tobacco research institute at Rajahmundry (Andhra Pradesh), cigar and cheroot tobacco research station at Vedasandur (via) Dindigul (Madras), hookah and chewing tobacco research station at Pusa (Bihar), wrapper and hookah tobacco research station at Dinhata (West Bengal) and a cigarette tobacco research sub-station at Guntur (Andhra Pradesh).

Another station for cigarette tobacco was started in February 1957 at Hunsur in Mysore State where soil and climate are different from those of the Guntur area where production of flue cured Virginia cigarette tobacco is mainly concentrated.

There are 15 cigarette manufacturers.

Export of tobacco is allowed freely without any restrictions.

Tobacco brings to the cultivators an annual income of Rs. 50 crores and contributes over Rs. 50 crores annually by way of excise duty to the national exchequer. It earns a foreign exchange of Rs. 15 crores.

PRODUCTION OF TOBACCO (UNMANUFACTURED)

(Thousand Pounds.)

State	1957-58	1958-59	1959-60
Andhra ..	232,960	244,160	259,840

Netherlands	5,235,427	37,38,243	3,245,462	21,05,232	4,332,924	28,21,385
Belgium	4,097,445	30,22,270	3,636,315	25,65,221	3,884,864	31,21,211

PRODUCTION OF CIGARETTES

	1957	1958	1959
Cigarettes (in Crore pieces)	2,889	2,984	3,214

The figures given in the tables are subject to revision. 3,200 crores cigarettes were produced in 1959-60.

VEGETABLE OIL INDUSTRY

INDIA is one of the most important producers of oilseeds in the world and is consequently a large producer of vegetable oils as well as an exporter of oils and oilseeds.

The following figures show the average production of different varieties of oilseeds in recent years along with their share in world production :—

—	Average Indian Production (lakh tons)	As percentage of world Production
Groundnut	43·90	34
Castor seed	1·08	15
Linseed	4·25	13
Sesamum	3·92	34
Rape and mustard ..	10·37	12

The following table gives the actual production —in thousand tons—of oilseeds during the seasons 1958-59 and 1959-60 :—

	1958-59	1959-60
Groundnut ..	4,812	4,390
Castor seed ..	112	108
Linseed	447	425
Sesamum ..	511	392
Rape and mustard	1,025	1,037
Total	6,907	6,352

The actual production of oil from the five major oilseeds has been estimated as follows :

('000 Tons).

	Groundnut	Castor	Sesamum	Rape and Mustard	Linseed	Total
1955-56 ..	878	39	143	242	123	1,440
1956-57 ..	954	39	138	293	123	1,547
1957-58 ..	1,007	28	111	264	79	1,489
1958-59 ..	1,092	36	160	293	142	1,723
1959-60 ..	996	35	133	296	135	1,595

In March 1956, there were 2,097 oil mills registered under the Factories Act. The total crushing capacity of the mills in the country is estimated at 56 lakh tons per annum in terms of oilseeds.

It is also estimated that there are about four lakh village *ghanis* in the country with an annual crushing capacity of about seven lakh tons of oilseeds. Thus the total crushing capacity is estimated at 63 lakh tons in terms of oilseeds.

The total output of oilseeds in recent years is estimated at 65 to 70 lakh tons.

The capital invested in the organised industry is estimated at Rs. 24·4 crores and the number of workers at 43,580. The most important oilseeds consumed in large quantities for the production of oils are groundnut, linseed, rape and mustard, castor seed and sesamum seed. Small quantities of cottonseed and mohwa seed are also crushed.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

The draft outline of the Third Plan envisages a target for oilseeds output in 1965-66 of 9·3 million tons as against the Second Plan target of 7·5 million tons and the actual output of 6·3 million tons in 1959-60.

IMPORTS AND EXPORTS

The following table shows the total imports and exports of oil and of some varieties:

(In cwts.).

—	1959	April-Sept. 1960
Imports (Total) ..	613,372	373,316
Coconut Oil ..	54,863	Nil
Linseed	Nil	Nil
Other Sorts ..	558,509	373,316
Exports (Total) ..	2,117,835	1,005,151
Groundnut Oil ..	880,990‡	72,486‡
Linseed Oil ..	405,179§	122,378§
Castor Oil ..	703,122	740,804

On the basis of the minimum *per capita* consumption of fats in this country, the total consumption of fats of the entire population would work out at 7 million tons, as against the present estimated consumption of 1·2 million tons.

In 1954-55, about 1·14 million tons of vegetable oils (including coconut oil) and about 255,000 tons of vanaspati were estimated to have been consumed for edible purposes in the country. This means a *per capita* consumption of 8·2 lb. (6·7 lb. of edible oils and 1·5 lb. of vanaspati). It was said to have gone up during the Second Plan. Assuming the higher consumption at 8·8 lb. the total requirements of vegetable oils and vanaspati for 400 million people had touched about 1·62 million tons by 1960-61.

The consumption of vegetable oils in industries has considerably risen since the last war. The development of soap, paints and varnish industries has stimulated the consumption of non-edible oils. Castor oil consumption as a lubricant has also registered considerable expansion. During the decade following the outbreak of the war, consumption of vegetable oils by the soap industry has doubled from 30,000 tons to 63,000 tons, and that of paints and varnish industry and lubricant has risen from 15,000 tons each to 30,000 tons and 25,000 tons respectively. By 1960-61, the total requirements of vegetable oils for all the industrial and miscellaneous purposes were estimated at 278,000 tons. Thus internal consumption requirements were of the order of only 1·9 million tons.

Pine Oil: The first pine oil factory in the country has been started at Hoshiarpur in the Punjab. It produces pine oil, dipentine and pine tar. The factory was inaugurated by the Union Industries Minister on July 16, 1960. This will save a foreign exchange of Rs. 30 to 40 lakhs.

COTTONSEED

Special efforts are being made to develop the cotton seed oil industry on modern lines. There were eight units equipped with delinting and de-hulling machines in 1955. Six more units were licensed during 1956, thereby bringing the total capacity for cotton seed oil crushing to 277,100 tons of seed. The number of units working in 1959 was 9. The installed capacity, in terms of seeds; during 1959 was 94,600 tons. The production in 1959 was 12,000 tons as against 9,452 tons in 1958, the production figure being in terms of extracted oil. Among the steps taken to increase the consumption of cotton seed oil by vanaspati factories is a reduction of excise duty. Export of cotton seed oil as well as decorticated cotton seed oil cake was licensed freely. The policy of not licensing new mills or expansion of existing oil mills has been continued.

In regard to solvent extraction of oilcakes, the Government had given licences by the end of March 1956, to install plants with a capacity of 340,000 tons of oilcakes, which together with the capacity established before the industry came under statutory control, made a total of 400,000 tons per year.

Production of oil by solvent extraction of oilcakes during 1958 aggregated 15,680 tons, as against 11,131 tons in 1957, and 5,765 tons in 1956. In 1959, the actual production was higher at 20,800 tons. The rise in output was due to the commencement of operations by three more units. Thirty-two licences had been issued up to the end of 1956 under the Industries Act for the establishment of solvent extraction plants. The number of units working in 1958 was 15 and 20 in 1959 with an installed capacity of 301,500 tons oil cakes per annum. Considerable foreign exchange is already being earned by this industry by export of deoiled meal to U.K. and other countries.

The development programme for the vegetable oil industry in the Third Plan is indicated in the following table:

('000 Tons)

	1950-51 Production	1955-56 Production	1960-61 Estimated Capacity	1960-61 Estimated Production	Targets for 1965-66 Capacity	Targets for 1965-66 Production
Vegetable oils:						
a) Solvent extraction of oil cakes	—	—	936 (Cake)	36 (Oil)	2,000 (Cake)	160 (Oil)
b) Cotton seed oil ..	—	—	415 (Seed)	37 (Oil)	850 (Seed)	100 (Oil)

VANASPATI

The Vanaspati Industry though a minor branch of the Vegetable Oil Industry is one of the most highly organised and efficient industries. Its history is interesting. It started on a small scale in 1930.

In April 1951, there were 48 vanaspati factories in India with an annual rated capacity of about 333,000 tons. In March 1956, their number had increased to 51 with a rated capacity of about 412,100 tons. In 1959, there were 58 factories with an annual production capacity of about 534,000 tons. Out of these, one is the Government Hydrogenation Factory at Kozhikode having an installed capacity of 3,000 tons per annum. Besides, there are seven factories with an annual rated capacity of 33,000 tons. It is the Government's policy not to permit any further expansion of the industry as the present capacity is adequate to meet all the requirements of 4 lakh tons. The aggregate installed capacity of the industry in 1959 was 446,220 tons as against 438,720 tons in 1958 and 443,724 tons in 1957. It was still higher at 460,548 tons in August 1960. The actual output of Vanaspati during 1959 amounted to 316,788 tons as against 293,781 tons in 1958, 301,356 tons in 1957, and 255,612 tons in 1956. During the first seven months of 1960, 209,803 tons were produced.

The consumption of vanaspati in India has increased at an average rate of about 20,000 tons per annum during the First Plan period. It was assumed that the consumption would rise at the rate of 25,000 tons per annum during the Second Plan. On this basis, the internal consumption might be estimated at about 380,000 tons in 1960-61.

In 1959-60 the internal consumption was estimated at 355,000 tons.

The following table summarises the progress of the industry:

(Tons)

Year	Production	Consumption	Exports
1954–55 ..	225,000	216,000	9,370
1955–56 ..	270,000	255,000	15,000
1956 ..	255,612	280,000	11,150
1957 ..	301,356	305,000	N.A.
1958 ..	295,152	330,000	2,687
1959 ..	316,788	316,300	2,700
1960 .. (estimated)	336,600	330,100	6,500

N. A.—Not available.

The gap between the installed capacity and actual production has continued to remain wide as will be seen from the following table:—

Year	Installed Capacity Tons	Production Tons
1954	368,232	225,000
1955	380,232	260,784
1956	412,020	255,612
1957	443,724	301,356
1958	438,720	295,152
1959	446,220	316,788
1960 Jan-Aug.	460,548	209,803

The net capital invested in the industry is about Rs. 22 crores. Besides 10,000 workers directly employed, the industry provides indirect employment for nearly 60,000 workers.

Edible oils constitute the chief raw material of the industry.

The table below summarises the programme of development in the Second and Third Plan:

(Tons)

	1955–56	1960–61	1960-61 Estimated	1965-66 Target
Installed Capacity	445,000	445,000	434,000	550,000
Production	270,000	400,000	350,000	500,000
Internal Consumption	255,000	375,000 to 380,000	—	—
Exports	15,000	20,000 to 25,000	—	—

A total of Rs. 30 lakhs may be available for vegetable oil research during the Third Plan.

‡ Includes hydrogenated oil.

§ Includes oxidised oil.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

WOOLLEN INDUSTRY

THE woollen industry is more or less scattered all over the country but the major concentrations are in Maharashtra and the Punjab.

The total capital investment in the industry is reckoned at about Rs. 20 crores.

The organized sector of the industry employs about 17,500 workers.

The raw material used is wool tops (imported), shoddy wool (all of which is imported), wool waste, rags etc. (imported and indigenous) and raw wool (imported and Indian). In addition the industry uses some quantities of man-made fibres. The installed capacity of the woollen industry as in April 1961 is 53,554 woollen spindles, 19,107 shoddy spindles, 1,29,364 worsted spindles and 4,042 power looms.

In order to meet the wool top requirements of worsted spinning units, 5 wool top manufacturing factories, with a total capacity of 16 million lbs. per year, have been licensed. Of these, the installed capacity is at present 4 million lbs. per year.

The estimates of the consumption of raw material are as follows:

(*In Million Lbs.*)

Raw Material	1957	1958	1959	1960
Indigenous Wool	7·09	6·82	7·89	7·07
Imported Wool	3·80	2·94	2·70	4·92
Imported Tops	14·74	14·56	12·35	13·10
Reclaimed Wool & Waste ..	4·50	4·46	4·22	4·68

There are at present 162 organised woollen units in India, of which 32 are purely spinning units, 104 purely weaving units and 26 composite. Of these about 60 are large scale units and the rest are small scale units.

The region-wise distribution of these units during 1959 was as follows:

State	No. of Units	Woollen & Shoddy spindles.	Worsted spindles.	Looms.
Bombay*	14	15,731	59,890	616
Delhi ..	1	—	864	—
Mysore ..	3	10,478	—	225
Punjab ..	106	23,765	53,974	1,562
U.P. ..	5	14,725	9,672	281
West Bengal	4	1,732	6,079	141
Kashmir	1	1,542	1,500	44
M.P. ..	1	876	—	20
Total	135	68,849	1,31,979	2,889

The production is as follows:

	1958	1959	1960
Woollen/worsted yarn (Million Lbs.)			
Capacity	40·40	67·00	67·00
Production ..	29·10	29·73	27·80
Woollen/worsted fabrics (Million Yds.)			
Capacity	48·00	48·00	48·00
Production ..	19·09	17·77	15·27

The import and export figures are as follows:

(*Value in Million Rs.*)

	1958-1959	1959-1960	1960-1961 (April-Dec. 1960)
IMPORT			
Wool	103·58	83·25	70·63
Woollen Mfrs., including yarn ..	4·79	4·05	1·99
Total	108·37	87·30	72·62
EXPORT			
Raw Wool	87·35	111·04	57·64
Woollen Mfrs.	54·88	59·59	42·30
Total	142·23	170·63	99·94

The Government of India have approved a scheme of Messrs. Duncan Bros., Calcutta for the establishment of Wool Tops Combing Plant in collaboration with Messrs. Isaac Holden & Sons Ltd., Bradford for a productive capacity of 10 million lbs., per annum. The unit was likely to go into production by the end of 1960.

The Tariff Commission has been asked to report on the price structure of all types of woollen yarns and fabrics. The Woollen Textiles (Production and Distribution Control) Order, 1960, empowering the Textile Commissioner to regulate the production of all types of woollen yarn, and to fix the prices of all types of such yarn and woollen fabrics manufactured therefrom had been promulgated during 1960. A panel for the development of carpets and druggets has been constituted to examine the various problems of the carpet industry and also to suggest measures to be taken for the development of the industry during the Third Plan period.

HOSIERY INDUSTRY

There are about 950 hosiery units in the country of which nearly 800 units are situated in Ludhiana. It is estimated that about 10,000 machines of different types are installed in this sector. The capital investment in the sector is estimated at about Rs. 3 crores. A large number of the machines employed are hand operated and locally fabricated. Industry caters practically to the whole of the domestic market.

The quantity of yarn consumed by the hosiery industry in the country is estimated at about 5 million lbs.

In 1958-59, woollen and worsted piecegoods worth more than Rs. 54 lakhs were exported. Woollen hosiery worth about Rs. 1 crore is estimated to be exported every year to the West Asian countries mostly through post parcels. Carpets and floor rugs exported were valued at Rs. 4·5 crores in 1958-59. The main destinations were U.K., U.S.A., Canada and Australia.

FIVE-YEAR PLANS

For increasing wool production in the country and for improving the quality of wool, four sheep breeding farms and two wool testing laboratories were established during the Second Five Year Plan for carrying out wool development programme in rural areas. 222 sheep and wool expansion centres were organised in ten States.

The estimated population of 40 million sheep produces about 70 million pounds of wool annually.

The yield of wool varies from three-fourths of a pound to four pounds per sheep per year. The present average yield per sheep in India is estimated at 1·7 pounds per annum. Annually more than 50 per cent of the clip, valued at Rs. 120 million, is exported. The mill industry concerned with the manufacture of superior cloth has to depend on the import of raw or semi-processed wool to the extent of 15 million pounds estimated to cost not less than Rs. 104 to Rs. 110 million in foreign exchange. If the quality of indigenous wool is improved, India can gradually decrease the import of wool.

Under the Second Five-Year Plan the output of woollen and worsted fabrics by the organised mill sector was expected to be stepped up from the present level of about 19 million yards to about 20 million yards by 1960-61. The yarn requirements of all the sectors will be 12 million lb. of woollen yarn and 15 million lb. of worsted yarn per annum.

The development programme for the woollen textile industry, mill sector, in the Second Five-Year Plan is indicated below:

	1955-56	1960-61
Spindleage and Loomage		
Woollen sector—spindles	61,032	62,768
Worsted sector— ,,	96,416	1,23,416
Powerlooms ..	3,950	4,051
Annual rated capacity on double shift		
Woollen Yarn (million lb.)	17	17·5
Worsted Yarn (million lb.)	21	28
Woollen and Worsted fabrics (million yd.)	48	50
Production		
Woollen tops (million lb.) ..		9
Woollen yarn (million lb.)	10·6	12
Worsted yarn (million lb.)	11·0	15
Woollen & Worsted fabrics (million yd.)	14·9	20

The woollen industry would not be permitted to install any additional spindles and looms during the Third Plan period, if the programme of development tentatively drawn up by the Planning Commission were finally accepted and implemented. This programme is in accordance with the recommendation made by the Development Council for Woollen textiles. The Council is of the view that the present installed capacity of the industry is more than sufficient to produce the entire requirements of woollen worsted yarn and cloth, inclusive of export demand. The weaving sector of the industry, according to it, is working, on an average, a little over 1½ shifts and the spinning sector only about one shift. The existing installed capacity of the industry (calculated on the basis of two shifts and 300 working days) is estimated at 67 million lbs. of woollen worsted yarn and 48 million yards of cloth, whereas the anticipated demand in the last years of the Third Plan is put at 45 million lbs. and 30 million yards, respectively. The production targets for the Third Plan are 52 million lbs. of yarn and 35 million yards of cloth. The productive capacity of wool tops has been fixed substantially higher, at 31·5 million lbs. for the Third Plan.

During the Third Plan six new sheep breeding farms and 4,000 new extension centres are proposed to be established, the sheep population covered by each centre varying from 10,000 to 15,000. It is envisaged that 300 wool grading and marketing centres to be run by co-operatives of producers should be set up during the Third Plan. Facilities for shearing, grading, baling and storing of wool will be provided at these centres.

The employment potential in this industry is expected to increase by about 5,000 persons during the Third Five-Year Plan.

The consumption of electric power during 1960-61 in this industry was approximately 13,000 H.P. This is likely to go up to about 20,000 H.P. by the end of the Third Five-Year Plan.

* Bilingual.

MINES AND MINERALS

By courtesy of Mineral Economics Division (Intelligence Section), Indian Bureau of Mines, Government of India.

ALLOTMENT under the First Five-Year Plan (mineral development): Rs. 1·06 crores.

Allotment under the Second Five-Year Plan: Rs. 73 crores. Investment in IIIrd Plan: Rs. 75 crores.

Some major facts are given below:

The total value of the mineral production in India in 1959 was Rs. 1,399 million as against Rs. 1,376 million in 1958. These values of mineral production are excluding the value of petroleum and minerals specified as prescribed substances under the Atomic Energy Act, 1948.

Second Plan targets: Bauxite 1,75,000 tons; Coal 60·00 million tons; Gypsum 19,70,000 tons; Iron ore 12·50 million tons; Limestone 23·30 million tons; Manganese ore 2·00 million tons.

The total value of minerals produced during the first half of 1960 is estimated at Rs. 776 million as against Rs. 700 million in the corresponding period of 1959 according to the latest bulletin issued by the Indian Bureau of Mines.

Coal, with an output of 26·06 million metric tons, recorded an increase of 1·9 mln. metric tons and was valued at Rs. 533 million which is about 69 per cent of the total value of mineral production.

There are at present 16 collieries and one coke plant owned and managed by the Government of India. The production of coal in the public sector was 6·8 mln. tons in 1959 as against 5·9 mln. tons in the previous year.

Next in order of value were manganese ore Rs. 48 million, salt Rs. 44 million, iron ore Rs. 40 million, gold Rs. 28 million, limestone Rs. 26 million, mica Rs. 11 million, copper ore Rs. 10 million and ilmenite Rs. 8 million.

By the end of the Second Plan the country would have three additional steel plants, one additional aluminium plant, six additional ferro-manganese plants and thirty-six additional cement factories.

The foreign exchange earned from minerals in 1959 was Rs. 49 crores.

The country spent foreign exchange to the tune of Rs. 1,332 million for buying minerals and metals from abroad in 1959 as against Rs. 1,408 million in 1958.

The export of metals during 1959 was valued at Rs. 73 million as against Rs. 29·3 million in 1958.

The mineral wealth of India, as at present known, though by no means inexhaustible, comprises an adequate range of useful products necessary for industrial development.

The reserves are ample in respect of minerals essential for basic industries—coal and iron—but the country is deficient in a fairly long list of vital minerals like ores of copper, tin, lead, zinc, nickel, cobalt and in sulphur and petroleum. Adequate reserves of an alternative source (pyrite deposits) of sulphur have been proved at Amjor, Bihar. It has changed the entire position of sulphur resources in the country.

Coal, iron ore, manganese ore, ilmenite, kyanite and mica are produced in quantities of real importance to industry and other sections of economy.

Of these mica, manganese ore, kyanite and ilmenite are wholly or largely exported.

The position with regard to aluminium ore, refractories, abrasives, limestone, etc., may be considered as fairly adequate while in respect of titanium and thorium ores and of mica, the country has considerable reserves.

MINERAL NEEDS OF INDUSTRIES

Mineral	Estimated annual consumption (1959)	Estimated requirements in 1960-61
Coal (metric tons)	46·4	60
Limestone (metric tons)	10·6	23
Gypsum ('000 tons)	935	1·97
Iron ore (")	4,750	10,500
Manganese ore (")	204	500
Bauxite (")	92	175
Ilmenite (")	3	3
Sulphur (")	137	210
Rock phosphate(")	164	400
Petroleum crude(m. tons)	N.A.	N.A.
Pyrites (")	..	Not estimated

POLICY

As part of the national policy to ensure efficient working of known mineral deposits, the Mines and Minerals (Regulation and Development) Act, 1948 was passed which came into force on 25th October, 1949.

By Section 5 of this Act the Central Government was empowered to make rules for regulating the grants of mining leases or for refusing grants of such leases in respect of any mineral or in any area if such areas are to be kept reserved by the State Government/Central Government for exploitation in the public sector.

By Section 6 of the same Act, the Central Government is empowered to make rules for conservation and development of minerals and by Section 7 to make rules for the modification or alteration of the terms and conditions of the leases granted prior to the commencement of this Act, so as to bring the terms and conditions of leases granted in accordance with the rules made under Sections 5 and 6.

Section 4 of the Act provides that any prospecting licence or mining lease granted after the commencement of that Act otherwise than in accordance with those rules, shall be void and shall have no effect.

The Central Government have so far issued three sets of rules: The Mineral Concession Rules, 1949, under section 5, The Petroleum Concession Rules, 1949, under section 6 and the Mining Leases (Modification of Terms) Rules, 1956 under section 7.

Regulation and development of oil fields and mineral oil resources and regulation of mines and mineral development were dealt with under the Mines and Minerals (Regulation and Development) Act, 1948 (53 of 1948). After the passing of the Mines and Minerals (Regulation and Development) Act, 1957, which came into force from 1st June 1958, and which exclusively deals with minerals other than Petroleum and Natural Gas, the 1948 Act deals exclusively with Petroleum and Natural Gas.

The Petroleum Concession Rules, 1949, have been superseded and repealed by the Petroleum and Natural Gas Rules, 1959, which came into force on November 25, 1959, in order to give more encouragement and facilities to the foreigners who are willing to invest their capital in the development of oil fields and mineral oil resources of the country.

In exercise of the powers conferred by section 18 of the Mines and Minerals (Regulation and Development) Act, 1957 and in supersession of the Minerals Conservation and Development Rules, 1955, the Central Government made the Mineral Conservation and Development Rules, 1958, under which submissions of quarterly returns have been discontinued and mine owners are now required to submit monthly and annual returns. Provisions have also been made for training facilities for students of mining engineering and geology.

In Oct. 1957 the Government of India decided that private parties were in future to be granted mining leases for minerals listed in Schedule A of the Industrial Policy Resolution of 1956, which is normally reserved for the public sector.

The minerals included in the Schedule 'A' of the Resolution are coal and lignite, mineral oils, iron ore, manganese ore, chrome ore, gypsum, sulphur, gold, diamond, copper, lead, zinc, tin, molybdenum and wolfram.

Government of India has also framed rules for atomic energy minerals and other minerals used for the production or use of atomic energy or for research. This Act is known as The Atomic Energy Act, 1948.

The Government departments concerned are the National Mineral Development Corporation (Pt.) Ltd., which is responsible for the exploitation of minerals in the public sector, the Geological Survey which prepares base maps, the Indian Bureau of Mines which advises Government on policy, undertakes research and inspection and collects data, and the Atomic Energy Commission which conducts research and sees to the development of atomic minerals and substances.

The Central Government have declared the following substances and all their respective components as prescribed substances for atomic use:—Uranium minerals, thorium minerals, beryllium minerals, vanadium minerals, lithium minerals, radium, zirconium, graphite, deuterium, plutonium, neptunium and minerals containing the above metals and accessories, ingredients, such as uraniferous allanite, triplite, columbite and tantalite.

The Coal Board under the Ministry of Steel, Mines and Fuel looks after the mining and development of collieries in the public sector and the distribution of coal to various consumers.

For the import and export of important minerals like iron ore, manganese, etc., there is now a State Trading Corporation under the Ministry of Commerce and Industry.

PRODUCTION, EXPORTS—IMPORTS

The total value of the mineral production in 1959 was of the order of Rs. 1,399 million against Rs. 1,373 million in 1958.

The total exports of mineral from India during 1959 fetched foreign exchange worth Rs. 470 million as compared with Rs. 460 million in 1958.

The exports of metals in 1959 were valued at Rs. 73 million as against Rs. 29·3 million in 1958. There were larger exports of iron, pig iron and steel metals, brass, bronze and zinc.

The value of the imports of minerals during 1959 was Rs. 102 million as against Rs. 80 million in 1958.

The increase of 27 per cent in the value of imports was mainly due to the larger imports of sulphur, flourspar, apatite, asbestos and abrasives.

The total value of metals imported during 1959 was Rs. 1,230 million as against Rs. 1,328 million in 1958.

The import of ferrous metals registered a marked decrease during the year.

The total value of imports (minerals, metals and alloys) in 1959 amounted to Rs. 1,332 million as against Rs. 1,408 million in 1958.

Department of Mines

The Department of Mines was formed in 1902 to administer the Mines Act, to hold enquiries

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

into mine accidents and into cases of explosions, inundations, fires, collapses, breakdowns etc. in mines of all types, from stone to coal and gold, etc.

The Department publishes a monthly Coal Bulletin, an annual Indian Coal Statistics and an Annual Report about the working of all mines in India.

Employment

The actual break-up of the persons employed in mines is given below :—

	1958	1959
Coal	382,172	383,761
Manganese Ore	86,857	59,935
Iron Ore	43,171	41,465
Mica	33,548	32,489
Gold	16,839	16,634
Others	86,773	83,733
Total employment in mines	649,360	618,017

This is exclusive of people employed in connected industries, which figure is estimated around two lakhs.

COAL

The most important coal fields are Raniganj in West Bengal and Jharia and Bokaro in Bihar. The West Bengal and Bihar fields contribute about 90 per cent of the total output. The best coking coal comes from Giridih, Jharia and Raniganj. Other States in which coal is found are Madhya Pradesh, Orissa, Andhra, Madras, Maharashtra, Assam, Rajasthan and Kashmir.

The existence of two new workable seams in the Jarangih colliery area, east of Bokaro, with a reserve of 0·33 million ton and Chirimiri coal field in Madhya Pradesh, have been proved by the Indian Bureau of Mines.

There are about 838 coal mines working in India.

Indian coal falls mainly into two classes namely, high grade steam and low grade steam.

The Metallurgical Coal Conservation Committee placed the reserves of coking coal at 329.6 million tons in respect of selected grade, 395.7 million tons of grade I quality and 49.1 million tons of grade II quality. With stowing, washing and blending the Committee thought that a reserve of 2,000 million tons of good quality coking coal could be obtained. The Geological Survey of India estimated the reserves of Gondwana coal and Tertiary coal at 38,116 and 4,533 million tons respectively.

The following table gives the details of output :—

Year	Production (million tons)
1950	32·31
1951	34·43
1952	36·30
1953	35·98
1954	36·88
	(in metric tonnes)
1955	38·84
1956	39·91
1957	44·20
1958	46·07
1959	47·82

Under the Mines and Minerals (Regulation & Development) Act, 1958, the period of lease to coal mines has been extended to 30 years with the option of one renewal for the same period.

Mechanisation in the industry is at an early stage of development. In 1959, on an average, there were 510 coal cutting machines in about 167 mines which produced 23 per cent of the total output. Also, there were 5 mechanical loaders and about 73 mechanical conveyors in operation.

Out of the 22 million tons of additional coal to be raised during the Second Plan 12 million tons will be raised in the public sector and 10 million tons in the private sector. The Plan target is 60 millions.

The existing State collieries are administered by the National Coal Development Corporation (Private) Ltd. located in Ranchi. This will also look after the collieries which will be established during the period of the Plan.

The control of coal, exercised under the colliery control order regarding distribution, price, etc., and the general control over private industry has been entrusted to a separate authority, the Coal Controller.

The approximate quantity of coal consumed by some of the principal consumers in India during 1959 was in million tonnes: Railways 15·08; iron and steel plants 6·01; electric supply companies 4·17; cement factories 2·28; brick burning 1·91; cotton mills 1·70; chemical factories 1·05; paper mills 0·66; jute mills 0·28; Indian bunkers 0·15.

The target for coal production by 1960-61 has been fixed at 60 million tons. At the same time the question of conserving metallurgical coal and washing of coal up to grade 4 has been given high priority during the Second Five Year Plan. There are already three washeries in the private sector at the Jamadoba, West Bokaro and Lodna collieries which supply washed coal to the Tata Iron and Steel Company and the Indian Iron and Steel Company, and one in the public sector at Kargali, which will supply the Rourkela and Bhilai steel plants.

The present production of these washeries is not adequate to meet their expanded needs. It is estimated that by the end of 1960-61 the steel industry in India would require about 9 million tons of washed coal per year.

Three more coal washeries located at Dugda and Patherdih in Bihar and Bhogirdih in West Bengal, are being set up under the public sector, each having a capacity of 500 tons per ton.

The washery at Dugda will supply generally Bhilai and Rourkela, the one at Patherdih the I.I.S. Co and the third at Bhorudih the T.I.S. Co.

In contract for the steel plant at Durgapur, is a washery to treat Jharia coals to meet the requirements of that steel plant.

Because of the paucity of coal deposits in south India, high priority has been given to the development of the multi-purpose 'South Arcot Lignite Project' at Neyveli. This plant will be producing 380,000 tons per annum of carbonised briquettes. (See under 'Government Industrial Undertakings'.)

IRON ORE

On account of the high ash of Indian metallurgical coke, it is usual in estimating the Indian iron ore reserves to accept only ores with an iron content of 60 per cent and above. Ores below this iron content are used only in very small quantities in Indian blast furnaces.

India possesses about one-fourth of the total world reserves of iron ore and is the biggest single country possessing such a large quantity of iron ore deposits as 21,000 million tons, though her output constitutes only 2 per cent of the total world production, compared to U.S.A. 43 per cent and U.S.S.R. 18 per cent.

The production of iron ore in 1959 was 7·9 mln. tonnes as against 6·13 mln. tonnes in 1958. The production from January to Nov. 1960 was 10·66 mln. tonnes, 33 per cent higher than output of the year before. Production during Jan.-April 1961 was 3,838,000 tonnes, 8 per cent higher than in Jan.-April 1960.

The quantity of the ore exported in 1960 was 2·4 million tonnes as compared to 2·02 million tonnes in 1959.

The whole export of the iron ore has been canalised through the State Trading Corporation from 1st July, 1957.

The foreign exchange earned through the export of iron ore during 1958 and 1959 was Rs. 99·9 million and Rs. 129·5 million respectively.

The principal buyers of the Indian ore are Japan, Czechoslovakia, Yugoslavia, Italy and West Germany in that order of importance.

Japan took 1·61 million tons in 1959 and Czechoslovakia 4·8 lakh tons.

During 1957 seven major steel companies of Japan entered into contract with the State Trading Corporation of India for the import of 7·2 million tons of iron ore over a period of 5 years. Smaller contracts were also made with the buying organisations in Czechoslovakia and Poland.

An agreement has been signed between India and Japan—March 8, 1960—whereby four million tons of iron ore will be supplied every year from Bailadila iron ore project in the Bastar District of M.P. The agreement will be valid for fifteen years.

DISTRIBUTION

The region-wise reserves proved and indicated in the country are shown below in million tons:

HÆMATITE ORES (in million tons)

Bihar and Orissa : Singhbhum 1,047; Keonjhar 988; Bonai 648; Mayurbhanj 60; total 2,743. *Madhya Pradesh :* Dhalli-Rajhara 114; Bailadila 610; Rowghat 740; Jabalpur 100; total 1,564. *Maharashtra :* Ratnagiri 5; Goa 15; Chanda 22; total 42. *Andhra :* 41; *Kashmir :* 5; *Mysore :* 904; *Rajasthan :* 5; *Punjab :* 2; *U.P.:* 10.

Total (Hæmatite ores) .. 5,316 million tons.

The total possible reserves of hæmatite ores are 17,630 million tons.

MAGNETITE ORES (in million tons)

The reserves proved and indicated in million tons are: *Madras :* Salem-Tiruchirapalli 305; *Mysore :* 215; *Bihar and Orissa :* 5; *Himachal Pradesh :* 60; *Andhra :* 20.

Total (Magnetite ores).. 605 million tons.

The total possible reserves of magnetite ores are 1,610 million tons.

LIMONITIC AND SPATHIC ORES (in million tons)

The reserves proved and indicated of limonitic and spathic ores are : *Bengal :* 500 million tons; and the possible reserves 2,000 million tons.

A coal bearing region 13 sq. miles in Bankura, Dist. (W. Bengal) has been discovered with reserves of 11 million tons.

The grand total of all ores proved and indicated is 6,421 million tons and the possible reserves 21,240 million tons.

Large deposits of high grade ores are limited to a few areas of which the following fields require special mention :—

(i) *Singhbhum and Orissa :* In what is known as the Singhbhum Iron Belt, consisting of the Singhbhum District, in which the Tata Iron & Steel Company's Steel Works are situated, and the neighbouring areas, there exist some of the richest iron ore deposits in the world. The iron content of the ore considered usable varies from 60 per cent to 65 per cent.

The new Durgapur steel plant will meet all its requirement from the iron ores occurring in the neighbouring regions. The Bonai ore range which is the extension of the main iron ore range will feed the Rourkela steel plant. The Indian Bureau of Mines has worked in this area for proving iron ore deposits for the Rourkela steel plant. Reserves of 114 mln. tons have been proved in Kiribura area by I.B.M.

Two mines namely Barsua and Kiribura are being developed, the former for meeting the iron ore requirements of Rourkela steel plant and the latter for export of nearly 2 million tons per annum to Japan.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

(*ii*) *Mysore:* There are big deposits of hæmatite and quartz—magnetite ore in Mysore but the latter are of low-grade and would require concentration before using them. The ores used in the Bhadravati Iron Works are from the Bababudan Hills and can be compared to Singhbhum ores containing about 60 per cent iron.

Limonite deposits are also known to exist but they have not been properly explored owing to transport difficulties.

(*iii*) *Madras:* Very large deposits, mainly magnetite, occur in Salem. They have been estimated at 305 million tons. They will, however, require concentration before use, and there may be considerable losses in the process.

(*iv*) *Madhya Pradesh:* Large deposits of hæmatite are found in the Bastar, Drug and Jabalpur districts of this State. Dhalli-Rajhara, Rowghat and Bailadila ranges in the Drug and Bastar districts are the major deposits in Madhya Pradesh. These three ranges are the main sources of iron ore for the Bhilai steel plant.

The exploratory work for blocking the iron ore deposits at Jharandalli in Rajhara Pahar, from where the Bhilai steel plant will draw its supplies was done by the Indian Bureau of Mines. In addition to iron ore, the Indian Bureau of Mines has also done operations in respect of limestone at Bhanpuri, dolomite at Bhanpuri, dolomite at Batapara and manganese ore at Balaghat area, in Madhya Pradesh for the requirements of the Bhilai steel plant.

(*v*) *Other Areas:* In Andhra the Bailadila range is reported to have hæmatite deposits which are inaccessible and far away from coal fields.

The only source of high-phosphorus ore is in Bengal. It is poor in iron content being 35 per cent to 45 per cent and the more easily available ore in this locality has been exploited.

The deposits in the Ceded Districts in Andhra are estimated to be not less than 300 million tons.

The contribution of Mysore to iron ore production ranges between 40,000 and 60,000 tons, and the rest comes practically from Bihar and Orissa.

Production

The following is the trend of production:

Year	Qty. in '000 metric tonnes.	Value Rs. lakhs.
1955	4,752	3,23
1956	4,976	3,99
1957	5,166	4,34
1958	6,129	4,85
1959	7,981	5,74

There has been a growing export trade in iron-ore as indicated below:

Year	Qty. in '000 tons.	Value in Rs. '000.
1952	668	2,99,08
1953	1,094	5,01,75
1954	1,056	4,62,75
1955	1,287	5,61,64
1956	1,982	10,20,00
1957	2,216	11,76,04
1958	1,900*	9,99,41
1959	2,510*	12,93,07

* In '000 metric tons.

The present yearly production of iron ore is around eight million tons and the target for the Second Five-Year Plan was 12·5 million tons. Of these, 10·3 million tons are expected to be consumed in the country, and 2·2 million tons would be available for export.

MANGANESE ORE

India is rich in manganese ore. Extensive deposits occur in Madhya Pradesh, Orissa, Andhra, Maharashtra, Mysore, Bihar, and Rajasthan.

The total reserves of manganese ore in the country are now estimated at over 100 million tons of which 15 million tons are of high grade. It is estimated that the deposits in the main belt of Nagpur and Bhandara in Maharashtra and Balaghat and Chhindwara in Madhya Pradesh alone contain reserves of the order of 80 million tons upto a depth of 500 ft. A major part of the output is exported at present.

The following is the trend of output and exports (000 tons).

Year	Production	Exports
1954	1,413	1,092
1955	1,584	1,232
1956	1,687	1,458
1957	1,602	1,706
1958	1,253 metric tons	976 metric tons
1959	1,187	986
1960 (Jan. to June) ..	624	506

To conserve good quality ore, export has been controlled since 1948. At present the export of high grade manganese ore is allowed to the extent of two million tons including 12,000 tons of battery grade. There is no quota restriction on the export of low grade. To conserve high grade ore Government is encouraging the setting up of beneficiation plant to improve low grade manganese ore and promote export. A heavy media separation plant for beneficiating low grade ore was set up by the Central Province Manganese Ore Co. Ltd. at Dongri Buzurg in Bhandara District in 1954. A similar plant is being set up at Garividhi in Andhra.

In the private sector six ferro-manganese plants located respectively at Joda and Rayagada in Orissa, Garividhi in Andhra, Dandeli in Mysore and Tumsar and Kamptee in Maharashtra have gone into production.

The Government is also encouraging the setting up of new units for the manufacture of ferro-manganese for which a production target of 160,000 tons during the Second Five-Year Plan had been proposed. Lately the Government of India has decided to double the production capacity.

Out of this, 60,000 tons will be required for internal consumption and the rest will be available for export.

The prices again showed a declining trend from the beginning of 1957. This continued during 1958 and stabilised by the end of 1959.

This is mainly due to a recession in the steel industry particularly in U.S.A. which is India's principal buyer, the supply of Brazilian manganese ore and the re-entry of Russia into the world market. The prices of 48 per cent and 38 per cent manganese ore were quoted at Rs. 175 and Rs. 60 in June 1958 as against Rs. 240 and Rs. 198 in June 1957. It is now quoted at Rs. 160 and Rs. 70 per ton (Oct. 1960).

MICA

Mica has been treated as a strategic mineral and India accounts for a big slice of the world trade in it.

The principal mica deposits are concentrated in Bihar, Rajasthan and Andhra.

In Bihar the mica belt is 96·5 to 129 kilometers long and about 19·3 to 26 kilometers wide and produces "ruby" mica which is in great demand all over the world.

At present Rajasthan is responsible for about 25 per cent of the Indian production. Most of the production from Rajasthan is sent to Bihar to be split and marketed.

The mica belt in the Nellore district in Andhra is about 65 kilometers long and 10 to 20 kilometers wide. The greater portion of the Andhra output is of "green" variety.

The statistics of mica production were not reliable till 1955. It was only after the promulgation of the Mineral Conservation and Development Rules that the Bureau of Mines was able to get correct figures.

The production and export figures of Mica are given below:—

Year	Production (metric tons)	Export (metric tons)
1957	30,943	22,376
1958	31,942	19,735
1959	28,846	23,376

CHROMITE

Chromite is an important strategic mineral of which India has moderate supplies.

The chief deposits are in the Singhbhum district of Bihar, the Mysore and Hassan districts of the Mysore State, the Ratnagiri and Sawantwadi areas of Maharashtra, the Krishna district of Andhra, the Salem district of Madras and the Keonjhar district of Orissa.

The estimated reserves of chromite ore are as follows (tons):

Bihar 20,500; Maharashtra 67,000; Madras 220,000; Mysore 765,000; Orissa 2,443,000.

The following table gives details regarding production and export of chromite ore:—

'000 tons

Year	Output	Exports
1953	65	15
1954	45	23
1955	89	48
1956	53	42
1957	79	41
1958	64*	49*
1959	85*	82*

* In '000 metric tons.

Export of chromite which was unrestricted till 1948 was brought under control and a ceiling of 10,000 tons was prescribed. In September 1955 the restriction on exports was removed.

MAGNESITE

Large deposits of magnesite used in the manufacture of magnesium salts, metallic magnesium and refractory bricks are known to occur in Salem (Madras), Hassan, Coorg and Mysore (Mysore), Almora (U.P.), Idar (Gujarat), Dungarpur (Rajasthan) and Singhbhum (Bihar).

Of these, the chief producing centres are Salem, Hassan and Mysore.

The deposits in Madras and Mysore States are known to contain 100 million tons upto a depth of 100 ft. Large deposits of magnesite have been discovered near Almora in U.P. The Indian Bureau of Mines has conducted exploratory work on magnesite deposits at Almora. Reserves of 3·3 million tons of magnesite have been proved and indicated by the department.

About a half of the output is used in the manufacture of refractory bricks for steel works and a considerable quantity is exported.

The output and export of magnesite from 1953 to 1959 are given below:—

Year	Output (Tons)	Exports (Cwts.)
1953	92,748	850,658
1954	70,507	507,236
1955	57,509	492,745
1956	91,711	690,920
1957	88,885	428,858
1958	104,236*	19,899*
1959	157,967*	27,988*

* Metric tons.

The total all-India production of magnesite during January to June 1960 was 71,316 metric tons valued at Rs. 1,166,000.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

GYPSUM

Gypsum deposits are known to exist in several parts of India. The better known gypsum bearing regions are in Rajasthan (Jodhpur, Bikaner, Nagaur and Jaisalmer) and in Madras (Tiruchirapalli district).

The total reserves are estimated at 469 million tons including the recent discovery of huge deposits of 305 million tons of gypsum in Rajasthan by the Geological Survey of India. Thus Rajasthan accounts for more than 90 per cent of the Indian reserves.

Smaller deposits also occur in Tehri-Garhwal, Himachal Pradesh and parts of western India; but these have not been explored.

The annual production from Indian deposits from 1952 is given below:—

Year	Output ('000 Tons)
1952..	411
1953..	586
1954..	612
1955..	700*
1956..	867*
1957..	936*
1958..	794*
1959..	860*

* In '000 metric tons.

The entire output is consumed in the country for the manufacture of fertilisers, cement and plaster of Paris. The cement industry consumes 3 to 4 lbs. of gypsum for one ton of cement produced. The annual requirements of the Sindri fertiliser factory is about 600,000 tons of gypsum.

Recently the Sindri Unit of Fertilisers Corporation Ltd. has carried out assessments of gypsum deposits in Rajasthan. According to them about 120 million tons of gypsum of all grades upto 30 ft. are available in Rajasthan, out of which it is indicated 25 million tons are of fertiliser grade containing 85 per cent or above $CaSo_4$.

The Planning Commission had estimated that by the end of 1960-61 the country would require 1·97 million tons of gypsum. The figure is based on the capacity envisaged for industries which use this mineral. There was a proposal to set up two additional plants similar to Sindri during the Second Five-Year Plan. One of them was to be located near Bhakra-Nangal.

The present consumption of gypsum by Sindri Fertilisers and Chemicals Ltd. is of the order of 5·3 lakh tons per year and this quantity will increase by 1·5 lakh tons after they have completed their expansion programme of production.

LEAD-ZINC ORE

In India 139,000 metric tons of lead-zinc ores were produced during Jan. to Nov. 1960 as against 147,000 metric tons during the same period in 1959.

The recovery of lead and zinc concentrates was also substantially higher being 6,488 metric tons and 9,978 metric tons respectively as compared to 5,341 and 7,391 metric tons in the year 1958.

The entire production was reported from the Zawar mines in Udaipur district of Rajasthan State.

The production of refined lead during 1959 was 3,958 metric tons as against 3,387 metric tons in 1958, representing an increase of nearly 17 per cent.

The recovery of lead and zinc concentrates amounted to 5,128 metric tons and 8,270 metric tons, respectively during Jan. to Oct. 1960 as compared to 5,256 and 8,014 metric tons in the corresponding period in 1959.

The Production of lead metal during Jan. to Oct. 1960 was 2,961 metric tons as compared to 3,313 metric tons in the same period in 1959.

SULPHUR

Native sulphur in deposits of large size is unknown in India though some occurrences have come to light in the hill ranges in the north of India.

There are occurrences in Puga and Kashmir but they are situated in a difficult terrain.

The mineral pyrites are another source of sulphur. It is found in Amjor (Bihar), Ingaldhal (Mysore), Taradevi (Simla), Lashtial (Kashmir), Polur (Madras), and Kaiga, Karwar (Mysore) of which Amjor and Ingaldhal deposits are of economic importance.

The Indian Bureau of Mines have proved 384 million metric tons of pyrites in area covering 48 sq. miles at Amjor assaying 40 to 44 per cent sulphur. Plans are afoot to recover sulphur from these pyrites by means of orkha process during the 3rd Five Year Plan. The Pyrites and Chemical Development Corporation has been set up under the aegis of NMDC to work and extract sulphur and sulphuric acid from the deposit.

A preliminary assessment has been made of the economics of a process developed by a Norwegian firm for producing sulphur from pyrites. An expert from the Norwegian firm has visited the sites of the deposits in the country to work out a detailed report on the mining of the ores and broad estimates for the project.

The annual consumption of sulphur in the country at present is estimated to be over 1·1 lakh tons to 1·29 lakh tons, the whole of which is met by imports.

As there is no production of sulphur in India, the country's requirements are met from imports, for which the recent figures are given below:—

Year	Quantity (cwts.)
1954-55	1,519,485
1955-56	1,695,411
1956-57	1,999,142
1958	108,801*
1959	136,946*

About two million tons of pyrites assaying 20-30 per cent sulphur have been estimated to be available at Ingaldhal, Mysore State.

Substantial quantities of pyrites are associated with the gold deposits of Wynad in the Nilgiris District of Madras.

Copper pyrites deposits are also a source of sulphur. Some of the Indian coal *e.g.* Assam coal and Rewa coal are high in sulphur. It has been estimated that one ton of sulphur can be extracted from the wasting of every 100 tons of coal.

The industrial development of the country largely depends on sulphuric acid. Its production went up from 107,000 tons in 1951 to 166,000 tons in 1956. A target of 470,000 tons, representing a 300 per cent increase over the present output, had been set for the Second Plan.

COPPER

India has only a small supply of copper. The country produces on an average 7,800 tonnes of fine refined copper per year, which is mostly utilised in the manufacture of brass for utensils and coins. The country's entire requirement of electrolytic copper is imported.

The production of refined copper in 1956 was 7,628 tons, in 1957 it was 7,848, in 1958 it was 7,966 metric tons and during 1959, it was 7,674 tonnes.

The production of the ore in 1956 was 386,196 tons, in 1957 it was 403,929, in 1958 it was 411,000 metric tons, in 1959 it was 404,000 metric tons. During 1960 it was 448,000 tonnes, an increase of 11 per cent over 1959. The entire production was reported from Singhbhum District in Bihar.

Production of copper metal during 1960 was 8,910 tonnes against 7,674 tonnes in 1959.

Proving operation for copper ore has also been taken up by the Bureau at Gani in Kurnool District. Drilling work is in progress in collaboration with the Geological Survey of India.

The more recent figures of import of the copper metal are given below:—

Year	Quantity (Tonnes)	Value in Rs. '000
1956 ..	31,775	151,592
1957 ..	48,622	170,333
1958 ..	52,336	134,372
1959 ..	50,840	163,095

The only area for copper ore in India is being worked by the Indian Copper Corporation at Ghatsila, Bihar, whose smelting plant is six miles away from the place. A licence for setting up an electrolytic copper refinery plant has been granted to the Indian Copper Corporation with an initial annual capacity of 8,534 tons.

There are other areas in the country where the ore might be worked. The more important of these are the Singhbhum copper belt of Bihar, Sikkim, Jalpaiguri and Darjeeling district (W. Bengal), Khetri, Daribo (Rajasthan), Tehri Garhwal (U.P.) and Gani (Andhra). Exploration conducted by the Indian Bureau of Mines is now in progress in Khetri and Daribo in Rajasthan and the results are encouraging.

Reserves of 28·4 million tons have been proved in the Madhan-Kudhan section of Khetri area. Exploratory operations have been extended to Koliham section in the Khetri area and in Pratapgarh in Daribo area. The Government of India is contemplating to set up a 10,000 ton electrolytic copper plant on the basis of results so far achieved by the Bureau of Mines.

SALT

The country has been not only self-sufficient in salt since 1951 but has now (1959) an exportable surplus of over 200 lakh maunds. As late as 1947 or 1948 the country had had to import about 120 lakh maunds each year to make up for the deficit.

The salt-producing areas are:

The coastal regions of Maharashtra, Gujarat, Kerala, Madras, Andhra, Orissa and West Bengal for salt from sea-brine;

Rajasthan from lake brine as well as subterranean brine;

Kharaghoda, Kuda, Bajana in the Little Rann of Kutch all in Gujarat for manufacture from subterranean brine;

Mandi, for rock salt, in Himachal Pradesh.

The total fixed capital in the salt industry is estimated at Rs. 8·45 crores. In 1950-51 the total investment was about Rs. 5·8 crores, of which Rs. 0·9 crore were invested in the public sector.

The First Five-Year Plan envisaged a production of 837 lakh maunds (3·1 million tons) in 1955-56. This target was surpassed in 1953 when 861 lakh maunds (3·16 million tons) of salt were produced.

The production in 1959 was 851 lakh maunds (3·1 million tons).

The Second Plan target is 1,000 lakh maunds (3·7 million tons) in 1960-61.

The statistics of production of salt are given below (in lakh maunds):

1946	479	1953	861
1947	517	1954	739
1948	636	1955	811
1949	556	1956	889
1950	713	1957	983
1951	744	1958	1,125
1952	760	1959	851
		1960-61 (target)	1,000

The capacity for production is unlimited. Actual production is limited by market conditions.

The total number of labourers employed per day in the salt industry in 1959 was 29,334 out of which 2,366 were employed in the public sector.

† Bilingual. * In tonnes.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

There are both licensed and unlicensed manufacturers. The latter are engaged in work on areas of 10 acres and less.

The Salt Control Board has decided to impose control on unlicensed salt manufacture.

With the increase in production the exports have also increased. The statistics for 1956 to 1959 are as follows (in lakh maunds):

1956	83·96	1958	79·51
1957	119·40	1959	92·29

During 1959 the quantity of salt exported to Japan was 87 lakh maunds as against 73·09 lakh maunds in 1958. This was arranged through the State Trading Corporation. The total quantity that was to be supplied between Jan. 1, 1960 and March 31, 1961 would be about 600,000 tons (about 168 lakh maunds).

There is now an agreement for the supply of salt to Japan.

Salt is subject to the levy of a cess under the Salt Cess Act of 1953. To encourage the small-scale part of this industry Government exempted manufacture in acres upto 10 acres from the payment of cess with effect from 15th May 1955. The small-scale manufacture was defined as manufacture by persons whose holdings did not exceed 10 acres. Later with effect from 23rd April 1956 all manufacturers with holdings of 10 acres to 100 acres were required to pay a cess at the rate of only one anna a maund, while those with larger holdings continued to pay cess at the rate of two annas a maund.

A Central Advisory Board and five Regional Advisory Boards—in Bombay,* West Bengal and Orissa, Andhra, Madras, Rajasthan—to advise the Government on the proper utilization of the proceeds of the salt cess and the development of the salt industry have been constituted by Government. They make suitable recommendations for the development of the industry in the private sector.

The Salt Commissioner in consultation with the Railway Board prepares every year a programme of distribution to every State based on per capita consumption. The supply from the source to the consuming areas is regulated under the zonal scheme of the distribution of salt.

The Salt Department is now under the Ministry of Commerce and Industry. The head of the Department is designated Salt Commissioner; the headquarters are in Jaipur. He is assisted by four Regional Officers, one each at Bombay, Madras, Calcutta and Mandi.

A company entitled Hindustan Salt Company Ltd. has been set up by Government which has taken over the Government salt works at Sambar and Didwana in Rajasthan and Kharaghoda in Gujarat. The authorized capital of the company is Rs. one crore.

To induce smaller manufacturers to join together to form co-operative societies a number of concessions are made.

For example, co-operative societies are exempted from payment of cess.

The standard of edible salt has been raised from 94 per cent to 95 per cent sodium chloride content with effect from 1st January, 1957.

Under the Second Five-Year Plan developments were proposed along the following lines: establishment of laboratories and model State farms, development of works and improvement of brine and of water supply, purchase of plant and machinery, medical and educational facilities and other amenities for the staff.

An expenditure of about Rs. two crores is to be incurred both in the public and private sectors.

A scheme for sinking shafts in Mandi mines has been approved. Work on this is in progress. This is expected to increase the production from 1·5 lakh maunds to 4 lakh maunds.

The Salt Committee set up by the Government in 1957 has submitted their report which is under active consideration of the Government. Creation of an autonomous Central Salt Board, introduction of a graded system of salt cess on production basis, creation of a labour and a statistics cell and ensuring payment of fair wages in salt industry, creation of a salt development credit fund for giving loans to salt co-operatives and other deserving salt manufacturers, creation of a salt labour welfare fund, registration of unlicensed manufactures, promotion of co-operative efforts in the salt industry, manufacture of bye-products, encouragement to the production of high purity salt for Alkali industries and of special varieties of salt like Iodised salt, table salt etc. are the more important recommendations of this committee.

The average number of labour employed per day in Govt. salt factories and other licensed factories during 1959-60 was 28,810 in salt factories in Gujarat, Maharashtra, Rajasthan, Mysore, Madras, Andhra Pradesh, Kerala, Orissa, West Bengal and Himachal Pradesh.

Target of salt production for the Third Five Year Plan has been proposed to be fixed at 150 million mds. as against 100 million mds. for the Second Plan. The total investment for the additional quantity has been estimated to be Rs. 75 million of which Rs. 12 million is likely to be the foreign exchange component.

RARE METALS

What is believed to be probably the world's biggest deposits of radioactive minerals was located "somewhere in North-East India" by the Indian Atomic Energy Department early in 1957.

Investigations carried out showed that the deposit had over 3·3 million tons of ore containing 300,000 tons of thorium of concentration of about 10 per cent. and 10,000 tons of uranium of concentration of 0·3 to 0·4 per cent.

The deposits also contain about 80 million tons of ilmenite. The production of ilmenite during the half year ending June 1959 was 143,000 metric tons according to the Indian Bureau of Mines. Ilmenite is recovered from the beach sands of Kerala State contributing nearly 93 per cent of the total production and the Manavalakuruchi area in Madras State. It is mainly exported to U.S.A. and U.K.

The deposit is, therefore, considered more important than the famous beach deposits of Kerala, hitherto regarded as one of the world's richest deposits.

India's total reserves of uranium are reckoned at 30,000 tons and of thorium at 500,000 tons.

Uranium mines are being developed in Bihar and Rajasthan. It is hoped enough would be found to feed the first power station which would need 100 to 150 tons of fuel a year.

GOVERNMENT INDUSTRIAL UNDERTAKINGS

IN the following pages we give short notes on Government industrial undertakings.

Total profits by Central Govt. industrial undertakings: 1959-60: Rs. 1·01 crores; 1960-61: Rs. 3·01 crores; 1961-62: Rs. 3·64 crores (Budget estimate).

ASHOKA HOTEL

Chanakyapuri, New Delhi.

Telegram and Cables: "Ashoka Hotel". *Telephone:* 30111 (40 lines).

The largest luxury hotel in India. It is fully airconditioned and has private swimming pool, refrigerator, telephone and bath for every room.

When started: October 30, 1956. Total cost: Rs. 2·73 crores. Expenditure as on March 31, 1960: Rs. 66,96,935. Income as on March 31, 1960: Rs. 76,66,147; Net profit (unaudited): Rs. 9·6 lakhs. No. of rooms: 345. No. of people the hotel can accommodate: 442. The highest and lowest charge per day: Rs. 50 to Rs. 250. Total no. of persons who stayed from April 1959 to March 1960: 1,11,073.

Board of Directors: T. Sivasankar, I.C.S.; M. R. Sachdev, I.C.S.; S. Dutt, I.C.S.; N. N. Wanchoo, I.C.S.; S. Ranganathan, I.C.S.; S. S. Khera, I.C.S.; S. Ratnam; N. P. Dube; General Maharaj Rajendrasinhji Devisinhji Jadeja, D.S.O. (Retd.); H. H. Yuvrani Yasho Rajya Lakshmi of Jammu and Kashmir; K. L. Hathi; M. R. Dhawan. *General Manager:* Brig. Raj Sarin; *Manager:* Jean Barrier.

ATOMIC REACTORS

(Trombay, Bombay 38)

APSARA, India's first research reactor, incidentally the first reactor in Asia outside the USSR, attained criticality on August 4, 1956. It was designed, engineered and built entirely by the engineers and scientists of the Trombay Establishment except for the fuel elements, which were provided by the United Kingdom Atomic Energy Authority under an agreement. It operates at a maximum power level of 1 MW and at this level provides a thermal neutron flux of about 3×10^{12} n/cm²/sec. at the edge of the core.

It is of the pool-type, wherein water acts as moderator, coolant, reflector and also protective shield. It essentially consists of two parts, the central uranium core and the water tank. The reactor core is made up of an array of fuel elements, each fuel element consisting of several convex fuel plates. The fuel plates, each of which is about 2" wide, 24" long and 0·07" thick, are made of sheet of aluminium-enriched uranium alloy sandwiched between two aluminium sheets. The core is suspended in a water tank of dimensions 28 × 10 × 28 ft. to a depth of 22 ft. at specified positions depending on the research problem under investigation. The core can be moved into various positions by means of a trolley. The walls of the tank are made of 8 ft. 6 in. thick concrete.

The reactor has been designed to provide many types of experimental facilities for various investigations.

It has proved itself to be invaluable for training personnel in reactor technology and fundamental research in neutron physics, engineering, and biology.

The reactor has been used for the production of isotopes, irradiation of biological samples and testing the various types of reactor and health physics instruments as well as for fundamental research.

Several innovations have been added to the reactor such as multiple filtration of feed water to the pool, which has increased the visual clarity of the pool water and a set of microfilters, which have improved the clarity further. An underwater cleaning arrangement for the tank bottom has been introduced. Preliminary work on the design of storage bay for irradiated fuel elements and a flask for transportation of spent fuel for processing has been completed. A device for underwater fuel inspection is under development. The ionisation chambers in the control system have been modified to suit high power operation. An automatic start-up procedure for the reactor is under development.

APSARA completed four years of operation on August 4, 1960 after operating for some 2·2 million kW hours. In 1957 it operated for 17,800 kWh, in 1958 for 1,59,500 kWh and in 1959 for 6,62,200 kWh. During 1960, the reactor operated for 13,36,800 kWh upto August 20, 1960, when it was shut down for maintenance. The reactor is again in operation.

ZERLINA is India's third research reactor. A zero energy reactor for lattice investigations and new assemblies, the reactor reached criticality on January 14, 1961 at 1·32 a.m. The reactor has been wholly designed and built by the staff of the Trombay establishment. It is primarily meant for carrying out studies relating to new fuel configurations. It is designed to operate at a maximum power level of 100 w. All its components have been fabricated, shop-assembled and tested.

The reactor vessel is cylindrical in shape, approximately 427 cms. in height and 229 cms. in diameter, with special arrangements at the top for providing variable core lattices. It incorporates many safety features and electrical interlocks for safe operation.

Initially, ZERLINA will operate on natural uranium fuel in the form of rods, heavy water as moderator and graphite as reflector. The natural uranium rods are being made in the Establishment's Fuel Element Fabrication Facility and 15 tonnes of heavy water have been already obtained on loan from the United States Atomic Energy Commission. A special cadmium shutter is provided for bare reactor studies and a heating arrangement for liquid moderators is also incorporated for temperature coefficient measurements.

This reactor will be very useful in the study and design of new reactor systems.

THE CANADA-INDIA REACTOR (C.I.R.) is India's second reactor, being a joint Indo-Canadian project under the Colombo Plan. Work on this project was taken up in February 1956 and the reactor attained criticality on July 10, 1960. The total cost of the project is approximately Rs. 10 crores, being shared in roughly equal proportions by the two countries.

It is a natural uranium-filled, heavy water moderated and light water cooled high flux research reactor with a thermal power of 40MW. The reactor will be used for basic research in physics, chemistry, metallurgy and reactor technology, for the production of large quantities of radioisotopes, and for the training of personnel.

The reactor is housed inside a large steel rotunda, 120 ft. in diameter and 134 ft. high. The shell and dome are fabricated from welded steel plates ⅜" and ½" respectively.

Surrounding the rotunda is the concrete annulus building which houses the reactor control room, air-conditioning and other auxiliary process equipment. Offices and laboratories are located in the attached laboratory building.

The heart of the reactor is an aluminium tank called the 'calandria' about 9 feet in diameter and 11 feet high where the heat producing nuclear reaction takes place. Some 200 fixed vertical aluminium tubes, running through the calandria from end to end, contain the natural uranium fuel rods, shut-off rods and experimental assemblies. The calandria also contains the heavy water, which acts as a 'moderator' slowing down the fast neutrons emitted by uranium-235 from speeds of about 10,000 miles per second to about 1 mile per second at which speed a chain reaction can be maintained.

The power level of the reactor is controlled by varying the level of the moderator, *i.e.* heavy water, in the reactor vessel. Shutting down of the reactor is accomplished by dropping the six shut-off rods and at the same time dumping part of the moderator into a dump tank. The entire control system is so designed that the development of any fault in a particular system that is likely to cause an unsafe condition in the reactor immediately shuts down the reactor by dumping of the heavy water and dropping of the shut-off rods.

It will provide India with a crucial facility necessary for designing and building its own nuclear power reactors. Experiments for breeding thorium into fissile uranium-233 will be carried out in the reactor and these are of great importance as the Indian Atomic Energy Commission's nuclear power programme, as envisaged, is ultimately based on thorium, which the country has in abundance.

When the C.I.R. attains the full power of 40 MW and regular isotope production starts, it will be one of the most powerful radioisotope producers in the world, capable of producing large quantities of various radioisotopes, fully meeting the national requirements for the foreseable future.

BHARAT ELECTRONICS LTD.

(Jalahalli P.O., Bangalore 13)

Bharat Electronics was registered as a private limited Company in April 1954 with its headquarters at Jalahalli, Bangalore. The authorised capital of the Company is Rs. 10 crores of which Rs. 6·5 crores have been subscribed. The entire capital is held by the Government of India.

The capital expenditure upto March 1960 was Rs. 227 lakhs.

By 1957 the factory buildings were all completed. The factory began production in the latter half of December 1956.

Various types of HF and VHF equipment are now in the production line of the factory. These include a General Purpose Communication Receiver, a 400 WHF Transmitter, 25 Watt HF Trans-receiver, 1 Watt HF Man-pack, 20 Watt and 50 Watt VHF Trans-receivers, 750 mm VHF Man-pack, a light weight UHF transmitter for the meteorological department and some studio equipment for All India Radio, HF Transmitters of 1 and 5 kW output power, Loud Megaphone called Belhailer, Hearing aid and components, Chokes, Transformers and Coils, etc.

An agreement has been signed with PYE Telecommunication of Cambridge for the manufacture of their Wireless Set Type 62 which is a high frequency mobile Trans-receiver for the Defence Services, who have been importing this set for the last several years. Our production of this set will meet the urgent requirements of the services.

Another important agreement signed in 1959 was with PHILIPS of Holland for the manufacture of valves. Eighteen types of valves standardized by the Radio and Cable Board and accepted by the Radio Manufacturers' Association in India will be taken up for manufacture in the initial stages. The capacity of the plant will be 1·8 million valves of the miniature type which can be substantially increased by double shift working, if the demands warrant such a step. The annual turnover will be of the order of Rs. 40 to 50 lakhs when full production is reached. It was expected that the valves will be available for sale by March 1961. This is the first time that an agreement has been signed for the manufacture of valves.

Negotiations are under progress with Messrs. SIEMENS & HALSKE of Germany for the manufacture of High Power Transmitters of their design in BEL. This will help to conserve our country's foreign exchange as there is an urgent need for such transmitters in the Defence Services and other Government Departments.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

An agreement has also been signed with *Nippon Electric Co., Ltd. of Tokyo, Japan for the manufacture of medium wave Broadcast Transmitters.

Preparations are under way for the production of radar equipment.

The present strength of the employees is 1,600. Buildings and machinery cost Rs. 2 crores. When the factory is in full production, it will employ about 5,000 persons and will produce electronic equipment worth Rs 4 crores annually.

The actual production was valued at Rs. 65 lakhs in 1958-59, as against Rs. 27·88 lakhs in 1957-58. During 1959-60 the factory manufactured equipment worth Rs. 110 lakhs. In 1960-61 the production was expected to be increased to Rs. 1·75 crores and in another three years the factory will reach its peak production target.

The Company is run by a Board of nine Directors.

Chairman, Board of Directors: O. Pulla Reddy, I.C.S. (Defence Secretary, Government of India).

Board of Management: B. V. Baliga (Managing Director); A. Rangaswami (Controller of Finance); C. B. Cariapa (Deputy General Manager); T. T. Joseph (Commercial Manager).

CHITTARANJAN LOCOMOTIVE WORKS

(Chittaranjan, Burdwan Dt., West Bengal)

Branch Office: Hindustan Buildings, 4, Chittaranjan Avenue, Calcutta 13)

General Manager, G. P. Shahani.

The works are under the Ministry of Railways.

Construction started in March 1948 and was completed on September 30, 1952. The original estimate both as regards cost and the date for completion was adhered to.

Production started on January 26, 1950. The first locomotive rolled out on November 1, 1950.

The total estimated cost is Rs. 14·93 crores.

The present capital cost at charge is Rs. 16·03 crores.

The total number of workshop staff (under Factory Act), 5,257; apprentices, 435; total, 5,692. The total strength of the organization 8,463 (corrected upto Sept. 30, 1960).

The initial target of 96 W.G. class locomotives having been reached in May 1954 the target of production was stepped up to 160 W.G. class locomotives per annum. This target was reached in Aug. 1956 and has been surpassed during the last three years. It now produces a locomotive every 48 hours (April 1961). It has manufactured more than 1,000 boilers so far.

The out-turn for the financial year 1959-60 was 164 W.G. and 9 W.T. locomotives making a total of 173 locomotives.

The production schedule has been as follows:

Rs. lakhs.

Year	No. of locomotives	Cost per locomotive
1951-52..	17	7·47
1952-53..	33	7·94
1953-54..	64	6·05
1954-55..	98	5·33
1955-56..	129	4·05
1956-57..	156	4·07
1957-58..	164	4·09
1958-59..	165	4·09
1959-60..	173	4·10
1960-61..	173	4·09

Total engine output upto 30th Oct. 1960: 1,103.

With the gradual stepping up of production, the Chittaranjan Locomotive Works launched a drive to cut down to the minimum the imported content of a locomotive. Gradually the capacity for the manufacture of components was either created at Chittaranjan or in the private sector in the country. Arrangements have been finalised for establishing a Steel Foundry at Chittaranjan to meet the requirements of the Works in respect of steel castings. The initial capacity of the foundry will be 7,000 tons per annum including 1,000 tons required for crossings and points.

Certain basic raw materials are still being imported (Chittaranjan today uses only 14 imported parts in a total of 5,330 parts which go into the manufacture of a locomotive), and with all the Steel Plants now going into production, the import of raw materials will be stopped.

In addition to the manufacture of Broad Gauge Goods locomotives of the 'WG' type, the Chittaranjan Locomotive Works have also undertaken the manufacture of 'WT' class locomotives. The 'WT' is a Tank type locomotive primarily meant for heavy suburban and shuttle services, but it can also be used for shunting in goods yards, working mixed trains and banking of goods trains on heavy gradients. An order for 10 'WT' locomotives has already been successfully completed by Chittaranjan Locomotive Works.

The further development plans of Chittaranjan Locomotive Works include the manufacture of electric locomotives. An order for 10 D.C. electric locomotives for the Central Railway has already been placed on the Works. The first electric locomotive is expected to be turned out of the Works in 1961. Proposal for the manufacture of A.C. electric locomotives at Chittaranjan Locomotive Works in collaboration with certain foreign firms are also afoot.

GARDEN REACH WORKSHOPS PRIVATE LTD.

2, Farlic Place, Calcutta 1.

Garden Reach Workshops was originally established in 1916 as a partnership Company combining the interests of The Rivers Steam Navigation Co. Ltd., and The British India Steam Navigation Co. Ltd. Successors to the partnership Company, Garden Reach Workshops Private Ltd., was acquired in April 1960 by the Government of India in the Ministry of Defence.

The site of Garden Reach Workshops covers 64 acres with a river frontage of half a mile and offers slipway and dry-dock facilities for inland water craft up to 2,000 tons and building berths for shallow-draft vessels up to 1,200 tons launching weight. Repairs to deep sea vessels are handled in the stream and in dry-docks and repair berths allotted by the Commissioners for the Port of Calcutta.

The Workshops are fully equipped to undertake marine repairs of all descriptions and having modern Machine Shops and Foundries. The Workshops have become an important industrial unit in the field of general engineering, especially in connexion with the manufacture of overhead Travelling Cranes, Deep Well Turbine Pumps, Colliery Haulages and Chain Conveyors for many types of industrial machinery. Other established activities include the manufacture of Railway Block Signalling Instruments and the production and repair of electric motors up to 50 H.P., and additional services cover complete electrical contracting, pattern-making, chain-testing up to 100 tons, saw-mill and timber processing and vitreous enamelling facilities. Stocks of components and spare parts for M.A.N. Diesel Engines are maintained in Bond and complete servicing facilities are available for M.A.N. equipment.

The Workshops employ approximately 5,000 workmen throughout the year and proper attention is also given to the training of apprentices, for eventual absorption by the Workshops and other public sector establishments.

The Company has handled a large volume of ship-repair work, repairs to Indian-owned vessels and to foreign-owned vessels in the past four years representing a direct form of conserving and earning foreign exchange.

During World War II over 4,000 vessels were repaired and 114 new vessels were constructed; more than 600 vessels have been constructed up to 1960 covering a wide range of Harbour Tugs, Light Naval Craft, Dredgers, Launches, River Steamers and Flats, Water-Boats, Barges and Pontoons and thus the Workshops have become specialists in the design and construction of shallow-draft vessels. For other specialised forms of ship construction, collaboration arrangements are in force with various Technical Consultants in the United Kingdom and Holland.

Rehabilitation and development of new facilities and lines of manufacture are being actively pursued.

HEAVY ELECTRICALS LTD.

(Ministry of Commerce and Industry)

A factory for the manufacture of heavy electrical equipment in the country, such as turbines, alternators, transformers, control gear, switchgear, traction equipment, is being set up near Bhopal in Madhya Pradesh by the Government of India with the technical collaboration of Messrs. Associated Electrical Industries Ltd., of U.K.

A Private Limited Company, known as Heavy Electricals (Private) Limited, with an authorized capital of Rs. 30 crores was incorporated on 29th August 1956 to control and manage this project. Issued and paid-up capital as on March 31, 1960: Rs. 11·20 crores.

The capital outlay of the project excluding the township is estimated to be of the order of Rs. 45 crores.

The first machine tool of the factory was installed on 13th January 1960.

Production of switchgear and portions of transformers was commenced on 1st July 1960. Foundry Block No. V was commissioned early in August 1960. The factory is expected to attain full production by 1965. Production of traction motors, industrial motors and heavy rotating plant is scheduled to commence by July 1963. The manufacture of most of the items on the schedule is expected to be started by the end of the 3rd Five Year Plan.

The project was inaugurated on 6th November 1960 by the Prime Minister.

In view of the considerable increase in the demand for heavy electrical goods in the country, the Government of India are considering the question of accelerating the time table for phases II and III of the project and increasing the annual output to Rs. 25 crores per annum in the beginning of the Fourth Plan. This might even go upto Rs. 35 crores, if further development, as envisaged, develops.

Two agreements (*i*) with a Syndicate of London Banks for long term credit and (*ii*) with Messrs. Associated Electrical Industries Ltd., London as our Purchasing Agents for Machine Tools and Equipment in London, have been executed to implement the rephased programme.

To man the factory with trained technical personnel, a comprehensive training scheme has been drawn up and the training has commenced. It will have about 960 trainees at a time in single shift. However it will work in more than one shift and turn out 1,300 trained personnel every year. Over 3,000 technicians including 120 graduate apprentices are already undergoing training at the training workshop established at the project site. It is proposed to step up this number to 4,000. Nearly 200 qualified engineers have been sent for training in the U.K.

The total estimated cost of the project is about Rs. 61·00 crores. A provision of Rs. 20·02 crores has been made in 2nd Five Year Plan. Capital outlay on the 1st Phase will be Rs. 28·73 crores. Annual output of the factory expected on full production in the 1st Phase is Rs. 6·20 crores, with an employment potential of nearly 5,000 people.

* An agreement was signed on June 20, 1961 for the manufacture of high quality tape recorder at Bharat Electronics.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

The factory will employ about ten thousand men on reaching full development and about eighteen thousand men on doubling up production.

Total expenditure on the project up to the end of October 1960 is estimated at Rs. 13 crores.

HEAVY ENGINEERING CORPORATION LTD.

Combined Office Building, Nepal Kothi, Doranda, Ranchi.

Government have established a new company called the Hindustan Heavy Engineering Corporation Ltd. with an authorised capital of Rs. 50 crores divided into 5 lakh shares of Rs. 1,000 each. The issued, subscribed and paid-up capital as on 31st December 1960 was Rs. 4,24,49,000 to administer ten heavy engineering projects in view.

The projects include the Heavy Machine Building Plant, the Foundry Forge Plant and the Coal Mining Machinery Plant. The implementation of the Ophthalmic Glass Project and Heavy Machine Tools Project has also been entrusted to this Corporation.

The registered office is at Ranchi.

Heavy Machine Building Plant: To be located at Hatia near Ranchi in Bihar, the Plant will have an initial capacity of 45,000 tons of machinery per year which can be raised later to 80,000 tons. The principal items to be manufactured in the initial stages will be blast furnaces, steel melting furnaces, coke ovens and by-product plants, rolling mills, cranes, etc.

The plant is expected to go into pilot production during the latter half of the Third Five Year Plan. The total yearly value of the end products of this unit when in full production and at current world C.I.F. prices, is expected to reach about Rs. 42—45 crores in the second stage. The plant is expected to have on its roll over 3,000 direct workers and staff at the first stage and 4,800 workers and staff at the second stage. The estimated capital outlay of the project excluding township etc. is likely to be in the order of Rs. 37·2 crores for the first stage and Rs. 48 crores for the second stage. Of this, the foreign exchange components are likely to be Rs. 17 crores and Rs. 21 crores for the first and the second stages respectively. The foreign exchange needs will be mostly met from the Rouble Credits offered by the U.S.S.R.

The Detailed Project Report for this plant was accepted in November, 1959. A contract for a total sum of Rs. 12·80 crores for the purchase of plant and equipment and certain items of stores from the U.S.S.R. was concluded with Messrs. Prommashexport of Moscow in March, 1960. Consignments of plant and equipment against this contract have already started coming in at the Calcutta Port from the U.S.S.R. A large quantum of equipment as well as several miscellaneous items are also being procured from indigenous sources.

Foundry Forge Project: This Project is also being set up at Hatia with the technical and financial assistance from Czechoslovakia as an adjunct to the Heavy Machine Building Plant, to meet its requirements of grey iron, steel and non-ferrous castings and forgings. The plant is being set up in 3 stages—the second stage corresponding to the requirements of the 45,000-ton stage of the Heavy Machine Building Plant. The expected capacity at the end of the second stage of the plant will be 1,84,885 tons.

The plant is expected to go into pilot production by 1963-64.

The total capital outlay on the project is likely to be Rs. 42 crores in the first stage and Rs. 61 crores in the second stage. The foreign exchange expenditure is likely to be Rs. 15 crores and Rs. 23·5 crores for the first and second stages respectively. The plant will have on its roll about 6,000 workers in the second stage. The Detailed Project Report for this plant was received from Czechoslovakia in November, 1959 and was accepted in April, 1960. A contract was also entered into with Czechoslovakia for the supply of plant and machinery for the first stage for a C.I.F. value of Rs. 10·87 crores, excluding the contract for spare parts for machinery and equipment.

Two agreements were signed between the Corporation and Technoexport of Czechoslovakia on March 31, 1961 for the expansion of the Plant.

Negotiations are in progress in regard to the supply of equipment for the second stage and spares for the first stage besides the preparation of the Detailed Project Report for the first phase of the third stage.

The working drawings for the Foundry Forge Project are being developed in India under the technical guidance of the Czech Experts.

The contract with Messrs. Technoexport of Praha includes the supply of only the production plant and equipment required. Other items are to be procured by the Corporation either from indigenous sources or through imports.

Coal Mining Machinery Project: This plant is being set up at Durgapur, West Bengal, in technical collaboration with the U.S.S.R. and utilizing parts of their 500 million and 1,500 million Rouble Credits. The Plant was initially designed to produce 30,000 tons of Coal Mining Machinery. But in view of the proposed increase in the output of coal during the Third Five Year Plan, the Government of India decided to expand the capacity of the plant to 45,000 tons per year. The items to be manufactured in the plant are coal cutters, loaders, pumps, haulages, trolley and battery type electric mine locomotives, safety detaching hooks, spare parts etc. The total annual value of the 30,000 tons of finished machinery items to be produced at Durgapur is likely to be Rs. 16 crores; the value of 45,000 tons at the second stage being approximately Rs. 24 crores. The capital outlay on the plant is expected to reach a sum of Rs. 26 crores for the first stage and Rs. 35 crores for the second stage. Of this total, Rs. 11 crores and Rs. 14 crores are likely to be the foreign exchange components for the first and the second stages respectively. The foreign exchange needs will be met out of the Rouble Credits offered by the U.S.S.R. In the first stage, the plant is expected to provide employment to 4,000 workers.

Following the acceptance of the Detailed Project Report in November, 1959, a contract for the supply of plant and equipment, fabricated steel structures and other store materials of a total value of Rs. 7·50 crores was entered into with Messrs. Prommashexport of the U.S.S.R. in March, 1960.

Consignments of plant and equipment against this contract have already started coming in from the U.S.S.R. For this plant, also, a sizeable quantum of construction equipment, machinery, fittings etc. are being procured from indigenous sources.

Ophthalmic Glass Project: This plant is also to be set up at Durgapur with technical and financial assistance from the U.S.S.R. Originally the project was conceived for the manufacture of 300 tons per annum of ophthalmic blanks with additional provision for processing ophthalmic and anastigmatic lenses and bi-focal lenses of coloured glasses. The total capital outlay on this plant is expected to be Rs. 3 crores of which approximately Rs. 63 lakh are likely to be the foreign exchange component. The Plant is expected to go into production by 1963.

Heavy Machine Tools Plant: The plant is being set up at Ranchi in technical collaboration and with financial loan assistance from Czechoslovakia to produce annually 10,000 tons of Heavy Machine Tools in the first stage. An agreement for the preparation of detailed Project report was signed at Ranchi on 31-5-1961 between Govt. of India and Techno-export of Czechoslovakia. The site of this project covering an area of approximately 28 acres has already been selected. The capital outlay on this project is likely to be approximately Rs. 15 crores, out of which, the foreign exchange component is expected to be approximately Rs. 10 crores. The items to be manufactured at the plant are central lathes, planers, horizontal bores, vertical turning and boring mills etc.

Training and other facilities: Arrangements are in hand to set up a self-contained modern Training Institute at Hatia complete with workshop facilities to impart technical training to about 1,000 apprentices at a time. Arrangements are also being made for a number of Indian Engineers and workers to be trained both in Russia and Czechoslovakia.

Townships at Hatia, costing approximately Rs. 22 crores, and having 16,000 houses, another at Durgapur costing Rs. 8 crores and having 8,000 houses, an air-conditioned 200-roomed Experts' Hostel at Hatia and a 50-roomed air-conditioned hostel at Durgapur to accommodate the Russian and Czech Experts.

HINDUSTAN AIRCRAFT LTD.

(Hindustan Aircraft P.O., Bangalore 17, Mysore)

Tel. & Cable address : Aircraft, Bangalore.

The company is managed by a Board of Directors under the Ministry of Defence through a Board of Management.

Founded in 1940, the Hindustan Aircraft, Ltd., is the largest aircraft manufacturing, repairing and overhauling organisation in the East. It has succeeded in establishing a sound aeronautical industry in the country.

Aviation Activities: In addition to the overhaul and converting of various types of war surplus aircraft, like the DC-3, the Liberator and their engines, H.A.L. have successfully manufactured the Percival Prentice Trainer and the De-Havilland Vampire Aircraft under Licence, for the Air Force. H.A.L. have designed, developed and produced in quantity a basic piston engined trainer designated as HT-2 for the I.A.F. and civil use.

In 1958 H.A.L. built the first Indian ultra-light two-seater aircraft 'Pushpak', which can rightly be claimed as the people's plane because it is priced at not more than Rs. 22,000. While it can be employed with advantage by the Armed Forces for communication duties, artillery observation and liaison flights, the Flying Clubs can use it for the initial training of pilots and the State Governments for flying-squad duties, aerial reconnaissance and flood-relief work.

A piston type aero-engine was also produced for the first time in India in March 1959. About 95 per cent of this was manufactured indigenously. It was planned to fit the Pushpak.

The Aircraft Division has planned to produce High Speed Supersonic Jet Fighters and Jet Trainer Aircraft while the newly formed Engine Division will produce Jet Engines for installation in these Aircraft.

In 1957 the Government concluded an agreement with the Bristol Aeroplane Company, under which India obtained a licence to make the full range of Bristol-Orpheus turbo-jet engines. Licence negotiations have also been completed with the Folland Aircraft Company for the manufacture by H.A.L. of the light-weight jet fighter, the Gnat. A few H.A.L. engineers were deputed to England to familiarize themselves with the production aspect of the Gnat and the Orpheus. Specialists from these factories have also come to assist the H.A.L. in developing the industry and training Indian personnel. The manufacture of the Gnat and the Orpheus 701 turbo-jet engine has now commenced. The latter has now an indigenous component of over 50 per cent.

The factory has been approved by the Civil Aeronautical Administration of the U.S.A. for the repair and overhaul of Dakota aircraft and engines. H.A.L. is also a member of the S.B.A.C.

Pressure of work compelled H.A.L. to open a branch at Barrackpore (near Calcutta) in 1952 to meet the mounting demands of overhauling.

Other activities: H.A.L. has, since 1947, been supplying all-metal third-class broad-gauge railway coaches of their own design to the Railway Board and the production rate now is about 300 coaches a year. About 1,800 coaches, with several new amenities, like night-lights, electric

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

fans, sleeping accommodation and wash-basins, had been delivered to the Indian Railways till October 1960 and proved very popular with the travelling public. These coaches now run on all the divisions of the Indian Railways and are also being used on the popular Janata services. One of the projects undertaken under the Second Five-Year Plan was the manufacture of light-weight integral coaches in collaboration with MAN, a leading German firm, the target being 300 coaches a year. Production of integral coaches has already started and coaches of the new type have already been handed over to the Railways. The target of production has already reached 300 per year, one year ahead of schedule. H.A.L. no longer builds bus bodies. It supplies pre-fabricated bus-body kits to bus-body builders under licence agreements.

H.A.L. was expected to manufacture its completely Indian-made integral railway coaches from May 1961.

H.A.L. has a modern Cast Iron and Light Alloy Foundry, which not only caters for its own needs but also supplies castings to Hindustan Machine Tools Ltd. which manufactures high precision lathes, milling and drilling machines and other concerns in the public and private sectors. H.A.L. has set up a forge shop to cater for the aluminium alloy forgings required by its Aircraft Division. The Light Alloy Forge set up at H.A.L. is the only one of its kind in India.

Net profit 1958-59 : Rs. 39,51,348. Sales turnover : Rs. 697·50 lakhs (aircraft manufacture and overhaul : Rs. 442·45 lakhs, railcoach manufacture Rs. 245·12 lakhs).

Board of Directors :

Chairman, O. Pulla Reddy, I.C.S., Secretary, Ministry of Defence.

Directors, J. R. D. Tata ; Air Marshal A. M. Engineer, D.F.C., Chief of Air Staff, I. A. F. ; S. Jayasankar (Financial Adviser, Ministry of Finance (Defence), Government of India); B. M. Abou Baker (Director of Industries and Commerce, Mysore); Prof. M. S. Thacker (Secretary, Ministry of Scientific Research and Cultural Affairs); R. P. Sarathy (Addl. Secretary, Ministry of Defence), Air Vice-Marshal Ranjan Dutt, Managing Director.

Board of Management :

Chairman, (Managing Director).

Members : J. P. Kacker (Financial Controller), P. M. Reddy (General Manager (Technical)), Air Commodore S. M. Rikh (Deputy General Manager (Engines)). Dr. V. M. Ghatage (Deputy General Manager (Design & Devpt.)), K. P. V. Menon (Deputy General Manager (Railcoach)); *Chief Administrative Officer*, Group Capt. K. C. Sarkar ; *Publicity Officer*, Major M. V. Subrahmanyam.

HINDUSTAN ANTIBIOTICS LIMITED

(Pimpri, Poona District)

The Government of India Penicillin Plant now known as Hindustan Antibiotics Ltd. is located on a 200 acre site in Pimpri, nine miles from Poona. It is a limited company of the Government of India with all the shares held by the President of India and his nominees. The authorised capital of the Company is Rs. 4 crores.

Starting in March 1952, the factory was completed in 1954. It went into production in August 1955. On 12th September 1955 the first batch of Indian penicillin manufactured at the Pimpri Plant and bottled at its Bottling Plant in Bombay was put on sale.

The factory was constructed on the basis of a tripartite agreement between the Government of India, the World Health Organisation (Since transferred to United Nations Technical Assistance Administration) and the United Nations Children's Emergency Fund.

The designed capacity of the plant is 9 million mega (9,000 billion) units per year : but the plant now produces at the rate of 25 million mega units per year as a result of the improvements in penicillin technology. A Pilot Plant, a workshop and all essential services have been arranged. Large-scale bottling operations at Pimpri commenced in March 1956. In addition, the former Indian Penicillin Committee's Bottling Plant at Bombay was shifted to Pimpri (1958) and is bottling penicillin, streptomycin and dihydrostreptomycin. The present rated capacity of the plant after completion of its expansion programme is about 40 million mega units per year.

In terms of finished product for clinical use the production was 17·9 million mega units in 1957, 29·03 mln. mega units in 1958-59, 32·05 mln. mega units in 1959-60 and 39·72 mln. mega units during the calendar year 1960. The present demand for penicillin in India is estimated at 60 mln. mega units.

The profits during 1958-59 and 1959-60 were Rs. 81·10 lakhs and Rs. 76·85 lakhs respectively after payment of income-tax. The total gross sales amounted to over Rs. 1·8 crores, in 1958-59. Rs. 3·27 crores and in 1959-60 Rs. 3·11 crores despite a substantial reduction in prices.

The factory employs 1,100 workers including the ministerial staff.

Half of the employees are housed in a modern residential colony having its own hospital, primary school, auditorium, library, recreation club, banks, post office and a consumers' co-operative store. A works committee makes suggestions for the welfare of the workers.

Equipped with the latest scientific equipment, a model Research Laboratory built at an approximate cost of Rs. 20 lakhs has been put up alongside the factory.

A production bonus of Rs. 2·43 lakhs was given to the staff and workers in respect of the working of the factory for 1957-58 and 1958-59 and Rs. 1·75 lakhs for 1959-60.

A plant for the production of 40,000 to 45,000 Kg. of antibiotics Streptomycin and Dihydrostreptomycin, is being set up at Pimpri at an estimated cost of Rs. 1·7 crores. A consultant service agreement has been signed with Messrs. Merck and Co. of U.S.A. It is expected that production will start in 1961. It will effect an annual saving of about Rs. one crore in foreign exchange. A project for the production of 25 tons of broad-spectrum antibiotics of the Tetracycline group at an estimated cost of Rs. 1·3 crores is also under consideration and the pilot plant for the first phase is nearing completion (Nov. 1960). It is also proposed to set up a plant for the manufacture of 50 tons of vitamin C per year at an estimated capital of Rs. 60 lakhs. The total developmental expenditure on all these projects amounting to about Rs. 4 crores is expected to be met from the company's present resources and future surpluses.

The Union Government is also planning to set up another antibiotic factory in the public sector with Russian aid.

When all these schemes materialise, the factory will be producing about Rs. 4 crores worth of antibiotics every year.

It may be mentioned here that Government have set up a body to examine procedures under the Chairmanship of Dr. H. J. Bhabha.

Mg. Director, S. T. Raja, B.A., LL.B., Barrister-at-Law.

HINDUSTAN CABLES LIMITED

Ministry of Commerce & Industry,
Govt. of India.

(P. O. Hindustan Cables,
Burdwan Dt., West Bengal)

With a view to manufacturing telephone cables in this country, the Government of India have set up the Hindustan Cables Factory, under the technical assistance of Messrs. Standard Telephones & Cables Ltd., London. The Company is entirely owned and financed by the Government of India and is under the over-all control of the Ministry of Commerce and Industry.

The factory started regular production in Sept. 1954. At present different sizes of underground telephone cables (600 miles) worth over a crore of rupees are manufactured every year.

During 1959-60 it produced 691 miles of cables worth over Rupees one crore fifteen lakhs. The production in 1960-61 was expected to be nearly 1,000 miles. Keeping pace with the latest development in telephone cable network, the manufacture of coaxial trunk telephone has been undertaken and production started in July 1960.

To meet the demands of the Indian Posts & Telegraphs Department steps are being taken to augment the capacity of the existing factory as also to manufacture various types of plastic insulated cables.

Chairman, Board of Directors, D. Sandilya, I.R.A.S.

Directors, N. E. S. Raghavachari, I.C.S. ; D. C. Driver ; G. D. Ambekar ; C. P. Vasudeban ; B. R. Murgai ; N. M. Vadi ; G. S. Ahluwalia ; M. S. Murthy ; K. Ramachandran ; N. K. Sen Gupta (*Managing Director*).

HINDUSTAN HOUSING FACTORY LIMITED

(Jangpura, New Delhi 14)

The Hindustan Housing Factory Ltd. was taken over completely by the Government of India with effect from 15th August 1955. It is now under the control of the Ministry of Works, Housing & Supply.

The present Directors of the Company are :—

Chairman, A. S. Naik ; *Directors*, A. P. V. Krishnan ; S. P. Varma ; N. G. Dewan, I.S.E. ; P. C. Bhattacharya, I.D.A.S. ; M. G. Kaul, I.C.S. ; N. R. Reddy ; Jaspat Rai Kapur, M.P. ; N. P. Dube.

General Manager, S. D. Pathak ; *Secretary*, M. R. Chandhoke.

The authorised share capital of the company is Rs. 75·00 lakhs and working capital Rs. 40·00 lakhs. The Government have advanced to the company 5 per cent interest bearing loan aggregating Rs. 40 lakhs for its working capital.

For the year 1-8-1958 to 31-7-1959, the target of production in accordance with the budget for 1958-59 was Rs. 57·00 lakhs, as the position of supply of raw materials had improved. During 1958-59 the factory reached the production target of Rs. 52 lakhs and is expected to further increase this by adding to its regular production roofing components and sleepers for the railways. The factory made a net profit of Rs. 84,707 during the year Aug. 1, 1958-July 31, 1959. Profit for 1959-60 : About Rs. 1·8 lakhs.

The Hindustan Housing factory at present (Feb. 1960) manufactures the following products: 1. Prestressed Concrete Department : Transmission and street lighting poles, beams for different spans, trusses and beams for industrial buildings, fencing posts. 2. R.C.C. Department (Precast): vibrated cement pipes, precast R.C.C. door and window frames, cladding panels and R.C.C. sleepers for railways. Prefab elements for housing and building construction. 3. Wood Work Department : Doors, windows, utility furniture and various other by-products such as pencils, slates, stamp pads, etc. 4. Foam Concrete Department : Foam Concrete or light weight concrete insulation blocks for cold storage plants and air-conditioned buildings and partition blocks for use in buildings as well as roofing slabs to minimise the weight on the walls. Reinforced foam concrete roofing components. The use of the lightweight partition blocks in multi-storeyed buildings brings about a saving in steel and reduction of load carrying members in the design of multi-storeyed buildings. Lightweight foam concrete insulation blocks have already replaced cork in some cold storage plants set up in Northern India.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

The Factory Management further provides facilities to the staff and workers regarding increase in wages, provident fund, E.S.I. Facilities and other privileges. The Management was expected to take up with the Government the question of a Housing Scheme for the workers.

HINDUSTAN INSECTICIDES LIMITED

Regd. Office : New Delhi.

Factories : Udyogmandal, Alwaye (Kerala)

Industrial Area, New Delhi 15.

The company was incorporated in March 1954 to manage the affairs of the first Government owned DDT Factory at Delhi, with an authorised capital of Rs. one crore. Later the Government of India decided to put up the second factory to be constructed at Alwaye, under the management of the same company. Both the factories are managed by Government through the company with a Board of Directors under the Ministry of Commerce and Industry.

Delhi Factory

This factory is situated in the industrial suburb of New Delhi and was set up with the assistance of United Nations agencies of UNICEF and W.H.O. (UNTAA). The UNICEF agreed to supply the plant and machinery at a cost of $250,000 and the W.H.O. (UNTAA) technical assistance to the extent of $100,000. The Government of India agreed to provide land, buildings, services, auxiliaries and the installation of plant and equipment at an estimated cost of Rs. 35,00,000.

The construction of the factory was started in 1953. The factory went into production in March 1955. The capacity of the plant was 700 tons Technical DDT per annum.

For doubling the plants capacity an agreement was reached by the Govt. of India with the UNICEF for an additional gift of equipment worth $275,000.

Expansion started in 1956 was completed in 1958 thus giving the Delhi plant a capacity of producing 1,400 tons of Technical DDT per annum. The factory now produces DDT to its full strength.

Production : Since the commencement of operations in March 1955 production has been steadily stepped up. From 10·6 tons production in April 1955 the D.D.T. factory reached the figure of 132·11 M. tons n September 1959. Production during the previous years was—

(*In M. Tons.*)

	1957-58	1958-59	1959-60
Technical DDT	703·20	1,288·61	1,466·00
Formulated DDT	667·77	1,117·28	1,830·42

The factory earned a net profit of more than Rs. 3 lakhs during 1959-60.

Alwaye Factory

Global tenders were invited and after protracted negotiations the firm of Messrs. Singmaster & Breyer Inc., New York, was awarded the contracts for both Technical DDT plant and the Formulated DDT plant on a turnkey basis in the years 1956, 1957 respectively.

Erection of plant and machinery was completed towards the end of 1957. With the completion of the other services like power, steam, water, trial production began in February 1958. The plant is now in regular production.

Within five months the factory crossed the rated capacity by producing 125·16 M. tons in October 1958. Production during 1958-59 and 1959-60 was—

(*In M. Tons.*)

	1958-59	1959-60
Technical DDT	825·86	1,109·00
Formulated DDT	692·70	2,252·50

The factory earned a net profit of more than Rs. 18 lakhs during 1959-60.

The entire output of the Delhi factory and the bulk production of the Alwaye Factory is earmarked for the Health Ministry (Malaria Institute of India) for their anti-malaria programme.

The Company employs approximately 520 persons at both the factories.

Training facilities have been provided in both the factories. Other amenities like canteen, dispensary, housing etc. exist in the factories.

Chairman : M. S. Himmat Sinhji.

Managing Director : B. B. Mathur.

HINDUSTAN MACHINE TOOLS LIMITED

(Jalahalli P.O., Bangalore)

This is a limited company under the Ministry of Commerce and Industry registered in Mysore on February 7, 1953 and located in Jalahalli, Bangalore.

The authorised share capital of the company is Rs. 12 crores.

The Company produces 90 types of machine tools—H 22 High Speed Lathes in 14 types, milling machines—vertical, horizontal and universal in six types, radial drills in 10 types and general purpose low priced lathes in 44 types. The company has recently entered into a technical collaboration agreement with Messrs. Officina Meccanica Olivetti, the Machine Tool Division of Olivetti, a well-known Italian firm, for the production of cylindrical grinding machines and the Company will give to the country 16 types of such machines .The grinding machines produced by HMT are sold below the landed cost of imported equivalents.

The addition of the new types of machines (grinding machines) will give further flexibility to the production programme of the factory and enable the country to save foreign exchange to the extent of about Rs. one crore per year.

The Company employs 3,568 skilled and semi-skilled workers. When the expansion programme is completed, the labour strength may be over 5,000.

In Feb. 1961, the factory produced 115 machines.

Till the end of Oct. 1960, the factory produced 2,220 machines valued at a little over Rs. 8·80 crores. The plan target of production of the Company was 400 machines by the end of the Second Plan period *i.e.*, 1960-61. The Company reached this target three years ahead of schedule by manufacturing 402 diversified machine tools valued at Rs. 1·55 crores during the financial year 1957-58. This represents two-thirds of India's output of Machine Tools.

During 1958-59 the company produced 552 machines valued at Rs. 2·01 crores and representing about 60 per cent of the entire output of machine tools in India.

During 1959-60, production came to 702 machines valued at Rs. 2·5 crores.

The annual production reached 1,002 machines by the end of the Second Plan period, 1960-61, The factory has embarked on a programme of expansion which will enable it to raise its production to 2,000 machines per year, double the plan target. The cost of the expansion programme which will be about Rs. 2·81 crores will be entirely financed from the internal resources of the factory, built up during 1956-60 in spite of the heavy expenditure on commissioning and development of Rs. one crore, which has been fully wiped off.

When the proposed expansion to 2,000 machines per year materialises in 1963, the value of the annual production will be over Rs.7 crores.

Including pending orders for 199 machines brought forward on April 1, 1959 and orders for 1,023 machines booked during the year 1959-60 there were total orders for 1,222 machines as against the production of 702 machines.

The foundation stone of the Rs. 2·5 crore watch project was laid in Bangalore by the Union Minister of Industry on 28-1-1961. The project envisages the establishment of a Watch factory of a capacity of 3,60,000 watches per year in multi-shift. Production would be stepped up to half a million per year. The factory would employ about 2,000 workers. Watches produced in the first instance would be of two types Ladies' and Gents'. Indigenous contents of the watches would rise from 54 per cent in the first year to 60 per cent in the 2nd year, 72 in the 3rd and 84 in the 4th year.

The net profit in 1960-61 after depreciation and tax liability but before return of share and loan capital of the Govt. was Rs. 82 lakhs as against Rs. 47.37 lakhs in 1959-60.

An industrial estate has been established in Bangalore attached to the H.M.T. The foundation stone was laid by the Minister of Commerce and Industry in November 1960. The simpler components of machines will be manufactured by the ancillary feeder industries constituting the industrial estate and supplied to H.M.T.

The Provident Fund contribution was enhanced from 6¼ per cent to 8⅓ per cent with effect from January 1, 1958.

The company has substantially expanded its welfare programme for the employees. The number of houses built upto Sept. 1960 for the employees rose to 860 from 319 on April 1, 1957. Two well-equipped dispensaries have been maintained by the Company for the benefit of workers and their families. Incentive bonus, enhanced wages and dearness allowance have been given to the employees. The entire wage structure has been rationalised and the minimum wage has been more than doubled compared to the wage level as on April 1, 1957.

The Company has constructed a well equipped workers' club at a cost of Rs. one lakh. The same will be further expanded with the addition of a swimming pool, etc.

National Training Institute : A National Training Institute was set up in the premises of the factory where all technicians underwent a course of expert training for some period. Training is now given also to others sponsored by other industries. The HMT continues to run the centre on behalf of the Government of India. It offers training facilities in the following trades (1) Highly skilled operators-fitters, turners, millers, grinders. (2) Reconditioning of machine tools and preventive maintenance. In view of increasing personnel needs in the light of the expansion programme, the centre runs with full complement.

Chairman and Managing Director : M. K. Mathulla.

Directors : Sarvashree V. Narahari Rao; B. M. Abu Baker, I.A.S.; N. Keshava, M.P.; G. Ramanujam; E. W. Issacs; D. Sandilya; N. N. Wanchoo; Prof. M. S. Thacker; Dr. B. D. Kalelkar.

HINDUSTAN SALT COMPANY LTD.

13, Vivekananda Marg 'C' Scheme,
Post Box No. 146, Jaipur.

The Hindustan Salt Company Limited was registered on 12th April 1958 at Jaipur. The Salt Sources at Sambhar Lake and Didwana in Rajasthan and Kharaghoda in Gujarat States were transferred to the Company on 1st January 1959, when the Company actually started functioning. The Didwana Source has been surrendered to the Rajasthan Government as from the 1st of April 1960.

The authorised capital of the Company is Rs. one crore. The total subscribed and paid up capital is Rs. 24,20,000 divided into 2,420 shares of Rs. 1,000 each and are held by the Government of India.

The fiscal year of the Company is from 1st July to 30th June. During the fiscal year ending 30th June 1960, the Company produced 103·83

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

lakh mds. of salt. The figures of income and expenditure as per Budget during the above period were Rs. 1,36,22,800 and 1,29,58,100 respectively.

The Company has provided employment to 1,063 men.

The affairs of the Company are under the control of a Board of Directors appointed by the President of India. *Chairman*, S. Ratnam; *Managing Director*, H. J. Everden; *Secretary*, B. B. Mookerjee.

HINDUSTAN SHIPYARD LIMITED

(Vishakapatnam 5, Andhra Pradesh)

This is located at Vishakapatnam in Andhra Pradesh. It was originally designed by the firm of Sir Alexander Gibb and Partners.

The following table gives details of the ships built at the shipyard:

	Name of ship	Date of laying keel	Date of launching	Date of completion and sailing	To whom sold
1.	"Jalausha" (8,000 DWT) ..	22- 6-46	14- 3-48	15-10-48	Scindia S. N. Co. Ltd.
2.	"Jalaprabha" ,, ..	22- 8-46	20-11-48	31- 3-49	,,
3.	"Kutubtari" (245 DWT) ..	23- 5-47	18-12-48	19- 5-49	,,
4.	"Jalaprakash" (8,000 DWT)..	27- 5-48	8- 8-49	14-12-49	,,
5.	"Jalapankhi" ,, ..	7- 1-49	6-12-49	31- 3-50	,,
6.	"Jalapadma" ,, ..	26- 1-50	14- 9-50	14- 1-51	,,
7.	"Jalapalaka" ,, ..	26- 1-50	27-12-50	29- 3-51	,,
8.	"Bharatmitra" ,, ..	28- 9-50	26- 3-51	28- 6-51	Bharat Line Ltd.
9.	"Jalaputra" ,, ..	28- 9-50	26- 3-51	28- 6-51	,,
10.	"Jagrani" ,, ..	9- 5-51	15-12-51	4- 6-52	Great Eastern Shipping Co. Ltd.,

19.	"Andamans" (4,000 DWT) ..	11- 8-55	25- 7-56	4-12-57	Govt. of India Home.
20.	"State of Orissa" (8,000 DWT)	8-12-55	16- 2-57	31-12-57	Eastern Shipping Corporation.*
21.	"Jalavikram" (7,000 DWT)..	16- 4-56	29- 7-57	26- 3-58	Scindia S. N. Co., Ltd.
22.	"Jalaveera" ,, ..	4- 8-56	22-11-57	1- 7-58	,,
23.	"Raj Kumar" (6,000 DWT)	31- 8-57	5- 7-58	10- 6-59	Great Eastern Shipping Co. Ltd.
24.	"Indian Industry" ,, ..	7-12-57	12-12-58	26-10-59	India Steamship Co., Ltd.
25.	"Dhruvak" (500 GRT)	27- 1-56	16- 7-58	16-11-59	Indian Navy
26.	"Jayalakshmi" (6,000 DWT)	22- 8-57	22- 4-59	27- 1-60	New Dholera Steamship Co., Ltd.

The company is managed by a Board of Directors, as already mentioned, under the Ministry of Transport. *Chairman*, G. L. Mehta; *Managing Director*, Commodore B. N. Lele, I.N. *Members*, G. Venkateswara Iyer, I.C.S.; Tulsidas Kilachand; Michael John, M.P.; Shantikumar N. Morarjee; T. M. Gokuldas; Dr. Nagendra Singh, I.C.S.; Rear Admiral A. K. Chatterji; Dr. M. V. Krishnarao; S. S. Shiralkar, I.A. & A.S.; Rear Admiral T. B. Bose; Jehangir P. Patel.

The original design envisaged the provision of eight berths but the shipyard now has four building berths to build ships ranging from 320 to 550 ft. in length, and from about 5,000 tons to about 15,000 tons deadweight capacity.

A fifth berth suitable for building small craft has also been constructed.

It has a fitting-out wharf 1,200 ft. long, which is being extended by 110 ft. towards the west.

There are about 5,000 technicians, workers and staff.

The yard has been managed by Hindustan Shipyard Limited since the 1st of March 1952, a company in which the Government of India have a controlling interest.

The authorised capital of Rs. 10 crores is divided into 100,000 ordinary shares. Issued and paid-up capital is Rs. 5,59,67,000 in which the Government's contribution is Rs. 4,55,42,000.

The value of work done at the Shipyard during 1957-58 and 1958-59 was Rs. 3 crores 43 lakhs and Rs. 3 crores 45 lakhs respectively.

During 1959-60 the value of production was Rs. 401·48 lakhs. The profit during 1959-60 was Rs. 68,873.

So far (Nov. 1960) 12 steamships of 8,000 DWT each, an unberthed passenger vessel of 245 DWT, five diesel ships of 7,000 DWT each, two diesel ships of 8,000 DWT each and one passenger-cum-cargo vessel of 4,000 DWT for the Andamans trade have been built, and three diesel ships of 6,000 DWT, apart from a mooring vessel, a launch and a tug.

Orders to build ten more ships are under execution. This number includes one naval craft for the Indian Navy.

"Darshak" the first ship built in India for the Indian Navy was launched at Vishakapatnam on Nov. 2, 1959. This is a survey ship of 2,750 tons displacement, constructed in the Hindustan Shipyard. M.V. "State of Uttar Pradesh" was launched on Dec. 31, 1959.

A provision of Rs. one crore had been made for further development of the shipyard in the Second Plan. This includes *inter alia* purchase of additional machinery and extension of the fitting-out jetty.

A full fledged training school has been started in which recruits get intensive training for 4½ years in batches of 100 each.

It is now decided that the second shipyard would be located in Cochin.

HINDUSTAN STEEL LIMITED

Bihar Govt. Secretariat Bldg., P.O. Hinoo, Ranchi.

Board of Directors: G. M. Shrinagesh, I.C.S. (*Chairman*), P. Kutar (*Production*), N. C. Deb (*Finance*), K. N. Subbaraman (*Construction*), P. C. Neogy, N. C. Srivastava, I.C.S., S. S. Khera, I.C.S., Michael John, A. Naga Raja Rao.

Hindustan Steel (Private) Limited was incorporated on 19th January, 1954 as a private limited company with an authorised capital of Rs. 100 crores with the object of establishing a steel plant at Rourkela in Orissa State.

With effect from the 1st April, 1957, the Bhilai and Durgapur Steel Projects were also transferred to the management of Hindustan Steel (Private) Limited. The authorized capital was increased to Rs. 300 crores.

In March 1959 this was renamed Hindus an Steel Ltd.

The investment at the end of 1958-59 was Rs. 373·10 crores. Out of this Rs. 73·10 crores were by way of loan and Rs. 300 crores by way of equity capital.

The loan would bear interest at a rate not exceeding one per cent over the bank rate.

When in full production each of the three plants will produce one million tons of ingot steel or in finished saleable products 0·72 million tons at Rourkela, 0·77 million tons at Bhilai and 0·79 million tons at Durgapur.

The Rourkela steel plant was formally opened by the President of India on Feb. 3, 1959, the Bhilai on Feb. 4 and Durgapur on Dec. 29, when they respectively started producing iron. The Rourkela plant started producing steel in April 1959, Bhilai in Oct. 1959 and Durgapur in 1960.

India exported her first bit of steel in April 1960 when 2,000 tons left Visakhapatnam.

It should be added that there are now plans for the expansion of all the three projects. Work on this was to start only around the middle of 1961 so that current operations aimed at building up these projects to a capacity of one million tons of ingot each should smoothly slide into the expansion programme.

About the cost of these plants, the original estimates provided for an expenditure of Rs. 439 crores for the three plants proper —for Rourkela 170 crores, for Bhilai 131 crores and for Durgapur 138 crores.

These estimates do not include the cost of townships, ore mines and quarries, land prospecting and designing development of sources of water supply, power supply facilities upto the perimeter of the plant, personnel required for operation including the cost of training, railway works outside the perimeter of the plant, personnel employed directly by the project, customs duty, expenditure on medical services, office expenditure and such other ancillary expenditure.

A provision of Rs. 120 crores has been made for these items but again the increases in the cost due to escalation have not been taken into account.

Raw Materials

The principal raw materials for the production of iron and steel are iron ore, coal and limestone.

For the Rourkela steel project, iron ore will be drawn from mines which are being developed in Barsua about 50 miles away.

For Bhilai, iron ore will be drawn from Rajhara about 60 miles away.

For Durgapur, iron ore will be obtained from new mines being developed in Bolani in Orissa.

For Rourkela, coal will be drawn from Kargali, Bokaro and Jharia fields.

For Bhilai, it is expected that besides Kargali, Bokaro and Jharia, the new fields of Korba which are being developed will also supply coals.

* It is reported that the Govt. has decided to amalgamate this with the Western Shipping Corpn. to form the Shipping Corpn. of India from June 1961.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Limestone for both Rourkela and Durgapur will be obtained from the Birmitrapur-Hathibari areas.

For Bhilai, limestone will be drawn from the Nandini deposits about 12 miles from the steel works.

Water, Power

The Mandira Dam built across the river Sankh will provide an unfailing supply of water to the Rourkela steel plant.

A system of reservoirs will supply industrial water to Bhilai. A new coagulation tank connected with the permanent drinking water supply has been brought into use relieving considerably the water works in Drug which will supply the new steel township and the old town of Drug.

Durgapur will get its water from the river Damodar through a channel which is being constructed by the Damodar Valley Corporation.

With the adoption of the L.D. process, large quantities of surplus gases would be available in Rourkela. To utilise these and to have near at hand a source of power supply which would be reliable and responsive to fluctuations, a power plant of 75,000 kW is constructed within the steel works. During peak hours, additional power would be obtained from the Hirakud hydro-electric system.

For the Bhilai steel plant, the main source of power would be the thermal station which is under construction in Korba. In addition, 24,000 kW. of power would be generated within the steel works' own thermal station.

In Durgapur, the Damodar Valley Corporation is putting up a 150,000 kW thermal station primarily to supply the steel works. Because of the proximity of this, the stand-by station within the steel works will only be of 15,000 kW.

Training, Personnel

For each of the steel plants, it is estimated that on an average about 670 engineers and higher supervisory staff and 6,300 skilled workers and operatives will be required.

A large training establishment is being run at Jamshedpur at which every young engineer is first given preliminary training before going abroad.

Arrangements have been made with the existing steel works in India to train 1,800 operatives in about four years. Over 75 engineering firms have agreed to train 1,600 skilled workers at a time. It is hoped that by the time all the three steel plants go into full production, about 13,000 skilled workers would have been trained at these centres.

Although ultimately there would be only about 7,500 engineers, operatives and skilled workers in each plant, the number of engineers and workers employed in construction is many times more.

At present, there are 5,804 workers employed by the Rourkela project direct and 18,211 by the contractors in Rourkela (Oct. 1960). In Bhilai there are 49,380 labourers employed by contractors (31st Oct. 1960). The project employs in all 47,821 persons (Oct. 1960).

In Durgapur there are 7,751 workers employed by the project and 26,518 by the contractors.

At Rourkela there were 573 foreigners appointed by contractors, 21 by consultants and one by the project as on 30th Oct. 1960.

Each of the townships will have 7,500 houses with a hospital, health centres, schools, shopping centres and the like.

In Rourkela, 6,483 houses have been built and another 1,003 are under construction. In addition about 1,000 cheaper type houses are under various stages of construction (October, 1960). In Bhilai, 5,284 houses have been built and another 1,520 are under construction (31st Oct. 1960). In Durgapur, 5,179 houses have been built and a further 1,190 are under construction.

In addition, temporary accommodation has been provided to large numbers of construction staff and workers.

Central Committee

It has been mentioned that the Government of India have decided to set up a committee to co-ordinate the work of various organisations engaged in the detailed planning of the expansions of the three steel works in the public sector.

The committee will consist of the General Managers of the three steel plants at Rourkela, Bhilai and Durgapur and a representative each of the Department of Mines & Fuel and Iron & Steel of the Ministry of Steel, Mines & Fuel. The General Manager (Construction Division) of the Hindustan Steel Ltd. and the Iron & Steel Controller of Government of India will also be members of the committee. The representative of the Department of Iron & Steel will be the convener of the committee.

The committee has been set up to plan the economic expansion of the three steel works with a view to securing the timely production of various categories of steel for which additional demands are likely to arise during and immediately following the Third Five-Year Plan.

With Hindustan Steel there is also a Central Designs Organization for planning and designing future steel plants. It is located in Rourkela and is at present engaged in planning the expansion of the three steel plants.

Rourkela: The annual output expected at Rourkela is about one million tons of steel ingots capable of being turned into about 720,000 tons of finished plates, sheets, strips, and tinplates.

It has been decided to expand the capacity of the plant to 1·8 million tons during the Third Plan.

The plant will consist of 3 coke oven batteries of 70 ovens each, a By-Products Plant and 3 Blast Furnaces each producing 1,000 tons of iron a day. The steel melting side consists of 4 Open Hearth Furnaces (of 80 tons capacity) and 3 L.D. Converters which will produce 250,000 tons and 750,000 tons of ingot steel, respectively.

The L. D. Converters are the first of their kind in India. The first of these was switched on on 28th Dec. 1959.

Rourkela is designed to produce 200,000 tons of plates, 470,000 tons of hot and cold rolled sheets of various gauges and 50,000 tons of tinplate, besides about 40,000 tons of foundry iron.

The by-products plant will deal with 130 tons of tar per day and produce benzol, creosote, naphthalene and other products.

In addition, a fertilizer plant is being put up to use the surplus nitrogen from the oxygen plant. This will produce 580,000 tons of nitro-limestone. The fertilizer plant will, therefore, be the biggest in Asia.

The present (March 1961) estimated cost of the plant is Rs. 221 crores including the cost for development of mines, town and other services.

The plant started production of pig iron on Feb. 3, 1959 and the first steel ingot was produced on April 30, 1959.

The blooming and slabbing mill was ready on Dec. 15, 1959 when the first slabs were rolled out. Commercial production started on Jan. 11, 1960. The mill has been designed to roll steel ingots upto a maximum weight of 16 tons each, and ultimately roll 1·8 mln. tons of slabs per year.

The plate mill was commissioned on Sept. 12, 1960. The Prime Minister opened on 28th March 1961, the wide strip mill, the penultimate stage of the Steel Project. The strip mill will roll 600,000 tons of sheets and strips during the initial stages.

Till the end of Dec. 1960, about 580,000 tons of pig iron were produced. The Plant produced 41,998 tonnes of pig iron and 26,491 tonnes of steel ingots in Jan. 1961 against 39,828 and 20,944 tons respectively in Dec. 1960. The production of finished steel rose from 5,283 tonnes in Dec. 1960 to 7,286 tonnes in Jan. 1961.

Production in the Rourkela Pipe Plant commenced in Sept. 1960. The capacity of the plant is 120,000 to 180,000 tons a year on single shift basis.

Rourkela is in Orissa, 257 miles from Calcutta on the main Calcutta-Bombay railway line.

It is spread over an area of about 20 sq. miles.

In the township 6,622 houses had been completed by the end of 1960.

Managing Director: Lt. General S. S. Thorat; *Technical Adviser:* Dr. H. Klinar; *Chief Engineer (Plant):* B. R. Malhotra; F. A. & C. A. D. B. Murao.

Bhilai Steel Project: An agreement was entered into between the Governments of India and the U.S.S.R. on 2nd February 1955, providing for technical and economic assistance in the erection of an integrated Steel Plant at Bhilai in Madhya Pradesh. The Plant is designed to produce one million tons of ingot steel to be rolled into 770,000 tons of heavy and medium structural steel and 300,000 tons of pig iron.

Construction started at Bhilai in the spring of 1957. Production of pig iron began on the 4th of Feb. 1959 and the production of steel on 12th Oct. 1959.

Production during Jan. 1961: Pig iron 72,609 tonnes as against 62,016 tonnes in Dec. 1960. Steel ingots 48,374 tonnes as against 38,496 tonnes in Dec. 1960. Ammonium Sulphate Fertilizer 988 tons in Dec. 1960. Crude tar 2,670 tonnes in Dec. 1960. The production of saleable steel stood at 34,313 tonnes in Jan. 1961. Till the end of Dec. 1960, 982,001 tons of pig iron were produced.

When complete there will be at Bhilai 3 coke oven batteries with 65 ovens each, 3 blast furnaces and some by-product units. The blast furnaces have a rated capacity of 900 tons each per day.

Iron will be converted into steel in 6 open-hearth furnaces of 250 tons capacity each.

The Rolling Mills will consist of one Blooming Mill, one Rail and Structural Mill, one Continuous Billet Mill and one Merchant Mill.

The blooming mill went into operation on Nov. 7, 1959 and the billet mill on Dec. 24, 1959. The latter has a capacity of 420,000 tons per annum. The rail and structural mill was commissioned on 27th October 1960 and has an annual capacity of 365,000 tons.

The merchants mill, the last of the four rolling mills of the Bhilai steel plant was commissioned on 2nd Feb. 1961, marking the completion of the construction work on the steel plant.

The third blast furnace and coke oven and the fifth open hearth furnace of the Bhilai steel plant was inaugurated on 30th Dec. 1960.

With the commissioning of these additional units, the Bhilai steel plant practically takes full shape, and work unit was expected to be completed by the end of March 1961.

The blast furnace is the last under the present programme of the steel plant.

The fifth open hearth furnace commissioned on 30th Dec. 1960 has a capacity to tap 250 tons of steel every day. The sixth open hearth furnace, which will be the last, will be commissioned in 1961.

The general pattern of products to be manufactured annually in Bhilai would be as under:—

Rails (Standard gauge)	100,000 tons
Rails (Narrow gauge)	10,000 ,,
Heavy structurals	284,000 ,,
Sleeper-bars and crossing sleepers	90,000 ,,
Rounds and Squares	121,000 ,,
Flats	15,000 ,,
Billets	150,000 ,,

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

About 60,000 tons of various products like coaltar, ammonium sulphate, benzol, toluene, are expected to be recovered annually by treatment of the gases given out from coal during its conversion into coke.

The capacity of the plant will be expanded to 2·5 million tons under the Third Five Year Plan.

This expansion has now been decided and an agreement has been arrived at with the Soviet Union.

The estimated cost is about Rs. 131 crores exclusive of the cost of township, ore mines, and such other ancillary expenditure. In 1957-58 about Rs. 63·33 crores were spent on the project as against an expenditure of Rs. 9 crores in 1956-57.

The expenditure incurred in 1958–59 was Rs. 74·74 crores and the total expenditure upto the end of March 1959 was Rs. 123·67 crores.

The foreign exchange component of the expansion expenses is about Rs. 42 crores. It is expected that this would be met out of the Rs. 180 crore rouble credit offered by USSR for the Third Plan.

Bhilai is in Madhya Pradesh, 156 miles from Nagpur on the main Calcutta-Bombay line.

It may be added that at the end of Oct. 1960 there were 498 Russians on construction and operation. In addition there were 54 Russians representing the Trade Group Supplier — Soviet firms fabricating machinery and equipment for the Bhilai plant.

Gen. Manager : Suku Sen.

Senior Dy. Gen. Manager : R. M. Ray, I.M.P.

Chief Engineer : P. P. Dani.

Durgapur Steel Project : The Steel Plant at Durgapur in West Bengal is the third one in the public sector (besides Bhilai and Rourkela). This will produce one million tons of ingot steel to be rolled into about 790,000 tons of light and medium sections and bars, in addition to 350,000 tons of pig iron for internal sale and export. It is proposed to expand the steel plant during the Third Plan to produce 1·6 million tons of ingot steel.

The steel plant produced 37,844 tonnes of pig iron and 19,598 tonnes of steel ingots in Jan. 1961 as against 36,156 tonnes and 18,425 tonnes respectively in Dec. 1960. The saleable pig iron showed an increase from 19,155 tonnes in Dec. 1960 to 20,511 tonnes in Jan. 1961.

During 1960, 427,495 tons of coke, 321,868 tons of pig iron, 65,276 tons of billets, 1,460 tons of sleeper bars, 16,793 tons of crude tar, 3,796 tons of ammonium sulphate, 4,117 tons of sulphuric acid and 136 tons of naphthalene were produced.

A 'package deal' contract for the construction of the works was signed with Messrs. Indian Steelworks Construction Co. Ltd., London on October 31, 1956, and the work is expected to be completed by the end of 1961.

At present one coke oven battery, two blast furnaces, four open hearth furnaces, two primary rolling mills, the continuous billet and sleeper bar mill are working, besides various units of the by-products plant, foundry and maintenance shops and other service units. The second blast furnace was commissioned on 2nd Feb. 1961. This furnace will produce 1,270 m. tons of iron a day. The Second Battery of the Coke Ovens was lighted up on October 12. Production at this battery was to start from the middle of December 1960. The coal washery with a capacity to wash 360 tons of low grade coal per hour also functions.

Ultimately the Durgapur Steel Works will have three blast furnaces, each with 1,250-ton capacity per day, seven 200-ton basic open hearth furnaces and one 100-ton open hearth furnace for making special steel, a 42" blooming mill, a 32" blooming mill, a continuous billet and sleeper bar mill, sleeper and fishplate plant, a 24" medium section mill, a continuous merchant mill and a wheel and axle plant.

These will produce 100,000 tons of forging blooms, 240,000 tons of Merchant Sections, 60,000 tons of forging bars, 60,000 tons of sleeper bars, 150,000 tons of billets, 200,000 tons of light sections, 30,000 tons of forging blooms, 45,000 sets of wheels and axles for railways and 350,000 tons of pig iron for sale.

The various by-products include ammonium sulphate, benzene, toluene, xylene, solvent naphtha, naphthalene, road tar, wood preserving creosote.

The original estimated cost of the plant was Rs. 138 crores.

Expenditure incurred by the project upto end of 1958–59 : Rs. 97·73 crores. Amount spent during 1958–59 : Rs. 55·62 crores ; amount spent during 1959–60 : Rs. 50·22 crores ; amount spent during 1960–61 : Rs. 21·37 crores (estimated).

No. of British technicians who joined the project till end of Sept. 1960 : 92.

The steel township, part of the Project, is built to house in the first phase 7,500 employees at a cost of nearly Rs. 14 crores. More than 5,000 of them have already been completed and the rest will be ready shortly.

The Project is administered by a General Manager, who is also an ex-officio Director of the Hindustan Steel Ltd.

General Manager : P. C. Neogi.

Dy. General Manager : P. C. Sood, I.M.P.

General Superintendent : R. C. W. Cameron.

WASHERIES

The requirements of washed coals for the three new steel plants in the public sector and the expanded steel plants in the private sector are estimated at about 8·27 million tons.

The washery at Kargali, set up by the National Coal Development Corporation, will supply 1·1 million tons to Rourkela and 0·5 million tons to Bhilai.

Two washeries owned by Tatas, one at Bokaro and the other in Jamadoba would, after certain improvements, supply 1·5 million tons of washed coals. The washery at Lodna, which supplies the Indian Iron and Steel Works, has an output of 0·22 million tons.

With the establishment of the washery at Kargali and the improvements to the Tata Washeries, capacity has to be set up only for the balance of about five and a half million tons. A washery is included in the contract for the steel plant at Durgapur to supply 0·8 million tons to meet the requirements of that plant. The balance—about 4·15 million tons—is proposed to be met from three washeries to be put up, one in Dugda, another in Bhojudih and the third in Patherdih.

The washery in Dugda will supply washed Jharia coals to Bhilai and Rourkela, the one in Bhojudih to the Tata Iron & Steel Works and the Patherdih washery to Indian Iron & Steel Works.

The three washeries will be under Hindustan Steel. Dugda will have a capacity of 500 tons an hour, Bhojudih 250, Patherdih 400. The first was expected to be commissioned end of 1960, the second will be commissioned at the end of 1961, third sometime in 1962.

INDIA GOVERNMENT SILVER REFINERY PROJECT

47, Strand Road, Calcutta 7.

This project is under the Ministry of Finance (Department of Economic Affairs), Government of India. Erection and installation of the plant has been completed and it has already started production.

The capital outlay on the project will be of the order of Rs. 1·3 crores.

The number of persons employed on the plant is about 350. Some of the departments of the Refinery are now being operated in three shifts round the clock.

The project is intended for the extraction and refining of silver from the Q.A. cut and defaced coins and recovery of copper as by-product.

The process of refining is a new patented process, the joint authors of which are late Mr. G. C. Mitter, formerly Master, Assay Deptt. and Silver Refinery Project and Messrs. Demang Elektrometallurgie G.m.b.H., West Germany.

General Manager, V. J. Joshi.

INDIAN RARE EARTHS LIMITED

Udyogamandal P.O.
(Alwaye, Kerala)

This factory is owned jointly by the Government of India and the Government of Kerala.

The subscribed capital is Rs. one crore, of which the Government of India's share is 64 per cent and of the Kerala Government 36 per cent.

The factory started production in July 1952. The Plant has a rated capacity to process 1,500 tons of Monazite per annum. The main products are Cerium Compounds, *viz.*, Mixed Rare Earths Chloride, Mixed Rare Earths Carbonate and Crude Cerium Hydroxide. Cerium Oxide and Cerium Naphthenate are also manufactured in small quantities. Trisodium Phosphate is obtained as a by-product.

The Cerium Compounds are exported for use in the manufacture of Misch Metal, Nodular Cast Iron, Alloys for Jet Engines, Pyrophoric alloys, Enamelling of Cast Iron and Steel, Polishing of Optical Glass, Tinting of Optical Glass, Lenses for aerial photography cameras, Tanning of leather, Carbon for arc lamps, etc.

The Trisodium Phosphate has multiple uses and is being used in textile, paper and other mills and industries for dyeing, bleaching, softening of industrial water, in boilers and for general cleaning purposes in mills, factories, hospitals, homes, etc.

The Company also operates the Thorium Plant of the Government of India at Bombay where Thorium Compounds are manufactured from raw material obtained at the Alwaye Plant.

Thorium Compounds are sold by the Company on behalf of the Department of Atomic Energy, Government of India.

The factory made a profit of Rs. 93·187 in 1959–60 against a loss of Rs. 1,23,952 during the previous year.

The company earned foreign exchange worth Rs. 18·82 lakhs during the year by the sale of rare earths chloride abroad. Thorium nitrate produced at the thorium plant of the Department, Trombay, fetched Rs. 2·3 lakhs in foreign exchange during the year, besides meeting in full the internal demand of the gas mantle industry.

Chief Administrative Officer, G. Rajagopal Menon.

Works Manager, H. N. Sethna.

Deputy Chief Administrative Officer, K. V. N. Nayar.

Deputy Works Manager, Alwaye, C. M. Mani.

Deputy Works Manager, Thorium Plant, C. R. Das.

INDIAN REFINERIES LIMITED

New Delhi.

A private limited company under the Companies Act, 1956, under the name and style of "Indian Refineries Limited" was registered in Delhi on August 22, 1958, with an authorised capital of Rs. 30 crores to control and manage the two oil refineries to be established by the Government.

The Company is being managed through a Board of Directors appointed by the President. The number of Directors for the present is ten.

Chairman, N. S. Mani, I.C.S. ; *Managing Director*, P. R. Nayak, I.C.S.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

INDIAN TELEPHONE INDUSTRIES LIMITED

(Duravani Nagar, Bangalore 16, Mysore State)
Railway Station : Krishnarajapuram
(Southern Railway)

Tel. Address : "Phonindustry."
Telephone : 5111 (4 lines)

Regional Offices, Sales & Service : National Insurance Bldg., 1st floor, 27, Bastion Road, Bombay 1 ; 22, Chittaranjan Avenue, United India Life Assurance Bldgs., Calcutta 13 ; 12-B, Netaji Subhash Marg, Daryaganj, Delhi 6 ; Flat No. 4-A, Agurchand Mansions, No. 35, Mount Road, Madras 2.

Total Investment :

Authorised Capital.. .. Rs. 4 Crores.
Subscribed and Paid-up Capital .. .. .. ,, 4 Crores.
Loan from the Govt. of India Rs. 1 Crore (approx.).

Board of Directors :

M. M. Philip, I.C.S. (*Chairman*) ; R. C. Vaish ; J. J. Eades ; D. S. Tod (*Alternate Director*) ; S. S. Shiralkar ; S. M. Ramakrishna Rao ; T. Shamanna ; S. L. Kirloskar ; Jagdeesh Prasad (*Managing Director*).

Administration :

General Manager, N. V. Shenoi.
Joint General Manager, P. K. Verghese.
Financial & Accounting Manager : S. R. Subrahmanyan.
Works Managers : W. M. Kulkarni (Max); S. Sankar Raman (Transmission).
Chief Engineer : H. J. Mirchandani.
Secretary, D. V. M. Rao.

The I.T.I. Ltd., the first industrial concern in the public sector after achieving independence, was originally started as a Government department in 1948 under the Ministry of Communications. On February 1, 1950 it was converted into a private limited company with the Government of India as the major share-holder.

Facts and Figures

Present Production per annum : Telephones — 1,20,000 ; exchange lines — 80,500 lines ; carrier equipment — 1,500 ; channels of long distance, transmission channels equipment and railway electrification equipment. In addition road traffic signals and other telecommunication equipment such as transmission measuring set, voice frequency repeaters, ultraphones, etc. are produced in considerable quantities. Paper condensers, fan condensers, condensers for fluorescent tube lighting, silver mica capacitors and precision screws of various types and sizes are also manufactured, surplus quantities of which are supplied to other industries.

I.T.I. has already exceeded the annual production targets laid down for the Second Five Year Plan in the production of telephones and exchange lines. During the Second Five Year Plan it was originally envisaged that a total of 3,20,000 telephones and 2,15,000 exchange lines would be produced. Against these targets, during the Second Plan period (from April 1956 to November 1960), I.T.I. has already produced 363,172 telephones and 223,585 exchange lines as against a target of 320,000 and 215,000 respectively.

During the Second Plan period the factory produced 4,41,000 telephones. I.T.I. supplied considerable quantities of telecommunication equipment for the electrification projects of the Indian Railways.

During 1959-60, the industry made a net profit of Rs. 37·14 lakhs. The turnover was nearly three and half crores of rupees representing an increase of a little over Rs. 24 lakhs over the previous year. The dividend of 2½ per cent has been maintained.

The I.T.I. has developed a new type of telephone named "Type 601" whose performance is far superior to the instrument now in use. This new type of telephone is expected to be available to the public in 1961. Minaturisation of the items produced is one of the prominent factors. At present various transistorised equipment are being developed by the Development departments. The I.T.I. will start manufacturing a new telephone receiver before the end of the Third Plan period. All the components of the receiver will be indigenous.

A joint Works Council of management and labour was inaugurated on 7th April 1959. A rational system of production bonus and incentive scheme exist.

Number of persons employed : 7,600.

INTEGRAL COACH FACTORY

Perambur, Madras.

The Integral Coach Factory Project at Perambur, a suburb of Madras on the Madras-Bombay line, is one of the largest Coach Building Unit in the world. It is an important endeavour of the Ministry of Railways included in the first Five-Year Plan, and is a significant step forward in the attainment of self-sufficiency in rolling stock.

Construction started in the latter half of 1952. The construction phase of the project covered about three years. The first coach was turned out on October 2, 1955.

The thousandth coach rolled out on January 22, 1960.

The yearly target of railway coaches to be manufactured in the factory during full production was originally 350 coaches. This had been planned to be achieved in the course of five years after October 1955. The target was, however, achieved much earlier. Details of the actual production and targets are given in the table below.

Period	Target as per agreement with the Swiss firm	Revised targets	Actual outturn
April 1955–March 1956	8	12	12
April 1956–March 1957	47	72	88
April 1957–March 1958	149	174	222
April 1958–March 1959	255	312	381
April 1959–March 1960	331	350	447
April 1960–March 1961	350		623 (anticipated).

In order to meet the increasing requirements of coaching stock for the Indian Railways, a second shift working has been introduced. The second shift is being gradually intensified so as to increase the outturn to about 700 coach shells per year.

From May 1960 the factory has been producing over 40 coaches every month.

The type of coach manufactured in the factory called the "integral coach" is of a modern design developed by a Swiss firm, Messrs. Swiss Car and Elevator Manufacturing Corporation Ltd., Schlieren, Zurich with whose collaboration the factory was designed. This coach is of all welded steel construction of the integral type.

The factory was producing only third class coaches and has now begun to manufacture third-class-cum-luggage and brake vans, third class sleeper coaches and first class coaches also.

During the Third Plan period, this factory has a production programme for a total of 3,735 coaches for the Indian Railways. This programme includes coaches for the broad gauge as well as as for the metre gauge. Diesel rail cars and the electric multiple unit stocks are also proposed to be produced at this factory during the Third Plan. The Third Plan of the Railways envisages procurement of 197 diesel rail cars as under : 67 broad gauge at the estimated cost of Rs. 6·4 lakhs per unit, 120 metre gauge at the estimated cost of Rs. 3·8 lakhs per unit and 10 narrow gauge cars at the estimated cost of Rs. 2·5 lakhs. The factory also intends building coaches for the export market.

Technical Training : Facilities exist for imparting training to the candidates in both theory and practice. A Technical School to train all the skilled workmen of the factory was established in March 1954, 18 months ahead of production.

Furnishing : The original intention was that the Integral Coach Factory would produce only shells while they will be furnished in the Railway workshops. Due, however, to the impact of the Second Plan, it has been decided to cater for furnishing all the shells at I.C.F. itself.

A separate furnishing unit, with a project cost of Rs. 3·69 crores is therefore being set up adjacent to the present Shell Unit. Construction work for this permanent furnishing factory is already in hand. Necessary land has been acquired and ancillary works like Railway sidings, roads, compound walls, water supply pipelines, works entrance, etc. have already been completed. The construction of the Main Works Office is nearing completion. The workshop structures in prefabricated reinforced concrete, a technique which is being tried for the first time in this sector, are now in hand. It is expected that this Furnishing Factory will be completed by about the middle of the Third Five Year Plan.

In the meanwhile, the factory has started furnishing coaches on a small scale by providing temporary facilities. Starting from May 1957, this temporary furnishing unit has gradually developed its output and is now furnishing at the rate of about 25 coaches per month.

Cost of the Coach : With increased outturn and improvement in the skill and technical know-how of the staff, the cost of production of coaches has been systematically reduced. The latest cost of production of an indigenously manufactured shell is only Rs. 78,000 as against Rs. 1,86,000 in 1955. This cost is considerably below the landed cost of an imported shell and also much lower than its ex-works price at Switzerland. Incentive system of payment has also been introduced in the factory from Jan. 1960 to further improve the production efficiency. Materials worth Rs. 37,000 were imported for the earlier III class coaches. Now this has been reduced to Rs. 5,000.

Amenities : A Colony of more than 600 quarters has been provided to accommodate the essential staff with modern amenities such as a Middle School, a Children's Park, a Recreation Club, a Co-operative Store and an open air theatre for the cultural activities of employees.

There are a Welfare Organisation to look after the welfare of the employees, a staff council with elected members for suggesting improvements in working conditions and production methods, suggestions and inventions scheme which encourages the workers to put up practical ideas for better and more economical production and a guardianship scheme by which supervisory staff take an interest in batches of workers after and during working hours. To encourage team spirit and comradeship, playgrounds have been provided in the factory area and there is a regular sports coach. The factory has first class hockey, football and athletics teams.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

The total number of employees (permanent and temporary) on the rolls is about 7,000 as against 4,779 in March 1958.

Chief Administrative Officer: K. Swarup; *Deputy Financial Adviser and Chief Accounts Officer:* V. R. Ganeshan; *Deputy Chief Mechanical Engineer (Furnishing):* K. M. Aiana; *Deputy Chief Mechanical Engineer (Shell):* C. G. Devaya; *Deputy Controller of Stores:* R. K. Tandon; *Secretary to Chief Administrative Officer:* K. T. Jethmalani.

MAZAGON DOCK LIMITED

Mazagon, Bombay 10.

On 14th May 1960, one of the biggest British Marine and Industrial ventures in this country became a National Undertaking when Mazagon Dock Ltd. was acquired by the Central Government. Situated at Bombay in the State of Maharashtra the Mazagon Dock is Western India's leading Ship-Repairing and Ship Building concern.

The Mazagon Dock is fully equipped to carry out all types of major repairs to Passenger Ships, Tankers and Cargo Ships. During the last war no fewer than 4,680 War-ships and Merchant Ships were repaired and during the period of 1954–58 over 2,000 ships flying the flags of 23 nations sailed out after being repaired here.

The first ship launched from its slipways was the cargo ship "HORMASJEE BOMANJEE" in 1828. This was followed by quite a few merchant ships and Men-of-War, notable among which are the "TIGRIS" and the Frigate "SHANNON". In more recent years quite a few Tugs, Oil Flats, Lighters and Launches were designed and constructed here. During the period of 1954–58 Mazagon Dock constructed 9 Tugs, 2 Grab Dredgers, 3 Anchor Boats, 2 Firefloats, 1 Survey Launch, 19 Barges and 1 Spirit Aviation Lighter. During the year 1960-61 it was planned to lay the keel of a 2,500 ton Passenger-cum Cargo ship, 2 ocean going Salvage Tugs, 3 large Aviation Fuel & Water Lighters and a host of smaller craft.

The Mazagon Dock has seven building berths out of which 3 are covered and 4 are open. Six of these berths are 260 ft. each and one berth is 165 ft. long. The construction of a 450 ft. long berth is under active consideration. The berth will be used for building coastal ships and specialised naval and commercial craft.

Besides ship repair and ship building, steel work fabrication, ferrous and non-ferrous foundry work, steel forgings, electrical and automobile work, all types of timber construction and general engineering work are carried out under fully qualified European and Indian Supervisors. More recently an entirely new project has been started in collaboration with Campbell Oil Engine Co. Ltd., Glasgow, and the Company manufactures various sizes of small horizontal and vertical engines of 6 to 20 H.P. It is planned to increase the production as the demand for small engines is on the increase and very soon it is hoped to export them to the Middle East and Far East countries who have shown a keen interest in the performance of the engine.

The naval work which is being done in Mazagon Dock after nationalisation utilises only a part of the yard's capacity and the establishment basically remains a commercial Yard.

It has got three dry docks named "Ritchie", "Mogul" and "Mazagon". The Ritchie Dry Dock is 483 ft. in length with a width of 62'-6" between the lower altars. The largest vessel docked was "The British Patience" with a moulded beam of 61 ft. The Mogul Dry Dock is 395 ft. long and 56 ft. wide. The Mazagon Small Dry Dock is 154 ft. in length, 33 ft. wide and actually vessels 125 ft. in length, 30 ft. in beam and up to 10 ft. in draft can be accommodated here. The Yard has 3,000 workmen and its clerical and supervisory staff consists of 350 members.

The Company has an authorised capital of Rs. 2 crores and a paid up capital of Rs. 63 lakhs.

Various new projects are under construction and plans are under way to make additional facilities available for merchant ships. The Yard plans to expand its building capacity to the extent of constructing medium size ships of 3,000 to 4,000 tons.

Managing Director: Capt. C. L. Bhandari.

NEYVELI LIGNITE CORPORATION LTD.

(Ministry of Steel, Mines and Fuel, Government of India.)

Preliminary investigations of the extensive lignite deposits which occur at Neyveli in the South Arcot District of Madras were undertaken first by the Madras Government and then by the Central Government from January 1, 1955, in consultation with Messrs. Powell Duffryn Technical Services Limited, a U.K. firm of technical consultants, whose services were made available to the Government of India under the Colombo Plan.

These preliminary investigations, including large-scale pumping tests, having proved the feasibility of economic mining and utilisation of the Neyveli lignite, Government accepted, in principle, the execution of the Integrated Lignite Project and sanctioned the mining part of the Project. The cost of the mining scheme is estimated at Rs. 20·32 crores.

The Integrated Project envisages the mining of 3·5 million tons of lignite per annum to be utilised for:

(*a*) production of 250,000 kW of power in a thermal power station using lignite as fuel;

(*b*) production of fertilizers with a nitrogen content of 70,000 tons per annum, in the form of urea; and

(*c*) manufacture of 714,000 tons of raw lignite briquettes per annum to be processed in a low temperature carbonising plant to yield 380,000 tons of carbonised briquettes per annum for use as domestic and industrial fuel, 43,000 tons of char dust, 6,400 tons of motor spirit, 51,300 tons of tar and 1,032 tons of phenol.

A detailed mine plan involving an estimated expenditure of Rs. 20·32 crores for the development and production phases of the mine submitted by the technical consultants was sanctioned by the Government. The scheme was inaugurated by the Prime Minister on May 20, 1957. Messrs. P.D.T.S. Ltd. were appointed consultants for the Mining Scheme. Orders for Rs. 5·5 crores worth of conventional and specialised machinery required for removing the overburden and developing the mine for full production have been placed.

All the conventional equipment have already arrived at site and a major number of items of specialised mining machinery have been received at the site and commissioned. The estimated cost of production of lignite has been worked out at about Rs. 10 per ton which compares favourably with the price at which coal is available in South India. In accordance with the time schedule for the mining project, the mine has begun production. In the initial stages annual production is estimated at 3·5 million tons. In the next few years this will be raised to 4·5 million tons. The ultimate target is 6·5 million tons per year.

The total quantity of overburden removed till the end of Oct. 1960 was 14·85 million cubic yards against a total of 27 million cubic yards to be removed before touching lignite.

The Central Water and Power Commission have drawn up the Project Report for the 250 MW. thermal station, the most important constituent scheme in the Integrated Lignite Project. The Thermal Station Scheme is one of the schemes financed from the credit offered by the U.S.S.R. in respect of which an agreement was signed in Delhi in 1957. The estimated cost of the scheme is Rs. 21·72 crores. The first unit of the Thermal Power Station is expected to be commissioned towards the end of 1961.

The Project Report for the Fertilizer Unit has also been drawn up. The total capital cost of the scheme has been estimated at Rs. 26·10 crores Full production is likely to start in March 1963.

Tests conducted on bulk samples of Neyveli lignite in West German laboratories have established that the lignite is of a high quality, capable of yielding satisfactory briquettes, both raw and carbonised on a commercial scale. Further tests on a pilot plant scale were conducted at Neyveli with the help of pilot plant equipment, received under the T.C.M. aid, for determining the optimum conditions under which the lignite should be briquetted and carbonised. Based on the results of the tests, a Project Report was prepared. Proposals have been forwarded to the Government of India for sanctioning the establishment of a Briquetting and Carbonisation Plant at an estimated cost of about Rs. 19 crores and their approval is awaited. The Plant will be commissioned in 1963.

Clay Washing Scheme: China clay of very good quality occur near the lignite seam. A scheme for the establishment of a Clay Washing Plant on a modest scale has also been drawn up. It is expected that the plant will be put into commission by about the end of 1961. The estimated cost of this scheme is about Rs. 14·30 lakhs.

A new township consisting of 31 blocks with all modern amenities like parks, schools, shops, hospital, co-operative stores, etc., has been planned, to accommodate offices, factories, staff and workers of the different units of the Integrated Project. It is to be constructed according to a phased programme. Construction work has already started and more than 2,000 houses have already been constructed. Further work is in progress.

Pending construction and development of the new township, a minimum number of temporary buildings have been constructed in the area south of the railway line, to meet the requirements of office and residential accommodation and to provide amenities on a modest scale.

As the mining gains momentum, the labour force of Project will go up. Two full time labour welfare officers have been appointed to look after the interests of the workers. There is also an Assistant Personnel Officer to look after the amenities of the workers. An Information Officer has also been appointed.

The Corporation has opened a high school, a middle school and an elementary school for the benefit of the children of its employees. There are a dispensary and maternity centre at Neyveli. A large hospital with all modern equiment is under construction.

The ownership, management and administration of the Neyveli lignite project has been entrusted to a Government of India-owned private limited company, Neyveli Lignite Corporation Ltd., which started functioning on 6th December 1956 and has its registered office at Neyveli 1, South Arcot District.

Chairman, Board of Directors, and Managing Director, T. M. S. Mani, I.C.S.

MACHINE-TOOL PROTOTYPE FACTORY, AMBERNATH

The Machine-tool Prototype Factory at Ambernath near Bombay was set up in 1953 by the Ministry of Defence, Government of India, under the Director-General, Ordnance Factories, in collaboration with a Swiss Firm. It was a pioneer project to design and develop ordnance weapons as well as machine tools.

Since its inception the factory has established production of several types of precision machine tools of its own design, and supplied these to various Government establishments and industry.

To overcome the shortage of skilled artisans necessary for the production of armaments, a Training School has been attached to M.T.P.F. since its inception. The school helps to meet the requirements of other ordnance factories also.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

NAHAN FOUNDRY LTD.

(Nahan, Sirmur District, Himachal Pradesh).

This was started in 1875 and has been continuously expanded.

The authorised capital is Rs. one crore and the paid-up capital Rs. 40 lakhs. The number of persons employed is about 500 at Nahan and about 150 in the agencies.

Production consists of improved type of cane crushers, bullock and power driven; centrifugal pumps in different sizes; paddy-thrashers; ploughs; corn-sheller machines (a new patented machine for separating maize corn from their cobs); chaff-cutters of different types; boiling pans; flour mills, power and bullock driven; and miscellaneous items. The foundry undertakes quality casting work for P.&T., D.G.S. & D., Public Health and Railways. A scheme to manufacture electric motors up to 20 H.P. was being implemented (November 1959). Initially it would manufacture 1,200 motors of various sizes. This will later increase to 3,600.

Production during 1959–60 was 3,067 tons. The value of total production for 1959–60 is Rs. 22·05 lakhs as against Rs. 19·61 lakhs in 1958–59.

The company made a net profit of Rs. 3,50,000 during 1959–60 and a net profit of Rs. 1,03,000 in 1958–59.

It is managed as a private limited company (which took over on Jan. 1, 1953) with the President and his nominees holding all the shares. The affairs are looked after by a Board of Directors appointed by the President of India and is under the administrative control of the Ministry of Commerce and Industry. It is a pioneer industry in northern India for the manufacture of cane crushers and "Sultan" is a speciality all over India.

General Manager, C. S. Shukla.

NANGAL FERTILIZER—HEAVY WATER PROJECT

Naya Nangal, Punjab.
(Ministry of Commerce and Industry, Government of India).

The factory which is located at Nangal on the right (western) bank of Sutlej, will produce nitro lime stone fertiliser with an annual capacity of about 3,90,000 tons. It will also produce about 14 tons of heavy water for the use of the Department of Atomic Energy. The factory which was expected to go into production in the first quarter of 1961 is estimated ultimately to cost about Rs. 30 crores. It is estimated to go into full production of 1,200 tons of fertilizer per day by the end of 1961.

The Nangal Fertilizer—Heavy Water Project will be the first factory in India to produce calcium Ammonium Nitrate, a fertilizer with high percentage of nitrogen content.

The control and management of the Project were formally transferred to Messrs. Nangal Fertilisers and Chemicals (Private) Limited, a company entirely owned by the Government of India, on April 20, 1956. From the 1st of January 1961, this Company has been amalgamated with the Sindri Fertilizers & Chemicals Ltd., to form the Fertilizer Corporation of India Ltd.

Total expenditure on the project as on Oct. 1' 1960 amounted to Rs. 19·06 crores. The amount of deferred foreign exchange payments outstanding as per various contracts with the foreign suppliers was Rs. 11·79 crores as on Oct. 1, 1960.

Contracts on deferred payment terms were awarded for :—

(*i*) supply of electrolysers and supervision of their erection to Messrs. De Nora of Milano, Italy on 31st March 1957 at a cost of Rs. 3·60 crores;

(*ii*) supply of accessories and auxiliaries of electrolysis plant to Messrs. De Nora of Milano, Italy, on 8th Sept. 1960 to a cost of Rs. 57 lakhs;

(*iii*) supply, erection and commissioning of the Fertilizer Group of Plants as a turn-key job to Messrs. Saint Gobain of Paris, France on the 10th October, 1957 at a cost of Rs. 850 lakhs;

(*iv*) supply and supervision of erection of electrical equipment to Messrs. English Electric Company of U.K. on the 23rd Dec. 1957 at a cost of Rs. 233·79 lakhs;

(*v*) supply of spares of electrial equipment to Messrs. English Electric Company on 18th Oct. 1958 at a cost of Rs. 4·85 lakhs; and

(*vi*) supply, erection and commissioning of Heavy Water Plant on 26th Nov. 1958 to Messrs. Line of West Germany at a cost of Rs. 115 lakhs.

Most of the plants of the fertilizer part of the factory are under commissioning and this part of the factory is expected to go into production shortly.

The construction of Heavy Water plant building was started in the middle of January 1960. This plant is expected to be commissioned before the end of 1961.

Construction of 2,200 residential units and a number of public utility buildings has been completed (Jan. 1961).

NATIONAL INSTRUMENTS LTD.

(15, Wood Street, Calcutta 16 and Raja Subodh Mullick Road, Jadavpur, Calcutta 32).

Total investment Rs. 1·35 crores. Value of production and repair for 1959–60 Rs. 53·69 lakhs. Number of persons employed 1,140.

This is a Government owned Company under the Ministry of Commerce and Industry, manufacturing and repairing scientific and mathematical instruments in India.

It manufactures prismatic compasses, theodolites, levels and other survey instruments, prismatic binoculars, telescopes, thermometers and hydrometers of various types, excise apparatus, barometers and other meteorological instruments, profile projectors, students' microscopes, pantagraph, pressure and vacuum gauges, demonstration eyepieces, sextant, drafting machines and other drawing office equipment and also repairs all types of scientific and aircraft instruments.

The factory has started planned production. The following expansion schemes are in hand: (*i*) An agreement has been entered into for the manufacture of micro-optic theodolites, with Messrs. Metrimpex Hungarian Trading Co. for Instruments, Budapest. The production of these theodolites is under way for which two technical officers had been sent to Hungary for technical know-how in the matter. (*ii*) Agreement has also been concluded for the manufacture of clinical thermometers with Messrs. Tokyo Shibaura Electric Co., Tokyo. A technician of this factory is now in Japan to learn the method of mass manufacture. The production programme in this respect is envisaged as under: 1960–61, 28 thousand numbers; 1961–62, 3 lakh numbers; 1962–63, 6 lakh numbers; and onwards. (*iii*) A technical collaboration agreement with Messrs. Nippon Kogaku of Tokyo has recently been entered into for establishing manufacture of cameras. It is proposed to manufacture 1,000 cameras in 1961-62, 6,000 in 1962-63 and 12,000 in 1963-64.

For the time being, it is proposed to commence manufacture of Nikkorex, the latest model which Messrs. Nippon Kogaku are making in medium-priced cameras. The factory is expected to reach an optimum production of 1,000 cameras per month within a period of two to three years. The agreement with the Japanese firm will be current initially for a period of 10 years.

Practical training facilities have been provided to the various categories of trainees.

During 1958–59 the factory earned a net profit of Rs. 2·48 lakhs. For 1959–60 the surplus expected is about Rs. 8·63 lakhs.

The development plans of this factory are so planned that this factory may serve as a nucleus in future for the manufacture of instruments, precision and scientific, which are at present imported.

Managing Director, N. Majumder, B.Sc. (Cal.), M.Sc. (Tech.) (Manch.), A.M.C.T. (Manch.).

Works Manager, L. M. De, B.Sc. (Eng.), A.M.I.E. Prod., E.A.M.I.E.

Secretary, S. Natarajan, B.A.

FERTILIZER CORPORATION OF INDIA LTD. (SINDRI UNIT).

(Sindri, Bihar)

This is a State-owned and State-managed private limited company under the Ministry of Commerce and Industry, Government of India, in which all the shares are held by the Government of India. The Company was registered on December 18, 1951.

Authorized share capital—Rs. 30 crores; paid-up—Rs. 17 crores.

The factory went into production on 31st October 1951; gas plant started 13th April 1951; production of anhydrous ammonia started 28th August 1951; marshalling yards completed 30th August 1951; bagging plant commissioned 4th February 1952; first bags of ammonium sulphate went out of the factory 7th February 1952.

The gross profits for the year 1959–60 amounted to Rs. 3,08,40,543. After providing Rs. 2,57,33,624 for depreciation and utilising Rs. 25,54,133 for paying interest on loan from the Government of India and adding (1) Rs. 15,57,238 the amount brought forward from last year's account (2) and Rs. 1,21,29,639 by transfer from General Reserve, the balance available was Rs. 1,62,39,663. Out of this, an amount of Rs. 92,00,000 has been provided as development rebate reserve and Rs. 68,00,000 as dividend to shareholders. This leaves Rs. 2,39,663 to be carried over to the account for 1960–61.

The total production of ammonium sulphate during 1959–60 was 285,248 tons; double salt 22,522 tons; urea 4,732 tons; coke 224,232 tons.

The fertilizer despatches to the various States during 1959–60 were : ammonium sulphate 274,725 tons; double salt 5,749 tons, urea 3,206 tons.

The factory consists of coke oven, gas, ammonia, sulphate, gas reformation, double salt and bagging plants; marshalling yards and about 12 mile railway track; 80,000 KW power house. Utilizes about 1,800 tons of coal, 1,900 tons of gypsum and 15 million gallons of water per day supplied from the nearby Damodar river. A barrage, constructed over the Gowai, a tributary of the Damodar, has impounded about 1,000 million gallons of water as a standby.

The Coke Oven Plant built at a cost of Rs. 2·81 crores and designed to produce 600 tons of coke per day and other important by-products of industrial importance, went into production on September 1, 1954.

Sindri's Rs. 13 crore expansion scheme for the production of 70 tons of urea and 400 tons of double salt (ammonium sulphate-nitrate) per day, has been completed.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

An incentive award at the rate of Rs. 17·70 per ton on 90,122 tons which was in excess of the basic figure 240,000 tons of Ammonium sulphate produced, was sanctioned for the staff who had service of one year and more on 31st December 1959 and drawing upto Rs. 500 basic pay.

Sindri has developed into an important training centre for young engineers and technicians and has trained personnel for Hindustan Steel Ltd., Neyveli Lignite Corporation Ltd., Hindustan Chemicals & Fertilizers Ltd., etc.

During 1959–60, there were 52 graduate apprentices and 68 trade apprentices under training, besides the following apprentices, *viz.*, chargeman trainees from Neyveli 41, operator trainees from Neyveli 49, trainees from Hindustan Steel 30.

The present retention price is Rs. 295·26 per metric ton for ammonium sulphate; Rs. 350 per metric ton for double salt and Rs. 620 per metric ton for urea.

Board of Directors :

Chairman, K. R. Damle, I.C.S.

Members, Satyendra Narayan Sinha; P. A. Narielwala; Brish Bhan; Shiva Chandika; P. N. Thapar, I.C.S.; B. C. Mukharji, I.C.S.; K. B. Lall, I.C.S.; K. L. Ghei; B. N. Sinha, Dr. Husain Zaheer; H. N. Sethna; M. R. Chopra.

Mg. Director, K. Ramachandran.

THORIUM PLANT

(Trombay, Bombay 38)

This plant built at Trombay with the object of processing the thoruim concentrates from the Rare Earths Plant at Alwaye, went into production in September 1955. The monazite sands occurring on Kerala Coast and on the south-west coast of Madras State constitute the main source of thorium in India. The coastal deposits are estimated to contain over 2,00,000 tons of this nuclear metal. Indian monazite has a thorium content of 8 to 9 per cent the highest in the world.

It is one of the largest thorium nitrate producing plants in the world. Beside supplying virtually the entire requirements of the gas mantle industry in India and the East Asian countries, it also supplies markets in Europe and America.

Preliminary work on the preparation of nuclear grade thorium compounds has been completed and the plant now produces nuclear grade thorium oxide for the Canada–India Reactor.

The Government's decision to locate the first nuclear power station on the west coast at Tarapur in Maharashtra State was announced by the Prime Minister in Aug. 1960. The work on the main project is expected to commence early in 1962.

(See also under 'Research.')

STATE-OWNED OR STATE-AIDED

GOVERNMENT CEMENT FACTORY

Churk, Mirzapur, U.P.

The Government Cement Factory was established at Churk in Mirzapur District at an initial cost of Rs. 4·5 crores. The factory went into production in September 1954. Its installed capacity is 700 tons per day. The factory employs over 2,000 persons.

Till November 1960 the cement production in the factory was 12,80,461 tons since its inception.

The expansion programme, costing Rs. 275 lakhs, has made considerable headway. But owing to shortage of steel and delay in the supply of machinery the new unit is now scheduled to go into production about Sept. 1961. With the completion of the expansion programmes the factory will start producing 1,400 tons of cement per day.

A pilot refractory bricks plant has been established in the factory with an initial capacity of 100 tons per month which will be increased to 36,000 tons annually during the Third Plan period.

GOVERNMENT PRECISION INSTRUMENTS FACTORY

Lucknow, U.P.

The factory was established in 1950 at Lucknow at a cost of Rs. 32·63 lakhs for the manufacture of water meters, microscopes and other precision instruments and went into production in 1952, when the turnover was nearly 300 water meters per month. The production of water meters and microscopes has now increased to 3,000 and 25 per month respectively. Till Dec. 1960, a total of 1,83,885 water meters, 1,418 microscopes and 245 stethescopes had been manufactured and total sales of these items accounted for 1,81,653, 1,164 and 162 pieces respectively. The production of stethescopes has been temporarily slackened to cope with heavy demand for water meters.

The factory has reached its licensed production capacity. A big expansion in its production has been envisaged during the 3rd Five Year Plan. The factory will soon embark upon the manufacture of pressure gauges, wall-clocks, time-pieces, movie cameras, etc.

The factory earned a net profit of Rs. 5,27,621 in 1959–60 as against Rs. 2,50,926 in 1958–59.

KOLAR GOLD MINING UNDERTAKINGS

Kolar Gold Fields, Mysore State.

Established: 1880. Formerly a British company, the mines were nationalised by the Government of Mysore in 1956. The three mines working at present are: the Mysore Mine, the Champion Reef Mine and Nandydroog Mine.

Capital Investment: Rs. 180·29 lakhs. No. of workmen: about 25,000.

The gold production during the year 1959–60 was 47·72 lakh gms. valued at Rs. 5·09 crores. The production of silver was 3·37 lakh gms. valued at Rs. 60,000.

The annual extraction of gold from the three mines is 156,388 ounces. The State Govt. had obtained a net profit of Rs. 27·49 lakhs during the period from 29th Nov. 1956 to 31st March 1960.

Management: The management of the Undertakings is vested in the Board of Management constituted by the State Government, of which the Chairman is the Chief Minister.

Details of taking over the undertakings by the Centre were being worked out (April 1961).

Managing Director: K. Narayana Swamy, I.A.S.; *Consulting Engineers:* John Taylor & Sons.

THE MYSORE IRON AND STEEL WORKS

(Bhadravathi, Shimoga Dist., Mysore State).

This Mysore State Government project for the establishment of the industry was worked out during the years 1914-18, and the basic industrial enterprise started operations in 1923.

The present total investment is Rs. 7·86 crores.

The works produce pig iron, cast iron pipes, plate sleepers, general foundry castings, merchant steel sections, steel castings, portland cement, ferro-alloys, and acetic acid. The turnover amounts to over Rs. four crores per annum.

The manufacture of pig iron by electric process is a noteworthy feature.

The annual production of pig iron is 85,000 tons; of cement about 82,000 tons; of ferro-silicon 6,700 tons; of steel about 45,000 tons.

The production in the General Foundry is about 10,000 tons of C. I. Pipes, 1,200 tons of general castings and 10,000 tons of plate sleepers a year.

The annual output of the Rolling Mill is about 30,000 tons of mild steel sections.

The Rod and Strip Mills produce 35 to 40 tons of rods or 25 to 30 tons of strips per day.

The Electric Steel Furnace produces annually about 4,500 tons of ingots and 650 tons of rough castings of which 200 tons are machined castings.

The output of the Structural Shop is about 200 tons a month or about 2,000 tons per annum.

As part of the expansion scheme a Cast Iron Spun Pipe Plant for manufacture of pipes from 3" to 12" diameter (17,000 tons per annum) has been installed and has gone into production.

Production of ferro-manganese in 2 Fuedle Furnaces with a capacity of 1,500 tons per year commenced during 1956–57.

The works have their plans for the Second Five-Year Plan period, to increase the steel ingot capacity from 30,000 tons to 1,00,000 tons and ferro-silicon production from 5,000 tons to 20,000 tons per annum. Orders for Ferro-Silicon Plant and equipment were placed in March 1959 and the plant is expected to come into operation during 1961–62. Schemes for the manufacture of tool and alloy steel, stainless steel sheet and silicon steel are under consideration.

The rolling capacity is to be increased from 25,000 tons to 85,000 tons.

The whole expansion scheme would cost Rs. 650 lakhs.

The labour employed: monthly rated about 1,800 and daily rated about 6,500.

A proposal to convert the works into an autonomous corporation is under consideration.

Director and Vice-Chairman, M. D. Shivananjappa, I.A.S.

General Manager: T. Krishnappa, M.Sc. (Met.).

Addl. General Manager: B. Seshadri Sharma, B.E.

THE NATIONAL NEWSPRINT AND PAPER MILLS LIMITED

(Nepanagar, Nimar Dist., Madhya Pradesh).

The mills are situated on the main Bombay-Itarsi-Delhi line about 27 miles from Khandwa and 17 miles from Burhanpur.

The Company is a limited concern with about 16,500 shareholders. Of the shares 51 per cent are held by the Union Government and 34 per cent by the Madhya Pradesh Government. The balance shares are held by shareholders from the public.

The construction of the mill started in 1948, and the installation of the Paper Machine and Ground Wood Mill was completed by January 1955. The mill had a trial run on 11th January 1955 for the first time manufacturing newsprint from indigenous groundwood pulp and imported chemical pulp.

The Chemical Plant was put into commission and newsprint manufactured from cent per cent indigenous raw materials on 29th December 1955.

The rated capacity of the plant is 100 tons per day. Present production is 80 to 85 tons a day. Production is being gradually stepped up with a view to reaching the target production.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

The production during 1959-60 was 22,411 tons.

The total revenue from sales during 1959-60 was Rs. 235 lakhs.

The Project has cost about six crores of rupees.

Total loss upto March 31, 1959: Rs. 136·2 lakhs. But the net profit during the year 1959-60 was Rs. 37·7 lakhs. Thus the actual loss as on March 31, 1960 is Rs. 98·5 lakhs. It is proposed to increase the production capacity to 73,000 annually during the Third Plan.

There are 1,150 workers working on monthly wages.

There are 13 members on the Board of Directors including the Chairman and the Managing Director. The Chairman and the Managing Director are appointed by the Union Government with the concurrence of the Madhya Pradesh Government. Four directors are nominated by the Union Government, four nominated by the Madhya Pradesh Government, one director jointly by the Union and the M.P. Governments and two directors representing the shareholders.

Chairman, Board of Directors, Sir A. Ramaswami Mudaliar.

Managing Director, S. L. Visvanadhan.

ANDHRA PRADESH

THE ANDHRA PRADESH INDUSTRIAL DEVELOPMENT CORPORATION (PRIVATE) LIMITED

The Andhra Pradesh Industrial Development Corporation (Private) Limited, a Government Corporation, has been registered.

The Corporation will have an authorised capital of Rs. 3 crores and paid-up share capital of Rs. 1 crore to start with.

The principal objects of this Company among others are:—(*a*) To promote, improve, establish and develop industries in the State of Andhra Pradesh; (*b*) To plan, formulate and execute projects for setting up industries or developing lines of production; (*c*) To engage in the processing and manufacture of metals, chemicals, engines, plants, machinery or any other commercial or industrial products, articles and commodities; (*d*) To engage in, establish, maintain and develop the generation, transmission and sale of electricity; (*e*) To establish, promote, develop, purchase, take on lease or in exchange under amalgamation, licence or concession, or otherwise acquire factories, industrial concerns, manufacturing concerns, mines beneficiation and mineral dressing, concentration and refining plants, chemical and other industrial plants, lands, buildings, workshops, power houses, plants and equipment, machinery, sidings, locos, works and any rights and privileges or interest therein and to explore, prospect, work, develop, administer, manage or control and to turn to account the same.

This Corporation is expected to start functioning shortly.

THE ANDHRA PAPER MILLS

(Rajahmundry).

The capital investmeet is Rs. 29 lakhs and production capacity is 10 tons a day. The Government have taken up a scheme to increase the present production capacity of the Mills from 10 to 60 tons of paper at a total capital cost of Rs. 513 lakhs (approximately). The production of the mills is now confined mostly to unbleached, kraft papers and it is proposed to produce white writing/printing papers and wrapping paper, after implementation of the expansion scheme. An agreement has also been entered into with Messrs. Empacel, Paris for the supply of plant and machineries under the French Credit on deferred payment terms.

Provision in the State Plan for 1960-61 for purchase of land, equipment and construction of buildings, etc. Rs. 70 lakhs. Provision during the Third Plan for the implementation of the expansion scheme for increasing the production capacity and for producing better quality of paper Rs. 400 lakhs.

THE GOVERNMENT CERAMIC FACTORY

(Gudur, Nellore Dist.).

The Government Ceramic Factory, Gudur, has been producing sanitaryware and crockeryware only, till 1959. A scheme for expansion of the Government Ceramic Factory, Gudur was included in the Second Five Year Plan at a total cost of Rs. 12·60 lakh, which was implemented by 1959. The production in the Government Ceramic Factory, Gudur has been doubled after its implementation. Production of electrical porcelain insulators has also been commenced as an additional line of production to meet the requirements of the Government Electricity Department and the public from 1960.

HYDERABAD TANNERIES LTD.

(Hyderabad).

The investment is Rs. 13 lakhs. The production is temporarily suspended. The issue of reorganisation is under active consideration for hitting the targeted production envisaged in the tannery.

NIZAM SUGAR FACTORY

The Nizam Sugar Factory is the largest single sugar producing unit in the country. 72 per cent of its capital is owned by the State Government. Its production was 51,200 tons in 1959-60. The factory's crushing capacity is being increased from 3,200 tons to 4,500 tons of cane per day.

The capacity of the Government Power Alcohol Factory, situated in the premises of the Nizam Sugar Factory, has been increased from 1,00,000 gallons to 1,90,000 gallons per month.

PRAGA TOOLS CORPORATION

(Hyderabad).

The authorised capital is Rs. 1·35 crores. The Union Government has agreed to invest another Rs. 75 lakhs to Rs. one crore for expanding the production which includes setting up of a modern foundry and a heavy forge shop.

It produces machine tools and accessories, precision tools, automobile parts, diesel parts, railway duplicates and accessories.

The present production is about Rs. 72 lakhs. The target for 1961-62 is Rs. 100 lakhs. The investment would be: Andhra: Rs. 47·57 lakhs; public: 18·35 lakhs; India Government: Rs. 70 lakhs.

THE SRI VENKATESWARA STRAWBOARD MILLS

(Tirupati).

This was originally a joint stock company which the State Government purchased in 1953. A scheme for starting this mill was included in the Second Plan at a total cost of Rs. 10·35 lakhs with a production capacity of 10 tons of straw board per day. While this scheme was under implementation, an offer was received from a private party for buying the mill and negotiations for its sale are in progress (Jan. 1961).

SINGARENI COLLIERIES

Coal is mined in the State by the Singareni Collieries Co. Ltd. from the coal fields at Kothagudium, Yellandu and Tandur. 88 per cent of the capital of the Company is owned by the State Government. The production of Singareni Collieries increased from 11·63 lakh tons in 1950 to 24·45 lakh tons in 1960. Under the Second Plan, it was proposed to increase the coal production to 27 lakh tons.

SYNTHETIC DRUG PROJECT

A site for the establishment of Synthetic Drugs Project at a capital investment of Rs. 8 to 10 crore under Central Sector in Sanathnagar, Hyderabad, has been finally selected by the Russian Experts. The required engineering geological data of this site and other data required by the Russian Experts have been furnished to them through the Government of India for the preparation of project report. The scheme was expected to be taken up early in 1961.

ASSAM

GOVERNMENT SHELLAC FACTORY

(Chaparmukh, Nowgong).

The factory was started in 1954 as a welfare measure for the Mikir tribesmen growing lac. The capital outlay is Rs. 2·5 lakhs. It handles 2,000 maunds of raw lac a year and provides work for 30 labourers with five on the establishment side. The target is 8,000 maunds a year.

BIHAR

BIHAR STATE SUPERPHOSPHATE FACTORY

(Sindri).

The factory went into production in April 1958.

Present capacity of production: Single superphosphate — 18,000 tons per annum.

Installed capacity of plants: (*i*) 200 tons superphosphate per day; (*ii*) 25 tons of 98 per per cent sulphuric acid per day.

Total investment: Rs. 65 lakhs.

No. of workers expected to be employed: About 150.

At present State-owned, but very shortly it will be a unit under the Bihar State Industrial Corporation which has been registered.

The factory is capable of producing 200 tons of superphosphate per day or about 70,000 tons per annum of 300 working days, provided an additional 50-ton per day capacity sulphuric acid plant is installed. There is provision for the establishment of an acid plant utilising pyrites in the Third Five Year Plan. Most of the superphosphate produced in the first stage will be consumed within Bihar, but supplies are also being made to neighbouring States.

The First Five-Year Plan had an allotment of Rs. 54·55 lakhs for the factory. The Third Five-Year Plan has allotted Rs. 50 lakhs for the expansion of the factory.

Works Manager, B. A. Sundara Moorthy, B.E., A.E.M.I. (Ind.).

JAMMU & KASHMIR

DRUG RESEARCH LABORATORY

(Canal Road, Jammu).

The Laboratory was started in 1943. Total investment in Rs. 18 lakhs. The number of persons employed is 170. The present production is valued at Rs. 7.5 lakhs and the Second Five-Year Plan target was Rs. 15 lakhs.

The sales effected during 1959-60 is to the tune of Rs. 7·1 lakhs.

DRUG RESEARCH LABORATORY

(Raj Bagh, Srinagar).

The Laboratory was started in 1956. Total investment is Rs. 10 lakhs and the number of persons employed is 100. The present production and the sales effected are valued at Rs. 3·79 lakhs and Rs. 1·60 lakhs respectively and the Second Five Year Plan target was Rs. 15 lakhs.

During 1960 the farms were separated from the factories. There are six farms in the State at present. The total number of persons employed in the farms is 553 and the present production is valued at Rs. 2·46 lakhs, the the sales effected being equal to the production.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

GOVERNMENT SILK WEAVING FACTORY
(Raj Bagh, Srinagar).

The factory was started in 1938–39 with 33 looms and 1,872 spindles. It is now equipped with 124 looms and an uptodate Throwing Plant of 5,616 spindles.

Total investment: Rs. 12·34 lakhs odd. The factory employs approximately 600 persons (520 labour and 80 establishment).

The present production is 4,50,000 yards per annum. The target for the Second Five-Year Plan was six to seven lakh yards.

GOVERNMENT WOOLLEN MILLS
(Srinagar, Kashmir).

The mill was started on 7th December 1950. The total investment is Rs. 26,81,965. The number of persons employed is over 500. The average monthly production on the basis of 1959–60 working is — cloth 18,117 yards and yarn 33,246 lbs. The Second Five-Year Plan target was 1 lakh lbs. of yarn per year.

KERALA

GOVERNMENT HYDROGENATION FACTORY

The work on the Factory was started in 1949 and completed in 1953. The factory is equipped with the most modern machinery. The production capacity of the plant is 10 tons of vanaspathi and 5 tons of refined oil per day in three shifts. Regular production of refined oil and vanaspathi started in March 1958. This is the only hydrogenation factory in India.

The capital investment as on 31st March 1960 was Rs. 24·83 lakhs and the annual turnover during 1959–60 was Rs. 27·47 lakhs.

GOVERNMENT OIL FACTORY
(Kozhikode).

The Government Oil Factory was established in 1940 with a view to meeting the growing demands of the Defence Forces in India for Vitamin 'A & D' products. Regular production was started in 1943. The factory now produces various vitamin products such as Seagold blended shark liver oil, Adamin liquid high potency Vitamin Oil, adamin capsules, Stayfit liquid, Stayfit capsules and Veterinary Vitamin oil such as Univaz and Trivax, etc. using up-to-date equipment and testing apparatus.

The capital investment as on 31st March 1960 was Rs. 6·80 lakhs and annual turnover Rs. 5·62 lakhs.

Net profit in 1958-59 amounted to Rs. 91,881.

KERALA GOVERNMENT CYCLE RIM FACTORY
Trivandrum 7.

The factory, located at Shankumugham in Trivandrum near the aerodrome, was formally opened in June 1959. The rated capacity of the factory is 1,000 cycle rims per day. Since the capacity of the electroplating plant initially installed is only half that of the rim making plant, the electroplating plant is being expanded to double its existing capacity.

The capital investment of the factory as on 31st March 1960 was Rs. 11·99 lakhs and the turnover from June 1, 1959 to March 31, 1960 was Rs. 75,883.

Actual production commenced only in October 1959. The production has been increased to 500 rims a day.

KERALA SOAP INSTITUTE
(Kozhikode).

Regular operation in this institute began in the year 1923. The institute manufactures several varieties of toilet soaps including the Kerala Sandalwood, Rose soaps etc. as also Wash-well and other varieties of bar soaps. The work of training of students in soap making is also undertaken.

The capital investment alone comes to Rs. 10,70,267.

The capacity of the factory is about 450 tons per annum. But it is now being increased to 600 to 700 tons. The Oil Technologist is in immediate charge of the Institute. The Director of Government Industries has an overall control. Agents have been appointed in almost all parts of India.

Turnover in 1959-60 was Rs. 12·76 lakhs and net profit Rs. 51,310.

KERALA GOVERNMENT CERAMICS
Kundara, Quilon.

Established in 1957 by the Kerala State Government as a State Owned industry for the production of superior porcelain crockery and electrical porcelain goods such as L.T. Insulators of all types with an electrical double tunnel kiln and other modern machinery. The latest type electric double tunnel kiln has been installed in the factory. Situated near Kundara Railway Station.

Capital investment as on 31st March 1960 was Rs. 50·04 lakhs. Annual turnover is about Rs. 6 lakhs. Number of labourers 200.

PALLATHRA BRICKS & TILES LTD.
College Road, Kottayam.

Authorised Capital: Rs. 1,00,00,000; Issued Capital Rs. 11,00,000; Date of commencement 21st February 1957.

The factory has been completed and erection of machinery is in progress.

The object of the Company is to produce and distribute sand lime bricks, a new architectural brick of high strength and finish. The designed capacity of the factory is 40,000 bricks per working day of 16 hours.

The total employment potential is 400 workmen.

Production was expected to commence in April 1961.

Provision for seven more units to be started in the following centres *viz.* Kozhikode, Cannanore, Trichur, Punnappra near Alleppey, Quilon, Kottayam (with laterite powder) in Kerala involving a total cost of Rs. 77 lakhs has already been made in the Third Five Year Plan of the State.

SRI KERALA VARMA AYURVEDIC CO-OPERATIVE PHARMACY & STORES LTD. NO. 4318.
Trichur.

The pharmacy and stores started functioning from March 1, 1959 on co-operative basis. They are the sole agents for the distribution of ayurvedic medicines to all the Government hospitals and dispensaries under the Department of Indigenous Medicine, Kerala State. The medicines are being supplied to the departmental institutions as well as to the public through the sales depots of this concern at Trivandrum, Alleppey, Kottayam, Trichur and Kozhikode.

Main products manufactured in the pharmacy are Ayurvedic Medicines, *viz.* Asavas, Arishtas, Thylams, Lahyams, Ghritams, Pills, Choornams, etc., etc.

The pharmacy now manufactures Kashaya Choornams on a very large scale.

SHARK LIVER OIL FACTORY
(Trivandrum 7).

This factory was started first as an annexe to the University Research Department in 1939 and was taken over by the Government in 1946. Regular production was started in 1950. The factory manufactures medical shark liver oil for human consumption as well as for veterinary use and also fish oil Rosin soap (insecticidal soaps). The capital investment of the factory as on March 31, 1960 was Rs. 2·27 lakhs and the turnover was Rs. 1·14 lakhs.

TRAVANCORE MINERALS LTD.
Head Office: Quilon, Kerala State.

Works: Chavara, Quilon Dt., Kerala State.

Manavalakurichi, Kanyakumari Dist., Madras State.

Date when started: January 1932—successors of Travancore Minerals Company, a private limited company incorporated in England; fully nationalised in June 1949. Pioneers in beach mineral dressing.

Total investments: Rs. one crore.

At present owned by the Central Government and the State Governments of Kerala and Madras in the ratio of 50 per cent, 45 per cent and 5 per cent respectively.

The Company owns three plants, two at Chavara near Quilon in Kerala State, and one at Manavalakurichi in Kanyakumari District of Madras State.

Production: 1,50,000 tons of ilmenite, 1,000 tons of rutile, 1,500 tons of monazite and other minerals.

The Board consists of a Chairman nominated by the Central Government, three Directors nominated by the Central Government, two Directors nominated by Kerala State Government and one Director nominated by the Madras Government.

The concern is administered by a Chief Administrative Officer appointed by the Board.

With the increased demand for rutile and zircon within the country and outside, efforts are being made to step up production at economic cost.

Net profit for the year ended March 31, 1960: Rs. 16,43,206·96. Foreign exchange earned during 1959–60: Rs. 104·10 lakhs.

TRAVANCORE PLYWOOD INDUSTRIES

This is a factory started as a Public Company with Government support. Finally in 1947, Government bought all the shares of the company and became sole proprietor. The capital investment in buildings and machinery, etc. upto 1960 was about Rs. 14·34 lakhs. The factory now mainly produces commercial and tea chest plywood panels. The installed capacity of the machinery for the production of plywood is 3 million s.ft. of 4 m.m. plywood in single shift per year. It is also licensed to produce half a million sq. ft. of commercial plywood per annum. Besides, 50,000 sets of battens are also being produced annually. The soft wood logs required for the manufacture of plywood are being delivered to the factory by the Forest Department. The plywood panels now produced in the factory find ready sales.

Annual turnover is about Rs. 7·5 lakhs and the capital investment as on 31st March 1960 was Rs. 14·33 lakhs. Net profit during 1958–59 amounted to Rs. 1·22 lakhs. The factory employs 122 daily rated workers and about 45 staff members.

TRAVANCORE RUBBER WORKS
(Chackai, Trivandrum 7).

The factory was started on 17th August 1935 as Travancore Govt. Rubber Factory (later leased to the Travancore Cables & Rubbers Ltd. The concern was finally taken over by the Govt. of Travancore-Cochin on 9-10-1949.

The capital investment by the Government as on 31st March 1960 was Rs. 18·52 lakhs and the profit made during the year ended 31st March 1960 was just over two lakhs. The annual turnover during 1959–60 was Rs. 24·23 lakhs. The factory consumes about half to three quarter ton of raw rubber per day and the production capacity is about three tons of goods worth Rs. 10,000 per day.

The factory employs about 324 persons: Staff 56 including officers and peons. Watchmen 10. Workers 258.

The production capacity of the factory is 25,00,000 lbs. per year.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

The main products manufactured in the factory are cycle tyres and tubes, sheeting pure single and double insertion and mottled, hoses armoured, suction, plain, radiator, bent, etc. of different specifications, tubings, valve tubes, rings, bushes, ebonite, rods, sheets, etc., latex sponge and latex foam cushions and mattresses.

Under the Second Five-Year Plan there were two schemes: 1. A cycle rim plant which has been completed and is now on production as a separate unit. 2. A scheme of modernisation of the present equipment and expansion of production programme of cycle tyres, tubes, sheetings, hoses, latex goods, moulded goods, etc., has also been taken up. Increased output of up-to-date finished goods and increased profits are expected by the mechanisation and modernisation.

MYSORE

THE GOVERNMENT CENTRAL INDUSTRIAL WORKSHOP

(Mysore Road, Bangalore 18.)
Established : 1897.

Capital invested as on March 31, 1960: Rs. 23,65,875 (including additional capital under expansion scheme).

No. of persons employed : 210.

Annual outturn : Rs. 3·4 lakhs.

The workshop was shifted to its new premises at Mysore Road after inauguration by the Chief Minister on June 27, 1959. The expansion scheme including the construction of buildings and purchase of machinery has been implemented at a cost of Rs. 13·6 lakhs. The workshop is engaged in general engineering works such as manufacture of trusses, pistons, meter boxes, storage tank, etc. The proposal for amalgamating the mechanical section of the Govt. Electric Factory with the new workshop was under consideration.

GOVERNMENT ELECTRIC FACTORY

(Mysore Road, Bangalore).
Established : 1939.

Capital invested : 79,05,517.

No. of persons employed : 984.

Annual outturn : Rs. 56·83 lakhs.

A scheme is under way to expand the factory under a licence granted by the Central Government at an estimated cost of Rs. 140 lakhs. An agreement for technical collaboration of the factory with a famous engineering firm, Messrs. A. E. G., Germany, was concluded in Nov. 1959. The expansion scheme envisages (1) production of transformers of capacities up to 10,000 KVA and of voltage rating up to 66,000 volts, recording an annual output of 200,000 KVA, (2) restarting of the manufacture of electric motors with a capacity up to 250 hp and the ultimate annual output of 60,000 hp and (3) manufacture of switch-gear like the iron clad switches, a variety of fuse cartridges, group operated isolators, oil circuit breakers, etc. with an aggregate value of Rs. 40 lakhs annually. A party of three A.E.G. specialists arrived towards the end of March 1960 for preparing detailed specifications of the plant and machinery. The Director of G.E.F. is now in Germany for finalising the expansion plans and estimates.

The ultimate turnover of the expanded factory will be Rs. 2 crores annually on single shift basis.

GOVERNMENT PORCELAIN FACTORY

(Malleswaram, Bangalore).
Established : 1932.

Capital invested : Rs. 1,09,29,618.

No. of persons employed : 1,168.

Annual outturn : Rs. 22,92,497.

The Government Porcelain Factory is the only State-owned industry of the type in India. In order to meet the growing demand for insulators, bushings, etc., an expansion scheme estimated to cost about Rs. 84 lakhs has been implemented with the technical collaboration of Messrs. Nippon Gaishi Kaisha Ltd., Nagoya, Japan. This scheme envisages an output of 2,500 tons of insulators etc., per annum. The scheme which was taken up in the First Five Year Plan, has been completed with building construction, erection of machinery etc., during the Second Five Year Plan and production operations were started from Feb. 23, 1957. The production during 1958–59 was 1,646 tons of H.T. and L.T. insulators including bushings and crockery and during 1959–60 the production was 2,128 tons.

GOVERNMENT SANDALWOOD OIL FACTORIES

(Mysore South & Shimoga Town).

Established : Mysore 1916 and Shimoga 1944.

Capital : Rs. 28,12,000.

Number of persons employed : 284.

1959–60 outturn : 1,91,170 lbs. of sandalwood oil valued at Rs. 1,01,29,253.

A programme of replacing the existing equipment in the Mysore factory has been completed and the expansion of the Shimoga factory is under way at an estimated cost of Rs. 1·85 lakhs for providing additional buildings and machinery. The scheme expects to cope with production to meet regular demands of sandalwood oil.

GOVERNMENT SOAP FACTORY

(Rajajinagar, Bangalore).
Established : 1918.

Capital invested : Rs. 31·63 lakhs.

No. of persons employed : 250.

Annual outturn : Rs. 50·62 lakhs.

The factory was shifted to its new premises at Rajajinagar, one of Bangalore's industrial suburbs and started functioning from July 1, 1957. It produces 1,000 tons of soap per annum. A glycerine recovery and rectification plant was erected in the new premises and was expected to go into production in one or two months (Dec. 1960). This will have an annual output of 75 tons of chemically pure glycerine.

MYSORE GOVERNMENT SILK WEAVING FACTORY

(Mysore).

Established : 1932.

Capital invested : Rs. 11·19 lakhs.

Number of persons employed : 186.

Annual outturn : Rs. 12,54,284.

This factory is engaged in the manufacture of high quality silk fabrics like georgettes, crepe-de-chine, satins, etc. The Mysore pure silk sarees are famous all over India.

MYSORE IMPLEMENTS FACTORY

(Hassan).
Established : 1939.

Capital invested : Rs. 21,20,571.

No. of persons employed : 248.

Annual outturn : Rs. 13·00 lakhs.

A scheme for mechanisation and development of the factory at an estimated cost of Rs. 14 lakhs is under progress. It was to be completed before the end of the Second Plan period and will step up production to Rs. 15 lakhs per annum of improved quality articles of tools, garden and agricultural implements, domestic articles, cutlery and light steel structure, etc., to meet the common man's purse. Nearly Rs. 12·75 lakhs had been spent on the mechanisation upto 31-3-1960 towards the purchase and erection of machinery and building construction.

FOREIGN INVESTMENTS IN INDIA : 1958 AND 1959

FOREIGN business investments consist of (*a*) the net foreign liabilities of branches of foreign-incorporated companies functioning in India, (*b*) foreign-held shares including proportionate free reserves and foreign-held debentures of rupee companies and (*c*) long-term loans obtained by these enterprises from official institutions abroad.

This article surveys the trends of foreign investments in India from a more limited angle *i.e.* long-term foreign capital in the private sector. Because of their predominantly short-term nature, capital movements in the banking official sectors are briefly described to provide a wider perspective.

The data presented in the article are based on the usual source material, namely official records and returns furnished by Indian and foreign companies operating in India. Detailed information on investments in the private sector are available only for 1958.

India's overall investment position from 1955-1959 are given below.

The figures are as at the end of the year.

(Rs. crores)

	Liabilities				Assets				Net position			
	1955	1957	1958	1959	1955	1957	1958	1959	1955	1957	1958	1959
Private (Non-Banking)* ..	4,56	5,42	5,71	5,93	—	—	—	—	−4,56	−5,42	−5,71	−5,93†
Banking	57	48	52	59	55	62	54	56	− 2	− 14	2	− 3
Official	2,01	4,63	6,68	9,26	11,71	7,26	5,92	6,45	9,70	2,63	− 76	− 281
TOTAL	7,14	10,53	12,91	15,78	12,26	7,88	6,46	7,01	5,12	2,65	−6,45	−8,77

* Figures are revisions of those given in the June 1959 Bulletin. † A tentative estimate.

Note : For the private non-banking sector no estimates are made for foreign liabilities other than business investments; nor has it been possible to indicate the level of foreign assets.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

SUMMARY

Net private foreign investment in India during 1958 showed a decline as compared to that in 1957. But this was chiefly due to a large outflow of petroleum capital, which element was not present in the earlier years. Trends in 1959, however, point to a marked recovery in the investments. For the period 1956-59, as a whole, foreign investment in the private sector would be of the order of Rs. 135 crores of which I.B.R.D. capital might amount to Rs. 80 crores.

The banking system which showed a net creditor position during 1957 and 1958, swung back to a debtor position in 1959. Accumulation of fresh indebtedness abroad by the official sector led to a further downward shift in the country's debtor position from Rs. 76 crores at the end of 1958 to Rs. 281 crores at the end of 1959.

Foreign investments in the private sector in India traditionally consist of investments by foreign private agencies; however, in recent years a significant part of such investments is accounted for by borrowings of private companies in India from the World Bank (IBRD). The table below gives comparable data.

(Rs. crores)

	1956	1957	1958
A. Inflow of private foreign capital (net) ..	24·7	16·8	1·7
(*i*) Retained earnings	19·4	9·6	9·8
(*ii*) Cash inflow	3·1	4·9	4·8
(*iii*) Non-cash inflow	8·5	11·4	11·5
(*iv*) Total (*i* + *ii* + *iii*)	31·0	25·9	26·1
B. IBRD Capital	— 6·3	— 9·1	— 24·4
	12·1	32·1	25·3
C. Gross inflow into the private sector ..	43·1	57·9	51·4
D. Net inflow into the private sector	36·8	48·8	27·0

Note: (1) Figures exclude foreign investment in the banking system. (2) The inflow has been computed wherever possible by eliminating valuation changes. (3) Totals may not add up because of rounding.

POSITION IN 1958

The book value of the outstanding investments as at the end of 1958 aggregated Rs. 570·6 crores. These figures include IBRD loans obtained during each of these periods.

The gross inflow of private investments at Rs. 26·1 crores in 1958 showed virtually no change as compared to 1957, regardless of whether retained earnings are included or excluded from the totals. The gross inflow was smaller than in 1956 (Rs. 31 crores) but considerably above the average for 1954 and 1955 (Rs. 19·9 crores).

Fresh capital receipts during 1958 amounted to Rs. 16 crores, the same as that of 1957 as against Rs. 11·6 crores in 1956 and the average of Rs. 7·9 crores during 1954-55.

In recent years, profits retained in business by foreign-controlled companies in India have shown large fluctuations as could be seen from table below:

(Rs. crores)

	1955	1956	1957	1958
Profits earned ..	36·5	46·2	34·8	35·2
Profits distributed	32·3	26·8	25·2	25·4
Profits retained	4·2	19·4	9·6	9·8

Profits earned, distributed and retained by foreign-controlled companies in 1957 and 1958 by industry group are shown below. Figures refer to proportionate profits of non-residents.

(Rs. crores)

	1957			1958		
	Earned	Distributed	Retained	Earned	Distributed	Retained
Petroleum	12·4	7·1	5·3	11·1	5·4	5·7
Manufacturing	10·7	6·9	3·8	12·9	7·8	5·1
Plantations	5·3	6·8	— 1·5	4·9	6·3	— 1·4
Others	6·4	4·4	2·0	6·3	5·9	0·4
TOTAL	34·8	25·2	9·6	35·2	25·4	9·8

Industry-wise

An industry-wise breakdown of the capital inflow during 1958 as compared to the preceding years is given in the table below:

(Rs. crores)

	1956		1957		1958	
	Gross inflow	Net inflow	Gross inflow	Net inflow	Gross inflow	Net inflow
Petroleum	12·3	12·3	17·5	17·5	6·2	—15·6
Manufacturing	18·0	15·7	38·3	36·0	34·7	33·4
Others	12·8	8·8	2·1	—4·7	10·5	9·2
TOTAL	43·1	36·8	57·9	48·8	51·4	27·0

Inflow of IBRD capital included in each of the years under the different groups is as follows:

(Rs. crores)

	1956	1957	1958
Manufacturing —			
Iron & Steel ..	8·2	29·9	23·8
Others (utilities)	3·9	2·1	1·5

Note: The figures are the same for gross and net inflows, there being no repayments of I.B.R.D. loans during the period.

If I.B.R.D. capital is excluded, gross private capital inflow into the manufacturing field amounted to Rs. 10·9 crores in 1958 as compared to Rs. 8·4 crores in 1957. More than half (6 crores) of this investment was in industries producing medicines and pharmaceuticals, rubber goods, stationery and automobiles. Regarding petroleum industry there was on a gross basis an inflow of Rs. 6·2 crores during 1958. The inflow was however offset by a heavy repatriation of about Rs. 21·8 crores of capital. Trading companies secured a net investment of Rs. 2·5 crores, half of it flowing into export and import business. During 1958 there has been an improvement in the net position of the plantation sector by Rs. 7 crores as against a disinvestment of Rs. one crore in 1957. There was a net investment of Rs. 3 crores in the mining sector in 1958 as against a disinvestment of Rs. one crore in 1957.

Country-wise

During 1958, the U.S.A. replaced the U.K. as the principal source of private capital although the U.K. still maintains its overwhelming lead in respect of outstanding investments. The U.S. investments as at the end of 1958 at Rs. 60 crores were only a fraction of the U. K. total of Rs. 398 crores. On a gross basis the inflow from the U.K. at Rs. 19 crores exceeded the U.S. capital inflow of Rs. 5 crores.

The inflow of non-banking foreign business investments is shown below by country:

(Rs. crores)

	1956	1957	1958
A. FOREIGN PRIVATE CAPITAL	24·7	16·8	1·7
U.K. ..	15·7	6·3	—2·8
U.S.A. ..	7·1	10·4	2·7
Other countries ..	1·9	0·1	1·8
B. IBRD Loans	12·1	32·1	25·3
TOTAL ..	36·8	48·8	27·0

Note: Totals may not add up because of rounding.

Owing to the heavy repatriation of capital during 1958 from the petroleum industry, which is almost controlled by foreign companies, the share of direct private investments came down during 1958. Their level at Rs. 436 crores as at the end of 1958 accounted for only 87 per cent of the total investments from private sources as compared to 90 per cent at the end of 1957. For the same reason, net foreign private investments during 1958 were half direct and half portfolio as can be seen from Table V which gives the distribution of capital inflow as between different kinds of foreign ownership. Details of industrial composition and country-wise breakdown are given in Table IV.

TRENDS IN 1959

Developments in 1959 as affecting foreign investments in the private sector can be indicated only in broad terms as data are lacking. During 1959, with the near completion of the private sector steel expansion projects, the drawings on I.B.R.D. loans shrank further to Rs. 10 crores from Rs. 25 crores in 1958. Issues of shares to non-residents in rupee companies stood lower at

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

about Rs. 5 crores compared to about Rs. 7·5 crores each in 1957 and 1958. On the other hand, there was a marked reduction in the capital outflow.

The petroleum group lost much less capital than in 1958, and the total outflow for all groups taken together in 1959 is estimated to be around Rs. 12 crores as against Rs. 24 crores in 1958. As regards reinvested profits, trends in 1959 suggest an increase in this form of investment or at least no reduction from the 1958 rate. Indications are that the net inflow of investments from private sources abroad is likely to show a marked increase.

Various indications showed a distinct improvement in the investment climate in 1959. For instance, though the actual allotments of shares to non-residents in 1959 at about Rs. 5 crores were below the level of Rs. 7·5 crores in 1958, approvals given during the year for foreign investment were higher (Rs. 19 crores†) than those in 1958 and 1957 (Rs. 13 crores each).

The Government entered into double taxation avoidance agreements‡ with four industrial countries namely the U.S.A., W. Germany, Japan and Norway, and negotiations for similar agreements with the U.K., Denmark and France were under way. India's decision to join the scheme sponsored by the U.S. Government for insurance against the risk of nationalisation, expropriation, etc., while supplementing the agreement concluded in 1957 in respect of transfer of profits and capital by American investors, contributed to an improved outlook for U.S. investments in India.

As regards the petroleum sector, the initial fears of oil companies about Government entry into this field appeared to have very largely subsided. The new policy announced by them in November 1959 assigned a special place to the foreign capital in the exploration field.

BANKING LIABILITIES

It is only the short-term side of the assets and liabilities of the banking system that shows any significant variation, the long-term side being more or less constant from year to year.

The long-term foreign liabilities of the banking system in India consist of some investments in the shares of the joint stock banking companies, and head office investments in the fixed assets of the branches of the foreign banks, while the long-term assets consist mainly of branch investments abroad of joint stock banking companies.

The short-term foreign obligations and assets of the banking system in India mainly comprise the following items: (*i*) overdrafts obtained by the branches of foreign banks from their head offices to meet their requirements of seasonal finance, (*ii*) the rupee deposits of foreign banks and individuals, (*iii*) working balances maintained abroad for financing imports and exports and (*iv*) outstanding export bills purchased and discounted.

The following table gives the position as at the end of 1958 and 1959 along with data for previous years.

FOREIGN ASSETS AND LIABILITIES OF THE BANKING SYSTEM

(Rs. crores)

	As at the end of				
	1955	1956	1957	1958	1959
Assets	55·1	51·6	61·5	53·7	55·9
Liabilities	57·0	61·2	47·8	52·4	59·2

Note: An increase in assets and a decrease in liabilities indicate an outflow of funds, while a decrease in assets and increase in liabilities indicate an inflow of capital.

In 1959 the net inflow of funds amounted to Rs. 5 crores against Rs. 12 crores in 1958. In 1958 the banks had partly utilised their foreign assets (Rs. 7 crores) and partly borrowed from abroad (Rs. 5 crores). The increase in assets (Rs. 2 crores) in 1959 was mainly on account of the rise in outstanding export bills. A rise in the rupee balances of non-resident banks (Rs. 4 crores) and of non-resident individuals and firms (Rs. 4 crores) slightly offset by a drop in other liabilities, was mainly responsible for the rise in liabilities.

OFFICIAL SECTOR

The changes in the external liabilities and assets of the official sector have been generally of a much larger magnitude than those of the private and banking sectors. It is the official sector which to a large extent finances the payments deficits; a considerable portion of the Plan expenditures of this sector is also financed by loans obtained from abroad.

Official liabilities went up by Rs. 206 crores (net) in 1958 and Rs. 257 crores (net) in 1959. Exclusive of liabilities to the I.M.F. and the I.B.R.D. net borrowings from foreign Governments amounted to Rs. 176 crores in 1958 and Rs. 204 crores in 1959. The main creditor countries were the U.S.A., the U.K., the U.S.S.R. and W. Germany in that order.

The official liabilities (Country-wise) 1956-1959 are shown below:

(Rs. crores)

	1956	1957	1958	1959
U.K. ..	33·8	26·0	48·9	97·7
U.S.A. ..	115·3	244·0*	323·5*	439·0
IMF/IBRD	26·9	132·5	162·2	214·8
Germany (West) ..	—	0·6	20·4	52·9
U.S.S.R. ..	1·1	13·3	52·6	56·9
Pakistan ..	38·6	38·5	36·2	36·7
Other countries ..	9·0	7·9	24·5†	27·5
TOTAL ..	224·7	462·8	668·3	925·5

* Revised. † The increase as compared to 1957 was mainly accounted for by the Canadian credit for purchase of wheat.

Official assets which have been continuously on the decline since 1955, showed an increase for the first time in 1959 (*vide* table below).

The official assets (Country-wise) 1956-1959 are shown below:

(Rs. crores)

	1956	1957	1958	1959
U.K. ..	598·6	356·6	214·8	221·0
U.S.A. ..	32·0	32·7	32·3	52·9
Pakistan ..	300·9*	300·9*	300·8*	300·8*
Other countries ..	3·5	14·3	19·3	18·3
I.M.F./I.B.R.D./I.F.C.	21·3	21·3	24·8	52·3
TOTAL ..	956·3	725·8	592·0	645·3

* Includes Partition debt to India of Rs. 300 crores.

Following a large decline of about Rs. 214 crores and Rs. 231 crores in 1956 and 1957, respectively, the assets fell by another Rs. 134 crores in 1958. The increase of Rs. 53 crores in the assets in 1959 included Rs. 24 crores of additional subscription to the International Monetary Fund. The remainder reflected for the most part the position *vis-a-vis* the U.K. and U.S.A. and represented additions to the country's foreign exchange reserves.

† Excludes certain approvals which involved transference of existing non-resident investment from one unit to another. ‡ Yet to be ratified.

OVERALL INVESTMENT POSITION

The country's overall investment position in 1958 and 1959 is summarised in the following table.

INDIA'S OVERALL INVESTMENT POSITION ABROAD

(Year-end figures)

(Rs. crores)

	Liabilities				Assets				Net Position			
	1955	1957	1958	1959	1955	1957	1958	1959	1955	1957	1958	1959
Private (Non-banking)	456	542	571	593	—	—	—	—	−456	−542	−571	−593*
Banking	57	48	52	59	55	62	54	56	−2	14	2	−3
Official	201	463	668	926	1,171	726	592	645	970	263	−76	−281
TOTAL	714	1,053	1,291	1,578	1,226	788	646	701	512	−265	−645	−877

* A tentative estimate. *Note*: For the private non-banking sector no estimates are made for foreign liabilities other than business investments, nor has it been possible to indicate the level of foreign assets.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

The swing from a large net creditor position of Rs. 512 crores at the end of 1955 to a heavy debtor position of Rs. 877 crores at the end of 1959 is chiefly due to the Plan expenditures and the financing of the country's balance of payment deficits by the official sector as can be seen from the depletion of its assets on the one hand and the increase in its liabilities on the other. At the end of 1955 the official sector was in a net creditor position of Rs. 970 crores, which came down to Rs. 263 crores at the end of 1957. It turned into a net debtor position of Rs. 76 and 281 crores at the end of 1958 and 1959 respectively. Complete reliance on borrowings abroad in 1959 for meeting payment deficits has been a significant development. During 1956-59 the country's net investment position abroad declined to the extent of about Rs. 1,400 crores, which has however been exceeded several times by domestic investment.

TABLES

I. FOREIGN BUSINESS INVESTMENTS IN INDIA—TRADE-WISE—1948-58.

(Lakhs of Rupees)

REMITTANCES

The remittances of profits and dividends of branches of foreign firms and companies and foreign controlled Indian joint stock companies engaged in trading activities in India amounted to (preliminary figures) Rs. 482·6 lakhs in 1958-59. The figures for 1957-58 and 1956-57 were Rs. 400·5 lakhs and Rs. 278 lakhs respectively. Rs. 345·5 lakhs were remitted to U.K. in 1958-59. In 1957-58 and 1956-57, the remittances to U.K. amounted to Rs. 170·4 lakhs and Rs. 91 lakhs respectively. In the case of U.S.A., the figures were: Rs. 13·5 lakhs in 1958-59; Rs. 218·6 lakhs in 1957-58; and Rs. 154·8 lakhs in 1956-57. The figures for Switzerland were: Rs. 0·4 lakhs in 1958-59; Rs. 1·2 lakhs in 1957-58; and Rs. 20·2 lakhs in 1956-57. Remittances to other countries amounted to Rs. 5·6 lakhs in 1958-59; Rs. 10·3 lakhs in 1957-58 and Rs. 12·0 lakhs in 1956-57.

COLOMBO PLAN

(See also under Foreign Aid)

COLOMBO Plan Bureau, P.O. Box No. 596, Colombo.

Director: J. K. Thompson; *Information Officer:* Majeed Malik; *Asst. Information Officer:* L. P. Goonetilleke.

Plan period: 1951-66.

The Colombo Plan (for Co-operative Economic Development in South and South-East Asia) was conceived at a meeting of the Foreign Ministers of the Commonwealth held in Colombo in January 1950.

Over the years, the membership of the Colombo Plan has grown to 21—15 countries within South and South-East Asia and six countries outside it.

The 15 countries within the area are Burma, Cambodia, Ceylon, the Federation of Malaya, India, Indonesia, Laos, Nepal, Pakistan, the Philippines, Singapore, Thailand and Viet-Nam, and North Borneo and Sarawak which take part in the Plan through their association with the United Kingdom.

The six countries outside the area are Australia, Canada, Japan, New Zealand, the United Kingdom and the United States.

Nearly one-fourth of mankind lives in the area covered by the activities of the Plan. The total population of the countries of the area is estimated to have increased from 600 million in 1950 to nearly 700 million in 1960.

The Plan, which is based on the principle of mutual co-operation, has stimulated developmental activities on a comprehensive scale in the area.

Assistance is provided on a bilateral basis between the Governments concerned without the intervention of any central organization.

Since its inception the Colombo Plan has sponsored over 15,000 trainees for specialised training in agriculture, medicine, and public health, social services, fisheries, co-operation, community development, industries, forestry, administration, transport and communications and journalism.

Over 1,700 experts have been provided for on-the-spot training in receiving countries.

Many of the regional members are now able to provide a high level of training in a number of practical and technical skills, and training facilities have been offered to nationals of each other.

Nearly 20 per cent of all the training places provided under the Colombo Plan are now within the region.

Of the countries of the region, India has provided the largest number of training places—1,279 out of 1,566—during the ten-year period. India also provided 34 experts—the highest for a regional member.

The number of training places received by Indians in the ten-year period is the highest for any country—3,275.

The Colombo Plan Organization consists of: The Colombo Plan Consultative Committee and the Colombo Plan Council for Technical Co-operation in South and South-East Asia. The Consultative Committee which meets once a year in one of the member countries takes note of the progress of the Plan and the role which external assistance plays in the development of the area and makes recommendations on the problems that arise in the implementation of development programmes. The Colombo Plan Council, located at Colombo, supervises the operation of the Colombo Plan Technical Co-operation Scheme and the dissemination of information on the Colombo Plan.

Assistance has been given primarily in three forms—financial assistance and equipment for development projects; food and other commodity assistance as contribution towards economic stability and growth; and technical assistance to increase the number and range of skills and strengthen the economic and social institutions. The major part of the assistance under the Colombo Plan has come from member countries from outside the area. Internally, in the area, mutual assistance has progressively increased in recent years.

TOTAL AID

Till the end of June 1960 the total aid amounted to $8,000 million or £2,857 million. During 1959-60 the aid amounted to $1,750 million (£625 million).

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Brief details of some of the major items of assistance rendered by the donor countries to the member countries in South and South-East Asia up to 1959-60, as recorded in the Ninth Annual Report of the Colombo Plan Consultative Committee are given below:

Australia: A £35·16 million (includes capital aid to India during the year in the form of wheat, sulphate of ammonia and copper, the proceeds from the sale of which will be spent on the building of wheat silos in Calcutta. Technical assistance equipment provided included items for Government wool and research stations); *Canada*: $281·7 million (includes continuation of establishment of Canada-India Atomic Reactor, the supply of diesel shunting locomotives, industrial metals, telecommunications equipment and cobalt beam therapy units and equipment for the Calcutta Milk scheme); *Japan*: 1,043 million yen (includes allocation of funds for the proposed setting up of a prototype production and training centre for small scale industries in West Bengal); *New Zealand*: £9·315 million up to March 1960 (includes assistance for several Dairy development schemes in India); *United Kingdom*: Commitments up to 30 June 1960 amounted to £170·7 million (includes authorised loans to India totalling £65·5 million); *United States of America*: Since 1951 to end of June 1960 $7,378 million of which a sum of $1,538 million was committed during 1960 (includes the agreement with the Government of India—the largest under PL 480—for the shipment of approximately 587 million bushels of wheat and 22 million bags of rice. In 1960, the United States committed $834·9 million of aid to India.

The United States, Australia, Canada, Japan, New Zealand and United Kingdom have made contributions to the Mekong River Development Project.

The International Bank for Reconstruction and Development provided 49 loans to Colombo Plan countries totalling over $1,107 million since the start of the Colombo Plan, of which over $727 million had been disbursed by September 1960. Twenty-four of the 49 loans were made to India, whose borrowings totalled $662 million.

During 1960, the Indus Waters Treaty was negotiated—the result of 8 years of negotiations between the two countries, India and Pakistan, in which the Bank acted as mediator. The division of waters now provided for requires the construction of works, the total cost of which is estimated to be about $1,070 million. In addition to the Bank loan, the Governments of Australia, Canada, Germany, India, New Zealand, the United Kingdom and the United States are contributing the equivalent of over $800 million.

From July 1950 up to June 1960, 1,729 experts were made available to member countries and training facilities were provided for 15,116 selected trainees under Colombo Plan Technical Co-operation by member countries including the United States. (These totals include U.S. figures for trainees only from 1 July 1958 onwards and for experts from 1 July 1959 onwards). During 1959–60 alone, 4,268 training places and 535 experts were provided and also special equipment to the value of over £2·9 million.

By June 1960, the total value of technical assistance provided under the Colombo Plan by the member countries including the United States, (from 1958 only) amounted to about £46·4 million.

U. S. expenditure on technical assistance during 1959–60 amounted to £13·4 million. In the same period, the U.S. provided 2,511 new awards for training and made available the services of 324 experts.

Expenditure on the provision of training has maintained a progressive rise and amounted to £4·36 million in the period 1 July 1958 to 30 June 1959 and £5·2 million in the period 1 July 1959 to 30 June 1960.

Training facilities and services of experts provided under the Scheme cover all the major fields of development, and include Engineering, Administration, Food, Agriculture and Forestry, Education, Medical and Health, Industry and Trade, Transport and Communications, Banking Finance and Accountancy, Power and Fuel, Statistics, Social Services, Co-operatives, Fisheries, and Journalism.

DEVELOPMENT EXPENDITURE

The countries of the area have drawn up development plans.

Fifteen Colombo Plan countries of South and South-East Asia incurred an estimated expenditure of nearly £1,309·8 million on development in the public sector in 1959–60. The budgeted expenditure for 1960–61 is estimated at nearly £1,546·3 million.

Government expenditure under developmental heads (£ million at a constant rate of exchange):

£ million

	1958-59 or 1958, Actuals	1959-60 or 1959, Revised Estimates	1960-61 or 1960, Budget Estimates.

Total	1,272·4	1,309·8	1,546·3

[1] Figures for Burma include capital expenditure in public enterprises. * Figures not available.
[2] April 1958–March 1959. April 1959–June 1960. July 1960–June 1961.

A favourable world economic situation during 1959–60 provided a propitious environment for continuing progress in the Colombo Plan area. The volume of exports increased. Along with the recovery in industrial countries, raw material prices improved, although food prices continued to decline. Weather conditions, so important to the Colombo Plan area, were generally favourable in 1959–60 and although bad weather affected production in some countries, agricultural production rose for the second successive year. The rice harvest was a record. Industrial production in the area rose substantially and rapidly in 1959–60, the output of cement and electric power particularly showed a marked increase. In India, the rise in industrial production was about 11 per cent, as compared with an increase of 2·4 per cent in 1958–59 and 1·7 per cent in 1957–58. Also in India, which accounted for most of the increased electric power output of the area during the year, 10 per cent more electricity was generated than in the previous year. Steel production in India was increased by 550,000 tons.

TECHNICAL ASSISTANCE

Australia, Burma, Canada, Ceylon, Federation of Malaya, India, Japan, New Zealand, Pakistan, Philippines, Singapore, United Kingdom and United States have contributed over £46·4 million to finance Colombo Plan Technical Co-operation. Technical assistance consists of provision of facilities for training, supply of experts and provision of equipment for training and research institutions. Technical assistance is also offered under various programmes of the United Nations and its Specialized Agencies.

According to the Ninth Annual Report of the Colombo Plan Consultative Committee, since 1950 training has been afforded to over 23,000 trainees and the services of an estimated 11,600 experts have been provided to countries in the area by all member countries of the Colombo Plan and also by agencies of the United Nations. This includes United States figures for the full period.

Not all the training is arranged outside South and South-East Asia; some Asian countries are helping others in training facilities. In addition, the United States, 'Third Country' programme provides financial assistance to enable trainees from countries in the area to proceed for training in another country of the area.

A break-up as between Colombo Plan and U.N. assistance:—

Till June 1960, 7,218 experts under the Expanded Programme of the United Nations and the Specialized Agencies served in the area. A number of countries have established technical schools and polytechnics in special fields such as textile and nursing education.

Under the Technical Co-operation Scheme of the Colombo Plan, 1,729 experts and 15,116 training places had been provided to the countries of South-East Asia till June 1960 by member countries including the United States. (The U.S. contribution is from July 1959). The distribution is as follows:

	Training Awards	Experts
Australia	3,084	367

* From 1st July 1958 only.

AID FROM INDIA

India has offered both economic and technical assistance to the countries of the region. Economic assistance has been given primarily to Nepal. This assistance was for development of roads and communications, construction of an air-field, mapping and air survey work, construction of Trisuli Project and minor irrigation works.

During 1959-60 India gave assistance of the value of Rs. 18·0 million. During the year, India also offered aid to the extent of Rs. 180 million for Nepal's Second Plan projects, inclusive of Rs. 40 million for the construction of East Kosi (Chhatra) canal and Rs. 40 million which is estimated to be the unspent balance of the current Rs. 100 million assistance programme in that country.

India also supplied 34 experts to the Colombo Plan countries during the year—two to Burma, 22 to Ceylon, 5 to Indonesia, four to Singapore, one to Viet Nam, in such fields as potato-growing, tractor engineering, timber research, small savings, sugar technology and the use and maintenance of HT 2 aircraft.

In addition to this India has provided 1,279 scholarships and fellowships to students of South-East Asia in various technical subjects at the Indian Universities, Scientific and Research institutes and in other projects from the beginning of the Colombo Plan Technical Co-operation Scheme. Of this number 820 were to Nepal, Ceylon (137); Philippines (71); Pakistan (39); Burma (46); Thailand (49); Indonesia (39); Malaya (30); Japan (8); North Borneo (3); Viet Nam (10); Laos (11); Sarawak (3); Australia (2); New Zealand (1); Singapore (10).

The largest number of training places were provided in the field of Education (293), Statistics (182), Engineering (209), Food, Agriculture and Forestry (128), Transport and Communications (116), Medical and Health (123), Industry and Trade (92), Administration (33), Co-operatives (28), Social Services (30), Banking Finance, Accountancy, Taxation and Insurance (10), Journalism, Press Photography and Printing (8) Fisheries (13), Power and Fuel (7), and Miscellaneous (7).

During the year 1959-60 training facilities were provided for 272 Asians in the fields of: Engineering 53, Medical & Health 43, Food, Agriculture and Forestry 31, General Education 30, Statistics 23, Transport and Communications 21, Social Services 18, Industry and Trade 14, Fisheries 10, Co-operatives 10, Power and Fuel 7, Administration 6, Banking, Finance, Accountancy, Taxation and Insurance 2, Journalism Press Photography and Printing 2, Technical Education 1 and miscellaneous 1.

Since the inception of the Colombo Plan, training in statistics has been provided to 182 candidates by the International Statistical Education Centre, Calcutta, which is jointly sponsored by the International Statistical Institute and the Indian Statistical Institute in collaboration with UNESCO.

Country-wise a description would be as follows:—

Four candidates from Burma have received training in dental surgery, archaeology, and community development; 5 from Ceylon—4 in textile chemistry, textile technology, textile finishing and training within industry and one in crash fire rescur; 11 from Indonesia in chemistry, agriculture, community development, physico-chemical properties of bamboos, their utilisation and preservation, coal and ore geology and volcanology, petrology and geo-chemistry; 8 from Malaya in printing and press room work and press relations, degree course in medicine and occupational therapy; one from North Borneo in village extension work; 4 from the Philippines in chemical and ceramic technology, analysis of paints and varnishes and leper hand surgery; 2 from Sarawak in public health; and 13 from Thailand in public administration, destructive distillation of wood, civil aviation, nutrition and agriculture. India has also offered training in forestry and fisheries. In 1959-60 three forest officers from Ceylon, 1 from Sarawak and 1 from

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Thailand were given courses at the Southern Forest Ranger College, Coimbatore. Two trainees from Malaya, 5 from the Philippines and 2 from Thailand were receiving training at the Central Fisheries Research Station, Calcutta. India provided 4 experts to Ceylon to advise on low cost road construction and the setting up of a Road Research Institute, taxation, leather technology and seed potato stations.

But India's largest contribution to Colombo Plan co-operation is the number and variety of training courses offered to Nepal each year. The number of new training places taken up in 1959-60 was 187. Twelve Nepalese were being trained in agriculture, in forestry (8) and veterinary science (4). To overcome the shortage of doctors training was being provided in western and ayurvedic medicine and in dentistry to 35 Nepalese trainees. In the fields of transport and communications, housing, mining, aviation and engineering 75 training places were awarded; 2 were undergoing training in applied chemistry and 1 in chemical engineering, 2 in sugar technology and 2 in textile technology, 5 were receiving training in community development work and 2 in clerical work. To assist with university development in Nepal, 7 Nepalese lecturers were taking higher degree courses in India in physics, chemistry, English literature, philosophy, Sanskrit, economics and zoology. A lecturer in chemistry at Tri-Chandra College, Kathmandu, a lecturer in Hindi at the Nepal University and 2 lecturers in psychology from the Tribhuvan University were following courses in their respective subjects. India was also training 5 Nepalese in home science, 6 in social education, 10 in co-operatives, 2 in accountancy and 3 in draughtsmanship, one in factory inspection and one in parliamentary procedure and practice.

Expenditure incurred on equipment in 1959-60 and from July 1950 to June 1960 were £428 and £19,177 respectively.

AID TO INDIA

Australia :—Australian capital aid to India amounted to A£767,700 during 1959-60. The total Australian contribution was at the end of June 1960 A£11·3 million. Forty-six Indian trainees proceeded to Australia during 1959-60 and 16 Australian experts served in India. Of the 396 training awards granted upto the end of June 1960 the majority were in agriculture engineering, nursing and science.

Canada :—Up to the end of 1959-60 Canadian capital assistance allocated to India amounted to $147·2 million, exclusive of an additional $51 million in grants and loans provided for the purchase of wheat. In 1959-60 $25 million was allocated to finance Canadian capital aid programme in India. The unallocated balance of funds from 1958-59 was used for the purchase of equipment for the Calcutta Milk scheme and additional copper. From Colombo Plan funds appropriated during 1959-60 Canada earmarked $2 million as an initial allotment for Canada's share of the Indus Basin Development Fund.

Japan :—Japan's Export-Import Bank has approved loans totalling 504·5 million yen against the special line of credit to India amounting to 18,000 million yen which is to be utilised over a 3-year period ending March 1961. In addition, the Bank had authorised by end of June 1960 funds totalling 1,646·4 million yen under the agreement between the two Governments for the extension of a further credit of 3,600 million yen. Japan has also indicated that it would be prepared to supply an additional line of yen credit amounting to 3,600 million yen for the procurement of capital equipment on a deferred payments basis.

New Zealand :—Capital assistance grants to India amounted to £2·42 million up to 30 June 1960. Further capital assistance amounting to £150,000 for 1960-61 is envisaged for dairy development in India. A further grant of £9,000 was made to the National Dairy Research Institute, Karnal. Eleven New Zealand experts in agriculture have been assigned to India since the beginning of the Colombo Plan. 71 trainees from India have received New Zealand technical assistance awards principally in agriculture and mining. To assist in financing development of the water resources of the Indus Basin, New Zealand has undertaken to make a contribution of £1 million under the Colombo Plan, to be made available in annual instalments of £100,000 over a ten year period.

United States:—In May 1960, the United States signed a 4-year agreement with India for the sale of $1,276 million of surplus agricultural commodities. A previous $299 million agreement had been signed in 1959. A substantial part of the proceeds will be made available on a loan or grant basis for economic development purposes. The $171·3 million in loans approved by the Development Loan Fund was largely for the construction of power generating plants, railways improvements and loans for the private sector. In addition, the Export-Import Bank made a loan of $13·7 million for an aluminium project. Technical Cooperation from the United States centered on agriculture and industry. The International Bank for Reconstruction and Development made two loans totalling $120 million for the continued development of the Indian railway system, bringing the amount lent for this purpose to $328 million—the largest amount lent by the Bank for any single project. The Bank also lent $10 million to the Industrial Credit and Investment Corporation of India Ltd. to assist the growth of private industry in India.

United Kingdom :—From 1951 to 30 June 1960, the United Kingdom authorised loans to India totalling £65·5 million, of which all but £1·1 million had been drawn by the latter date. In 1959-60, India drew the whole £19 million loan promised at the second Consortium meeting and the £19·45 million balance of the £28·5 million loan promised at the first Consortium meeting. This assistance was for general balance of payments support. In 1959, a loan of £3 million was also made available for the Assam oil pipeline project of which £1·9 million had been drawn by 30 June 1960.

Out of the 225 Indian trainees in the United Kingdom under Colombo Plan Technical Co-operation arrangements on the 30th June 1960, 80 were technicians being trained by the British iron and steel industry for the Durgapur Steel Plant, which brings the number of Indians so far trained in the United Kingdom for this project to 168. The United Kingdom has undertaken to train 400 Indian technicians in all for the Durgapur Steel Plant. Other Indians were given and are receiving training in varying fields including medicine, civil engineering, food and agriculture and scientific subjects.

During 1959-60, 9 experts were sent to India bringing to a total of 17 the number of United Kingdom experts working in India during that period. Among them were advisers on mining research and metal mining at Dhanbad, a Professor and a Director of Practical Training for the projected Delhi Engineering College which the Indian Government plan to open in July 1961. This college will be staffed initially with professional staff to be provided by the United Kingdom under technical co-operation arrangements. In addition, equipment to the value of over £250,000 will be provided for the College and paid for by British industry.

The services of consultants were provided to prepare for the Indian Government a detailed report on two Heavy Engineering projects, namely, the Heavy Structural Fabricating Works and the Heavy Plate and Vessel shop.

Requests for books and equipment for six projects were approved, among them being the National Metallurgical Laboratory, Jamshedpur (£12,000), the Central Building Research Institute, Roorkee (£6,000) and the Hospital for Mental Diseases, Ranchi (£2,400).

U. S. AID TO INDIA

U.S. economic assistance to India consists of both grants and loans. The total commitments of the U.S. under various agreements with the Government of India now stand at $3,872·6 million (Rs. 1,843·3 crores).

(U.S. aid from the inception of the aid programme to India in June 1951 through June 1, 1961). The first figure is in million dollars and the figure in brackets the rupee equivalent in crores: Aid under Indo-American Technical Cooperation Programme 490·7 (233·6); Public Law 480, Title I 2,337·3 (1,112·6); Famine relief grants to Indian Government 10·4 (4·9); Agricultural commodities distributed through voluntary agencies (Public Law 480, Title III) 113·1 (53·8); Development Loan Fund 493·4 (234·8); Export-Import Bank 238·0 (113·3); Wheat Loan of 1951 189·7 (90·3); Total 3,872·6 (1,843·3).

Breakdown : Loans repayable in dollars 427·7 (203·6); Loans repayable in rupees or dollars 1,735·5 (826·1); Grants to Indian Government for economic development (not repayable) 1,122·8 (534·5); Amounts under PL-480, Title I, reserved for U.S. government use 300·8 (143·1); Cooley Funds for loans to private enterprise 162·3 (77·3); Famine relief grants to Indian government (not repayable) 10·4 (4·9); Agricultural commodities distributed through voluntary agencies (PL-480, Title III) (not repayable) 113·1 (53·8); Total 3,872·6 (1,843·3).

The position as on December 31, 1960 giving the different heads as well as the year under which it has been given: (Figures in mln. dollars) 1. Technical and Economic Assistance through Joint Indo-American Programme 483·2*a*; 2. Other ICA Programmes 5·5*b*; 3. Development Loan Fund 408·3*c*; 4. India Emergency Food Act of 1950—Wheat Loan 189·7*d*; 5. Export-Import Bank Line of Credit Approved 219·6; 6. Famine Relief Grants to Indian Government of Surplus Foods Under PL 480 Title II 4·9; 7. Donations of Surplus Foods Distributed by Non-Profit Voluntary Relief Agencies under PT 480 Title III 113·1*e*; 8. Sales of Surplus Agricultural Commodities for Indian rupees under PL 480 Title I 2,302·2*f*; 9. Sale for rupees of commodities purchased by U.S. with foreign currencies obtained from sale in third countries of U.S. surplus commodities under PL 480, Section (*d*) 6·0*g*; Total 3,732·5.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

a. Includes a loan of $20·0 million approved in June 1958 for Orissa Iron Ore Project from Asian Economic Development Fund.

b. Includes $5·0 million for emergency flood and famine relief and $0·5 million ocean freight on PL 480 Title II Commodities financed under appropriation to the International Cooperation Administration.

c. Does not include three commitments totalling $22·2 million for which agreements are not yet signed.

d. The India Emergency Food Act of 1951 provided that the first $5·0 million of interest paid by India for interest on the loan was to be placed in a special fund to assist education in India.

e. Includes market value of commodities and freight paid by International Cooperation Administration. Prior to FY 1955, these surplus food donations were authorized under section 416 of the Agricultural Act of 1949.

f. Represents market value plus ocean freight under 5 agreements (excluding $6·0 million which covers the excess cost of freight as the result of the requirement that the commodities be shipped in U.S. vessels for which Indian Government is not required to deposit rupees in special account of U.S. Treasury).

g. Fertilizers procured by the ICA with the Japanese Yen, French Franc, and Italian Lira proceeds of PL 480 sales in third countries, electrical goods and clay products under similar arrangements.

The aid year by year was as follows (as on June 30) in million dollars:

1951: 194·2; 1952: 53·6; 1953: 45·3; 1954: 89·5; 1955: 105·8; 1956: 83·8; 1957: 439·0; 1958: 324·4; 1959: 395·8; 1960: 1,723·9; 1961: 277·2. Total: 3,732·5.

Of this aid grants amounted to 1,102·0 million dollars, loans repayable in dollars 428·0, loans repayable in dollars or rupees 1,674·0. Total U.S. grants and loans: 3,204·0 million dollars.

Besides, there are the rupee proceeds of U.S. Surplus Commodity Sales under PL 480, Title 1, reserved for U.S. uses: 297·0 million dollars.

And sale for rupees of Commodities purchased by U.S. with foreign currencies obtained from sale in third countries of U.S. surplus commodities under PL 480, Section (*d*): 6·0 million dollars.

EMERGENCY WHEAT LOAN

As authorized under the provisions of the India Emergency Act (Public Law 48) passed by the United States Congress in 1951, a loan of $189·7 million (Rs. 90·3 crores) was extended to India to finance the purchase of two million tons of American foodgrains urgently needed to alleviate the food crisis brought on by floods and subsequent drought in 1950.

The loan carries an interest rate of 2¼ per cent per annum and is repayable in dollars. The original loan agreement stipulated that repayment was to commence on June 30, 1957 and terminate on June 30, 1986. The first three amortization payments, as well as interest charges for seven and one-half years, were made on schedule. However, in September 1958 when India was experiencing serious difficulties financing the heavy foreign exchange requirements of the Second Five-Year Plan in addition to the normal claims on her foreign exchange earnings, the United States Government agreed to postpone the eighteen semi-annual instalments of interest and principal due during the period December 31, 1959 to June 30, 1967 and to reschedule them to fall due from December 31, 1986 to June 30, 1995. No additonal interest payments over the life of the loan will be required as a result of this deferment which involves $23 million on principal account and $39 million of interest.

The legislation authorizing the loan also provided that the first $5 million paid by India as interest on the loan was to be placed in a special deposit account in the treasury of the United States to remain available, until expended, for the purpose of rehabilitation and development of Indian universities and institutions of higher learning. The India Wheat Loan Educational Exchange Programme, which is administered by the United States Information Service, started functioning in 1954. The total amount obligated as of December 31, 1960 was $4,825,050. As of June 30, 1961, of this amount $1,830,000 will have been used to provide scientific equipment to Indian institutions of higher learning, $1,393,000 for procurement of books for their libraries, $1,049,550 for an exchange-of-persons programme, and $552,500 for administrative costs. Altogether 116 Indian students will have gone to the United States for study by June 30, 1961 and 37 American Professors will have come to Indian Universities to advise and assist them in their fields of specialized knowledge and experience. Indian Universities and institutes of higher learning numbering 102 have received assistance from this fund.

PUBLIC LAW 480

This Law (U.S. Public Law 480) authorizes the U.S. Government to enter into agreements with foreign governments to sell certain agricultural products which are in surplus supply in the United States and to accept foreign currencies, such as Indian rupees, as payment. This act also permits the use of some of the sales proceeds by the recipient countries for economic development purposes.

India has been the beneficiary of more than one-fifth of the total value of the PL 480 sales agreements negotiated by the United States with other friendly nations around the globe. Sales agreements totalling Rs. 1,093·5 crores ($2,302·2 million) had been signed with the Indian Government as of December 31, 1960.

The PL 480 sales agreements include provision as to the utilization of the anticipated rupee proceeds of the sales transactions. The provisions agreed to prior to as of December 30, 1960 stipulate that 33·6 per cent of the total sales proceeds anticipated under all agreements are to be given to the Indian Government as an outright grant for financing non-revenue producing development or educational projects. In addition, 46·5 per cent will be made available to the Indian Government as long-term, low-interest loans for financing the rupee costs of economic development projects. Another 7·0 per cent of the total value of the rupee sales under the three agreements will be available through the U.S. Export-Import Bank for rupee loans to (1) United States business firms or affiliates of such firms for business development and expansion in India or (2) for loans to firms of any nationality for establishment of facilities for increasing the consumption of, and markets for, United States agricultural products in India. The remaining 12·9 per cent of the sale proceeds are to be retained by the U.S. Government to cover its ordinary operating expenditures in India.

In terms of money the agreed uses have resulted as follows as on December 31, 1960 (in million dollars):

Grants to Indian Government: 773·5; Loans to Indian Government for Economic Development: 1,070·5; U.S. Government purposes: 296·9; For loans to U.S. and eligible Indian firms through Export-Import Bank: 161·3; Total: 2,302·2 million dollars.

ASSISTANCE UNDER PL 480
(Through December 31, 1960)

BREAKDOWN—PL 480, TITLE I
(in thousands)

Agreement*	Value: Dollars	Value: Rupee Equivalent
1. August 29, 1956	354,556	1,697,948
2. June 23, 1958 ..	55,277	264,644
3. September 26, 1958	259,800	1,243,818
4. November 13, 1959	297,870	1,426,082
5. May 4, 1960 ..	1,334,700	6,390,009
Total ..	2,302,203	11,022,501

* Dates of original signature shown; figures include any subsequent amendments or supplements.

The surplus agricultural commodities supplied under the first four agreements and those covered by the fifth agreement are as follows:

Commodity	Unit	First Four Agreements	Fifth Agreement	Total
Wheat	Tons	11,000,000	16,000,000	27,000,000
Rice	,,	400,000	1,000,000	1,400,000
Cotton	Bales (US)	625,000	330,000	955,000
Corn and Grain Sorghum ..	Tons	375,000	100,000	475,000
Corn	,,	..	134,000	134,000
Tobacco	,,	3,000	2,000	5,000
Dried Milk Powder ..	,,	20,000	..	20,000
Soybean Oil	,,		4,000	4,000

Section (*d*) of PL 480 Title I provides that a portion of the local currency proceeds of sales of agricultural commodities set aside for the uses of the U.S. Government may be spent for financing the purchase of goods or services for other friendly countries. In accordance with this authorization, the U.S. Government has resold to the Indian Government for rupees commodities purchased with the local currency proceeds of PL 480 sales in third countries. Fertilizer purchases equivalent in value to $5·4 million (Rs. 2·6 crores) were authorized by ICA with Japanese Yen, French Francs and Italian Lire and sold to India for rupees, thus saving India the equivalent in foreign exchange. In addition, $575,214 (Rs. 0·3 crore) of electrical goods and clay products were authorized for procurement from Japan under a similar transaction. The rupee proceeds of the sale of these commodities accrue to the U.S. Treasurer for use in financing the operations of the U.S. Government.

PL. 480 TITLE II

Under Title II of U.S. Public Law 480, which authorizes the utilization of surplus American Agricultural foodstuffs for distribution to friendly peoples in meeting famine or other extraordinary relief requirements, India received as a gift 10,000 tons of wheat, 10,000 tons of rice and 3,000 tons of non-fat dry milk for free distribution in those areas affected by natural disasters in 1955 and 1956. The value of these commodities was $4·9 million (Rs. 2·3 crores). In addition $500,000 to cover the cost of ocean freight on those commodities was financed from the appropriation to the International Cooperation Administration.

PL 480 TITLE III

Title III of PL 480 authorizes the U. S. Commodity Credit Corporation to donate foodstuffs in surplus supply to non-profit voluntary agencies for use in the assistance of needy

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

persons, both within and without the United States. As of December 31, 1960, there has been shipped to India for free distribution to the poor and needy, $113·1 million (Rs. 51·5 crores) worth of milk, butter, cheese, cottonseed oil, beans, wheat flour, corn, corn meal and rice.

DEVELOPMENT LOAN FUND

The Development Loan Fund (DLF) was established by the U.S. Congress in 1957 under the Mutual Security Act of 1954, as amended. Its purpose is to provide long-term development loans to economically less-advanced, friendly countries.

Loan terms and conditions are flexible. DLF is an independent agency.

Loan agreements totalling $471·9 million (Rs. 224·6 crores) were signed with the Govt. of India upto April 1961 under the DLF operations.

The loans are repayable in either dollars or rupees at the option of the Indian Government. The amortization period on some of the loans is as long as 21 years. Interest charges on loans for profit-making enterprises have been 5½ or 5¾ per cent. Interest is 3½ per cent on the loans to be utilized for so-called "social overhead" projects, in which the benefits are diffused to the community at large (such as transportation facilities and public power utilities).

Loans have been given for modernization and expansion of the railways, for the manufacture of buses, trucks and jeeps, cement plants, jute plants, steel imports, equipment for power development, metallurgical, mineral, chemical, cement, machinery, textile, sugar, paper industries.

EXPORT-IMPORT BANK CREDITS

Created in 1934, the Export-Import Bank operates under the Export-Import Bank Act of 1945 as amended. Its basic purpose is to facilitate and assist in the financing of Export-Import trade between the United States and other countries. As the principal foreign lending arm of the United States Government, proceeds of loans made by it are used for the purchase of capital equipment and related services in the Unilted States.

A late comer to India, except in the capacity as agent for the United States in handling the $189·7 million wheat loan in 1951, the Export-Import Bank authorized a line of credit of $150 million (Rs. 75 crores) in favour of the Government of India in February, 1958. This loan was for the purpose of providing India with dollar exchange to make purchases in the United States of capital equipment in the fields of industry, agriculture, power, communications, transportation and port development.

In November 1957, the Bank issued a loan of $1·8 million to the National Rayon Corpn., and one of $60,000 to the Sundatta Cotton Seed Utilization Co. In the year 1960 three loans were made: Hindustan Aluminium Ltd. (Kaiser-Birla), $13·6 million; Air India International, $4·1 million; and a $50 million additional line of credit to the Government of India. Thus by December 31, 1960, loans from this source totalled $219·5 million.

In addition to its dollar lending operations, the Export-Import Bank is authorized to extend rupee credits to private enterprises in India under certain conditions. As of December 31, 1960, ten such loans had been made, for a total of Rs. 110,700,000.

JOINT INDO-AMERICAN PROGRAMME

The Indo-American Programme consists of aid authorized under the Mutual Security Act and the former Act for International Development and administered by the International Cooperation Administration (ICA) and its predecessor agencies. The provisions under which the aid is made available to India are set forth in the POINT FOUR GENERAL AGREEMENT FOR TECHNICAL COOPERATION BETWEEN INDIA AND THE UNITED STATES OF AMERICA signed on December 28, 1950 and THE INDO-UNITED STATES TECHNICAL COOPERATION AGREEMENT signed on January 5, 1952.

As of December 31, 1960 the contribution of the United States to India through the Indo-American Programme totalled $483·2 million (Rs. 230 crores*). Of this amount, $332·0 million (Rs. 158·2 crores) were given as grants and $150·0 million (Rs. 71·74 crores) were made available in the form of long-term, low-interest loans repayable in rupees.

To this 483·2 million dollars must be added 5·5 million dollars of emergency flood relief and 408·3 million dollars of Development Loan Fund, thus making a total of 897·0 million dollars.

The total amount of 483·2 million dollars can be broken up as follows (in million dollars):—

Technical Co-operation 79·0; Development Assistance 334·5; Special Assistance for Malaria Eradication 47·5; Asian Economic Development Fund 22·2.

The Government of India contributes the rupee costs of joint projects. These include local construction costs, purchase of project sites, transport and handling charges within-India of U.S. financed imports, a portion of the within-India support costs for U.S. project technicians and the salaries of Indian personnel working on Joint Indo-American Projects as well as salaries and other rupee costs of Indian personnel who are sent to the U.S. and third countries for training.

Joint projects under the Indo-American Programme have been in support of India's Five-Year Plans. The project proposals are initiated by the operating ministries of the Government of India and approved by the Technical Cooperation Mission (TCM), the representative of ICA in India, and by the Ministry of Finance acting in accordance with the broad policies set forth by the Planning Commission, which are designed to ensure coordination between these projects and the economic development programme of the country.

At the request of the Government of India, the United States has been providing assistance to help India improve the standard of living of the people. This aid has taken a variety of forms—from providing the consultation services of a single American specialist on audio-visual techniques to the financing of $20 million worth of capital equipment imports for the Orissa Iron Ore Project. U.S. aid has played a supporting role in many areas of India's development—from railways to mining, from seed improvement to malaria eradication, and from the training of future university professors to instruction in industrial crafts. The forms of United States economic aid to India have changed with the changing needs of India as well as changes by the U.S. Government in the methods of administration of its foreign aid programmes.

The first shipment of aid commodities arrived in 1951.

Since the inception of the Indo-American programme, heavy emphasis has been placed on agriculture. Emphasis has also been given to the problems of industrial development.

The signing in 1958 of an agreement for the conversion from the programme of malaria control to one of nationwide eradication established this as the major activity in the field of health over the next four or five years.

The Indo-American programme has been financed from appropriations to ICA for Development Assistance, Technical Cooperation, the Asian Economic Development Fund and Special Assistance in support of the Malaria Eradication Programme of the Indian Government.

TECHNICAL ASSISTANCE

Below we give a summary of the assistance provided under the Indo-American Technical Assistance Programme. The position is as on June 30, 1960. The first figure indicates the obligation and the figure within brackets, the expenditure:

	(In 000's of dollars)
I. Agriculture and Natural Resources	
Acquisition & Distribution of Fertilizers	17,295 (17,295)
Acquisition & Distribution of Iron & Steel for Agricultural purposes ..	19,770 (19,770)
Plant Protection & Locust Control	584a (584a)
Determination of Soil Fertility & Fertilizer Use	461 (437)
Expansion & Modernization of Marine & Inland Fisheries	2,610 (2,488)
Groundwater Irrigation..	18,265 (18,265)
Agricultural & Home Science Extension & Training	959 (923)

Grand Total Aid to India Authorized by Mutual Security Legislation ..	502,333

Note : Not included in above figures are $6·0 million representing sales for rupees of commodities purchased by ICA with foreign currencies obtained from the sale in third countries of U.S. surplus agricultural commodities under P.L. 480 Title I—Section (*d*).

U. S. TECHNICIANS

U.S. technicians working in India on a regular two-year tour of duty or for a short period of consultation may be hired directly as members of the TCM staff or their services may be provided under the terms of a contract negotiated with an American University or an engineering firm. In addition to the technicians working with their Indian counterparts, TCM has a small administrative staff whose salaries as well as the expenses incident to their being stationed abroad are paid by the International Co-operation Administration in Washington. A total of 188 Americans were employed by TCM as of December 31, 1960. Of this total, 27 had administrative responsibility within TCM and 161 programme personnel were working on the joint Indo-American projects or in project-support positions in TCM. Of the latter, 97 were "direct hire" and 64 were hired under contract arrangements.

Generally speaking, the U.S. programme technician on the project to which he is assigned works in close co-operation with one or more Indian counterparts.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Programme personnel (U.S. Technicians) assigned to India by field of activity from 1952-60 are given in the table below:

U.S. Fiscal Year ending June 30.

Field	1952	1953	1954	1955	1956	1957	1958	1959	1960
Agriculture and Natural Resources	34	43	30	35	54	76	76	53	27

TOTAL	64	95	107	141	182	207	165	140	60

Grand Total from 1952–60 : 1,161.

INDIAN PARTICIPANTS

Since 1951 there have been 2,506 Indian participants in the Joint Indo-American exchange programme who have already been abroad or who are preparing to depart. Of this total, 1,416 Indian participants completed their advanced training in the United States or third countries and returned to India to carry on work in their particular fields. As of June 30, 1960, another 409 participants were still in training in the U.S. and 681 participants were preparing to leave for further study abroad under the programme.

The nature of participant training is very broad and ranges from a three months programme in tropical forestry in Puerto Rico to an intensive two-year training programme for future professors of engineering at a leading American university.

The sponsoring authority in India should be prepared to bear the following rupee costs: Salaries of trainees during the period of training; Cost of travel between the place of duty and the Indian port; Incidental expenses, *e.g.* fees for passport, medical certificates, etc.

Until recently, primary emphasis was on the agriculture and natural resources fields. However, in 1959, predominance shifted to the industrial field where 121 participants were processed for the National Productivity Council Project alone and another 100 were processed for the steel training project in co-operation with the Ford Foundation. Under the Teacher Training in Engineering Education Project 150 more participants were also processed in 1959.

The figures for trainees as from 1953 are shown below :—

Year ending June 30.

Field	1953	1954	1955	1956	1957	1958	1959	1960	TOTAL

PRIVATE ORGANIZATIONS

Ford Foundation

The Ford Foundation has been giving grants since 1951.

The total grants upto December 31, 1960 were $41·3 million (Rs. 19·7 crores). Some of the more important projects for which grants were given are: English Language Teaching Institute, Hyderabad; extension service departments in secondary teachers training colleges; expert advice on a regional plan for Delhi; training of Indian engineers in the U.S. steel plants; training and demonstration in the development of small scale industry—the equipment of the Small Industry Service Institutes; community development in rural areas.

Rockefeller Foundation

The total grants upto December 31, 1960 were $10·3 million (Rs. 4·9 crores). The aid is in the form of travel grants and fellowships. The assistance to institutions and projects is mainly in the field of health—control of hookworm and malaria, development of rural health centres, rural sanitation, nursing education, nutrition, public health laboratory service. The institutions are: All India Institute of Hygiene, Calcutta; Virus Research Centre, Poona; Indian Agricultural Research Institute, New Delhi; Institute of Medical Sciences, New Delhi.

U. N. AID TO INDIA

IN general U.N. Aid to India is provided by the United Nations and the U.N. Specialized Agencies through the following Programmes: 1. Expanded Programme of Technical Assistance (U.N. Technical Assistance Board); 2. Individual programmes of aid by the United Nations and the Specialized Agencies under their Regular Budgets; 3. Special Programmes such as UNICEF (United Nations Children Fund); 4. United Nations Special Fund.

During 1959, under the Expanded Programme, the total amount provided for assistance to India, by the U.N. including local costs, was $2,484,976.

The Government of India pledged and paid a contribution of $525,000 to the entire Expanded Programme, as also an amount equivalent to $148,858 towards local costs for the year 1959. The contributions pledged by all Governments to the Expanded Programme of Technical Assistance for 1959 were $31,307,200.

The contributions by all Governments to EPTA for 1960 were $33,015,815, of which the Indian contribution was $750,000. In addition the Government was expected to contribute approximately $178,345 in 1960 towards the local living expenses of experts.

In addition to the technical assistance given under the EPTA, the costs of technical assistance provided by some of the Participating Organizations under their Regular and other Programmes for 1959 from their own regular annual budgets were: UNTAO $75,000, UNESCO $50,000 (Reg. 1959) $180,074 (Participation Programme 1959-1960) WHO $328,165 (Reg. Programme) $238,528 (Malaria Eradication Special Account, 1959).

The total amounts obligated under the Expanded Programme during 1959 classified under different agencies are as follows: (figures in U.S. dollars); UNTAO: 407,265; ILO 308,128; FAO 305,489; UNESCO 883,072; ICAO 52,087 and WHO 518,177: Total 2,484,976.

During 1959, 150 experts were engaged under the Expanded Programme and 54 under the Regular Programme: 35 by UNTAO, 10 by ILO, 37 by FAO, 28 by UNESCO, 1 by ICAO, 82 by WHO and 1 by ITU.

During the same period 112 Indian nationals were recruited by the various agencies under the Expanded Programme and 40 under Regular Programme: UNTAO 23; ILO 8; FAO 38; UNESCO 20; ICAO 6; WHO 50; ITU 4 and WMO 3.

The total fellowships awarded to Indians both under the Expanded and Regular Programmes during the year were 166: TAO 100; ILO 11; FAO 11; UNESCO 16; WHO 26 and ITU 2.

India gave facilities to 142 fellows from various countries under the Expanded and Regular Programme: TAO 36; ILO 5; FAO 6; UNESCO 8; WHO 85 and IAEA 2.

Subjects in which technical assistance was offered were:

TAO: Statistics (Quality Control, Mathematical Statistics, Installation Engineers of various types of equipment), Earthmoving Equipment, Power Distribution, Mining and Geology, Dam Designs, DDT. Plastic Moulds, Lighthouse Engineering, Housing Documentation, Demography, Rehabilitation for Physically Handicapped, Community Development, Natural Resources Development and Power, Port Development, Area Surveys, Savings Surveys, Materials Substitution, Lead Pencils and Electrical Signalling Equipment.

ILO: Manpower Organization including Vocational Training, Employment Information, Occupational Classification, Apprenticeship, Instructor Trainers Productivity, Industrial Relations, Teaching Techniques, Unemployment and Underemployment Statistics.

FAO: Irrigation and Farm Management, Land Reform, Dairy Engineering, Milk Marketing, Dairy Management, Milk Ejection, Artificial Insemination, Livestock, Hides and Skin, Forest Industries, Sandalwood Spike Diseases, Agricultural Statistics, Fisheries (in various branches such as Marine Fisheries Biology, Fish Marketing, Fish Training, Fish Technology, Naval Architects, Harbour Specialists and Fleet Manager), Underwater exploration, Soil Conservations, Food Technology, Dietetics, Home Economics, Animal Gynaecology, Fruit Concentrates, Nutrition.

UNESCO: Metallurgy, Hydraulics, Chemical Engineering, Ship Model Testing, Electronics, Mechanical Handling, Exploratory Geophysics, Switchgear Design, Instrumentation, Electro-Chemistry, Industrial Electronics, Vacuum Technology, Silicate Technology, Non-ferrous Metallurgy, Mechanic Tools, Fuel Technology, Steel Metallurgy, Chemical Engineering, Plant Design, Steam Turbines, Furnace Design, Scientific Translation.

ICAO: Radar Training.

ITU: Research in modern methods of common central switching.

WHO: National Tuberculosis Programme; Tuberculosis Control and Training Centre, Nagpur, and Hyderabad; Tuberculosis Chemotherapy Centre, Madras; Assistance to the All-India Institute of Mental Health, Bangalore; Public Health Engineering, University of Madras; Environmental Sanitation, Uttar Pradesh and Kerala; Health Education (Ministry of Health in co-operation with Ministry of Education), Vital and Health Statistics, Nagpur; Professors in Preventive and Social Medicine; Refresher Courses for Nurses; Nursing Education (Public Health Integration); Dental Health, Health Education, States of Bombay,* Uttar Pradesh, Bihar; Nursing Advisers to States (Madhya Pradesh, Madras and Punjab); Medical education in Non-clinical Subjects; Paediatric Education.

Among the Institutions that benefited were: Indian Statistical Institute, Calcutta; Roorkee University; National Building Organization; Demographic Training and Research Centre; National Council of Applied Economic Research; All India Institute of Physical Medicine and Rehabilitation; Council of Scientific and Industrial Research; Central Training Institute, Koni Bilaspur; Indian Agricultural Research Institute; National Physical Laboratory; Banaras Hindu University; Engineering College, Poona; Indian School of Mines and Applied Geology, Dhanbad; Indian Institute of Technology, Bombay and Kharagpur; All India Institute of Hygiene and Public Health; International Statistical Education Centre; National Productivity Centre; Forestry Research Institute: All India Institute of Basic Education.

Some of the fields of activity in which the United Nations technical assistance programme co-operated with India during 1959 are:

Fisheries specialists from Norway, Japan and United States of America are working in India for expansion of modernization of Marine and Inland fishing industry. These specialists have been to different parts of the country—to Maharashtra, Gujarat State, Madras, Cochin and West Bengal, advising on modernization of boats, equipment and harbour facilities, adapting their suggestions to the needs of each region.

American, British, Soviet and Yugoslav experts are working on the staff of India's higher institutes of technology.

Specialists from many countries are participating in public health, malaria eradication and nurse training programmes of the country.

In the field of productivity, experts under other programmes are working in close co-operation with the ILO experts.

The experts in Area and Savings Survey worked in cooperation with the Ford Foundation experts.

The allocation for the year 1959 for various UNICEF assisted projects in India is $5,105,700. Total assistance from UNICEF from 1948 to 1959 amounts to $27,808,057. The assistance provided is in the form of equipment and supplies for the following: Child Nutrition Project; Orissa Milk Conservation Programme, Bombay, Bangalore, Ahmedabad and Rajkot; pre-school and school feeding programme; nutrition education and related activities, Andhra Pradesh; DDT Plant, Delhi; Tuberculosis Control Programme, BCG Vaccination Programme and the national programme for the development of health services in relation to community development.

India contributed Rs. 23,00,000 to UNICEF in 1959, besides a grant of Rs. 5,00,000 for the maintenance of the UNICEF local office.

United Nations Special Fund was created in October 1958 for large scale technical assistance

* Bilingual.

CC-0. Agamhigam Digital Presevation Foundation, Chandigarh

projects designed to have immediate impact on economic and social development of the less developed countries.

The total amount of contributions pledged by the Member countries for 1959 was $25,814,187 and for the year 1960 it was $37,712,754. For each of the years 1959 and 1960 the Government of India have pledged a contribution equivalent to $1,750,000.

During 1959, the Special Fund allocated $4,004,850 for assisting the following four projects (1) Central Training Institute for Industrial Instructors, Calcutta: $1,033,250; (2) Power Engineering Research Organization, Bangalore and Bhopal: $1,928,800; (3) Mechanical Engineering Research Institute, Durgapur: $691,400; and (4) Regional Labour Institutes, Kanpur, Calcutta and Madras: $351,400. In May 1960, the Governing Council of the Special Fund approved five more projects for India, the total allocation being $4,516,700. The projects are (1) An all India Scheme for Investigations of Potential Hydro-Electric sites: $2,361,400; (2) The Higher Fisheries Training Institute, Bombay: $610,300; (3) The Calcutta Water Supply Project: $324,100; (4) Central Mining Research Station, Durgapur: $695,900 and (5) the Central Public Health Engineering Institute, Nagpur: $525,000. In Dec. 1960 the Fund approved a grant of 3·78 million dollars for four projects in India: the Central Scientific Instruments Organization, Delhi, the Cavitation Research Centre, Poona, the National Aeronautical Research Laboratory, Bangalore, and the Vocational Training Scheme for Industrial Trades.

During 1959, the International Bank for Reconstruction and Development (World Bank) loaned to India a total of $60 million on the following basis: Railway loan $50 million 20 year 6 per cent loan of July 15, 1959 and Industrial loan $10 million 10 year loan of July 15, 1959.

Loans disbursed to India by the World Bank upto end of 1959 amount to $502,056,252.

Under the U.N. expanded technical assistance programme of UNESCO a sum of $ 1,545,000 is expected to be available for the two-year period 1961-62, which would be given in the form of experts, fellowships and equipment.

Statistical Summary of UNTAA Activities in India from July 1952—May 1960

	Assistance Received				Assistance Provided		
Year	Project costs[1]	No. of experts in field	No. of fellowship awards	Equip. and Supplies Provided[2]	Pledges to the Special Account	Experts recruited from country	Fellowship placement in country

FOREIGN AID TO INDIA

TOTAL external assistance (excluding assistance under the P.L. 480) authorised to India between August 1949 and December 1960 by the I.B.R.D. and foreign governments and institutions totalled Rs. 2,727* crores. Among the countries from whom assistance was received were the U.S.A., the U.K., the U.S.S.R., Canada, Australia, New Zealand, West Germany, Japan, Czechoslovakia, Rumania, Yugoslavia, Norway and Poland (Table I below). Assistance so far specifically earmarked for the Third Plan totalled Rs. 370 crores, extended by the U.S.S.R., Yugoslavia and Czechoslovakia.

Disbursement upto 31-3-1960
Rs. 1·90 crores.

* This includes :—

(1) The amount of Rs. 31·92 crores representing the rupee equivalent of the dollar value of Agricultural Commodities imported under P.L. 665. Out of this amount a sum of about Rs. 18·99 crores is expected to be received as a part of the three Development Assistance Loans, and the rest is to be received either in the form of grants for agreed projects or to be utilised by T.C.M. for meeting rupee expenditure on technicians and participants, etc. (2) $20 million loan for Orissa Iron Ore Project. (3) Excludes amounts obligated towards U.S. technicians, participants and miscellaneous.

** This excludes :—

Cooley Funds and amounts retained by the U.S. Government.

† This excludes amount of $3·9 million granted direct to Ahmedabad Electricity Co. Ltd.

†† Amounts specifically earmarked for Third Plan.

* Figures in millions of dollars. Those in brackets are in Rs. Crores. † Public sector. †† Comprises four individual loans.

U.S.S.R.

Below we give brief notes on the aid from Russia.

The credit of Rs. 64 crores had been received from the U.S.S.R. for the establishment of the Steel Plant at Bhilai which was utilised by September 1959. Further, credits to the tune of Rs. 81 crores had been authorised during the years 1957 and 1959. Of this, Rs. 60 crores is intended for financing industrial projects (*i.e.* Heavy Machine Building Plant, Coal Mining Machinery Plant, Thermal Power Station at Neyveli, an Optical and Ophthalmic Glass Factory and Enterprises in the Korba Coalfields), Rs. 9 crores for Drugs Project and Rs. 12 crores for the Oil Refinery in Barauni. In addition, credits of Rs. 179 crores and Rs. 60 crores have been authorised in 1959 and 1960 respectively for financing projects under the Third Five Year Plan. A 300 m.w. thermal power project is to be set up near Ramgarh in Hazaribagh Dist., Bihar by the end of the 3rd Plan, costing Rs. 40 crores.

The new loan carries standard Soviet terms: it is repayable, in goods, over 12 years after the last shipment; the interest rate is two and a half per cent.

An agreement signed on February 21, 1961 for further aid from U.S.S.R. to the extent of Rs. 60 crores covers the following projects: Hydro-electric power station on right bank of Bhakra, oil refinery in Gujarat, washery for cooking coal at Kathara in Bihar, refractories plant near Bhilai, exploration and production of oil in Cambay, Ankleshwar and other areas.
